ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 136

[FRL–6100–5]

RIN 2040–AD07

Guidelines Establishing Test Procedures for the Analysis of Pollutants; Measurement of Mercury in Water

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This proposed regulation would amend the guidelines establishing test procedures for the analysis of pollutants under the Clean Water Act by adding Method 1631: Mercury in Water by Oxidation, Purge and Trap, and Cold Vapor Atomic Fluorescence. EPA Method 1631 was developed in order to measure mercury reliably at the low levels associated with ambient water quality criteria (WQC). EPA has promulgated WQC for mercury at 12 parts-per-trillion (ppt) in the National Toxics Rule, and published guidance criteria for mercury at 1.8 ppt in the Water Quality Guidance for the Great Lakes System. EPA Method 1631 would need to be used in conjunction with clean sampling and laboratory techniques to preclude contamination at the low ppt levels necessary for mercury determinations. EPA has developed guidance documents on sampling and clean rooms for trace metals, including mercury.

DATES: Comments on this proposal must be submitted on or before July 27, 1998.

ADDRESSES: Send written comments on the proposed rule to "Method 1631" Comment Clerk (Docket # W–98–15); Water Docket (4101); Environmental Protection Agency; 401 M Street, SW; Washington, DC 20460. Commenters are requested to submit any references cited in their comments. Commenters are also requested to submit an original and three copies of their written comments and enclosures. Commenters that want receipt of their comments acknowledged should include a self addressed, stamped envelope. All comments must be postmarked or delivered by hand. No facsimiles (faxes) will be accepted.

Data availability: A copy of the supporting documents cited in this proposal is available for review at EPA's Water Docket; 401 M Street, SW, East Tower Basement, Washington, DC 20460. For access to docket materials, call (202) 260–3027 between 9:00 a.m. and 3:30 p.m. for an appointment. An electronic version of Method 1631 is available via the Internet on EPA's Internet home page at http://www.epa.gov/OST.

FOR FURTHER INFORMATION CONTACT: Maria Gomez-Taylor, Ph.D., Engineering and Analysis Division (4303), USEPA Office of Science and Technology, 401 M Street, SW, Washington, DC 20460; or call (202) 260–1639.

SUPPLEMENTARY INFORMATION:

Potentially Affected Entities

EPA Regions, as well as States, Territories and Tribes authorized to implement the National Pollutant Discharge Elimination System (NPDES) program, issue permits that comply with the technology-based and water quality-based requirements of the Clean Water Act. In doing so, the NPDES permitting authority, including authorized States, Territories, and Tribes, make a number of discretionary choices associated with permit writing, including the selection of pollutants to be measured and, in many cases, limited in permits. If EPA has "approved" standardized testing procedures (i.e., promulgated through rulemaking) for a given pollutant, the NPDES permit must include one of the approved testing procedures or an approved alternate test procedure. Therefore, entities with NPDES permits could be affected by the standardization of testing procedures in this rulemaking. These entities may be affected because NPDES permits may incorporate one of the standardized testing procedures in today's rulemaking. In addition, when a State, Territory, or authorized Tribe provides certification of federal licenses under Clean Water Act section 401, States, Territories and Tribes are directed to use the standardized testing procedures. Categories and entities that may ultimately be affected include:

Category	Examples of potentially affected entities
State and Territorial Governments and Indian Tribes	States, Territories, and Tribes authorized to administer the NPDES permitting program; States, Territories, and Tribes providing certification under Clean Water Act section 401; Governmental NPDES permittees.
Industry	Industrial NPDES permittees.
Municipalities	Publicly-owned treatment works with NPDES permits.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. This table lists the types of entities that EPA is now aware could potentially be affected by this action. Other types of entities not listed in the table could also be affected. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

I. Authority

Today's proposal is pursuant to the authority of sections 301, 304(h), and 501(a) of the Clean Water Act (CWA), 33 U.S.C. 1314(h), 1361(a) (the "Act"). Section 301 of the Act prohibits the discharge of any pollutant into navigable waters unless the discharge complies with a National Pollutant Discharge Elimination System (NPDES) permit, issued under section 402 of the Act. Section 304(h) of the Act requires the Administrator of the EPA to "promulgate guidelines establishing test procedures for the analysis of pollutants that shall include the factors which must be provided in any certification pursuant to section 401 of this Act or permit applications pursuant to section 402 of this Act." Section 501(a) of the Act authorizes the Administrator to "prescribe such regulations as are necessary to carry out his function under this Act." EPA publishes CWA analytical method regulations at 40 CFR part 136. The Administrator also has made these test procedures applicable to monitoring and reporting of NPDES permits (40 CFR part 122, § 122.21, 122.41, 122.44, and 123.25), and implementation of the pretreatment standards issued under section 307 of the Act (40 CFR part 403, § 403.10 and 402.12).

II. Background

A. Mercury

Mercury is a toxic pollutant pursuant to section 307(a)(1) of CWA (see the list of toxic pollutants at 40 CFR 401.15) and is a priority pollutant as derived from the toxic pollutant list (see 40 CFR 423, Appendix A). Available EPA approved methods for mercury

determine inorganic and organic forms of mercury as "total mercury."

B. Methods for Determination of Mercury

Methods currently approved at 40 CFR part 136 measure mercury by purging mercury vapor from a water sample into a specially designed chamber placed in the light beam of an atomic absorption spectrophotometer. In contrast, EPA Method 1631 measures mercury by purging mercury vapor from a water sample onto a gold trap and thermally desorbing the mercury from the trap into an atomic fluorescence spectrometer. Purging the mercury onto the gold trap concentrates the mercury and allows water vapor from the sample to be vented, and use of atomic fluorescence provides an increased response compared to atomic absorption. As a result, EPA Method 1631 is approximately 200 times more sensitive than currently approved methods for determination of mercury.

C. Need for Improved Method for Mercury

The most sensitive currently approved methods for mercury are capable of achieving a quantitation level of 200 ng/L (parts-per-trillion; ppt). These methods are not sensitive enough to measure mercury at levels called for under the National Toxics Rule (40 CFR 131.36) and the Water Quality Guidance for the Great Lakes System (60 FR 15366)—12 ppt and 1.8 ppt, respectively.

III. Summary of Proposed Rule

A. Introduction

This proposed rule would make available at 40 CFR part 136 an additional test procedure for measurement of mercury. This rulemaking does not propose to repeal any of the currently approved methods that test for mercury. For an NPDES permit, the permitting authority should decide the appropriate method based on the circumstances of the particular effluent measured. Use of EPA Method 1631 may be specified by the permitting authority when a permit is modified or reissued. If the permitting authority does not specify the method to be used, a discharger would be able to use EPA Method 1631 or any of the currently approved methods for determination of mercury, provided that the method chosen meets the requirements specified in the permit.

B. Summary of Proposed Method 1631

EPA Method 1631 has four procedural components: sample pretreatment; purge and trap; desorption; and detection by atomic fluorescence. In the sample pretreatment step, bromine monochloride (BrCl) is added to the sample to oxidize all forms of mercury to Hg(II). After oxidation, the sample is sequentially prereduced with $NH_2OH{\bullet}HCl$ to destroy free halogens, then reduced with $SnCl_2$ to convert Hg(II) to volatile Hg(0). The Hg(0) is purged from the aqueous solution with nitrogen onto a gold-coated sand trap. The trapped mercury is thermally desorbed from the gold trap into a flowing gas stream into the cell of a cold-vapor atomic fluorescence spectrometer. Quality is assured through calibration and testing of the oxidation, purging, and detection systems.

C. Sample Contamination

Trace levels of metals are ubiquitous in the environment. Therefore, the determination of trace metals at the levels of interest for water quality criteria necessitates the use of clean sample handling techniques to preclude false positives arising from sample collection, handling, or analysis. EPA has released several guidance documents that are designed to ensure that metals data accurately reflect actual environmental levels. The guidance documents include: Method 1669: Sampling Ambient Water for Trace Metals at EPA Water Quality Criteria Levels; Guidance on Establishing Trace Metals Clean Rooms in Existing Facilities; and Guidance on Documentation and Evaluation of Trace Metals Data Collected for Clean Water Act Compliance Monitoring. The most serious problem faced by laboratories conducting metals analyses at these very low levels is the potential for sample contamination during sample collection and handling. Mercury is particularly difficult to collect due to its ubiquity in the environment. For example, commonly used polyethylene sample containers are unacceptable for sample storage because atmospheric mercury would be expected to diffuse through the walls of the container, causing sample contamination. EPA's Method 1669 (Sampling Method) details the rigorous sample handling and quality control (QC) procedures necessary to produce reliable data for mercury at the levels of interest for water quality criteria.

D. Quality Control

The quality control (QC) in EPA Method 1631 is more extensive than the QC in currently approved methods for mercury. EPA Method 1631 contains all of the standardized QC tests proposed in EPA's streamlining initiative (62 FR 14976) and used in the 40 CFR 136 Appendix A methods. An initial demonstration of laboratory capability is required and consists of: (1) a method detection limit (MDL) study to demonstrate that the laboratory is able to achieve the MDL and minimum level of quantification (ML) specified in Method 1631; and (2) an initial precision and recovery (IPR) test, consisting of the analysis of four reagent water samples spiked with mercury, to demonstrate the laboratory's ability to generate acceptable precision and recovery.

Ongoing QC would consist of the following tests that would need to accompany each analytical batch (i.e., a set of 20 samples or less pretreated at the same time):

- Verification of calibration of the purge and trap and atomic fluorescence systems, to verify that instrument response has not deviated significantly from that obtained during calibration.
- Analysis of a matrix spike (MS) and matrix spike duplicate (MSD) to demonstrate method accuracy and precision and to monitor matrix interferences.
- Analysis of reagent and bubbler blanks to demonstrate freedom from contamination.
- Analysis of a laboratory control sample and ongoing precision and recovery (OPR) samples to demonstrate that the method remains under control.

EPA Method 1631 contains QC acceptance criteria for all QC tests. Compliance with these criteria would allow a data user to evaluate the quality of the results. These QC acceptance criteria would increase the reliability of results and provides a means for laboratories and data users to monitor analytical performance, thereby providing a basis for sound, defensible data.

E. Performance Based Measurement System

On October 7, 1997, EPA published a Notice of the Agency's intent to implement a Performance Based Measurement System (PBMS) in all of its programs to the extent feasible (62 FR 52098). The Agency is currently determining the specific steps necessary to implement PBMS in its programs and preparing an implementation plan. Because final decisions have not yet been made concerning the implementation of PBMS in water programs, today's proposed method does not include full provisions for PBMS.

However, consistent with the Streamlining Initiative proposed on March 28, 1997 (62 FR 14976), EPA Method 1631, as proposed, would

employ a performance-based approach to the sample preparation and trapping systems. Analysts would be allowed to modify the sample preparation and trapping aspects of the method provided all the performance criteria are met. The method also allows the use of alternate reagents and hardware provided that equivalent or superior performance is demonstrated and all QC acceptance criteria are met.

Demonstrating equivalency involves two sets of tests, one set with reference standards and the other with the sample matrix. The equivalency procedures include performance of the IPR test using reference standards to demonstrate that the results produced with the modified procedure would meet or exceed the QC acceptance criteria in EPA Method 1631. In addition, if the detection limit may be affected by a modification, performance of an MDL study would be required to demonstrate that the modified procedure could achieve an MDL less than or equal to the MDL in EPA Method 1631 or, for those instances in which the regulatory compliance level is greater than the ML in the method, one-third the regulatory compliance level. (For a discussion of these levels, see EPA Method 1631 or the Streamlining Initiative proposed in March of 1997 (62 FR 14976).

Once EPA has made its final determinations regarding implementation of PBMS in programs under the Clean Water Act, EPA Method 1631 would be amended to incorporate specific provisions of PBMS. We anticipate that such changes will be included in the final version of the method. Commenters are encouraged to address PBMS implementation for this method and are specifically requested to comment on the performance characteristics of EPA Method 1631 to assist EPA in developing practical method performance and related criteria for PBMS implementation.

IV. Development and Validation of Method 1631

EPA Method 1631 is based on techniques published in the literature and widely used throughout the marine chemistry community. EPA validated the method during development in multiple single-laboratory studies and in an interlaboratory (round-robin) method validation study.

A. Background

In response to the need for measuring of trace metals at ambient water quality criteria levels set forth in the National Toxics Rule, EPA convened a panel of trace metals experts in Boston in November, 1993. The purpose of the meeting was to obtain information on modern laboratory techniques for the analysis of trace metals. This panel consisted of mostly marine chemists who had been making trace metals measurements in the marine environment for more than 10 years. The panel concluded that the technique of oxidation, purge and trap, desorption, and atomic fluorescence would provide reliable results for measurements of mercury at low ppt levels.

B. Initial Method Development

Initial method development was carried out under contract in a marine chemistry laboratory recognized for expertise in measurements of mercury at ultra-trace levels. EPA received an initial draft of the method in late 1994. EPA revised the initial draft into EPA's Environmental Monitoring Management Council (EMMC) format in early 1995 and added the standardized quality control (QC) used in the 40 CFR 136, Appendix A methods. Initial QC acceptance criteria were developed from data provided by the Agency contractor responsible for initial method development.

C. Multiple Single-Laboratory Validation Studies

In 1996, EPA conducted studies in four laboratories to further assess method performance and to better define the method detection limit (MDL) and QC acceptance criteria. Each laboratory performed an MDL study and an initial precision and recovery test. EPA revised the draft method based on results and comments received from these studies. Based on these data, EPA selected an MDL of 0.2 ng/L (0.2 ppt) for EPA Method 1631. This was the highest of the MDLs achieved by any of the laboratories. The highest MDL was selected because this MDL was well below the 1.8 ppt ambient water quality criterion required by the Great Lakes Initiative. EPA established a minimum level of quantitation of 0.5 ng/L and revised the QC acceptance criteria for EPA Method 1631 based on data from the four laboratories in the validation study. Details of the studies are given in a study plan and a report of the studies is included in the docket for today's proposed rule.

D. Interlaboratory Validation Study

In mid-1997, EPA developed a study plan to conduct an interlaboratory validation of EPA Method 1631. The interlaboratory validation study was conducted in late 1997. The following matrices, forms, and levels were studied: total mercury in reagent water at four levels; total and dissolved mercury in effluent at one level; dissolved mercury in freshwater at four levels, and total and dissolved mercury in seawater at one level. In addition, each laboratory performed an MDL study to demonstrate that the MDL of 0.2 ppt could be achieved. All the laboratories participating in the study achieved an MDL below 0.2 ppt. Therefore, EPA believes this MDL is reasonable. The study plan and a report of the study are contained in the Docket. Results and comments from the study were used to evaluate the QC acceptance criteria and revise other details of EPA Method 1631 into the version being proposed today. The performance characteristics of the method are summarized in Tables 1–3. EPA invites comment and additional data on the performance characteristics of this method.

V. Status of Currently Approved Methods

This action proposes to make EPA Method 1631 available for determination of mercury in aqueous samples ranging from seawater to sewage effluent. Currently approved methods for determination of mercury, EPA Methods 245.1 and 245.2, Standard Method 3112B, ASTM Method D3223–91, USGS Method I–3462–85, and AOAC-International Method 977.22, would not be withdrawn or otherwise affected by this regulation. EPA specifically invites comment on this aspect of the proposal, including the possible consequences and solutions if EPA were to withdraw such methods.

VI. Regulatory Requirements

A. Executive Order 12866

Under Executive Order 12866 (58 FR 51735 (October 4, 1993)) the Agency must determine whether a regulatory action is "significant" and therefore subject to OMB review and the requirements of the Executive Order. The Order defines "significant regulatory action" as one that is likely to result in a rule that may: (1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise novel

legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

It has been determined that this rule is not a "significant regulatory action" under the terms of Executive Order 12866 and is therefore not subject to OMB review.

B. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), P.L. 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with "Federal mandates" that may result in expenditures to State, local, and tribal governments, in the aggregate, or to the private sector, of $100 million or more in any one year. Before promulgating an EPA rule for which a written statement is needed, section 205 of UMRA generally requires EPA to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most cost-effective, or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted. Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal governments, it must have developed under section 203 of UMRA a small government agency plan. The plan must provide for notifying potentially affected small governments, enabling officials of affected small governments to have meaningful and timely input in the development of EPA regulatory proposals with significant Federal intergovernmental mandates, and informing, educating, and advising small governments on compliance with the regulatory requirements.

Today's proposed rule contains no Federal mandates (under the regulatory provisions of Title II of the UMRA) for State, local, or Tribal governments or the private sector. The proposed rule would impose no enforceable duty on any State, local or Tribal governments or the private sector. This rule proposes alternative analytical test procedures which would merely standardize the procedures when testing is otherwise required by a regulatory agency. Therefore, the proposed rule is not subject to the requirements of sections 202, 203, and 205 of the UMRA. EPA invites comment on its conclusions regarding whether alternate test procedures constitute a federal mandate.

C. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA), EPA generally is required to conduct a regulatory flexibility analysis describing the impact of the regulatory action on small entities as part of rulemaking. However, under section 605(b) of the RFA, if EPA certifies that the rule will not have a significant economic impact on a substantial number of small entities, EPA is not required to prepare a regulatory flexibility analysis. Pursuant to section 605(b) of the Regulatory Flexibility Act, 5 U.S.C. 605(b), the Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities. This regulation approves an additional test procedure (analytical method) for the measurement of mercury. This rule makes available an alternative testing procedure for use in compliance monitoring and data gathering but does not require its use.

D. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*, EPA must submit an information collection request covering information collection requirements in proposed rules to the Director of the Office of Management and Budget (OMB) for review and approval. This proposed rule contains no information collection requirements. Therefore, an information collection request will not be submitted to OMB.

E. National Technology Transfer and Advancement Act

Under section 12(d) of the National Technology Transfer and Advancement Act (NTTAA), the Agency is required to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, business practices, etc.) that are developed or adopted by voluntary consensus standard bodies. Where available and potentially applicable standards are not used by EPA, the NTTAA requires the Agency to provide Congress, through the Office of Management and Budget (OMB), an explanation for the reasons for not using such standards.

Proposal of EPA Method 1631 is the result of a need to determine mercury at the low levels associated with water quality criteria for mercury in the National Toxics Rule (40 CFR 131.36) and in the Water Quality Guidance for the Great Lakes System (60 FR 15366). These documents specify concentrations for mercury in the low part-per-trillion range and the currently approved methods are not sensitive enough to measure mercury at these levels. EPA's search of the technical literature revealed that there are no consensus standards for determination of mercury capable of measuring this pollutant at these low levels. EPA invites public comments on the Agency's proposal as well as on any other existing, potentially applicable voluntary consensus standards that the Agency should consider for the determination of mercury at low ppt levels.

F. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045 (62 FR 19885, April 23, 1997), applies to any rule that (1) is likely to be "economically significant" as defined under Executive Order 12866, and (2) concerns environmental health or safety risk that the Agency has reason to believe may have a disproportionate effect on children. If a regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This rule is not subject to E.O. 13045, "Protection of Children from Environmental Health Risks and Safety Risks" because this is not an "economically significant" regulatory action as defined by E.O. 12866, and because it does not involve decisions on environmental health or safety risks that may disproportionately affect children.

VII. Request for Comments

EPA requests public comments and information on this proposed rule. Specifically, EPA invites comment on the appropriateness of Method 1631 for the measurement of mercury at low ppt levels, the utility of EPA Method 1631 for NPDES compliance monitoring, the MDL and QC acceptance criteria specified in Method 1631, and EPA's proposed decision not to withdraw other, existing, approved methods for determination of mercury.

List of Subjects in 40 CFR Part 136

Environmental protection, Analytical methods, Monitoring, Reporting and recordkeeping requirements, Waste treatment and disposal, Water pollution control.

Dated: May 15, 1998.

Carol M. Browner,

Administrator.

In consideration of the preceding, USEPA proposes to amend title 40, chapter I of the Code of Federal Regulations part 136 as follows:

PART 136—[AMENDED]

1. The authority citation for part 136 continues to read as follows:

Authority: Secs. 301, 304(h), 307, and 501(a) Pub. L. 95–217, Stat. 1566, *et seq.* (33 U.S.C. 1251, *et seq.*) (The Federal Water Pollution Control Act Amendments of 1972 as amended by the Clean Water Act of 1977 and the Water Quality Act of 1987), 33 U.S.C. 1314 and 1361; 86 Stat. 816, Pub. L. 92–500; 91 Stat. 1567, Pub. L. 92–217; Stat. 7, Pub. L. 100–4 (The "Act").

2. In § 136.3, paragraph (a), Table IB.—List of Approved Inorganic Test Procedures, is amended by revising entry 35 to read as follows:

§ 136.3 Identification of test procedures.

(a) * * *

TABLE IB.—LIST OF APPROVED INORGANIC TEST PROCEDURES

Parameter, units and method	Reference (method number or page)				
	EPA [1,35]	Standard methods 18th Ed.	ASTM	USGS [2]	Other

35. Mercury—Total,[4]					
Cold vapor, manual, or (or µg/L)	245.1	3112–B	D3223–91	I3462–85	[3]977.22
Automated (µg/L)	245.2				.....
Oxidation, purge and trap, and atomic fluorescence (ng/L)	1631				.....
. . .	.	.	.		.

Table IB Notes:

[1] "Methods for Chemical Analysis of Water and Wastes", Environmental Protection Agency, Environmental Monitoring Systems Laboratory-Cincinnati (EMSL–CI), EPA–600/4–79–020, Revised March 1983 and 1979 where applicable.

[2] Fishman, M.J., et al, "Methods for Analysis of Inorganic Substances in Water and Fluvial Sediments," U.S. Department of the Interior, Techniques of Water—Resource Investigations of the U.S. Geological Survey, Denver, CO, Revised 1989, unless otherwise stated.

[3] Official Methods of Analysis of the Association of Official Analytical Chemists," methods manual, 15th ed. (1990).

[4] For the determination of total metals the sample is not filtered before processing. A digestion procedure is required to solubilize suspended material and to destroy possible organic-metal complexes. Two digestion procedures are given in "Methods for Chemical Analysis of Water and Wastes, 1979 and 1983". One (section 4.1.3), is a vigorous digestion using nitric acid. A less vigorous digestion using nitric and hydrochloric acids (section 4.1.4) is preferred; however, the analyst should be cautioned that this mild digestion may not suffice for all sample types. Particularly, if a colorimetric procedure is to be employed, it is necessary to ensure that all organo-metallic bonds be broken so that the metal is in a reactive state. In those situations, the vigorous digestion is to be preferred making certain that at no time does the sample go to dryness. Samples containing large amounts of organic materials may also benefit by this vigorous digestion, however, vigorous digestion with concentrated nitric acid will convert antimony and tin to insoluble oxides and render them unavailable for analysis. Use of ICP/AES as well as determinations for certain elements such as antimony, arsenic, the noble metals, mercury, selenium, silver, tin, and titanium require a modified sample digestion procedure and in all cases the method write-up should be consulted for specific instructions and/or cautions.

NOTE TO TABLE IB NOTE 4: If the digestion procedure for direct aspiration AA included in one of the other approved references is different than the above, the EPA procedure must be used.

Dissolved metals are defined as those constituents which will pass through a 0.45 micron membrane filter. Following filtration of the sample, the referenced procedure for total metals must be followed. Sample digestion of the filtrate for dissolved metals (or digestion of the original sample solution for total metals) may be omitted for AA (direct aspiration or graphite furnace) and ICP analyses, provided the sample solution to be analyzed meets the following criteria:

a. has a low COD (<20)
b. is visibly transparent with a turbidity measurement of 1 NTU or less
c. is colorless with no perceptible odor, and
d. is of one liquid phase and free of particulate or suspended matter following acidification.

. . . . . .

[35] Precision and recovery statements for the atomic absorption direct aspiration and graphite furnace methods, and for the spectrophotometric SDDC method for arsenic are provided in Appendix D of this part titled, "Precision and Recovery Statements for Methods for Measuring Metals".

* * * * * * *

3. In part 136, appendix A is amended by adding EPA Method 1631 to read as follows:

Appendix A to Part 136—Methods for Organic Chemical Analysis of Municipal and Industrial Wastewater

* * * * *

Method 1631 Mercury in Water by Oxidation, Purge and Trap, and CVAFS

1.0 Scope and Application

1.1 This Method is for determination of mercury (Hg) in filtered and unfiltered water by oxidation, purge and trap, desorption, and cold-vapor atomic fluorescence spectrometry (CVAFS). This Method is for use in EPA's data gathering and monitoring programs associated with the Clean Water Act, the Resource Conservation and Recovery Act, the Comprehensive Environmental Response, Compensation and Liability Act, and the Safe Drinking Water Act. The Method is based on a contractor-developed method (Reference 1) and on peer-reviewed, published procedures for the determination of mercury in aqueous samples, ranging from sea water to sewage effluent (References 2–5).

1.2 This Method is accompanied by Method 1669: Sampling Ambient Water for Determination of Trace Metals at EPA Water Quality Criteria Levels (Sampling Method). The Sampling Method guidance document is recommended to preclude contamination during the sampling process.

1.3 This Method is for determination of Hg in the range of 0.5–100 ng/L and may be extended to higher levels by selection of a smaller sample size.

1.4 The ease of contaminating ambient water samples with mercury and interfering substances cannot be overemphasized. This Method includes suggestions for improvements in facilities and analytical techniques that should minimize contamination and maximize the ability of the laboratory to make reliable trace metals

determinations. Section 4.0 gives these suggestions.

1.5 The detection limit and minimum level of quantitation in this Method usually are dependent on the level of interferences rather than instrumental limitations. The method detection limit (MDL; 40 CFR 136, Appendix B) for Hg has been determined to be 0.2 ng/L when no interferences are present. The minimum level (ML) has been established as 0.5 ng/L. An MDL as low as 0.05 ng/L can be achieved for low Hg samples by using a larger sample volume, a lower BrCl level (0.2%), and extra caution in sample handling.

1.6 Clean and ultraclean—The terms "clean" and "ultraclean" have been applied to the techniques needed to reduce or eliminate contamination in trace metals determinations. These terms are not used in this Method because they lack an exact definition. However, the information provided in this Method is consistent with the summary guidance on clean and ultraclean techniques (References 6–7).

1.7 This Method follows the EPA Environmental Methods Management Council's "Guidelines and Format for Methods to Be Proposed at 40 CFR, Part 136 or Part 141."

1.8 This Method is "performance based." The analyst is permitted to modify the Method to overcome interferences or lower the cost of measurements if all performance criteria are met. Section 9.1.2 gives the requirements for establishing method equivalency.

1.9 Any modification of this Method, beyond those expressly permitted, shall be considered a major modification subject to application and approval of alternate test procedures under 40 CFR 136.4 and 136.5.

1.10 This Method should be used only by analysts who are experienced in the use of CVAFS techniques and who are trained thoroughly in the sample handling and instrumental techniques described in this Method. Each analyst who uses this Method must demonstrate the ability to generate acceptable results using the procedure in Section 9.2.

1.11 This Method is accompanied by a data verification and validation guidance document, Guidance on the Documentation and Evaluation of Trace Metals Data Collected for CWA Compliance Monitoring (Reference 8).

2.0 Summary of Method

2.1 A 100- to 2000-mL sample is collected directly into a specially cleaned, pretested, fluoropolymer bottle using sample handling techniques specially designed for collection of mercury at trace levels (Reference 9).

2.2 For dissolved Hg, the sample is filtered through a 0.45-μm capsule filter.

2.3 The sample is preserved by adding either 5 mL/L of pretested 12N HCl or 5mL/L BrCl solution. If a sample will also be used for the determination of methyl mercury, it should be preserved with 5 mL/L HCl solution only.

2.4 Prior to analysis, a 100-mL sample aliquot is placed in a specially designed purge vessel, and 0.2N BrCl solution is added to oxidize all Hg compounds to Hg(II).

2.5 After oxidation, the sample is sequentially prereduced with NH_2OH. HCl to destroy the free halogens, and then reduced with $SnCl_2$ to convert Hg(II) to volatile Hg(0).

2.6 The Hg(0) is separated from solution by purging with nitrogen onto a gold-coated sand trap (Figure 1).

2.7 The trapped Hg is thermally desorbed from the gold trap into an inert gas stream that carries the released Hg(0) into the cell of a cold-vapor atomic fluorescence spectrometer (CVAFS) for detection (Figure 2).

2.8 Quality is ensured through calibration and testing of the oxidation, purging, and detection systems.

3.0 Definitions

3.1 Total mercury—all BrCl-oxidizable mercury forms and species found in an unfiltered aqueous solution. This includes, but is not limited to, Hg(II), Hg(0), strongly organo-complexed Hg(II) compounds, adsorbed particulate Hg, and several tested covalently bound organo-mercurials (e.g., CH_3HgCl, $(CH_3)_2Hg$, and $C_6H_5HgOOCCH_3$). The recovery of Hg bound within microbial cells may require the additional step of UV photo-oxidation. In this Method, total mercury and total recoverable mercury are synonymous.

3.2 Dissolved mercury—All BrCl-oxidizable mercury forms and species found in the filtrate of an aqueous solution that has been filtered through a 0.45 micron filter.

3.3 Apparatus—Throughout this Method, the sample containers, sampling devices, instrumentation, and all other materials and devices used in sample collection, sample processing, and sample analysis that come in contact with the sample and therefore require careful cleaning will be referred to collectively as the Apparatus.

3.4 Definitions of other terms used in this Method are given in the glossary at the end of the Method.

4.0 Contamination and Interferences

4.1 Preventing ambient water samples from becoming contaminated during the sampling and analysis process constitutes one of the greatest difficulties encountered in trace metals determinations. Over the last two decades, marine chemists have come to recognize that much of the historical data on the concentrations of dissolved trace metals in seawater are erroneously high because the concentrations reflect contamination from sampling and analysis rather than ambient levels. Therefore, it is imperative that extreme care be taken to avoid contamination when collecting and analyzing ambient water samples for trace metals.

4.2 Samples may become contaminated by numerous routes. Potential sources of trace metals contamination during sampling include: metallic or metal-containing labware (e.g., talc gloves that contain high levels of zinc), containers, sampling equipment, reagents, and reagent water; improperly cleaned and stored equipment, labware, and reagents; and atmospheric inputs such as dirt and dust. Even human contact can be a source of trace metals contamination. For example, it has been demonstrated that dental work (e.g., mercury amalgam fillings) in the mouths of laboratory personnel can contaminate samples that are directly exposed to exhalation (Reference 5).

4.3 Contamination Control.

4.3.1 Philosophy—The philosophy behind contamination control is to ensure that any object or substance that contacts the sample is metal free and free from any material that may contain mercury.

4.3.1.1 The integrity of the results produced cannot be compromised by contamination of samples. This Method and the Sampling Method give requirements and suggestions for control of sample contamination.

4.3.1.2 Substances in a sample cannot be allowed to contaminate the laboratory work area or instrumentation used for trace metals measurements. This Method gives requirements and suggestions for protecting the laboratory.

4.3.1.3 Although contamination control is essential, personnel health and safety remain the highest priority. The Sampling Method and Section 5 of this Method give suggestions and requirements for personnel safety.

4.3.2 Avoiding contamination—The best way to control contamination is to completely avoid exposure of the sample to contamination in the first place. Avoiding exposure means performing operations in an area known to be free from contamination. Two of the most important factors in avoiding/reducing sample contamination are (1) an awareness of potential sources of contamination and (2) strict attention to work being done. Therefore, it is imperative that the procedures described in this Method be carried out by well-trained, experienced personnel.

4.3.3 Use a clean environment—The ideal environment for processing samples is a class-100 clean room. If a clean room is not available, all sample preparation should be performed in a class-100 clean bench or a nonmetal glove box fed by mercury- and particle-free air or nitrogen. Digestions should be performed in a nonmetal fume hood situated, ideally, in the clean room.

4.3.4 Minimize exposure—The Apparatus that will contact samples, blanks, or standard solutions should be opened or exposed only in a clean room, clean bench, or glove box so that exposure to an uncontrolled atmosphere is minimized. When not being used, the Apparatus should be covered with clean plastic wrap, stored in the clean bench or in a plastic box or glove box, or bagged in clean zip-type bags. Minimizing the time between cleaning and use will also minimize contamination.

4.3.5 Clean work surfaces Before a given batch of samples is processed, all work surfaces in the hood, clean bench, or glove box in which the samples will be processed should be cleaned by wiping with a lint-free cloth or wipe soaked with reagent water.

4.3.6 Wear gloves—Sampling personnel must wear clean, nontalc gloves during all operations involving handling of the Apparatus, samples, and blanks. Only clean gloves may touch the Apparatus. If another object or substance is touched, the glove(s) must be changed before again handling the Apparatus. If it is even suspected that gloves have become contaminated, work must be

halted, the contaminated gloves removed, and a new pair of clean gloves put on. Wearing multiple layers of clean gloves will allow the old pair to be quickly stripped with minimal disruption to the work activity.

4.3.7 Use metal-free Apparatus—All Apparatus used for determination of mercury at ambient water quality criteria levels must be nonmetallic, free of material that may contain metals, or both.

4.3.7.1 Construction materials—Only fluoropolymer or borosilicate glass (if Hg is the only target analyte) containers should be used for samples that will be analyzed for mercury because mercury vapors can diffuse in or out of other materials, resulting in results that are biased low or high. All materials, regardless of construction, that will directly or indirectly contact the sample must be cleaned using the procedures in this Method and must be known to be clean and mercury free before proceeding.

4.3.7.2 Serialization—It is recommended that serial numbers be indelibly marked or etched on each piece of Apparatus so that contamination can be traced, and logbooks should be maintained to track the sample from the container through the labware to introduction into the instrument. It may be useful to dedicate separate sets of labware to different sample types; e.g., receiving waters vs. effluents. However, the Apparatus used for processing blanks and standards must be mixed with the Apparatus used to process samples so that contamination of all labware can be detected.

4.3.7.3 The laboratory or cleaning facility is responsible for cleaning the Apparatus used by the sampling team. If there are any indications that the Apparatus is not clean when received by the sampling team (e.g., ripped storage bags), an assessment of the likelihood of contamination must be made. Sampling must not proceed if it is possible that the Apparatus is contaminated. If the Apparatus is contaminated, it must be returned to the laboratory or cleaning facility for proper cleaning before any sampling activity resumes.

4.3.8 Avoid sources of contamination—Avoid contamination by being aware of potential sources and routes of contamination.

4.3.8.1 Contamination by carryover—Contamination may occur when a sample containing a low concentration of mercury is processed immediately after a sample containing a relatively high concentration of mercury. When an unusually concentrated sample is encountered, a bubbler blank should be analyzed immediately following the sample to check for carryover. Samples known or suspected to contain the lowest concentration of mercury should be analyzed first followed by samples containing higher levels.

4.3.8.2 Contamination by samples—Significant laboratory or instrument contamination may result when untreated effluents, in-process waters, landfill leachates, and other samples containing high concentrations of mercury are processed and analyzed. This Method is not intended for application to these samples, and samples containing high concentrations should not be permitted into the clean room or laboratory dedicated for processing trace metals samples.

4.3.8.3 Contamination by indirect contact—Apparatus that may not directly come in contact with the samples may still be a source of contamination. For example, clean tubing placed in a dirty plastic bag may pick up contamination from the bag and subsequently transfer the contamination to the sample. Therefore, it is imperative that every piece of the Apparatus that is directly or indirectly used in the collection, processing, and analysis of ambient water samples be thoroughly cleaned (see Section 6.1.2).

4.3.8.4 Contamination by airborne particulate matter—Less obvious substances capable of contaminating samples include airborne particles. Samples may be contaminated by airborne dust, dirt, particles, or vapors from unfiltered air supplies; nearby corroded or rusted pipes, wires, or other fixtures; or metal-containing paint. Whenever possible, sample processing and analysis should occur as far as possible from sources of airborne contamination.

4.4 Interferences.

4.4.1 Due to the BrCl oxidation step, there are no observed interferences in the determination of Hg by this Method.

4.4.2 The potential exists for destruction of the gold traps if free halogens are purged onto them, or if they are overheated (>500 °C). When the instructions in this Method are followed accurately, neither of these outcomes is likely.

4.4.3 Water vapor may collect in the gold traps and subsequently condense in the fluorescence cell upon desorption, giving a false peak due to scattering of the excitation radiation. Condensation can be avoided by predrying the gold trap, and by discarding those traps that tend to absorb large quantities of water vapor.

4.4.4 The fluorescent intensity is strongly dependent upon the presence of molecular species in the carrier gas that can cause "quenching" of the excited atoms. The dual amalgamation technique eliminates quenching due to trace gases, but it remains the analyst's responsibility to ensure high purity inert carrier gas and a leak-free analytical train.

5.0 Safety

5.1 The toxicity or carcinogenicity of each chemical used in this Method has not been precisely determined; however, each compound should be treated as a potential health hazard. Exposure to these compounds should be reduced to the lowest possible level.

5.1.1 Chronic mercury exposure may cause kidney damage, muscle tremors, spasms, personality changes, depression, irritability and nervousness. Organo-mercurials may cause permanent brain damage. Because of the toxicological and physical properties of Hg, pure standards should be handled only by highly trained personnel thoroughly familiar with handling and cautionary procedures and the associated risks.

5.1.2 It is recommended that the laboratory purchase a dilute standard solution of the Hg in this Method. If primary solutions are prepared, they shall be prepared in a hood, and a NIOSH/MESA-approved toxic gas respirator shall be worn when high concentrations are handled.

5.2 This Method does not address all safety issues associated with its use. The laboratory is responsible for maintaining a current awareness file of OSHA regulations for the safe handling of the chemicals specified in this Method. OSHA rules require that a reference file of material safety data sheets (MSDSs) must be made available to all personnel involved in these analyses (29 CFR 1917.28, Appendix E). It is also suggested that the laboratory perform personal hygiene monitoring of each analyst who uses this Method and that the results of this monitoring be made available to the analyst. Additional information on laboratory safety can be found in References 10–13. The references and bibliography at the end of Reference 13 are particularly comprehensive in dealing with the general subject of laboratory safety.

5.3 Samples suspected to contain high concentrations of Hg are handled using essentially the same techniques employed in handling radioactive or infectious materials. Well-ventilated, controlled access laboratories are required. Assistance in evaluating the health hazards of particular laboratory conditions may be obtained from certain consulting laboratories and from State Departments of Health or Labor, many of which have an industrial health service. Each laboratory must develop a strict safety program for handling Hg.

5.3.1 Facility—When samples known or suspected of containing high concentrations of mercury are handled, all operations (including removal of samples from sample containers, weighing, transferring, and mixing) should be performed in a glove box demonstrated to be leaktight or in a fume hood demonstrated to have adequate airflow. Gross losses to the laboratory ventilation system must not be allowed. Handling of the dilute solutions normally used in analytical and animal work presents no inhalation hazards except in an accident.

5.3.2 Protective equipment—Disposable plastic gloves, apron or lab coat, safety glasses or mask, and a glove box or fume hood adequate for radioactive work should be used. During analytical operations that may give rise to aerosols or dusts, personnel should wear respirators equipped with activated carbon filters.

5.3.3 Training—Workers must be trained in the proper method of removing contaminated gloves and clothing without contacting the exterior surfaces.

5.3.4 Personal hygiene—Hands and forearms should be washed thoroughly after each manipulation and before breaks (coffee, lunch, and shift).

5.3.5 Confinement—Isolated work areas posted with signs, segregated glassware and tools, and plastic absorbent paper on bench tops will aid in confining contamination.

5.3.6 Effluent vapors—The effluent from the CVAFS should pass through either a column of activated charcoal or a trap containing gold or sulfur to amalgamate or react mercury vapors.

5.3.7 Waste handling—Good technique includes minimizing contaminated waste.

Plastic bag liners should be used in waste cans. Janitors and other personnel must be trained in the safe handling of waste.

5.3.8 Decontamination.

5.3.8.1 Decontamination of personnel—Use any mild soap with plenty of scrubbing action.

5.3.8.2 Glassware, tools, and surfaces—Sulfur powder will react with mercury to produce mercuric sulfide, thereby eliminating the possible volatilization of Hg. Satisfactory cleaning may be accomplished by dusting a surface lightly with sulfur powder, then washing with any detergent and water.

5.3.9 Laundry—Clothing known to be contaminated should be collected in plastic bags. Persons who convey the bags and launder the clothing should be advised of the hazard and trained in proper handling. If the launderer knows of the potential problem, the clothing may be put into a washer without contact. The washer should be run through a cycle before being used again for other clothing.

5.3.10 Wipe tests—A useful method of determining cleanliness of work surfaces and tools is to wipe the surface with a piece of filter paper. Extraction and analysis by this Method can achieve a limit of detection of less than 1 ng per wipe. Less than 0.1 µg per wipe indicates acceptable cleanliness; anything higher warrants further cleaning. More than 10 µg on a wipe constitutes an acute hazard and requires prompt cleaning before further use of the equipment or work space, and indicates that unacceptable work practices have been employed.

6.0 Apparatus and Materials

Disclaimer: The mention of trade names or commercial products in this Method is for illustrative purposes only and does not constitute endorsement or recommendation for use by the Environmental Protection Agency. Equivalent performance may be achievable using apparatus, materials, or cleaning procedures other than those suggested here. The laboratory is responsible for demonstrating equivalent performance.

6.1 Sampling equipment.

6.1.1 Sample collection bottles-Fluoropolymer or borosilicate glass, 125-to 1000-mL, with fluoropolymer or fluoropolymer-lined cap.

6.1.2 Cleaning.

6.1.2.1 New bottles are cleaned by heating to 65–75 °C in 4 N HCl for at least 48 h. The bottles are cooled, rinsed three times with reagent water, and filled with reagent water containing 1% HCl. These bottles are capped and placed in a clean oven at 60–70 °C overnight. After cooling, they are rinsed three more times with reagent water, filled with reagent water containing 0.4% (v/v) HCl, and placed in a mercury-free class-100 clean bench until dry. The bottles are tightly capped (with a wrench), double-bagged in new polyethylene zip-type bags until needed, and stored in wooden or plastic boxes until use.

6.1.2.2 Used bottles known not to have contained mercury at high levels are cleaned as above, except for only 6–12 h in hot 4 N HCl.

6.1.2.3 Bottle blanks should be analyzed as described in Section 9.4.4.1 to verify the effectiveness of the cleaning procedures.

6.1.3 Filtration Apparatus.

6.1.3.1 Filter—0.45-µm, 15-mm diameter capsule filter (Gelman Supor 12175, or equivalent).

6.1.3.2 Peristaltic pump—115-V a.c., 12-V d.c., internal battery, variable-speed, single-head (Cole-Parmer, portable, "Masterflex L/S," Catalog No. H–07570–10 drive with Quick Load pump head, Catalog No. H–07021–24, or equivalent).

6.1.3.3 Tubing—styrene/ethylene/butylene/silicone (SEBS) resin for use with peristaltic pump, approx ⅜-in ID by approximately 3 ft (Cole-Parmer size 18, Catalog No. G–06464–18, or approximately ¼-in OD, Cole-Parmer size 17, Catalog No. G–06464–17, or equivalent). Tubing is cleaned by soaking in 5–10% HCl solution for 8–24 h, rinsing with reagent water in a clean bench in a clean room, and drying in the clean bench by purging with metal-free air or nitrogen. After drying, the tubing is double-bagged in clear polyethylene bags, serialized with a unique number, and stored until use.

6.2 Equipment for bottle and glassware cleaning.

6.2.1 Vat, 100–200 L, high-density polyethylene (HDPE), half filled with 4 N HCl in reagent water.

6.2.2 Panel immersion heater, 500–W, all-fluoropolymer coated, 120 vac (Cole-Parmer H–03053–04, or equivalent).

Warning: Read instructions carefully!! The heater will maintain steady state, without temperature feedback control, of 60–75 °C in a vat of the size described. However, the equilibrium temperature will be higher (up to boiling) in a smaller vat. Also, the heater plate MUST be maintained in a vertical position, completely submerged and away from the vat walls to avoid melting the vat or burning out!

6.2.3 Laboratory sink—in class-100 clean area, with high-flow reagent water (Section 7.1) for rinsing.

6.2.4 Clean bench—class-100, for drying rinsed bottles.

6.2.5 Oven—stainless steel, in class-100 clean area, capable of maintaining ± 5°C in the 60–70°C temperature range.

6.3 Cold vapor atomic fluorescence spectrometer (CVAFS): The CVAFS system used may either be purchased from a supplier, or built in the laboratory from commercially available components.

6.3.1 Commercially available CVAFS—Tekran (Toronto, ON) Model 2500 CVAFS, or Brooks-Rand (Seattle, WA) Model III CVAFS, or equivalent.

6.3.2 Custom-built CVAFS (Reference 14). Figure 2 shows the schematic diagram. The system consists of the following:

6.3.2.1 Low-pressure 4–W mercury vapor lamp.

6.3.2.2 Far UV quartz flow-through fluorescence cell—12 mm × 12 mm × 45 mm, with a 10-mm path length (NSG Cells, or equivalent).

6.3.2.3 UV-visible photomultiplier (PMT)—sensitive to <230 nm. This PMT is isolated from outside light with a 253.7-nm interference filter (Oriel Corp., Stamford, CT, or equivalent).

6.3.2.4 Photometer and PMT power supply (Oriel Corp. or equivalent), to convert PMT output (nanoamp) to millivolts.

6.3.2.5 Black anodized aluminum optical block—holds fluorescence cell, PMT, and light source at perpendicular angles, and provides collimation of incident and fluorescent beams (Frontier Geosciences Inc., Seattle, WA, or equivalent).

6.3.2.6 Flowmeter—with needle valve capable of reproducibly keeping the carrier gas flow rate at 30 mL/min.

6.4 Hg purging system—Figure 2 shows the schematic diagram for the purging system. The system consists of the following:

6.4.1 Flow meter/needle valve—capable of controlling and measuring gas flow rate to the purge vessel at 350 ± 50 mL/min.

6.4.2 Fluoropolymer fittings—connections between components and columns are made using 6.4-mm OD fluoropolymer tubing and fluoropolymer friction-fit or threaded tubing connectors. Connections between components requiring mobility are made with 3.2-mm OD fluoropolymer tubing because of its greater flexibility.

6.4.3 Acid fume pretrap—10-cm long × 0.9-cm ID fluoropolymer tube containing 2–3 g of reagent grade, nonindicating, 8–14 mesh soda lime chunks, packed between wads of silanized glass wool. This trap is cleaned of Hg by placing on the output of a clean cold vapor generator (bubbler) and purging for 1 h with N_2 at 350 mL/min.

6.4.4 Cold vapor generator (bubbler)—200-mL borosilicate glass (15 cm high × 5.0 cm diameter) with standard taper 24/40 neck, fitted with a sparging stopper having a coarse glass frit that extends to within 0.2 cm of the bubbler bottom (Frontier Geosciences, Inc. or equivalent).

6.5 The dual-trap Hg(0) preconcentrating system.

6.5.1 Figure 2 shows the dual-trap amalgamation system (Reference 5).

6.5.2 Gold-coated sand traps—10-cm long × 6.5-mm OD × 4-mm ID quartz tubing. The tube is filled with 3.4 cm of gold-coated 45/60 mesh quartz sand (Frontier Geosciences Inc., Seattle, WA, or equivalent). The ends are plugged with quartz wool.

6.5.2.1 Traps are fitted with 6.5-mm ID fluoropolymer friction-fit sleeves for making connection to the system. When traps are not in use, fluoropolymer end plugs are inserted in trap ends to eliminate contamination.

6.5.2.2 At least six traps are needed for efficient operation, one as the "analytical" trap, and the others to sequentially collect samples.

6.5.3 Heating of gold-coated sand traps—To desorb Hg collected on a trap, heat for 3.0 min to 450–500 °C (a barely visible red glow when the room is darkened) with a coil consisting of 75 cm of 24-gauge Nichrome wire at a potential of 10–14 vac. Potential is applied and finely adjusted with an autotransformer.

6.5.4 Timers—The heating interval is controlled by a timer-activated 120-V outlet (Gralab, or equivalent), into which the heating coil autotransformer is plugged. Two timers are required, one each for the "sample" trap and the "analytical" trap.

6.5.5 Air blowers—After heating, traps are cooled by blowing air from a small

squirrel-cage blower positioned immediately above the trap. Two blowers are required, one each for the "sample" trap and the "analytical" trap.

6.6 Recorder—Any multi-range millivolt chart recorder or integrator with a range compatible with the CVAFS is acceptable. By using a two pen recorder with pen sensitivity offset by a factor of 10, the dynamic range of the system is extended to 10^3.

6.7 Pipettors—All-plastic pneumatic fixed-volume and variable pipettors in the range of 10 µL to 5.0 mL.

6.8 Analytical balance capable of weighing to the nearest 0.01 g.

7.0 Reagents and Standards

7.1 Reagent water—18-MΩ minimum, ultrapure deionized water starting from a prepurified (distilled, reverse osmosis, etc.) source. Water should be monitored for Hg, especially after ion exchange beds are changed.

7.2 Air—It is very important that the laboratory air be low in both particulate and gaseous mercury. Ideally, mercury work should be conducted in a new laboratory with mercury-free paint on the walls. Outside air, which is very low in Hg, should be brought directly into the class-100 clean bench air intake. If this is not possible, air coming into the clean bench can be cleaned for mercury by placing a gold-coated cloth prefilter over the intake.

7.2.1 Gold-coated cloth filter: Soak 2 m^2 of cotton gauze in 500 mL of 2% gold chloride solution at pH 7. In a hood, add 100 mL of 30% $NH_2OH{\bullet}HCl$ solution, and homogenize into the cloth with gloved hands. The material will turn black as colloidal gold is precipitated. Allow the mixture to set for several hours, then rinse with copious amounts of deionized water. Squeeze-dry the rinsed cloth, and spread flat on newspapers to air-dry. When dry, fold and place over the intake prefilter of the laminar flow hood.

Caution: Great care should be taken to avoid contaminating the laboratory with gold dust. This could cause interferences with the analysis if gold becomes incorporated into the samples or equipment. The gilding procedure should be done in a remote laboratory if at all possible.

7.3 Hydrochloric acid—trace-metal purified reagent-grade HCl containing less than 5 pg/mL Hg. The HCl should be preanalyzed for Hg before use.

7.4 Hydroxylamine hydrochloride—Dissolve 300 g of $NH_2OH{\bullet}HCl$ in reagent water and bring to 1.0 L. This solution may be purified by the addition of 1.0 mL of $SnCl_2$ solution and purging overnight at 500 mL/min with Hg-free N_2.

7.5 Stannous chloride—Bring 200 g of $SnCl_2{\bullet}2H_2O$ and 100 mL concentrated HCl to 1.0 L with reagent water. Purge overnight with mercury-free N_2 at 500 mL/min to remove all traces of Hg. Store tightly capped.

7.6 Bromine monochloride (BrCl)—In a fume hood, dissolve 27 g of reagent grade KBr in 2.5 L of low-Hg HCl. Place a clean magnetic stir bar in the bottle and stir for approximately 1 h in the fume hood. Slowly add 38 g reagent grade $KBrO_3$ to the acid while stirring. When all of the $KBrO_3$ has been added, the solution color should change from yellow to red to orange. Loosely cap the bottle, and allow to stir another hour before tightening the lid.

Warning: This process generates copious quantities of free halogens (Cl_2, Br_2, BrCl), which are released from the bottle. Add the $KBrO_3$ slowly in a fume hood!

7.7 Stock mercury standard—NIST-certified 10,000-ppm aqueous Hg solution (NIST–3133). This solution is stable at least until the NIST expiration date.

7.8 Secondary Hg standard—Add approx 0.5 L of reagent water and 5 mL of BrCl solution (Section 7.6) to a 1.00-L class A volumetric flask. Add 0.100 mL of the stock mercury standard (Section 7.7) to the flask and dilute to 1.00 L with reagent water. This solution contains 1.00 "µg/mL (1.00 ppm) Hg. Transfer the solution to a fluoropolymer bottle and cap tightly. This solution is considered stable until the NIST expiration date.

7.9 Working Hg standard—Dilute 1.00 mL of the secondary Hg standard (Section 7.8) to 100 mL in a class A volumetric flask with reagent water containing 0.5% by volume BrCl solution (Section 7.6). This solution contains 10.0 ng/mL and should be replaced monthly.

7.10 IPR and OPR solutions—Using the working Hg standard (Section 7.9), prepare IPR and OPR solutions at a concentration of 5 ng/L Hg in reagent water.

7.11 Nitrogen—Grade 4.5 (standard laboratory grade) nitrogen that has been further purified by the removal of Hg using a gold-coated sand trap.

7.12 Argon—Grade 5.0 (ultra high-purity, GC grade) that has been further purified by the removal of Hg using a gold-coated sand trap.

8.0 Sample Collection, Preservation, and Storage

8.1 Before samples are collected, consideration should be given to the type of data required, (i.e., dissolved or total), so that appropriate preservation and pretreatment steps can be taken. The pH of all aqueous samples must be tested immediately before aliquotting for processing or direct analysis to ensure the sample has been properly preserved.

8.2 Samples are collected into rigorously cleaned fluoropolymer bottles with fluoropolymer or fluoropolymer-lined caps. Borosilicate glass bottles may be used if Hg is the only target analyte. It is critical that the bottles have tightly sealing caps to avoid diffusion of atmospheric Hg through the threads (Reference 4). Polyethylene sample bottles must not be used (Reference 14).

8.3 Collect samples using guidance provided in the Sampling Method (Reference 9). Procedures in the Sampling Method are based on rigorous protocols for collection of samples for mercury (References 4 and 14).

Note: Discrete samplers have been found to contaminate samples with Hg at the ng/L level. Therefore, great care should be exercised if this type of sampler is used to collect samples. It may be necessary for the sampling team to use other means of sample collection if samples are found to be contaminated using the discrete sampler.

8.4 Sample filtration—For dissolved Hg, samples and field blanks are filtered through a 0.45 µm capsule filter (Section 6.1.3.1). The Sampling Method gives the filtering procedures.

8.5 Preservation—Samples are preserved by adding either 5mL/L of pretested 12N HCl or 5 mL/L BrCl solution. If a sample will also be used for the determination of methyl mercury, it should be preserved with 5 mL/L HCl solution only. Acid- and BrCl-preserved samples are stable for a minimum of 6 months.

8.5.1 Samples may be shipped to the laboratory unpreserved if they are (1) collected in fluoropolymer bottles, (2) filled to the top with no head space, (3) capped tightly, and (4) maintained at 0–4°C from the time of collection until preservation. The samples must be acid-preserved within 48 h after sampling.

8.5.2 Samples that are acid-preserved may lose Hg to coagulated organic materials in the water or condensed on the walls (Reference 15). The best approach is to add BrCl directly to the sample bottle at least 24 hours before analysis. If other Hg species are to be analyzed, these aliquot must be removed prior to the addition of BrCl. If BrCl cannot be added directly to the sample bottle, the bottle must be shaken vigorously prior to sub-sampling.

8.5.3 Handling of the samples in the laboratory should be undertaken in a mercury-free clean bench, after rinsing the outside of the bottles with reagent water and drying in the clean air hood.

Note: Due to the potential for contamination, it is recommended that filtration and preservation of samples be performed in the clean room in the laboratory. However, if circumstances in the field prevent overnight shipment of samples, samples should be filtered and preserved in a designated clean area in the field in accordance with the procedures given in Sampling Method 1669 (Reference 9).

8.6 Storage—Sample bottles should be stored in clean (new) polyethylene bags until sample analysis. Refrigeration at 0—4°C is not necessary once samples are preserved. If properly preserved, samples can be held up to 6 months before analysis.

9.0 Quality Control

9.1 Each laboratory that uses this Method is required to operate a formal quality assurance program (Reference 16). The minimum requirements of this program consist of an initial demonstration of laboratory capability, ongoing analysis of standards and blanks as a test of continued performance, and the analysis of matrix spikes (MS) and matrix spike duplicates (M.SD) to assess accuracy and precision. Laboratory performance is compared to established performance criteria to determine that the results of analyses meet the performance characteristics of the Method.

9.1.1 The analyst shall make an initial demonstration of the ability to generate acceptable accuracy and precision with this Method. This ability is established as described in Section 9.2.

9.1.2 In recognition of advances that are occurring in analytical technology, the

analyst is permitted certain options to improve results or lower the cost of measurements. These options include automation of the dual-amalgamation system, single-trap amalgamation (Reference 17), direct electronic data acquisition, calibration using gas-phase elemental Hg standards, changes in the bubbler design (including substitution of a flow-injection system), or changes in the detector (i.e., CVAAS) when less sensitivity is acceptable or desired. Changes in the principle of the determinative technique, such as the use of colorimetry, are not allowed. If an analytical technique other than the CVAFS technique specified in this Method is used, that technique must have a specificity for mercury equal to or better than the specificity of the technique in this Method.

9.1.2.1 Each time this Method is modified, the analyst is required to repeat the procedure in Section 9.2. If the change will affect the detection limit of the Method, the laboratory is required to demonstrate that the MDL (40 CFR Part 136, Appendix B) is lower than one-third the regulatory compliance level or lower than the MDL of this Method, whichever is higher. If the change will affect calibration, the analyst must recalibrate the instrument according to Section 10.

9.1.2.2 The laboratory is required to maintain records of modifications made to this Method. These records include the following, at a minimum:

9.1.2.2.1 The names, titles, addresses, and telephone numbers of the analyst(s) who performed the analyses and modification, and the quality control officer who witnessed and will verify the analyses and modification.

9.1.2.2.2 A narrative stating the reason(s) for the modification(s).

9.1.2.2.3 Results from all quality control (QC) tests comparing the modified method to this Method, including the following:

(a) Calibration (Section 10).

(b) Initial precision and recovery (Section 9.2).

(c) Analysis of blanks (Section 9.4).

(d) Matrix spike/matrix spike duplicate analysis (Section 9.3).

(e) Ongoing precision and recovery (Section 9.5).

(f) Quality control sample (Section 9.6).

(g) Method detection limit (Section 9.2.1).

9.1.2.2.4 Data that will allow an independent reviewer to validate each determination by tracking the instrument output to the final result. These data are to include the following:

(a) Sample numbers and other identifiers.

(b) Processing dates.

(c) Analysis dates.

(d) Analysis sequence/run chronology.

(e) Sample weight or volume.

(f) Copies of logbooks, chart recorder, or other raw data output.

(g) Calculations linking raw data to the results reported.

9.1.3 Analyses of MS and MSD samples are required to demonstrate the accuracy and precision and to monitor matrix interferences. Section 9.3 describes the procedure and QC criteria for spiking.

9.1.4 Analyses of blanks are required to demonstrate acceptable levels of contamination. Section 9.4 describes the procedures and criteria for analyzing blanks.

9.1.5 The laboratory shall, on an ongoing basis, demonstrate through analysis of the ongoing precision and recovery (OPR) sample and the quality control sample (QCS) that the system is in control. Sections 9.5 and 9.6 describe these procedures, respectively.

9.1.6 The laboratory shall maintain records to define the quality of the data that are generated. Sections 9.3.7 and 9.5.3 describe the development of accuracy statements.

9.1.7 The determination of Hg in water is controlled by an analytical batch. An analytical batch is a set of samples oxidized with the same batch of reagents, and analyzed during the same 12-hour shift. A batch may be from 1 to as many as 20 samples. Each batch must be accompanied by at least three bubbler blanks (Section 9.4), an OPR sample, and a QCS. In addition, there must be one MS and one MSD sample for every 10 samples (a frequency of 10%).

9.2 Initial demonstration of laboratory capability.

9.2.1 Method detection limit—To establish the ability to detect Hg, the analyst shall determine the MDL determined according to the procedure at 40 CFR 136, Appendix B using the apparatus, reagents, and standards that will be used in the practice of this Method. The laboratory must produce an MDL that is less than or equal to the MDL listed in Section 1.5 or one-third the regulatory compliance limit, whichever is greater. The MDL should be determined when a new operator begins work or whenever, in the judgment of the laboratory, a change in instrument hardware or operating conditions would dictate that the MDL be redetermined.

9.2.2 Initial precision and recovery (IPR)'To establish the ability to generate acceptable precision and recovery, the analyst shall perform the following operations:

9.2.2.1 Analyze four replicates of the IPR solution (5 ng/L, Section 7.10) according to the procedure beginning in Section 11.

9.2.2.2 Using the results of the set of four analyses, compute the average percent recovery (X), and the standard deviation of the percent recovery (s) for Hg.

9.2.2.3 Compare s and X with the corresponding limits for initial precision and recovery in Table 2. If s and X meet the acceptance criteria, system performance is acceptable and analysis of samples may begin. If, however, s exceeds the precision limit or X falls outside the acceptance range, system performance is unacceptable. Correct the problem and repeat the test (Section 9.2.2.1).

9.3 Matrix spike (MS) and matrix spike duplicate (MSD)—To assess the performance of the Method on a given sample matrix, the laboratory must spike, in duplicate, a minimum of 10% (1 sample in 10) from a given sampling site or, if for compliance monitoring, from a given discharge. Therefore, an analytical batch of 20 samples would require two pairs of MS/MSD samples (four spiked samples total).

9.3.1 The concentration of the spike in the sample shall be determined as follows:

9.3.1.1 If, as in compliance monitoring, the concentration of Hg in the sample is being checked against a regulatory compliance limit, the spiking level shall be at that limit or at 1–5 times the background concentration of the sample (as determined in Section 9.3.2), whichever is greater.

9.3.1.2 If the concentration of Hg in a sample is not being checked against a limit, the spike shall be at 1–5 times the background concentration or at 1–5 times the ML in Table 2, whichever is greater.

9.3.2 To determine the background concentration (B), analyze one sample aliquot from each set of 10 samples from each site or discharge according to the procedure in Section 11. If the expected background concentration is known from previous experience or other knowledge, the spiking level may be established a priori.

9.3.2.1 If necessary, prepare a standard solution to produce an appropriate level in the sample (Section 9.3.1).

9.3.2.2 Spike two additional sample aliquots with the spiking solution and analyze these aliquots as described in Section 11.1.2 to determine the concentration after spiking (A).

9.3.3 Calculate the percent recovery (R) in each aliquot using the following equation:

$$\%R = 100\frac{(A - B)}{T}$$

Where:

A = Measured concentration of analyte after spiking

B = Measured concentration of analyte before spiking

T = True concentration of the spiking

9.3.4 Compare percent recovery (R) with the QC acceptance criteria in Table 2.

9.3.4.1 If results of the MS/MSD are similar and fail the acceptance criteria, and recovery for the OPR standard (Section 9.5) for the analytical batch is within the acceptance criteria in Table 2, an interference is present and the results may not be reported for regulatory compliance purposes. If the interference can be attributed to sampling, the site or discharge should be resampled. If the interference can be attributed to a method deficiency, the analyst must modify the method, repeat the test required in Section 9.1.2, and repeat analysis of the sample and MS/MSD. However, when Method 1631 was written, there were no known interferences in the determination of Hg using this Method. If such a result is observed, the laboratory should investigate it thoroughly.

9.3.4.2 If the results of both the spike and the OPR test fall outside the acceptance criteria, the analytical system is judged to be not in control. The laboratory must identify and correct the problem and reanalyze the sample batch.

9.3.5 Relative percent difference between duplicates'Compute the relative percent difference (RPD) between the MS and MSD results according to the following equation using the concentrations found in the MS and MSD. Do not use the recoveries calculated in Section 9.3.3 for this calculation because the RPD is inflated when the background concentration is near the spike concentration.

$$RPD = 200 \times \frac{(|D1 - D2|)}{(D1 + D2)}$$

Where:

D1 = concentration of Hg in the MS sample
D2 = concentration of Hg in the MSD sample

9.3.6 The RPD for the MS/MSD pair must not exceed the acceptance criterion in Table 2. If the criterion is not met, the system is judged to be out of control. The problem must be identified and corrected immediately, and the analytical batch reanalyzed.

9.3.7 As part of the QC program for the laboratory, method precision and accuracy for samples should be assessed and records maintained. After analyzing five samples in which the recovery passes the test in Section 9.3.4, compute the average percent recovery (R_a) and the standard deviation of the percent recovery (s_r). Express the accuracy assessment as a percent recovery interval from $R_a - 2s_r$ to $R_a + 2s_r$. For example, if R_a = 90% and s_r = 10% for five analyses, the accuracy interval is expressed as 70—110%. Update the accuracy assessment regularly (e.g., after every five to ten new accuracy measurements).

9.4 Blanks—Blanks are critical to the reliable determination of Hg at low levels. The sections below give the minimum requirements for analysis of blanks. However, it is suggested that additional blanks be analyzed as necessary to pinpoint sources of contamination in, and external to, the laboratory.

9.4.1 Bubbler blanks—Bubbler blanks are analyzed to demonstrate freedom from system contamination. At least three bubbler blanks must be run per analytical batch. One bubbler blank must be analyzed following each OPR. The mean bubbler blank for an analytical batch, if within acceptance criteria, is subtracted from all raw data for that batch prior to the calculation of results.

9.4.1.1 Immediately after analyzing a sample for Hg, place a clean gold trap on the bubbler, purge and analyze the sample a second time using the procedure in Section 11, and determine the amount of Hg remaining in the system.

9.4.1.2 If the bubbler blank is found to contain more than 50 pg Hg, the system is out of control. The problem must be investigated and remedied, and the samples run on that bubbler must be reanalyzed. If the blanks from other bubblers contain less than 50 pg Hg, the data associated with those bubblers remain valid.

9.4.1.3 The mean result for all bubbler blanks (from bubblers passing the specification in Section 9.4.1.2) in an analytical batch (at least three bubbler blanks) is calculated at the end of the batch. The mean result must be <25 pg with a standard deviation of <10 pg for the batch to be considered valid. If the mean is <25 pg, the average peak measurement value is subtracted from all raw data before results are calculated.

9.4.1.4 If Hg in the bubbler blank exceeds the acceptance criteria in Section 9.4.1.3, the system is out of control, and the problem must be resolved and the samples reanalyzed. Usually, the bubbler blank is too high for one of the following reasons:

(a) Bubblers need rigorous cleaning;
(b) Soda-lime is contaminated; or
(c) Carrier gas is contaminated.

9.4.2 Reagent blanks—The Hg concentration in reagent blanks must be determined on solutions of reagents by adding these reagents to previously purged reagent water in the bubbler.

9.4.2.1 Reagent blanks are required when the batch of reagents (bromine monochloride plus hydroxylamine hydrochloride) are prepared, with verification in triplicate each month until a new batch of reagents is needed.

9.4.2.2 Add aliquots of BrCl (0.5 mL), NH_2OH (0.2 mL) and $SnCl_2$ (0.5 mL) to previously purged reagent water in the bubbler.

9.4.2.3 The presence of more than 25 pg of Hg indicates a problem with the reagent solution. The purging of certain reagent solutions, such as $SnCl_2$ or NH_2OH with mercury-free nitrogen or argon can reduce Hg to acceptable levels. Because BrCl cannot be purified, a new batch should be made from different reagents and should be tested for Hg levels if the level of Hg in the BrCl solution is too high.

9.4.3 Field blanks.

9.4.3.1 Analyze the field blank(s) shipped with each set of samples (samples collected from the same site at the same time, to a maximum of 10 samples). Analyze the blank immediately before analyzing the samples in the batch.

9.4.3.2 If Hg or any potentially interfering substance is found in the field blank at a concentration equal to or greater than the ML (Table 2), or greater than one-fifth the level in the associated sample, whichever is greater, results for associated samples may be the result of contamination and may not be reported for regulatory compliance purposes.

9.4.3.3 Alternatively, if a sufficient number of field blanks (three minimum) are analyzed to characterize the nature of the field blank, the average concentration plus two standard deviations must be less than the regulatory compliance limit or less than one-half the level in the associated sample, whichever is greater.

9.4.3.4 If contamination of the field blanks and associated samples is known or suspected, the laboratory should communicate this to the sampling team so that the source of contamination can be identified and corrective measures taken before the next sampling event.

9.4.4 Equipment blanks—Before any sampling equipment is used at a given site, the laboratory or cleaning facility is required to generate equipment blanks to demonstrate that the sampling equipment is free from contamination. Two types of equipment blanks are required: bottle blanks and sampler check blanks.

9.4.4.1 Bottle blanks—After undergoing the cleaning procedures in this Method, bottles should be subjected to conditions of use to verify the effectiveness of the cleaning procedures. A representative set of sample bottles should be filled with reagent water acidified to pH <2 and allowed to stand for a minimum of 24 h. Ideally, the time that the bottles are allowed to stand should be as close as possible to the actual time that the sample will be in contact with the bottle. After standing, the water should be analyzed for any signs of contamination. If a bottle shows contamination at or above the level specified for the field blank (Section 9.4.3), the problem must be identified, the cleaning procedures corrected or cleaning solutions changed, and all affected bottles recleaned.

9.4.4.2 Sampler check blanks—Sampler check blanks are generated in the laboratory or at the equipment cleaning facility by processing reagent water through the sampling devices using the same procedures that are used in the field (see Sampling Method). Therefore, the "clean hands/dirty hands" technique used during field sampling should be followed when preparing sampler check blanks at the laboratory or cleaning facility.

9.4.4.2.1 Sampler check blanks are generated by filling a large carboy or other container with reagent water (Section 7.1) and processing the reagent water through the equipment using the same procedures that are used in the field (see Sampling Method, Reference 9). For example, manual grab sampler check blanks are collected by directly submerging a sample bottle into the water, filling the bottle, and capping. Subsurface sampler check blanks are collected by immersing a submersible pump or intake tubing into the water and pumping water into a sample container.

9.4.4.2.2 The sampler check blank must be analyzed using the procedures in this Method. If mercury or any potentially interfering substance is detected in the blank at or above the level specified for the field blank (Section 9.4.3), the source of contamination or interference must be identified, and the problem corrected. The equipment must be demonstrated to be free from mercury and interferences before the equipment may be used in the field.

9.4.4.2.3 Sampler check blanks must be run on all equipment that will be used in the field. If, for example, samples are to be collected using both a grab sampling device and a subsurface sampling device, a sampler check blank must be run on both pieces of equipment.

9.5 Ongoing precision and recovery (OPR)—To demonstrate that the analytical system is within the performance criteria of this Method and that acceptable precision and accuracy is being maintained within each analytical batch, the analyst shall perform the following operations:

9.5.1 Analyze the OPR solution (5 ng/L, Section 7.10) followed by a bubbler blank prior to the analysis of each analytical batch according to the procedure beginning in Section 11. An OPR also must be analyzed at the end of an analytical run or at the end of each 12-hour shift. Subtract the peak height (or peak area) of the bubbler blank from the peak height (or area) of the OPR and calculate the concentration for the blank-subtracted OPR.

9.5.2 Compare the concentration recovery with the limits for ongoing precision and recovery in Table 2. If the recovery is in the range specified, the analytical system is control and analysis of samples and blanks may proceed. If, however, the concentration is not in the specified range, the analytical

process is not in control. Correct the problem and repeat the ongoing precision and recovery test. All reported results must be associated with an OPR that meets the Table 2 performance criteria at the beginning and end of each batch.

9.5.3 The laboratory should add results that pass the specification in Section 9.5.2 to IPR and previous OPR data and update QC charts to form a graphic representation of continued laboratory performance. The laboratory should also develop a statement of laboratory data quality by calculating the average percent recovery (R_s) and the standard deviation of the percent recovery (s_r). Express the accuracy as a recovery interval from R_s—$2s_r$ to R_s + $2s_r$. For example, if R_s = 95% and s_r = 5%, the accuracy is 85–105%.

9.6 Quality control sample (QCS)—The laboratory must obtain a QCS from a source different from the Hg used to produce the standards used routinely in this Method (Sections 7.7–7.10). The QCS should be analyzed as an independent check of system performance

9.7 Depending on specific program requirements, the laboratory may be required to analyze field duplicates and field spikes collected to assess the precision and accuracy of the sampling, sample transportation, and storage techniques. The relative percent difference (RPD) between field duplicates should be less than 20%. If the RPD of the field duplicates exceeds 20%, the laboratory should communicate this to the sampling team so that the source of error can be identified and corrective measures taken before the next sampling event.

10.0 Calibration and Standardization

10.1 Establish the operating conditions necessary to purge Hg from the bubbler and to desorb Hg from the traps in a sharp peak. Further details for operation of the purge and trap and desorption and analysis systems is given in Sections 11.3 and 11.4, respectively. The entire system is calibrated using standards traceable to NIST standard reference material, as follows:

10.1.1 Calibration.

10.1.1.1 The calibration must contain five or more non-zero points and the results of analysis of two bubbler blanks. The lowest calibration point must be at the Minimum Level (ML).

10.1.1.2 Standards are analyzed by the addition of aliquots of the Hg working standard (Section 7.9) directly into the bubblers. Add a 50 µL aliquot of the working standard and 0.5 mL $SnCl_2$ to the bubbler. Swirl to produce a standard of 0.5 ng/L. Purge under the optimum operating conditions (Section 10.1). Sequentially follow with aliquots of 0.1, 0.5, 2.5, and 10 mL of the working standard plus 0.5 mL $SnCl_2$ to produce standards of 1, 5, 25, and 100 ng/L.

10.1.1.3 For each point, subtract the mean peak height or area of the bubbler blanks for the analytical batch from the peak height or area for the standard. Calculate the calibration factor (CF_x) for Hg in each of the five standards using the mean bubbler-blank-subtracted peak height or area and the following equation:

$$CF_X = \frac{(A_X) - (A_{BB})}{(C_X)}$$

Where:

A_X=peak height or area for Hg in standard

A_{BB}peak height or area for Hg in bubbler blank)

C_X=concentration of standard analyzed (ng/L)

10.1.1.4 Calculate the mean calibration factor (CF_m), the standard deviation of the calibration factor (SD), and the relative standard deviation (RSD) of the calibration factor, where RSD = 100 x SD/CF_m.

10.1.1.5 If RSD ≤ 15%, calculate the recovery for the lowest standard (0.5 ng/L) using CF_m. If the RSD ≤ 15% and the recovery of the lowest standard is in the range of 75–125%, the calibration is acceptable and CF_m may be used to calculate the concentration of Hg in samples. If RSD > 15% or if the recovery of the lowest standard is not in the range of 75–125%, recalibrate the analytical system and repeat the test.

10.2 Ongoing precision and recovery—Perform the ongoing precision and recovery test (Section 9.5) to verify calibration prior to and after analysis of samples in each analytical batch.

11.0 Procedure

Note: The following procedures for analysis of samples are provided as guidelines. Laboratories may find it necessary to optimize the procedures, such as drying time or potential applied to the Nichrome wires, for the laboratory's specific instrumental set-up.

11.1 Sample Preparation.

11.1.1 Pour a 100-mL aliquot from a thoroughly shaken, acidified sample, into a 125-mL fluoropolymer bottle. If BrCl was not added as a preservative (Section 8.5), add the amount of BrCl solution (Section 7.6) given below, cap the bottle, and digest at room temperature for a 12 h minimum.

11.1.1.1 For clear water and filtered samples, add 0.5 mL of BrCl; for brown water and turbid samples, add 1.0 mL of BrCl. If the yellow color disappears because of consumption by organic matter or sulfides, more BrCl should be added until a permanent (12-h) yellow color is obtained.

11.1.1.2 Some highly organic matrices, such as sewage effluent, will require high levels of BrCl (i.e., 5 mL/100 mL of sample), and longer oxidation times, or elevated temperatures (i.e.; place sealed bottles in oven at 50°C for 6 h). The oxidation always must be continued until a permanent yellow color remains.

11.1.2 Matrix spikes and matrix spike duplicates—For every 10 or fewer samples, pour two additional 100-mL aliquots from a randomly selected sample, spike at the level specified in Section 9.3, and process in the same manner as the samples. There should be 2 MS/MSD pairs for each analytical batch of 20 samples.

11.2 Hg reduction and purging—Place 100 mL of reagent water in each bubbler, add 1.0 mL of $SnCl_2$, and purge with Hg-free N_2 for 20 min at 300-400 mL/min (Figure 1).

11.2.1 Connect a gold sand trap to the output of the soda lime pretrap, and purge the water another 20 min to obtain a bubbler blank.

11.2.2 Add 0.2 mL of 30% N H2OH to the BrCl-oxidized sample in the 125-mL fluoropolymer bottle. Cap the bottle and swirl the sample. The yellow color will disappear, indicating the destruction of the BrCl. Allow the sample to react for 5 min with periodic swirling to be sure that no traces of halogens remain.

Note: Purging of free halogens onto the gold trap will result in damage to the trap and low or irreproducible results.

11.2.3 After discarding the water from the standards, connect a fresh trap to the bubbler, pour the reduced sample into the bubbler, add 0.5 mL of 20% $SnCl_2$ solution, and purge the sample onto a gold sand trap with N_2 for 20 min.

11.2.4 When analyzing Hg samples, the recovery is quantitative, and organic interferents are destroyed. Thus, standards, bubbler blanks, and small amounts of high-level samples may be run directly in the water of previously purged samples. After very high samples, a small degree of carryover (<0.01%) may occur. Bubblers that contain such samples should be blanked prior to proceeding with low level samples.

11.3 Desorption of Hg from the gold trap.

11.3.1 Remove the (sample) trap from the bubbler, place the Nichrome wire coil around the trap and connect the trap into the analyzer train between the incoming Hg-free argon and the second gold-coated (analytical) sand trap (Figure 2).

11.3.2 Pass argon through the sample and analytical traps at a flow rate of approximately 30 mL/min for approximately 2 min to drive off condensed water vapor.

11.3.3 Apply power to the coil around the sample trap for 3 minutes to thermally desorb the Hg (as Hg(0)) from the sample trap onto the analytical trap.

11.3.4 After the 3-min desorption time, turn off the power to the Nichrome coil, and cool the sample trap using the cooling fan.

11.3.5 Turn on the chart recorder or other data acquisition device to start data collection, and apply power to the Nichrome wire coil around the analytical trap. Heat the analytical trap for 3 min (1 min beyond the point at which the peak returns to baseline).

11.3.6 Stop data collection, turn off the power to the Nichrome coil, and cool the analytical trap to room temperature using the cooling fan.

11.3.7 Place the next sample trap in line and proceed with analysis of the next sample.

Note: Do not heat a sample trap while the analytical trap is still warm; otherwise, the analyte may be lost by passing through the analytical trap.

11.4 Peaks generated using this technique should be very sharp and almost symmetrical. Mercury elutes at approximately 1 minute and has a width at half-height of about 5 seconds.

11.4.1 Broad or asymmetrical peaks indicate a problem with the desorption train, such as improper gas flow rate, water vapor on the trap(s), or an analytical trap damaged by chemical fumes or overheating.

11.4.2 Damage to an analytical trap is also indicated by a sharp peak, followed by a small, broad peak.

11.4.3 If the analytical trap has been damaged, the trap and the fluoropolymer tubing downstream from it should be discarded because of the possibility of gold migration onto downstream surfaces.

11.4.4 Gold-coated sand traps should be tracked by unique identifiers so that any trap producing poor results can be quickly recognized and discarded.

12.0 Data Analysis and Calculations

12.1 Calculate the mean peak height or area for bubbler blanks, "BB" (n = at least 3).

12.2 Calculate the concentration of Hg in ng/L (parts-per-trillion; ppt) in each sample according to the following equation:

$$[Hg](ng/L) = \frac{A_s - A_{BB}}{CF_m \times V_s}$$

where:

A_s = peak height (or area) for Hg in sample

A_{BB} = peak height (or area) for Hg in bubbler blank

CF_m = mean calibration factor (Section 10.1.1.5)

V_s = sample volume in liters

12.3 Calculate the concentration of Hg in the reagent blank (C_{RB}), in ng/L, using the equation in Section 12.2 and substituting the peak height or area resulting from the reagent blank for A_s. If the Hg in the reagent blank is attributable to Hg in the BrCl, correct the concentration of Hg in the reagent blank by the volume of BrCl used for the particular sample (Section 11.1.1.2) using the following equation:

$$C_{RB} = \frac{V_{BS}}{V_{VBRB}}$$

where:

V_{BS} = volume of BrCl solution used in sample (Section 11.1.1.2)

V_{BRB} = volume of BrCl solution used in reagent blank (Section 9.4.2.2)

12.4 Reporting

12.4.1 Report results for Hg at or above the ML, in ng/L, to three significant figures. Report results for Hg in samples below the ML as <0.5 ng/L, or as required by the regulatory authority or in the permit. Report results for Hg in reagent blanks at or above the ML, in ng/L, to three significant figures. Report results for Hg in reagent blanks below the ML but at or above the MDL to two significant figures. Report results for Hg not detected in reagent blanks as > 0.2 ng/L, or as required by the regulatory authority or in the permit.

12.4.2 Report results for Hg in samples and reagent blanks separately, unless otherwise requested or required by a regulatory authority or in a permit. If blank correction is requested or required, subtract the concentration of Hg in the reagent blank from the concentration of Hg in the sample to obtain the net sample Hg concentration.

12.4.3 If the laboratory achieved an MDL lower than 0.2 ng/L (Section 1.5), a new ML may be calculated by multiplying the laboratory-determined MDL by 3.18 and rounding the result to the number nearest to (1, 2, or 5) × 10^n, where n is an integer. Results below these levels should be reported as above using the lower MDL and ML.

13.0 Method Performance

13.1 This method was tested in 12 laboratories using reagent water, freshwater, marine water and effluent (Reference 18). The quality control acceptance criteria listed in Table 2 were verified by data gathered in the interlaboratory study, and the method detection limit (MDL) given in Section 1.5 was verified in all 12 laboratories. In addition, the techniques in this Method have been intercompared with other techniques for low-level mercury determination in water in a variety of studies, including ICES–5 (Reference 19) and the International Mercury Speciation Intercomparison Exercise (Reference 20).

13.2 Precision and recovery data for reagent water, freshwater, marine water, and secondary effluent are given in Table 3.

14.0 Pollution Prevention

14.1 Pollution prevention encompasses any technique that reduces or eliminates the quantity or toxicity of waste at the point of generation. Many opportunities for pollution prevention exist in laboratory operation. EPA has established a preferred hierarchy of environmental management techniques that places pollution prevention as the management option of first choice. Whenever feasible, laboratory personnel should use pollution prevention techniques to address their waste generation. When wastes cannot be reduced feasibly at the source, the Agency recommends recycling as the next best option. The acids used in this Method should be reused as practicable by purifying by electrochemical techniques. The only other chemicals used in this Method are the neat materials used in preparing standards. These standards are used in extremely small amounts and pose little threat to the environment when managed properly. Standards should be prepared in volumes consistent with laboratory use to minimize the disposal of excess volumes of expired standards.

14.2 For information about pollution prevention that may be applied to laboratories and research institutions, consult *Less is Better: Laboratory Chemical Management for Waste Reduction*, available from the American Chemical Society's Department of Governmental Relations and Science Policy, 1155 16th Street NW, Washington DC 20036, 202/872–4477.

15.0 Waste Management

15.1 The laboratory is responsible for complying with all Federal, State, and local regulations governing waste management, particularly hazardous waste identification rules and land disposal restrictions, and for protecting the air, water, and land by minimizing and controlling all releases from fume hoods and bench operations. Compliance with all sewage discharge permits and regulations is also required.

15.2 Acids, samples at pH <2, and BrCl solutions must be neutralized before being disposed of, or must be handled as hazardous waste.

15.3 For further information on waste management, consult *Less is Better: Laboratory Chemical Management for Waste Reduction*, both available from the American Chemical Society's Department of Government Relations and Science Policy, 1155 16th Street NW, Washington, DC 20036.

17.0 Glossary

The definitions and purposes below are specific to this Method, but have been conformed to common usage as much as possible.

17.1 *Ambient Water*—Waters in the natural environment (e.g., rivers, lakes, streams, and other receiving waters), as opposed to effluent discharges.

17.2 *Analytical Batch*—A batch of up to 20 samples that are oxidized with the same batch of reagents and analyzed during the same 12-hour shift. Each analytical batch must also include at least three bubbler blanks, an OPR, and a QCS. In addition, MS/MSD samples must be prepared at a frequency of 10% per analytical batch (one MS/MSD for every 10 samples).

17.3 *Bubbler Blank*—Analyzed to demonstrate freedom from system contamination. Immediately after analyzing a sample, water in the bubbler is purged and analyzed using the same procedure as for the samples to determine Hg. The blank is somewhat different between days, and a minimum of three bubbler blanks must be analyzed per analytical batch. The average of the results for the three bubbler blanks is subtracted from the result of analysis of each sample to produce a final result.

17.4 *Intercomparison Study*—An exercise in which samples are prepared and split by a reference laboratory, then analyzed by one or more testing laboratories and the reference laboratory. The intercomparison, with a reputable laboratory as the reference laboratory, serves as the best test of the precision and accuracy of the analyses at natural environmental levels.

17.5 *Matrix Spike (MS) and Matrix Spike Duplicate (MSD)*—Aliquots of an environmental sample to which known quantities of the analyte(s) of interest is added in the laboratory. The MS and MSD are analyzed exactly like a sample. Their purpose is to quantify the bias and precision caused by the sample matrix. The background concentrations of the analytes in the sample matrix must be determined in a separate aliquot and the measured values in the MS and MSD corrected for these background concentrations.

17.6 *May*—This action, activity, or procedural step is allowed but not required.

17.7 *May not*—This action, activity, or procedural step is prohibited.

17.8 *Minimum Level (ML)*—The lowest level at which the entire analytical system must give a recognizable signal and acceptable calibration point for the analyte. It is equivalent to the concentration of the lowest calibration standard, assuming that all method-specified sample weights, volumes, and cleanup procedures have been employed. The ML is calculated by multiplying the MDL by 3.18 and rounding the result to the number nearest to (1, 2, or 5) – 10^n, where n is an integer.

17.9 *Must*—This action, activity, or procedural step is required.

17.10 *Quality Control Sample (QCS)*—A sample containing Hg at known concentrations. The QCS is obtained from a source external to the laboratory, or is prepared from a source of standards different from the source of calibration standards. It is used as an independent check of instrument calibration.

17.11 *Reagent Water*—Prepared from 18 MΩ ultrapure deionized water starting from a prepurified source. Reagent water is used to wash bottles, as trip and field blanks, and in the preparation of standards and reagents.

17.12 *Regulatory Compliance Limit*—A limit on the concentration or amount of a pollutant or contaminant specified in a nationwide standard, in a permit, or otherwise established by a regulatory authority.

17.13 *Shall*—This action, activity, or procedure is required.

17.14 *Should*—This action, activity, or procedure is suggested, but not required.

17.15 *Stock Solution*—A solution containing an analyte that is prepared from a reference material traceable to EPA, NIST, or a source that will attest to the purity and authenticity of the reference material.

17.16 *Ultraclean Handling*—A series of established procedures designed to ensure that samples are not contaminated during sample collection, storage, or analysis.

18.0 *Tables and Figures*

TABLE 1.—LOWEST AMBIENT WATER QUALITY CRITERION FOR MERCURY AND THE METHOD DETECTION LIMIT AND MINIMUM LEVEL OF QUANTITATION FOR EPA METHOD 1631

Metal	Lowest ambient water quality criterion [1]	Method detection limit (MDL) and minimum level (ML)	
		MDL[2]	ML[3]
Mercury (Hg)	1.8 ng/L	0.2 ng/L	0.5 ng/L

[1] Lowest water quality criterion for the Great Lakes System (60 FR 15366, March 23, 1995). The lowest Nationwide criterion is 12 ng/L (40 CFR 131.36).
[2] Method detection limit (40 CFR 136, Appendix B).
[3] Minimum level of quantitation (see Glossary).

TABLE 2.—QUALITY CONTROL ACCEPTANCE CRITERIA FOR PERFORMANCE TESTS IN EPA METHOD 1631

Acceptance criteria	Section	Limit (%)
Initial precision and recovery (IPR)	9.2.2	
Precision (s)	9.2.2.3	21
Recovery (X)	9.2.2.3	79–121
Ongoing precision and recovery (OPR)	9.5.2	77–123
Matrix spike/matrix spike duplicate (MS/MSD)	9.3	
Recovery	9.3.4	75–125
Relative percent difference (RPD)	9.3.5	24

TABLE 3.—PRECISION AND RECOVERY FOR REAGENT WATER, FRESH WATER, MARINE WATER, AND EFFLUENT WATER USING METHOD 1631

Matrix	*Mean recovery (%)	*Precision (% RSD)
Reagent water	98.0	5.6
Fresh water (filtered)	90.4	8.3
Marine water (filtered)	92.3	4.7
Marine water (unfiltered)	88.9	5.0
Secondary effluent (filtered)	90.7	3.0
Secondary effluent (unfiltered)	92.8	4.5

*Mean percent recoveries and RSDs are based on expected Hg concentrations.

Title 3—

The President

Proclamation 7098 of May 21, 1998

National Maritime Day, 1998

By the President of the United States of America

A Proclamation

The United States is and has always been a maritime Nation. Our history is tied to the sea—from the Santa Maria to the Mayflower, from clipper ships to ocean liners, from the Liberty Ships of World War II to the huge, efficient containerships of the 1990s—and our development as a Nation has paralleled the growth of our waterborne commerce.

As we look forward to the challenges of the 21st century, we continue to rely on our Nation's maritime industry and the U.S. Merchant Marine to keep America competitive in an increasingly global economy. Ships and barges carry more than one billion tons of commercial cargo annually between ports within our Nation. Internationally, more than 95 percent of our imports and exports by weight are transported on water—a total of more than one billion metric tons of cargo each year.

We also depend on America's maritime industry and Merchant Marine to fill a crucial role in protecting our national interests and the security of our allies. Throughout our history, in times of conflict or crisis, the owners, operators, and crews of U.S.-flag commercial vessels have provided vital sealift capability in support of our Armed Forces, advancing defense, peacekeeping, and humanitarian missions across the globe.

Our maritime industry has made many important contributions to the economic strength and defense capability of our Nation, and my Administration has worked with the Congress to implement new approaches to ensure the industry's continued viability. Our National Shipbuilding Initiatives are helping to improve the competitiveness of America's maritime industry by seeking to eliminate foreign subsidies, assisting the industry's international marketing efforts, eliminating unnecessary government regulations, and enhancing private sector financing of shipbuilding through Federal loan guarantees. Under the Maritime Security Program, the Federal Government contracts with owners and operators of U.S.-flag vessels to supplement our military sealift capability and gains access to a fleet of modern commercial ships and the sophisticated intermodal transportation system that supports it. Together, these programs protect our Nation's economic interests and our national security by ensuring that U.S.-flag vessels will always sail in the sea lanes of the world.

In recognition of the importance of the U.S. Merchant Marine, the Congress, by a joint resolution approved May 20, 1933, has designated May 22 as "National Maritime Day" and has authorized and requested the President to issue annually a proclamation calling for its appropriate observance.

NOW, THEREFORE, I, WILLIAM J. CLINTON, President of the United States of America, do hereby proclaim May 22, 1998, as National Maritime Day. I urge all Americans to observe this day with appropriate programs, ceremonies, and activities and by displaying the flag of the United States at their homes and in their communities. I also request that all ships sailing under the American flag dress ship on that day.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-first day of May, in the year of our Lord nineteen hundred and ninety-eight, and of the Independence of the United States of America the two hundred and twenty-second.

William J. Clinton

ENERGY DEPARTMENT
Federal Energy Regulatory Commission
Natural Gas Policy Act:
Interstate natural gas pipelines—
Business practice standards; published 4-23-98

ENVIRONMENTAL PROTECTION AGENCY
Air quality implementation plans; approval and promulgation; various States:
Missouri; published 4-24-98
Air quality implementation plans; approval and promulgation; various States; air quality planning purposes; designation of areas:
Ohio et al.; published 3-26-98

FEDERAL COMMUNICATIONS COMMISSION
Common carrier services:
Telecommunications Act of 1996; implementation—
Customer proprietary network information and other customer information; telecommunications carriers' use; published 4-24-98

LABOR DEPARTMENT
Mine Safety and Health Administration
Coal, metal, and nonmetal mine safety and health:
Roof and rock bolts and accessories; safety standards
Correction; published 5-26-98

TRANSPORTATION DEPARTMENT
Federal Aviation Administration
Airmen certification:
Pilot, flight instructor, ground instructor, and pilot school certification rules; clarifying amendments and editorial changes; published 4-23-98
Airworthiness directives:
AERMACCI S.p.A.; published 4-9-98
Allison Engine Co.; published 5-8-98
Industrie Aeronautiche e Meccaniche Model Piaggio S.p.A.; published 4-9-98
New Piper Aircraft, Inc.; published 4-15-98
Stemme GmbH; published 4-9-98
Class D airspace; published 2-25-98

COMMENTS DUE NEXT WEEK

AGRICULTURE DEPARTMENT
Agricultural Marketing Service
Nectarines and peaches grown in California; comments due by 6-1-98; published 4-1-98
Onions grown in—
Idaho and Oregon; comments due by 6-1-98; published 5-15-98

AGRICULTURE DEPARTMENT
Animal and Plant Health Inspection Service
Livestock and poultry disease control:
Brucellosis; increased indemnity for cattle and bison; comments due by 6-1-98; published 3-31-98
Plant-related quarantine, foreign:
Rhododendron established in growing media; importation; comments due by 6-1-98; published 4-30-98

AGRICULTURE DEPARTMENT
Commodity Credit Corporation
Loan and purchase programs:
Conservation farm option program; comments due by 6-1-98; published 4-2-98

AGRICULTURE DEPARTMENT
Food Safety and Inspection Service
Meat and poultry inspection:

Product processing categories; policy clarification; comments due by 6-1-98; published 4-1-98

AGRICULTURE DEPARTMENT
Freedom of Information Act; implementation; comments due by 6-3-98; published 5-4-98

COMMERCE DEPARTMENT
National Oceanic and Atmospheric Administration
Endangered and threatened species:
Johnson's seagrass; comments due by 6-4-98; published 4-20-98
Fishery conservation and management:
Alaska; fisheries of Exclusive Economic Zone—
Scallop; comments due by 6-1-98; published 3-31-98
Scallop; comments due by 6-1-98; published 4-16-98
Shortraker/rougheye rockfish; comments due by 6-1-98; published 4-2-98
Highly migratory species fisheries—
Vessel monitoring systems requirements; implementation options; comments due by 6-1-98; published 4-17-98
West Coast States and Western Pacific fisheries—
Pacific Coast groundfish; comments due by 6-5-98; published 5-15-98

COMMODITY FUTURES TRADING COMMISSION
Practice and procedure:
Miscellaneous amendments; comments due by 6-2-98; published 4-3-98

CONSUMER PRODUCT SAFETY COMMISSION
Poison prevention packaging:
Child-resistant packaging requirements—
Minoxidil preparations with more than 14 mg of minoxidil per package; comments due by 6-1-98; published 3-17-98

DEFENSE DEPARTMENT
Vocational rehabilitation and education:
Reservists education—
Monthly verification of enrollment and other reports; comments due by 6-1-98; published 3-31-98

DEFENSE DEPARTMENT
Navy Department
Acquisition regulations:
Shipbuilding contracts; price adjustments; comments due by 6-1-98; published 5-1-98

EDUCATION DEPARTMENT
Elementary and secondary education:
Elementary and Secondary Education Act; implementation—
Helping disadvanaged children meet high standards; comments due by 6-1-98; published 3-31-98

ENVIRONMENTAL PROTECTION AGENCY
Air pollutants, hazardous; national emission standards:
Halogenated solvent cleaning; temporary stay extension; comments due by 6-4-98; published 5-5-98
Air pollution; standards of performance for new stationary sources:
Dupont test program for hydrogen-fueled flares; comments due by 6-3-98; published 5-4-98
Air programs:
Accidental release prevention—
Risk management programs; comments

due by 6-1-98; published 4-17-98

Air quality implementation plans; approval and promulgation; various States:

California; comments due by 6-1-98; published 4-30-98

Connecticut et al.; comments due by 6-1-98; published 4-30-98

New York; comments due by 6-1-98; published 4-30-98

Hazardous waste program authorization:

Oklahoma; comments due by 6-1-98; published 4-30-98

Hazardous waste program authorizations:

Oklahoma; comments due by 6-1-98; published 4-30-98

Hazardous waste:

Identification and listing—

Exclusions; comments due by 6-1-98; published 4-15-98

Recycled used oil management standards; comments due by 6-5-98; published 5-6-98

Recycled used oil management standards; comments due by 6-5-98; published 5-6-98

Pesticides; tolerances in food, animal feeds, and raw agricultural commodities:

Propiconazole; comments due by 6-2-98; published 4-3-98

Practice and procedure:

Civil penalties administrative assessment, compliance or corrective action orders issuance, and permits revocation, termination, or suspension; comments due by 6-5-98; published 5-6-98

Water pollution control:

Water quality standards—

Alabama; comments due by 6-3-98; published 5-13-98

Polychlorinated biphenyls (PCBs); priority toxic pollutants numeric criteria; States' compliance; comments due by 6-1-98; published 4-2-98

FEDERAL COMMUNICATIONS COMMISSION

Common carrier services:

Operations support systems, interconnection, and operator services and directory assistance; performance measurements and reporting requirements; comments due by 6-1-98; published 5-15-98

Radio stations; table of assignments:

Idaho; comments due by 6-1-98; published 4-21-98

New Mexico; comments due by 6-1-98; published 4-21-98

CFR CHECKLIST

This checklist, prepared by the Office of the Federal Register, is published weekly. It is arranged in the order of CFR titles, stock numbers, prices, and revision dates.

An asterisk (*) precedes each entry that has been issued since last week and which is now available for sale at the Government Printing Office.

A checklist of current CFR volumes comprising a complete CFR set, also appears in the latest issue of the LSA (List of CFR Sections Affected), which is revised monthly.

The CFR is available free on-line through the Government Printing Office's GPO Access Service at http://www.access.gpo.gov/nara/cfr/index.html. For information about GPO Access call the GPO User Support Team at 1-888-293-6498 (toll free) or 202-512-1530.

The annual rate for subscription to all revised paper volumes is $951.00 domestic, $237.75 additional for foreign mailing.

Mail orders to the Superintendent of Documents, Attn: New Orders, P.O. Box 371954, Pittsburgh, PA 15250–7954. All orders must be accompanied by remittance (check, money order, GPO Deposit Account, VISA, Master Card, or Discover). Charge orders may be telephoned to the GPO Order Desk, Monday through Friday, at **(202) 512–1800** from 8:00 a.m. to 4:00 p.m. eastern time, or FAX your charge orders to **(202) 512-2250**.

Complete set (one-time mailing)		264.00	1996

[1] Because Title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.

[2] The July 1, 1985 edition of 32 CFR Parts 1–189 contains a note only for Parts 1–39 inclusive. For the full text of the Defense Acquisition Regulations in Parts 1–39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[3] The July 1, 1985 edition of 41 CFR Chapters 1–100 contains a note only for Chapters 1 to 49 inclusive. For the full text of procurement regulations in Chapters 1 to 49, consult the eleven CFR volumes issued as of July 1, 1984 containing those chapters.

[4] No amendments to this volume were promulgated during the period Apr. 1, 1990 to Mar. 31, 1997. The CFR volume issued April 1, 1990, should be retained.

[5] No amendments to this volume were promulgated during the period July 1, 1996 to June 30, 1997. The volume issued July 1, 1996, should be retained.

[6] No amendments to this volume were promulgated during the period January 1, 1997 through December 31, 1997. The CFR volume issued as of January 1, 1997 should be retained.

Public Laws

105th Congress, 2nd Session, 1998

Pamphlet prints of public laws, often referred to as slip laws, are the initial publication of Federal laws upon enactment and are printed as soon as possible after approval by the President. Legislative history references appear on each law. Subscription service includes all public laws, issued irregularly upon enactment, for the 105th Congress, 2nd Session, 1998.

Individual laws also may be purchased from the Superintendent of Documents, U.S. Government Printing Office. Prices vary. See Reader Aids Section of the Federal Register for announcements of newly enacted laws or access the online database at http://www.access.gpo.gov/nara/index.html

Briefings on how to use the Federal Register
For information on briefings in Washington, DC, and Chicago, IL, see announcement on the inside cover of this issue.

Now Available Online via
GPO Access

Free online access to the official editions of the *Federal Register, the Code of Federal Regulations* and other Federal Register publications is available on *GPO Access*, a service of the U.S. Government Printing Office at:

http://www.access.gpo.gov/nara/index.html

For additional information on ***GPO Access*** products, services and access methods, see page II or contact the *GPO Access* User Support Team via:

- ★ Phone: toll-free: 1-888-293-6498
- ★ Email: gpoaccess@gpo.gov

The **FEDERAL REGISTER** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see http://www.nara.gov/fedreg.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

GPO Access users can choose to retrieve online **Federal Register** documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the **Federal Register** at http://www.access.gpo.gov/nara. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov, or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512–1262; or call (202) 512–1530 or 1–888–293–6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $8.00 for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 63 FR 12345.

Printed on recycled paper containing 100% post consumer waste

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

Title 3—

The President

Proclamation 7099 of May 22, 1998

Prayer For Peace, Memorial Day, 1998

By the President of the United States of America

A Proclamation

Today Americans live in a time of great hope. Our Nation is free, prosperous, and at peace. While very real dangers and problems still exist in the world, the Cold War is over, democracy is sweeping the globe, and old adversaries are forming new partnerships.

But the blessings we enjoy today are not the happy accidents of history; they are the culmination of promises kept by generations of young Americans and paid for by their courage and sacrifice. The promise of freedom articulated in our Declaration of Independence was made real by a ragtag army of brave Americans who were prepared to die for their convictions. The promise of unity was kept during the Civil War by thousands of Americans, black and white, who were willing to fight to preserve our Union. The promise of democracy was kept by the hundreds of thousands of Americans who fought and died in World War I, World War II, Korea, Vietnam, and the Persian Gulf. On home soil and in foreign lands, lost at sea or brought down from the skies, our young men and women in uniform have given their lives to keep their promise to America: to defend our freedom, to preserve our values, and to advance the ideals of democracy.

On this Memorial Day, we, too, have promises to keep. We remember and honor all those gallant Americans who, in the eloquent words of President Lincoln, "gave the last full measure of devotion" for the well-being of our Nation and their fellow citizens. We express our profound sympathy and gratitude to the families who have lost their sons and daughters in service to America. We promise to keep faith with all those who have died for our country by remaining vigilant in our defense of freedom and democracy. And we promise always to work for permanent peace in the world so that a new generation of Americans will never have to know the horrors of war.

In respect and recognition of the courageous men and women to whom we pay tribute, the Congress, by joint resolution approved on May 11, 1950 (64 Stat. 158), has requested the President to issue a proclamation calling upon the people of the United States to observe each Memorial Day as a day of prayer for permanent peace and designating a period on that day when the American people might unite in prayer.

NOW, THEREFORE, I, WILLIAM J. CLINTON, President of the United States of America, do hereby proclaim Memorial Day, May 25, 1998, as a day of prayer for permanent peace, and I designate the hour beginning at 3:00 p.m. EDT of that day as a time to join in prayer. I urge the press, radio, television, and all other information media to take part in this observance.

I also request the Governors of the United States and the Commonwealth of Puerto Rico, and the appropriate officials of all units of government, to direct that the flag be flown at half-staff during this Memorial Day on all buildings, grounds, and naval vessels throughout the United States and in all areas under its jurisdiction and control, and I request the people of the United States to display the flag at half-staff from their homes for the customary forenoon period.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-second day of May, in the year of our Lord nineteen hundred and ninety-eight, and of the Independence of the United States of America the two hundred and twenty-second.

William J. Clinton

Rules and Regulations

Federal Register
Vol. 63, No. 101
Wednesday, May 27, 1998

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 890

RIN 3206–AI05

Federal Employees Health Benefits Program: Removal of Minimum Salary Requirement

AGENCY: Office of Personnel Management.

ACTION: Final rule.

SUMMARY: The Office of Personnel Management (OPM) is issuing a final rule to remove an obsolete provision that prohibits an employee whose annual salary is $350 or less from enrolling in the Federal Employees Health Benefits (FEHB) Program.

EFFECTIVE DATE: June 26, 1998.

FOR FURTHER INFORMATION CONTACT: Kenneth A. Lease, 202–606–0004.

SUPPLEMENTARY INFORMATION: On January 6, 1998, OPM published a proposed rule in the **Federal Register** (63 FR 446) to remove an obsolete provision that prohibits an employee earning $350 or less per year from enrolling in the FEHB Program. This provision was based on the fact that, until they were amended in 1982, FEHB regulations required that employee contributions to premiums could only be made by salary withholding while an employee was in a pay status. ($350 is the amount which, when the Program began in 1960, was sufficient to cover the appropriate employee contributions for the least costly FEHB plan.) As amended in August 1982, however, the regulations now require enrollee contributions, by direct payment if necessary, for all periods during which coverage continues, even periods during which an employee does not receive pay (such as a leave without pay situation).

We also proposed to amend the reference in the definition of *letter of credit* under § 890.101 to conform to a recent reference change in Chapter 16 of title 48, Code of Federal Regulations (FEHBAR).

We received no comments.

Regulatory Flexibility Act

I certify that this regulation will not have a significant economic impact on a substantial number of small entities because it primarily affects Federal employees.

List of Subjects in 5 CFR Part 890

Administrative practice and procedure, Government employees, Health facilities, Health insurance, Health professions, Hostages, Iraq, Kuwait, Lebanon, Reporting and recordkeeping requirements, Retirement.

Office of Personnel Management.

Janice R. Lachance,

Director.

Accordingly, OPM is amending 5 CFR part 890 as follows:

PART 890—FEDERAL EMPLOYEES HEALTH BENEFITS PROGRAM

1. The authority citation for part 890 continues to read as follows:

Authority: 5 U.S.C. 8913; § 890.803 also issued under 50 U.S.C. 403p, 22 U.S.C. 4069c and 4069c–1; subpart L also issued under sec. 599C of Pub. L. 101–513, 104 Stat. 2064, as amended, § 890.102 also issued under sections 11202(f), 11232(e), and 11246(b) and (c) of Pub. L. 105–33, 111 Stat. 251.

2. In § 890.101, paragraph (a), the definition of *Letter of Credit* is revised to read as follows:

§ 890.101 Definitions; time computations.

(a) * * *

Letter of credit is defined in 48 CFR 1602.170–10.

* * * * *

§ 890.102 [Amended]

3. In § 890.102, paragraph (c)(4) is removed and paragraphs (c)(5), (c)(6), (c)(7), and (c)(8) are redesignated as paragraphs (c)(4), (c)(5), (c)(6), and (c)(7) respectively.

4. In § 890.303, paragraph (b) is revised to read as follows:

§ 890.303 Continuation of enrollment.

* * * * *

(b) *Change of enrolled employees to certain excluded positions.* Employees and annuitants enrolled under this part who move, without a break in service or after a separation of 3 days or less, to an employment in which they are excluded by § 890.102(c), continue to be enrolled unless excluded by paragraphs (c) (4), (5), (6), or (7) of § 890.102.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 98–ACE–12]

Amendment to Class E Airspace; Knoxville, IA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Direct final rule; request for comments.

SUMMARY: This action amends the Class E airspace area at Knoxville Municipal Airport, Knoxville, IA. The FAA has developed Global Positioning System (GPS) Runway (RWY) 15 and RWY 33 Standard Instrument Approach Procedures (SIAPs) to serve Knoxville Municipal Airport. Additional controlled airspace extending upward form 700 feet Above Ground Level (AGL) is needed to accommodate these SIAPs and for Instrument Flight Rules (IFR) operations at this airport. The enlarged area will contain the new GPS RWY 15 and GPS RWY 33 SIAPs in controlled airspace. The intended effect of this rule is to provide controlled Class E airspace for aircraft executing the GPS RWY 15 and GPS RWY 33 SIAPs and to segregate aircraft using instrument approach procedures in instrument conditions from aircraft operating in visual conditions.

DATES: This direct final rule is effective on 0901 UTC, August 13, 1998.

Comments for inclusion in the Rules Docket must be received on or before June 15, 1998.

ADDRESSES: Send comments regarding the rule in triplicate to: Manager, Airspace Branch, Air Traffic Division, ACE–520, Federal Aviation Administration, Docket Number 98–ACE–12, 601 East 12th Street, Kansas City, MO 64106.

The official docket may be examined in the Office of the Regional Counsel for the Central Region at the same address between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

An informal docket may also be examined during normal business hours in the Air Traffic Division at the same address listed above.

FOR FURTHER INFORMATION CONTACT: Kathy Randolph, Air Traffic Division, Airspace Branch, ACE–520C, Federal Aviation Administration, 601 East 12th Street, Kansas City, MO 64106; telephone: (816) 426–3408.

SUPPLEMENTARY INFORMATION: The FAA has developed GPS RWY 15 and GPS RWY 33 SIAPs to serve the Knoxville Municipal Airport, Knoxville, IA. The amendment to Class E airspace at Knoxville, IA, will provide additional controlled airspace at and above 700 feet AGL in order to contain the new SIAPs within controlled airspace, and thereby facilitate separation of aircraft operating under Instrument Flight Rules. The area will be depicted on appropriate aeronautical charts. Class E airspace areas extending upward form 700 feet or more above the surface of the earth are published in paragraph 6005 of FAA Order 7400.9E, dated September 10, 1997, and effective September 16, 1997, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

The Direct Final Rule Procedure

The FAA anticipates that this regulation will not result in adverse or negative comment and, therefore, is issuing it as a direct final rule. Previous actions of this nature have not been controversial and have not resulted in adverse comments or objections. The amendment will enhance safety for all flight operations by designating an area where VFR pilots may anticipate the presence of IFR aircraft at lower altitudes, especially during inclement weather conditions. A greater degree of safety is achieved by depicting the area on aeronautical charts. Unless a written adverse or negative comment, or a written notice of intent to submit an adverse or negative comment is received within the comment period, the regulation will become effective on the date specified above. After the close of the comment period, the FAA will publish a document in the **Federal Register** indicating that no adverse or negative comments were received and confirming the date on which the final rule will become effective. If the FAA does receive, within the comment period, an adverse or negative comment, or written notice of intent to submit such a comment, a document withdrawing the direct final rule will be published in the **Federal Register**, and a notice of proposed rulemaking may be published with a new comment period.

Comments Invited

Although this action is in the form of a final rule and was not preceded by a notice of proposed rulemaking, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified under the caption **ADDRESSES.** All communications received on or before the closing date for comments will be considered, and this rule may be amended or withdrawn in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in evaluating the effectiveness of this action and determining whether additional rulemaking action would be needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy-related aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this action will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this rule must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 98–ACE–112." The postcard will be date stamped and returned to the commenter.

Agency Findings

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant to preparation of a Federalism Assessment.

The FAA has determined that this regulation is noncontroversial and unlikely to result in adverse or negative comments. For the reasons discussed in the preamble, I certify that this regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

Accordingly, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES, AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9E, Airspace Designations and Reporting Points, dated September 10, 1997, and effective September 16, 1997, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

ACE IA E5 Knoxville, IA [Revised]

Knoxville Municipal Airport, IA
(Lat. 41°17'56" N., long. 93°06'50" W.)
Knoxville NDB
(Lat. 41°17'45" N., long. 93°06'51" W.)

That airspace extending upward from 700 feet above the surface within a 6.8-mile radius of Knoxville Municipal airport and within 2.6 miles each side of the 145° bearing from the Knoxville NDB extending from the 6.8-mile radius to 7 miles southeast of the airport and with 2.6 miles each side of the 340° bearing from the Knoxville NDB extending from the 6.8-mile radius to 7 miles northwest of the airport, exclusion that

airspace within the Knoxville, IA, Class E airspace area.

* * * * *

Issued in Kansas City, MO, on March 31, 1998.

Christopher R. Blum,

Acting Manager, Air Traffic Division, Central Region.

[FR Doc. 98–13995 Filed 5–26–98; 8:45 am]

BILLING CODE 13–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 184

[Docket No. 88G–0288]

Direct Food Substances Affirmed As Generally Recognized as Safe; Sheanut Oil

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending its regulations to affirm that the use of sheanut oil as a direct human food ingredient is generally recognized as safe (GRAS). This action is in response to a petition filed by Fuji Oil Co., Ltd.

DATES: The regulation is effective May 27, 1998.

FOR FURTHER INFORMATION CONTACT: William J. Trotter, Center for Food Safety and Applied Nutrition (HFS–206), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–418–3088.

SUPPLEMENTARY INFORMATION:

I. Background

In accordance with the procedures described in § 170.35 (21 CFR 170.35), Fuji Oil Co., Ltd., 6–1, Hachiman-Cho, Minami-Ku, Osaka 542, Japan, submitted a petition (GRASP 8G0343) requesting that sheanut oil be affirmed as GRAS for use as a direct food ingredient.

FDA published a notice of filing of this petition in the **Federal Register** of September 30, 1988 (53 FR 38347), and gave interested parties an opportunity to submit comments to the agency. FDA received three comments in response to that notice. These comments are discussed in section VIII of this document.

II. Standards for GRAS Affirmation

Under § 170.30 (21 CFR 170.30), general recognition of safety may be based only on the views of experts qualified by scientific training and experience to evaluate the safety of substances. The basis of such views may be either: (1) Scientific procedures, or (2) in the case of a substance used in food prior to January 1, 1958, through experience based on common use in food (§ 170.30(a)). General recognition of safety based upon scientific procedures requires the same quantity and quality of scientific evidence as is required to obtain approval of a food additive and ordinarily is to be based upon published studies, which may be corroborated by unpublished studies and other data and information (§ 170.30(b)). General recognition of safety through experience based on common use in food prior to January 1, 1958, may be determined without the quantity or quality of scientific procedures required for approval of a food additive, but ordinarily is to be based upon generally available data and information concerning the pre-1958 history of use of the food ingredient (§ 170.30(c)(1)). In evaluating this petition, the agency reviewed information and data on the history of sheanut oil use and on published and unpublished safety studies for sheanut oil.

III. Identity and Specification

Sheanut oil is produced from sheanuts derived from the Shea tree *Butyrospermum parkii* and is composed mainly of triglycerides containing an oleic acid moiety at the 2-position and saturated fatty acids, usually stearic or palmitic acids, at the 1- and 3-positions. It meets the following specifications, which are consistent with those for other food-grade oils as described in the Food Chemicals Codex (Ref. 1):

1. Saponification value—185 to 195,
2. Iodine value—28 to 43,
3. Unsaponifiable matter—not to exceed 1.5 percent,
4. Free fatty acids—less than 0.1 percent (as oleic acid),
5. Peroxide value—less than 10 milliequivalents/equivalent (meq/eq),
6. Heavy metals—less than 0.1 part per million (ppm) each of lead and copper.

The petitioner adequately referenced methods of analyses for these specifications.

IV. Manufacturing Process

Sheanut oil is refined by various processes, which may involve different sequences of manufacturing steps and solvents that are in common use in the fat and oil industry. The crude oil must be refined to remove excessive unsaponifiable material. Standard refining techniques, e.g., decolorization by passage through bleaching clay and steam distillation to remove odoriferous impurities, are employed to purify further the oil.

V. Proposed Use in Food

The intended use for sheanut oil is as a component of a mixture of oils used as cocoa butter substitutes. The agency has calculated a mean estimated daily intake (EDI) of 2.2 gram/person/day (g/p/d) for sheanut oil in confections and candies (2+ year olds). The EDI for consumers at the 90th percentile level is 4.4 g/p/d. The EDI for children from 2 to 5 years old is 1.8 g/p/d at the mean and 4.3 g/p/d at the 90th percentile level.

VI. Common Use in Food Before 1958

The petitioner provided several published articles that document that sheanut oil has a history of common use in food prior to 1958. Sheanut oil has been used in Africa for food purposes since the 1800's (Ref. 2). It has also been used in Europe as a cooking oil and as a cocoa butter substitute, as well as for making margarine (Ref. 3 through 7). In addition, in a comment submitted in support of the petition, Loders Croklaan, Inc.,[1] of Berwyn, PA, presented information that documents use of sheanut oil in England for more than 50 years; among the uses of sheanut oil documented in this comment were as a pastry fat, a cooking oil, a cocoa butter substitute, and for making margarine. The comment provided copies of formulations from England that showed that some cooking fats in 1948 contained between 5 and 7 percent sheanut oil and that a pastry margarine known as "flex," marketed between 1954 and 1958, contained between 80 and 91 percent sheanut oil.[2]

VII. Safety Information

The evidence documenting common use of sheanut oil in food reflects no known adverse effects. The absence of documented adverse effects from food use of sheanut oil is corroborated by several animal feeding studies, by information regarding the components of sheanut oil, and its similarity in

[1] In a comment submitted to the agency, Loders Croklaan, Inc., also requested that all safety data and other information concerning sheanut oil contained in its Food Master File (FMF) No. 253 be incorporated into Fuji's petition. Consequently, the information contained in FMF No. 253 was made available for public display under the same docket no. 88G–0288 with the Fuji petition.

[2] In addition, in its comment Loders Croklaan, Inc., quoted official United Kingdom statistics for sheanuts imported into the United Kingdom as averaging 6,000 metric tons per year between 1948 and 1957.

composition to other GRAS fats and oils.

Specifically, sheanut oil is composed principally of triglycerides containing oleic acid in the 2-position and the saturated fatty acids, usually stearic and palmitic acids, in the 1- and 3-positions. The components of these triglycerides, glycerol, and oleic, stearic, and palmitic acids, as well as other fatty acids found as minor components, are naturally found as part of lipids and lipoproteins of both plants and animals; they are also the same fatty acids and glycerol components found in a broad range of edible fats and oils that are GRAS. The synthesis and metabolism of these substances are well understood and are documented in biochemistry textbooks (for example, Ref. 8).

In addition, the agency has determined that sheanut oil has an overall composition that conforms to that of other edible oils in terms of its total glyceride content, fractions of tri-, di- and monoglycerides, and unsaponifiable matter (Ref. 9). Thus, sheanut oil is similar in chemical composition to commonly used GRAS fats and oils, such as cocoa butter, cottonseed oil, soybean oil, corn oil, and palm oil.

Further, the agency evaluated four corroborative animal studies on the safety of sheanut oil. Three of these studies, which are published (Ref. 10 through 12), establish that sheanut oil has absorbability comparable to that as the other tested GRAS oils and fats. These studies also establish that the growth rates for the subject animals were comparable to those for animals fed other GRAS oils and fats. The fourth study, which is unpublished, is a 104-week toxicity/carcinogenicity study of sheanut oil and other oils in rats. The results of this 104-week study demonstrate that there is no carcinogenic potential for sheanut oil (Ref. 13).

VIII. Response to Comments

In response to the published notice, FDA received three comments from the law offices of Freeman, Wasserman & Schneider on behalf of Loders Croklaan, Inc., of Berwyn, PA.

As discussed previously, the first comment requested that FDA incorporate the safety data and other information on sheanut oil submitted by Loders Croklaan, Inc., and contained in FMF No. 253. The comment asserted that, in addition to the fact that sheanut oil has been used as part of the human diet for a considerable period of time prior to 1958 in countries outside the United States, the safety data also establish that sheanut oil is safe for human consumption.

The second comment, also submitted in support of the petition, was intended to: (1) Provide independent documentation of the history of use of sheanut oil in food prior to 1958 (discussed in section VI of this document), (2) provide safety data for sheanut oil (discussed in section VII of this document), and (3) suggest modifications to the proposed specifications of sheanut oil. These suggested modifications are consistent with the fact that sheanut oil can be made by different processes that involve various sequences of processing steps and various solvents. The comment asserted that certain changes, discussed as follows, should be made to the specifications proposed by the petitioner.

First, the comment stated that the refined oil produced by Loders Croklaan, Inc.'s process, which has an iodine value typically between 33 and 43, allows for a greater percentage of 2-oleoyl-1,3-distearin (SOS). The comment pointed out that an oil composed entirely of SOS would have an iodine value of 25 and, therefore, recommended a specification for an iodine value between 25 and 43. Second, the comment stated that, if a specification for residual solvent is included, it should reflect the possible varieties of recrystallizing and precipitating solvents typically used in the fat and oil industry, instead of specifications for hexane and ethanol only, which the petitioner uses in its process. Third, the comment stated that the proposed specifications for specific gravity and refractive index reflect only the petitioner's oil product and that if these specifications are to be included in a regulation, the comment suggested that broader ranges be used to reflect industry-wide standards rather than the petitioner's specific product.

The agency agrees that sheanut oil may be refined using a variety of solvents and procedures commonly used in the fats and oils industry. The agency believes that sheanut oil produced by standard processing of sheanuts, including further refining to remove excessive unsaponifiable material, should be the food ingredient to be affirmed as GRAS and that the specifications for sheanut oil should encompass all of the typical sheanut oils produced under good manufacturing practices.

The agency agrees with the comment that the range given for iodine value should be modified. However, the agency has calculated a theoretical iodine value for pure SOS of 28.6 and, therefore, believes that a specification range of 28 to 43 would encompass all likely refined sheanut oils (Ref. 14). With regard to residual solvents, the agency agrees with the comment that the specifications for solvents should not be limited to those used by the petitioner (Ref. 14). The agency notes that solvents other than those used by the petitioner are used in the fats and oils industry, and further notes that any residual solvent that becomes or may reasonably be expected to become a functional component of sheanut oil must be GRAS or a food additive approved for use in the manufacture of food fats and oils. Therefore, the agency believes that no specification for solvents is necessary. Similarly, the agency does not believe that specifications for specific gravity and refractive index are necessary in a regulation in order to ensure a safe product; this would be consistent with specifications for other food-grade oils as described in the Food Chemicals Codex (Ref. 1).

The third comment was a reiteration of Loders Croklaan, Inc.'s position regarding specifications for sheanut oil, which have been discussed previously, together with the agency's response.

IX. Conclusions

The petitioner has provided evidence that demonstrates that sheanut oil was in common use in food prior to 1958; this information is published and is corroborated by other information from separate published sources, including information submitted in a comment. There are no reports of adverse effects from such food use of sheanut oil. As provided for under § 170.30(a)(2), FDA has determined that this information provides an adequate basis upon which to conclude that the use of sheanut oil is GRAS among experts qualified by scientific training and experience to evaluate the safety of substances used in food.

This evidence of common use in food prior to 1958 without any reported adverse effects is further corroborated by information regarding the components of sheanut oil, the similarity of sheanut oil to other oils that are GRAS, and the results of four animal feeding studies, three of which are published. Therefore, the agency is affirming the use of sheanut oil as GRAS in accordance with 21 CFR 184.1(b)(3) in the following food categories at levels not to exceed current good manufacturing practice, except that the ingredient may not be used in a standardized food unless permitted by the standard of identity: Confections and frostings as defined in § 170.3(n)(9)

(21 CFR 170.3(n)(9)), coatings of soft candy as defined in § 170.3(n)(38), and sweet sauces and toppings as defined in § 170.3(n)(43).

X. Environmental Effects

The agency has determined under 21 CFR 25.32(f) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

XI. Analysis of Impacts

FDA has examined the impacts of the final rule under Executive Order 12866 and the Regulatory Flexibility Act (5 U.S.C. 601–612). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). According to Executive Order 12866, a regulatory action is "economically significant" if it meets any one of a number of specified conditions, including having an annual effect on the economy of $100 million or adversely affecting in a material way a sector of the economy, competition, or jobs. A regulation is considered "significant" under Executive Order 12866 if it raises novel legal or policy issues. The agency finds that this rule is neither an economically significant nor a significant regulatory action as defined by Executive Order 12866. In addition, it has been determined that this final rule is not a major rule for the purpose of congressional review.

The primary benefit of this action is to remove uncertainty about the regulatory status of the petitioned substance. No compliance costs are associated with this final rule because no new activity is required, and no current or future activity is prohibited by this rule.

The Regulatory Flexibility Act requires agencies to analyze regulatory options that would minimize the economic impact of their regulations on small businesses and other small entities. No compliance costs are associated with this final rule because no new activity is required, and no current or future activity is prohibited. Therefore, this final rule will not have a significant economic impact on a substantial number of small entities. Accordingly, under the Regulatory Flexibility Act, the agency certifies that this final rule will not have a significant economic impact on a substantial number of small entities.

XII. Effective Date

This rule recognizes an exemption from the food additive definition in the Federal Food, Drug, and Cosmetic Act, and from the approval requirements applicable to food additives. Thus, no delay in the effective date is required by the Administrative Procedure Act (5 U.S.C. 553(d)). Therefore, the rule will be effective immediately (5 U.S.C. 553(d)(1)).

List of Subjects in 21 CFR Part 184

Food ingredients.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Director, Center for Food Safety and Applied Nutrition, 21 CFR part 184 is amended as follows:

PART 184—DIRECT FOOD SUBSTANCES AFFIRMED AS GENERALLY RECOGNIZED AS SAFE

1. The authority citation for 21 CFR part 184 continues to read as follows:

Authority: 21 U.S.C. 321, 342, 348, 371.

2. Section 184.1702 is added to read as follows:

§ 184.1702 Sheanut oil.

(a) Sheanut oil is produced from sheanuts derived from the Shea tree *Butyrospermum parkii* and is composed principally of triglycerides containing an oleic acid moiety at the 2-position and saturated fatty acids, usually stearic or palmitic acids, at the 1- and 3-positions.

(b) The ingredient meets the following specifications when tested using any appropriate validated methodology:

(1) Saponification value of 185 to 195,

(2) Iodine value of 28 to 43,

(3) Unsaponifiable matter not to exceed 1.5 percent,

(4) Free fatty acids not more than 0.1 percent as oleic acid,

(5) Peroxide value not more than 10 milliequivalents/equivalent (meq/eq),

(6) Lead not more than 0.1 part per million (ppm),

(7) Copper not more than 0.1 ppm.

(c) In accordance with § 184.1(b)(3), the ingredient is used in the following food categories at levels not to exceed current good manufacturing practice, except that the ingredient may not be used in a standardized food unless permitted by the standard of identity: Confections and frostings as defined in § 170.3(n)(9) of this chapter, coatings of soft candy as defined in § 170.3(n)(38) of this chapter, and sweet sauces and toppings as defined in § 170.3(n)(43) of this chapter.

Dated: May 13, 1998.

L. Robert Lake,

Director, Office of Policy, Planning and Strategic Initiatives, Center for Food Safety and Applied Nutrition.

BILLING CODE 4160–01–F

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Chapter V

Blocked Persons, Specially Designated Nationals, Specially Designated Terrorists, and Specially Designated Narcotics Traffickers: Additional Designations

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Amendment of final rule.

SUMMARY: The Treasury Department is adding to Appendices A and B to 31 CFR chapter V the names of 6 individuals and 21 entities that have been determined to play a significant role in international narcotics trafficking centered in Colombia or have been determined to be owned or controlled by, or to act for or on behalf of, other specially designated narcotics traffickers.

EFFECTIVE DATE: May 26, 1998.

FOR FURTHER INFORMATION CONTACT: Office of Foreign Assets Control, Department of the Treasury, Washington, DC 20220, tel.: 202/622–2520.

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

This document is available as an electronic file on *The Federal Bulletin Board* the day of publication in the **Federal Register**. By modem, dial 202/515–1387 and type "/GO FAC," or call 202/512–1530 for disk or paper copies. This file is available for downloading without charge in WordPerfect 5.1, ASCII, and Adobe Acrobat® readable (*.PDF) formats. For Internet access, the address for use with the World Wide Web (Home Page), Telnet, or FTP protocol is: fedbbs.access.gpo.gov. The document is also accessible for downloading in ASCII format without charge from Treasury's Electronic Library ("TEL") in the "Business, Trade and Labor Mall" of the FedWorld bulletin board. By modem, dial 703/321–3339, and select the appropriate self–expanding file in TEL. For Internet access, use one of the following protocols: Telnet = fedworld.gov (192.239.93.3); World Wide Web (Home Page) = http://www.fedworld.gov; FTP = ftp.fedworld.gov (192.239.92.205). Additional information concerning the programs of the Office of Foreign Assets Control is available for downloading from the Office's Internet Home Page: http://www.ustreas.gov/treasury/services/fac/fac.html, or in fax form through the Office's 24–hour fax–on–demand service: call 202/622–0077 using a fax machine, fax modem, or (within the United States) a touch–tone telephone.

Background

Appendices A and B to 31 CFR chapter V contain the names of blocked persons, specially designated nationals, specially designated terrorists, and specially designated narcotics traffickers designated pursuant to the various economic sanctions programs administered by the Office of Foreign Assets Control ("OFAC") (62 FR 34934, June 27, 1997). Pursuant to Executive Order 12978 of October 21, 1995, "Blocking Assets and Prohibiting Transactions with Significant Narcotics Traffickers" (the "Order") and § 536.312 of the Narcotics Trafficking Sanctions Regulations, 31 CFR Part 536 (the "Regulations"), the following 6 individuals and 21 entities are added to the Appendices as persons who have been determined to play a significant role in international narcotics trafficking centered in Colombia or who have been determined to be owned or controlled by, or to act for or on behalf of, persons designated in or pursuant to the Order (collectively "Specially Designated Narcotics Traffickers" or "SDNTs"). Any property subject to the jurisdiction of the United States in which an SDNT has an interest is blocked, and U.S. persons are prohibited from engaging in any transaction or in dealing in any property in which an SDNT has an interest.

Designations of foreign persons blocked pursuant to the Order are effective upon the date of determination by the Director of the Office of Foreign Assets Control, acting under authority delegated by the Secretary of the Treasury. Public notice of blocking is effective upon the date of filing with the Federal Register, or upon prior actual notice.

Because the Regulations involve a foreign affairs function, Executive Order 12866 and the provisions of the Administrative Procedure Act (5 U.S.C. 553), requiring notice of proposed rulemaking, opportunity for public participation, and delay in effective date, are inapplicable. Because no notice of proposed rulemaking is required for this rule, the Regulatory Flexibility Act (5 U.S.C. 601–612) does not apply.

For the reasons set forth in the preamble, and under the authority of 3 U.S.C. 301; 50 U.S.C. 1601–1641; 50 U.S.C. 1701–1706; E.O. 12978, 60 FR 54579, 3 CFR, 1995 Comp., p. 415, appendices A and B to chapter V of 31 CFR are amended as set forth below:

1. Appendices A and B to chapter V of 31 CFR are amended by adding the following names inserted in alphabetical order (1) in Appendix A, section I, and (2) under the heading "Colombia" in Appendix B:

AGRICOLA SONGO LTDA., Calle 74 No. 53–30, Barranquilla, Colombia; NIT # 890115794–3 (Colombia) [SDNT]

[AZ–005–ROP FRL–6101–9]

Approval and Promulgation of Implementation Plans; Phoenix, Arizona Ozone Nonattainment Area, 15 Percent Rate of Progress Plan and 1990 Base Year Emission Inventory

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is determining, pursuant to its federal planning authority in Clean Air Act (CAA) section 110(c), that the Phoenix, Arizona ozone nonattainment area has in place sufficient control measures to meet the 15 percent rate of progress (ROP) requirement in Clean Air Act (CAA) section 182(b)(2). EPA is also approving, under CAA sections 110(k) and 182(a)(1), the 1990 base year emissions inventory for the Phoenix metropolitan area that was submitted to EPA by the State of Arizona on April 1, 1993.

EFFECTIVE DATE: June 26, 1998.

ADDRESSES: Copies of the documents relevant to this action, including the technical support document (TSD), are contained in the docket for this rulemaking. The docket is available for inspection during normal business hours at the following locations:

U.S. Environmental Protection Agency, Region 9, Office of Air Planning, Air Division, 17th Floor, 75 Hawthorne Street, San Francisco, California 94105. Phone: (415) 744–1248.

Arizona Department of Environmental Quality, Library, 3033 N. Central Avenue, Phoenix, Arizona 85012. (602) 207–2217.

Copies of this notice and the TSD are also available in the air programs section of EPA Region 9's website, http://www.epa.gov/region09.

FOR FURTHER INFORMATION CONTACT: Frances Wicher, Office of Air Planning (AIR–2), U.S. Environmental Protection Agency, Region 9, 75 Hawthorne Street, San Francisco, California 94105. Phone: (415) 744–1248. Email: wicher.frances@epamail.epa.gov.

SUPPLEMENTARY INFORMATION:

I. Background

A. Clean Air Act Requirements

The Phoenix metropolitan area was originally classified as a moderate ozone nonattainment area on November 6, 1991.[1] Section 182(b) of the Clean Air Act (CAA or Act) requires that each state in which all or part of a moderate ozone nonattainment area is located submit, by November 15, 1992, an inventory of actual emissions from all sources, as described in sections 172(c)(3) and 182(a)(1), in accordance with guidance provided by the Administrator. Section 182(b)(1)(A) of the CAA also requires states with moderate and above ozone nonattainment areas to develop plans to reduce volatile organic compounds (VOC) emissions by 15 percent, net of growth, from the 1990 baseline. The 15 percent rate of progress (ROP) plans were to be submitted by November 15, 1993, and the reductions were required to be achieved by November 15, 1996.

Although the November 15, 1996 deadline has now passed, the 15 percent ROP requirement remains. Once a statutory deadline has passed and has not been replaced by a later one, the deadline then becomes "as soon as possible." *Delaney* v. *EPA*, 898 F.2d 687, 691 (9th Cir. 1990). EPA has interpreted this requirement to be "as soon as practicable." See the proposed rule for this final action at 63 FR 3687 (January 26, 1998).[2] This requirement is discussed further in section II below.

B. Phoenix's 15 Percent Plan

The State of Arizona submitted its initial 15 percent rate of progress plan for the metropolitan Phoenix area on November 15, 1993 and supplemented it on April 8, 1994. On April 13, 1994 EPA found the initial plan incomplete because it failed to include, in fully adopted and enforceable form, all of the measures relied upon in the 15 percent demonstration. This incompleteness finding started the 18-month sanction "clock" in CAA section 179 and the two-year clock under section 110(c) for EPA to promulgate a federal implementation plan (FIP) covering the 15 percent ROP requirement. Subsequently, in November 1994 and April 1995, Arizona submitted an attainment plan for the Phoenix area which updated the 15 percent ROP demonstrations.

On May 12, 1995, EPA found the revised 15 percent plan and the attainment plan complete, turning off the sanctions clock; however, under section 110(c), the FIP clock continues until EPA approves the 15 percent plan. Since 1995, EPA has acted to approve many of the control measures relied upon in this plan but has not yet acted on the overall 15 percent plan.

The 15 percent ROP demonstration in the State's plan relied primarily on improvements to the State's vehicle emissions inspection and maintenance (I/M) program. Not all the emission reductions attributed to the program have been realized because of technical problems with implementing certain parts of the I/M program. In part to replace these lost emission reductions

[1] The Phoenix metropolitan area was recently reclassified from moderate to serious for ozone. 62 FR 60001 (November 6, 1997). Today's action relates to the moderate area CAA requirements for a 1990 base year inventory and a 15 percent ROP demonstration. The reclassification does not affect the area's continuing obligation to meet these requirements.

[2] The reader should consult this proposed rule for a more detailed discussion of the CAA requirements applicable to today's final action, the State's 15 percent ROP plans and EPA's evaluation of them, and EPA's proposed 15 percent demonstration.

and in part to ensure continued progress toward attainment of the ozone standard in the Phoenix area, the State opted into EPA's federal reformulated gasoline (RFG) program in 1997 (60 FR 30260 (June 3, 1997)) and EPA recently approved the State's own, more stringent Cleaner Burning Gasoline (CBG) program which is intended to replace the federal program. 63 FR 6653 (February 10, 1998).

C. EPA's 15 Percent ROP Plan

In August 1996, EPA was sued by the American Lung Association of Arizona and others, *American Lung Association of Arizona, Inc. et al.* v. *Browner*, No. CIV 96–1856 PHX ROS (D. Ariz.) to enforce EPA's obligation under CAA section 110(c) to promulgate a federal plan for the 15 percent ROP requirement. On July 8, 1997 a consent decree was filed in the case establishing a schedule of January 20, 1998 for proposing and May 18, 1998 for promulgating a 15 percent ROP plan. EPA's obligation to promulgate a federal plan is relieved to the extent that it has approved State measures.

The State's 15 percent plan as revised and submitted in 1993 through 1995 does not reflect the changes to the control strategy necessitated by the problems with the enhanced I/M program and the implementation of the federal RFG program, nor does it include the recalculation of the target emission level that EPA guidance requires if post-1996 emissions reductions (such as those from the RFG program) are to be credited to the 15 percent plan. As a result, EPA has not received a complete state submittal containing a revised 15 percent ROP demonstration that it could act on without additional analysis, public hearing and adoption by the State. Thus, EPA is complying with the *ALAA* consent decree today by promulgating, pursuant to its CAA section 110(c) FIP authority, a federal 15 percent ROP plan for the Phoenix area.

D. Proposed Action

On January 26, 1998 (63 FR 3687), EPA proposed to determine that the Phoenix area will have sufficient controls in place by no later than April 1, 1999 to meet the 15 percent rate of progress requirement and that this date is the most expeditious date practicable for achieving the 15 percent target, based on the set of controls EPA has proposed for crediting in the 15 percent demonstration and the unavailability of any other practicable controls that could advance the date. The technical basis for this determination and the list of control measures that provide the required 15 percent VOC reduction are summarized in the proposal and are fully documented in the technical support document (TSD) that accompanies this rulemaking.

EPA also proposed to approve the 1990 base year emissions inventory for the Phoenix metropolitan area that was submitted to EPA by the State of Arizona on April 1, 1993. EPA's review of this inventory is also summarized in the proposal and fully documented in the TSD.

II. Public Comment and EPA Responses

EPA received only one set of comments on its proposed determination that the Phoenix, Arizona ozone nonattainment area has in place sufficient control measures to meet the 15 percent ROP requirement in CAA section 182(b)(2). These comments were submitted by the Arizona Center for Law in the Public Interest (ACLPI) on behalf of the plaintiffs in *ALAA*.

EPA has responded to most significant comments below and has provided full responses to all comments in the TSD that accompanies this rulemaking.

Comment: ACLPI claims that EPA's proposal is flawed because it does not propose FIP measures as an alternative to approving a State 15 percent plan, and without such an alternative proposal, EPA's decision making process here will be inherently biased, unfair and violative of the Administrative Procedures Act. ACLPI states that the only way to negate this bias and prejudgment is for EPA to immediately propose a FIP, so that it has an alternative to approval of the State's demonstration.

Response: This comment, as well as others discussed below, reflects a basic misapprehension of the nature of EPA's January 26, 1998 proposal. Contrary to ACLPI's claims, EPA did not propose to approve or otherwise act on Arizona's 15 percent SIP. Rather, the Agency proposed a 15 percent ROP FIP under its federal planning authority in CAA section 110(c).[3]

Nowhere in the proposal did EPA state or otherwise indicate that it was proposing to approve the State's 15 percent plan. In fact, in the section discussing its FIP obligation under *ALAA*, EPA concluded that it did "not have in front of it a complete state submittal containing a revised 15 percent ROP demonstration that it could act on without additional analysis, public hearing and adoption *by the State*." Emphasis added. 63 FR 3688. In the conclusion section of the proposal, EPA stated that it was acting pursuant to its CAA section 110(c) authority in proposing a determination that the Phoenix metropolitan area has in place sufficient control measures to meet the 15 percent ROP requirement. See 63 FR 3692. CAA section 110(c) provides EPA's authority to promulgate FIPs. In contrast, EPA's SIP approval authority resides in section 110(k).

The proposed FIP consists of a *federal* demonstration that already-approved State and federal control measures, combined with already-proposed federal measures, are sufficient to provide for a 15 percent ROP in the Phoenix area as required by CAA section 182(b)(1)(A)(i) and that there are no other measures which would meaningfully advance the date by which the 15 percent ROP will be met. See 63 FR 3692. As a consequence of this finding, EPA did not, and was not required to, propose any additional federal measures.

EPA notes that this is not the first time it has promulgated an Arizona FIP that consists only of a demonstration that existing State and federal measures were adequate. In 1991, EPA promulgated attainment and maintenance demonstrations for the Pima County (Tucson), Arizona carbon monoxide (CO) nonattainment area that consisted solely of a demonstration that existing approved State and federal measures were adequate for expeditious attainment and long-term maintenance of the CO standard in the area and that no additional federal measures were necessary. See 56 FR 5458, 5470 (February 11, 1991).

Comment: ACLPI asserts that if EPA found that the State has not submitted a complete 15 percent ROP demonstration, it should have disapproved it on that basis instead of proceeding to supply its own data and analysis to produce a showing on the State's behalf, an approach which conflicts with the Act. ACLPI states that EPA's statutory duty is to approve or disapprove what the state submits and that EPA cannot write a plan and pretend it is the State's. Finally, ACLPI states that Arizona has had more than ample time to submit its 15 percent plan and if the State's demonstration is inadequate, then EPA must disapprove it and adopt a FIP.

Response: As discussed above, EPA proposed a 15 percent ROP demonstration under its federal planning authority in CAA section 110(c) and did not propose any action on Arizona's 15 percent SIP. When

[3] EPA did at the same time propose to approve under CAA section 110(k) the State's 1990 Base Year Emission Inventory. This inventory was required by CAA section 182(a)(1) and was submitted separately from the 15 percent plan. See 63 FR 3688.

acting in place of the State pursuant to a FIP under section 110(c), EPA "stands in the shoes of the defaulting State, and all the rights and duties that would otherwise fall to the State accrue instead to EPA." *Central Arizona Water Conservation District* v. *EPA*, 990 F.2d 1531, 1541 (9th Cir. 1993). Thus, in preparing this FIP demonstration, it is EPA's responsibility to supply its own data and analyses of that data and to produce the required showing that would otherwise be the responsibility of the State. Thus, the approach EPA took in this rulemaking is fully consistent with the Act.

EPA did base its proposed determination in part on a reanalysis of the State's plan. This approach is reasonable given that the State had already prepared an extensive and competent technical evaluation of emission sources in the Phoenix area and the effect of controls on reducing emissions from those sources. In preparing its own demonstration, EPA did modify some of the information in the State's plan to reflect the actual implementation status of the State's I/M program and the implementation of new federal and state controls. However, a federal plan based on technical information contained in a State plan does not constitute or imply approval of that State plan.

Since no action was proposed in regard to the State's 15 percent ROP plan, comments relating to the appropriate disposition of that plan are not relevant to this rulemaking. EPA notes that it is not required in this instance to disapprove the State plan prior to promulgating a replacement FIP under CAA section 110(c).

EPA acknowledges that it is required by the Act to take action on submitted SIPs. However, at this time inaction on the State's 15 percent plan in no way affects EPA's promulgation of this FIP.

Comment: ACLPI comments that EPA is extending until April 1, 1999 the time for achieving the 15 percent reduction that was supposed to have been achieved by November 15, 1996 and has justified this lengthy extension by adopting several policies that ACLPI asserts are not consistent with applicable case law or the Clean Air Act.

First, ACLPI states that although it agrees with EPA that *Delaney* v. *EPA*, 898 F.2d 687, 691 (9th Cir. 1990) supplies the relevant test for compliance once a statutory deadline has passed, it disagrees with the Agency's interpretation that under the *Delaney* case, the appropriate standard is "as soon as practicable." ACLPI notes that the actual phrase used by the *Delaney* court was "as soon as *possible*," using every available control measure and asserts that the difference between "practicable" and "possible" is not merely semantic. According to ACLPI, "practicability," as used in the Act, allows for consideration of various economic and social factors in determining the required speed of progress. ACLPI believes that to say that the pace for compliance after the Clean Air Act deadline has passed is still as soon as "practicable" is to read the deadline out of the statute which is why the *Delaney* court allegedly set a much more stringent test—compliance as soon as possible—for areas that miss a statutory deadline.

Response: In *Delaney*, the Ninth Circuit interpreted the Clean Air Act requirement for EPA to develop a CO federal implementation attainment plan for two Arizona areas after the passage of the then applicable statutory attainment date of December 31, 1987. The Court concluded that after the passage of that date, "the national ambient air quality standards must be attained as soon as possible with every available measure * * *." 898 F.2d at 691. The *Delaney* Court arrived at this test by relying on a statement in an EPA guidance document providing that if a state plan's "control measures are not adequate to demonstrate attainment by 1987, additional measures which can be implemented after 1987 must be identified and adopted and attainment must be demonstrated by the earliest possible date * * *. 46 Fed. Reg. 7186 (January 22, 1981)."[4] In another part of the opinion concerning reasonably available control measures, the Court noted another EPA guidance document specifying that a control measure would be deemed not reasonably available if it would not advance attainment, would cause substantial widespread and long-term adverse impact, or would take too long to implement. 898 F.2d at 692.

EPA believes that the appropriate interpretation of *Delaney's* "as soon as possible" test is informed by the Court's acknowledgment of certain limitations on the speed of compliance as expressed in its citation of the guidance related to the scope of reasonably available measures. Therefore, consistently since the Ninth Circuit's opinion, EPA has framed the "as soon as possible" *Delaney* test, in the post-statutory attainment deadline context, to mean "'as expeditiously as practicable,' by a fixed date," and has stated that "[t]he statute does not require measures that are absurd, unenforceable, or impracticable." 55 FR 36458, 36505 (Sept. 5, 1990).[5] In addition to applying this interpretation of the *Delaney* test to attainment plans after the passage of the statutory attainment deadline, the Agency has also consistently applied it in its actions on plans that address the 15 percent requirement following the November 15, 1996 statutory deadline for these plans. See, e.g., 62 FR 31343, 31345–31346 (June 9, 1997) approving the 15 percent ROP SIP for Philadelphia; 62 FR 33999, 34000–34001 (June 24, 1997) approving the 15 percent ROP SIP for the northern Virginia.

Moreover, EPA notes that one court, while finding *Delaney* not precisely on point for its purpose of fashioning a remedy in a citizen's enforcement action, nevertheless made some instructive observations on the relationship between the two standards. The Court noted that:

> although the *Delaney* opinion utilized the 'as soon as possible' standard employed by EPA guidelines, it did not do so out of rejection of the 'practicable' standard or out of concern that the two standards differed. Rather it simply had no occasion to compare them. Indeed the *Delaney* court appeared to blur them when it criticized Arizona for rejecting measures without demonstrating that such measures were 'impracticable' or unreasonable.

Citizens for a Better Environment v. *Deukmejian*, 746 F. Supp. 976, 985 (N.D. Cal. 1990). The Court went on to observe that:

> [a]s a practical matter, however, no Court will use its equitable powers to impose remedies that are irrational, albeit "possible." Thus as long as time is considered paramount, and the term "practical" is strictly construed in keeping with the purposes of the Act, the "as expeditiously as practicable" standard should yield no less results than an "as soon as possible" standard.

The Court concluded that "when properly interpreted, there is no practical difference between the two standards." *Id.* EPA agrees with this assessment.

Furthermore, while EPA believes that it is consistent with the *Delaney* test to take into account socioeconomic factors as described above, the issue is effectively moot with regard to this

[4] Following the *Delaney* opinion, EPA revoked certain portions of this guidance document in order to clarify that the Agency did not intend to require post-1987 plans to include every conceivable control measure. 55 FR 38326 (September 18, 1990).

[5] In its proposal of an attainment CO FIP for Arizona, EPA restated its interpretation of the *Delaney* test as requiring "a demonstration of attainment as expeditiously as practicable utilizing all measures available to the federal government that are capable of advancing the attainment date, short of those producing absurd results, such as severe socioeconomic disruptions." 55 FR 41204, 41210 (October 10, 1990).

rulemaking. In proposing, for the purposes of its 15 percent demonstration, that "as soon as practicable" is April 1, 1999, the Agency did not consider any economic or social factors. Rather the factors EPA considered were the Agency's authority and resources to implement a measure, whether the measure provided a significant emission reduction, and whether the measure could be implemented soon enough to meaningfully advance the date by which the 15 percent reduction could be demonstrated. The Agency believes, as discussed above and in response to an additional comment below, that the consideration of these factors is entirely appropriate and consistent with both the Clean Air Act and the *Delaney* opinion.

Comment: ACLPI comments that in its proposed action, EPA asserted that the 15 percent ROP need not be achieved until April 1, 1999 because (a) that is the soonest such reductions will be achieved under the State's adopted programs and various adopted and proposed EPA programs and (b) no other measures are available that would reduce VOC emissions by more than 0.5 percent or advance achievement of the 15 percent ROP by three or more months. ACLPI asserts that there is nothing in the Clean Air Act or *Delaney* that allows de minimis exemptions for percent reductions or months of delay.

Response: The inherent authority of administrative agencies to exempt de minimis situations from a statutory requirement has been upheld in contexts where an agency is invoking a de minimis exemption as "a tool to be used in implementing the legislative design when "the burdens of regulation yield a gain of trivial or no value." *Alabama Power Co.* v. *Costle*, 636 F.2d 323, 360–61 (D.C. Cir. 1979).

In this rulemaking, EPA has invoked this de minimis doctrine for gauging when the promulgation of a new control would or would not contribute to meeting the statutory requirement for a 15 percent ROP in the Phoenix area as soon as is practicable. EPA has interpreted the "as soon as practicable" test to require a showing that the applicable implementation plan contains all VOC control measures that are practicable for the area and that meaningfully accelerate the date by which the 15 percent level is achieved. Measures that provide only an insignificant additional amount of reductions or could not be implemented soon enough to meaningfully advance the date by which the 15 percent is demonstrated are not required to be implemented. See *Memorandum*, John S. Seitz, Director of the Office of Air Quality Planning and Standards, and Richard B. Ossias, Deputy Associate General Counsel to Regional Air Division Directors; "15 Percent VOC SIP Approvals and the 'As Soon As Practicable' Test;" February 12, 1997.

For determining whether additional measures were necessary for this demonstration, EPA proposed to define "significant emission reduction" to be equal to or more than one-half of one percent (0.5 percent) of the total emission reductions needed to meet the 15 percent ROP requirement in 1999 for the Phoenix nonattainment area, the equivalent of 0.5 metric tons per day (mtpd). Thus any measures that would result in less than a 0.5 mtpd reduction by April 1, 1999 were considered to yield de minimis reductions and were rejected from further review.

In the context of this rulemaking where the 15 percent ROP will be achieved within one year, 0.5 mtpd is truly de minimis, representing *one two-hundredths* of the emission reductions needed to show the 15 percent ROP. In terms of control requirements, more than 200 of these "de minimis" measures would be needed to demonstrate 15 percent ROP in Phoenix. The federal imposition of a measure or group of measures with so little impact on the ROP demonstration would be nonsensical. Thus a regulation imposing one of these de minimis measures would indeed yield "a gain of trivial or no value." As such, a de minimis exemption is an entirely "appropriate tool to be used in implementing the legislative design" of the CAA's rate of progress and general FIP requirements. *Alabama Power* at 360.

EPA proposed to define "meaningfully accelerate the date by which the 15 percent is demonstrated" as three or more months. EPA has projected that the 15 percent ROP will be demonstrated in the Phoenix area by April 1, 1999. Therefore, if a measure could advance that demonstration date to on or before January 1, 1999, then EPA would consider that the measure meaningfully accelerated the 15 percent ROP. In the proposal, EPA explained its selection of three months as a balance between the environmental benefit of advancing the date and the potential to trivialize the "as soon as practicable" demonstration. 63 FR 3687, 3691.

The 15 percent ROP progress requirement is part of the Act's overall scheme for ozone attainment. In Phoenix, ozone exceedances occur during the hot-weather months of May through October. EPA's proposed three month "de minimis" period (January 1 to April 1) falls well before the beginning of this season and as a result the ozone benefit of additional controls during this period would be at best, exceedingly small. Thus, the federal implementation of a measure or measures whose sole effect would be to advance by less than 3 months from the April 1, 1999 date on which the 15 percent ROP is met, would clearly yield "a gain of trivial or no value."

EPA does not agree that *Delaney* bars the use of de minimis exemptions. As discussed previously, the *Delaney* court itself recognized limits on its conclusion that once a statutory deadline has passed the new deadline becomes "as soon as possible with all available measures." These limits include not requiring measures that would not advance attainment, would cause substantial widespread and long-term adverse impact, or would take too long to implement. These limits clearly indicate that the *Delaney* court did not expect EPA to impose controls that yield no benefit or a benefit that is outweighed by the implementation burden. Thus, EPA's use of de minimis exemptions is consistent with *Delaney*.

Comment: ACLPI notes that EPA predicts that the State will meet the 15 percent reduction target by April 1, 1999 with just 0.3 tons per day to spare and argues that this is not a credible demonstration given the size of the inventory and the many uncertainties in EPA's emission reduction predictions. ACLPI asserts that the record here shows that emission reductions expected from control measures do not always materialize.

Response: The statutory requirement for 15 percent ROP demonstrations is met when the plan demonstrates that it achieves "at least a 15 percent" reduction. See section 182(b)(1)(A)(i). Neither the Act nor EPA guidance requires 15 percent ROP demonstrations to include a margin of safety; therefore, reductions greater than the exact amount needed to demonstrate the 15 percent ROP are not required. As a result, the amount of excess emissions in the 15 percent demonstration is immaterial.

Both the base year inventory used to calculate the 15 percent target emission level and the projected emission inventories and emission reduction calculations were prepared using generally-accepted methodologies consistent with Agency guidance. See the TSD for this rulemaking. As such, they provide a credible and appropriate basis for the 15 percent demonstration and additional adjustments to account for uncertainties are not warranted or required. EPA notes that it already factored into its 15 percent ROP

demonstration available information on the implementation status of the control measures.

Because ACLPI neither explains how the size of the inventory relates to the credibility of the demonstration nor provides specifics on the "many uncertainties in EPA's emission reduction predictions" or instances where the emission reductions may not materialize, EPA is not able to further respond to this comment.

Comment: ACLPI comments that EPA proposed to credit 4.4 tons per day in emission reductions from three federal rulemakings that are still at the proposal stage and asserts that such an approach violates the Act and EPA policy. ACLPI supports that assertion by stating that under section 182(b)(1)(c) of the Act, credit can be claimed only for rules "promulgated" by EPA and that EPA policy and the Act also forbid the granting of emission reduction credit for measures that have not been legally adopted. ACLPI further argues that there is no assurance whatsoever that the proposed rules will be adopted in a form and on a schedule that will assure the projected emission reductions and without the credit claimed for these measures, the ROP plan does not demonstrate the required 15 percent reduction and therefore is legally deficient.

Response: Consistent with the Clean Air Act, its policies and its actions on other 15 percent plans, EPA is crediting three proposed national rules in this 15 percent demonstration: consumer products, autobody refinishing and architectural and industrial maintenance coatings. As noted in the proposal, each of these rules are required under CAA section 183(e) and the Agency had recently been sued to enforce the requirement to promulgate these rules. Since the proposal the Agency has agreed to a schedule for their promulgation by August 15, 1998. See lodged consent decree in *Sierra Club* v. *Browner,* CIV No. 97–984 PLF (D.D.C.).

CAA section 182(b)(1)(A) requires states to submit their 15 percent SIP revisions by November, 1993. Section 182(b)(1)(C) provides the following general rule for creditability of emissions reductions towards the 15 percent requirement: "emissions reductions are creditable toward the 15 percent required * * * to the extent they have actually occurred, as of [November, 1996], from the implementation of measures required under the applicable implementation plan, rules promulgated by the Administrator, or a permit under Title V." CAA section 182(b)(1)(D) further states that certain emissions reductions are not creditable, including reductions from certain control measures required prior to the 1990 Amendments.

These creditability provisions are ambiguous. Read literally, they provide that, although the 15 percent SIPs are required to be submitted by November 1993, emissions reductions are creditable as part of those SIPs only if "they have actually occurred, as of [November 1996]". This literal reading renders the provision internally inconsistent. Accordingly, EPA believes that the provision should be interpreted to provide, in effect, that emissions reductions are creditable "to the extent they will have actually occurred, as of [November, 1996], from the implementation of [the specified measures]" (the term "will" is added). This interpretation renders the provision internally consistent.

CAA section 182(b)(1)(C) explicitly includes as creditable reductions those resulting from "rules promulgated by the Administrator." This provision does not state the date by which those measures must be promulgated, i.e., does not indicate whether the measures must be promulgated by the time the 15 percent SIPs were due (November, 1993), or whether the measures may be promulgated after this due date.

Because the statute is silent on this point, EPA has discretion to develop a reasonable interpretation under *Chevron U.S.A. Inc.* v. *NRDC,* 467 U.S. 837, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). EPA believes it reasonable in the first instance to interpret CAA section 182(b)(1)(C) to allow areas to credit reductions from federal measures as long as those reductions are expected to occur by November, 1996, the date for achieving the 15 percent ROP, even if the federal measures are not promulgated by the November, 1993 due date for the 15 percent SIPs.

EPA's interpretation is consistent with the Congressionally-mandated schedule for promulgating regulations for consumer and commercial products, under section 182(e) of the Act. This provision requires EPA to promulgate regulations controlling emissions from consumer and commercial products that generate emissions in nonattainment areas. Under the statutory schedule, by November, 1993—the same date that the States were required to submit the 15 percent SIPs—EPA was to issue a report and establish a rulemaking schedule for consumer and commercial products. Further, EPA was to promulgate regulations for the first set of consumer and commercial products by November, 1995. It is reasonable to conclude that Congress anticipated that reductions from these measures would be creditable as part of the 15 percent SIPs, as long as those reductions were to occur by November, 1996.

EPA has also established specific policies interpreting the Act that allow crediting of these proposed national measures in 15 percent plans. See *Memorandum,* John S. Seitz, Director, OAQPS to Regional Air Division Directors; "Credit for the 15 Percent Rate-of-Progress Plans for Reductions from the Architectural and Industrial Maintenance Coating Rule and the Autobody Refinishing Rule;" November 29, 1994; *Memorandum,* John S. Seitz, Director, OAQPS to Regional Air Division Directors; "Credit for the 15 Percent Rate-of-Progress Plans for Reductions from the Architectural and Industrial Maintenance (AIM) Coating Rule;" March 22, 1995; *Memorandum,* John S. Seitz, Director, OAQPS to Regional Air Division Directors; "Regulatory Schedule for Consumer and Commercial Products under Section 182(e) of the Clean Air Act;" June 22, 1995; and *Memorandum,* John S. Seitz, Director of the Office of Air Quality Planning and Standards, and Richard B. Ossias, Deputy Associate General Counsel to Regional Air Division Directors; "15 Percent VOC SIP Approvals and the 'As Soon As Practicable' Test;" February 12, 1997.

While this analysis focuses on SIPs, it applies equally to FIPs. As noted before, EPA "stands in the shoes of the State" when promulgating a FIP and all the rights and duties available to a state under the Act become available to EPA in a FIP.

The above analysis also describes statutory provisions that include specific dates for 15 percent SIP submittals (November 15, 1993) and implementation (November 15, 1996). While these dates have expired and new dates for submittal (in this case, promulgation) and implementation have been developed, EPA does not believe that the expiration of the statutory dates, and the development of new ones, invalidates the conclusion that reductions from federal measures promulgated after the date the 15 percent plan is submitted (or promulgated) can be counted toward the ROP demonstration.

Because it has agreed to a schedule in a proposed consent decree to promulgate these national rules by August 15, 1998, EPA intends to promulgate the rules within 3 months of this FIP promulgation and well before the April 1, 1999 15 percent ROP demonstration date. As a result, crediting reductions from these federal measures is also sensible from an

administrative standpoint. If it did not credit these national measures, EPA would need to promulgate compensating rules, applicable only to Phoenix, to replace their 4.4 mtpd benefit. EPA has already shown that there are no other measures available that would meaningfully advance the April 1999 date by which the 15 percent ROP is demonstrated in the Phoenix area, thus any additional measures would not result in reductions any sooner than the proposed national rules. Nor would these potential Phoenix-only measures result in any greater reductions creditable to the 15 percent plan since they would simply substitute for the reductions from the national rules.[6] Thus, if it did not credit the national measures, EPA would simply be engaging in a wasteful rulemaking exercise to promulgate measures in May, 1998 that it could almost immediately withdraw when the national rules are promulgated in August, 1998.[7]

The fact that EPA cannot determine precisely the amount of credit available for the proposed national measures does not preclude granting them credit. The credit can be granted as long as EPA is able to develop reasonable estimates of the amount of VOC reductions from the measures EPA expects to promulgate. EPA believes that it is able to develop reasonable estimates, particularly because it has already proposed and taken comment on the measures at issue, and is expecting to promulgate final rules in little less than 3 months. Moreover, the use of estimated emissions and emission reductions rather than actual measurements is a common and necessary practice in attainment and reasonable further progress demonstrations because actual measurements, even for promulgated measures, are seldom available. For example, EPA's document to estimate emissions, "Compilation of Air Pollutant Emission Factors", January 1995, AP–42), provide emission factors used to estimate emissions from various sources and source processes. AP–42 emission factors have been used, and continue to be used, by states and EPA to determine base year emission inventory figures for sources and to estimate emissions from sources where such information is needed.

This rulemaking is based on the best information currently available to the Agency on the projected reductions from these proposed national rules. If these projected reductions turn out to be greater than the amount it determines to be appropriate after promulgation of the final rules, then EPA will take appropriate action to revise this 15 percent demonstration.

Comment: ACLPI argues that contrary to EPA's assertion there are a number of additional control measures that are currently available to advance the time for achieving the 15 percent ROP including the use of California's diesel fuel standards ("CARB diesel") and additional controls on consumer products, both of which are identified in the *Report of the Arizona Governor's Air Quality Strategies Task Force* (1998) ("1998 Task Force Report") as are a number of other measures.

Response: ACLPI is correct that the 1998 Task Force Report shows that adoption of the CARB diesel fuel standards would reduce Phoenix VOC emissions by 7.1 mtpd in 1999. The report, however, also states that implementation of this measure would require at least two years and thus could not occur prior to mid-2000, more than a year after the April 1, 1999 demonstration date for the 15 percent ROP. The State's consultant concluded that the two-year implementation schedule was the minimum necessary after reviewing the refining capacity available to produce CARB diesel fuel for the Phoenix market. See 1998 Task Force Report, p. 77. Since EPA has no grounds to dispute the consultant's conclusions (which were endorsed by the Task Force) regarding the minimum implementation schedule for CARB diesel, it finds the measure would not advance the date by which the 15 percent ROP would be met.

The Task Force recommended adoption of California's phase I and phase II consumer product standards. These standards are more stringent than EPA's proposed national standards for 13 product categories not currently regulated in Phoenix: single phase aerosol air fresheners, engine degreasers, solid or paste forms of furniture maintenance products, non-aerosol forms of glass cleaners, hairsprays, aerosol insect repellants, nail polish removers, automotive brake cleaners, aerosol dust aids, fabric protectants, crawling bug insecticides, and personal fragrance products.

Except for hairsprays, California's more stringent limits are already in place. The compliance date for the final VOC limit for hairsprays is June 1, 1999, two months after the April 1, 1999 demonstration date for 15 percent ROP in Phoenix. The majority of the emission reductions (or approximately 0.9 metric tons per day) that would result from implementing CARB's consumer products rule in Phoenix come from the final hairspray standard. The balance of the tighter CARB limits produce only a 0.23 mtpd reduction, which EPA finds to be de minimis.

The 1998 Governor's Task Force evaluated and recommended controls for not only VOC but also nitrogen oxides, carbon monoxide, particulate matter and regional haze. These controls range from I/M program improvements to improved compliance with the area's fugitive dust rules and include numerous study proposals (e.g., Transit Task Force). Since ACLPI was not specific about what additional control measures EPA should evaluate for this plan, it is not possible for EPA to respond in more detail to this comment.

III. Conclusion

Pursuant to its federal planning authority under CAA section 110(c) and for the reasons discussed above, EPA is determining that the Phoenix metropolitan area has in place or will have in place sufficient control measures to meet the 15 percent ROP requirement for VOCs in CAA section 182(b)(1)(A) as soon as practicable.

EPA is also approving the State's 1990 base year inventory for the Phoenix area under CAA sections 110(k)(2) and 182(a)(1).

Under 40 CFR 93.118(e), this final action establishes a VOC conformity budget of 76.7 metric tons per average summer day based on the inventory methodology and mobile source emissions model used for this 15 percent ROP demonstration. This conformity budget is in addition to, and not in lieu of, the conformity budget established in the *MAG 1993 Ozone Plan for the Maricopa County Area, Modeling Attainment Demonstration* (October 1994).

IV. Administrative Requirements

A. Executive Order (E.O.) 12866

The Office of Management and Budget has exempted this action from E.O. 12866 review.

---

[6] The statutory requirement EPA is fulfilling here is to demonstrate a fixed emission reduction of 15 percent from 1990 base year levels. Emission reductions in excess of this fixed amount are unnecessary. Since EPA has already concluded that the proposed national measures combined with other adopted state and federal measures will result in the required 15 percent ROP as soon as practicable, additional Phoenix-only federal measures are not necessary.

[7] In its rulemakings, EPA strives to take the least intrusive and most sensible regulatory approach that achieves the statutory requirements. In this situation, it made no regulatory sense to ignore these pending national measures (which have already been proposed and have near-term date for promulgation) that will apply automatically to Phoenix in favor of promulgating wholly new Phoenix-specific measures.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act, 5 U.S.C. Section 601 *et seq.*, EPA must prepare a regulatory flexibility analysis assessing the impact of any proposed or final rule on small entities. 5 U.S.C. sections 603 and 604. Alternatively, EPA may certify that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and government entities with jurisdiction over populations of less than 50,000.

This action simply presents the analysis of the emission impacts on the Phoenix metropolitan area of already adopted or proposed State and federal rules. This action neither promulgates additional measures nor requires Arizona or its local jurisdictions to adopt or implement additional measures beyond those that they currently have adopted and implemented or have been proposed or implemented at the federal level. As such, it does not regulate any entities. Therefore, pursuant to 5 U.S.C. 605(b), EPA certifies that today's action does not have a significant impact on a substantial number of small entities within the meaning of those terms for RFA purposes.

C. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), P.L. 104–4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, when EPA promulgates "any general notice of proposed rulemaking that is likely to result in promulgation of any rule that includes any Federal mandate that may result in the expenditures by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more" in any one year. A "Federal mandate" is defined, under section 101 of UMRA, as a provision that "would impose an enforceable duty" upon the private sector or State, local, or tribal governments", with certain exceptions not here relevant. Under section 203 of UMRA, EPA must develop a small government agency plan before EPA "establish[es] any regulatory requirements that might significantly or uniquely affect small governments." Under section 204 of UMRA, EPA is required to develop a process to facilitate input by elected officers of State, local, and tribal governments for EPA's "regulatory proposals" that contain significant Federal intergovernmental mandates. Under section 205 of UMRA, before EPA promulgates "any rule for which a written statement is required under [UMRA section] 202", EPA must identify and consider a reasonable number of regulatory alternatives and either adopt the least costly, most cost-effective or least burdensome alternative that achieves the objectives of the rule, or explain why a different alternative was selected.

As explained above, sections 202, 203, 204, and 205 of UMRA do not apply to today's action because it does not impose an enforceable duty on or otherwise affect any entity. Therefore, EPA is not required, and has not taken, any actions under UMRA.

D. E.O. 13045: Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045, entitled "Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885 (April 23, 1997)), applies to any rule that EPA determines (1) "economically significant" as defined under E.O. 12866 and (2) the environmental health or safety risk addressed by the rule has a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children; and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

Today's final action promulgating a demonstration that the Phoenix area meets the 15 percent VOC ROP requirement in CAA section 182(b)(1)(A)(i) is not subject to E.O. 13045 because it is not an economically significant regulatory action as defined by E.O and because it does not involve decisions on environmental health risks or safety risks that may disproportionately affect children.

E. Submission to Congress and the General Accounting Office

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule is not a "major" rule as defined by 5 U.S.C. 804(2).

F. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by July 27, 1998. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Intergovernmental relations, Ozone.

Dated: May 18, 1998.

Carol M. Browner,

Administrator.

Title 40, Chapter I of the Code of Federal Regulations is amended as follows:

PART 52—[AMENDED]

1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart D—Arizona

2. Section 52.123 is amended by adding paragraph (g) to read as follows:

§ 52.123 Approval status.

* * * * *

(g) Pursuant to the federal planning authority in section 110(c) of the Clean Air Act, the Administrator finds that the applicable implementation plan for the Maricopa County ozone nonattainment area demonstrates the 15 percent VOC rate of progress required under section 182(b)(1)(A)(i).

[FR Doc. 98–13984 Filed 5–26–98; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FI–071–9810a; FRL–6015–4]

Approval and Promulgation of Implementation Plans; State of Florida

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is approving a revision to the State of Florida's State Implementation Plan (SIP) submitted to EPA on December 10, 1996, through the Florida Department of Environmental Protection. The amendment adds perchloroethylene to the list of chemicals excluded from the definition of volatile organic compounds (VOC). The amendment also corrects vague language in various definitions. The revision moves conditions relating to the Small Business Assistance Program (SBAP) from Chapter 62–202 to Rule 62–210.220.

DATES: This final rule is effective July 27, 1998 unless adverse or critical comments are received by June 26, 1998. If the final rule is withdrawn, timely notice will be published in the **Federal Register**.

ADDRESSES: Written comments on this action should be addressed to Karla L. McCorkle at the Environmental Protection Agency, Region 4 Air Planning Branch, 61 Forsyth Street, SW, Atlanta, Georgia 30303. Copies of documents relative to this action are available for public inspection during normal business hours at the following locations. The interested persons wanting to examine these documents should make an appointment with the appropriate office at least 24 hours before the visiting day. Reference file FL–071–9810. The Region 4 office may have additional background documents not available at the other locations.

Air and Radiation Docket and Information Center (Air Docket 6102), U.S. Environmental Protection Agency, 401 M Street, SW, Washington, DC 20460

Environmental Protection Agency, Region 4 Air Planning Branch, 61 Forsyth Street, SW, Atlanta, Georgia 30303

Florida Department of Environmental Protection, Air Resources Management Division, Twin Towers Office Building, 2600 Blair Stone Road, Tallahassee, Florida 32399–2400

FOR FURTHER INFORMATION CONTACT: Karla L. McCorkle at 404/562–9043.

SUPPLEMENTARY INFORMATION: On December 10, 1996, the State of Florida through the Florida Department of Environmental Protection submitted a revision to the Florida SIP. The revision adds perchloroethylene to the list of chemicals excluded from the definition of VOC. This amendment also corrects vague language in the definitions of "Acid Mist," "Commence Construction," "Gas/Gas Method," and "Liquid/Gas Method," as directed by Florida's Joint Administrative Committee. The revision moves provisions relating to the SBAP from Chapter 62–202 to Rule 62–210.220. The definition "Small Business Stationary Source" is amended for clarification.

The specific rule revisions from the December 10, 1996, submittal that are being approved in this action are discussed below:

Exclusion of Perchloroethylene to VOC Definition

Rule 62–210.200—The amendment adds "perchloroethylene" to the list of chemicals excluded from the definition of "Volatile Organic Compounds." This revision makes the definition of VOC in the Florida SIP consistent with the EPA definition.

Definitions

Rule 62–210.200—Throughout this section, the following definitions have been amended to correct vague language: "Acid Mist," "Commence Construction," "Gas/Gas Method," and "Liquid/Gas Method." In definition (1), "Acid Mist," a reference to Rule 62–204.800 is added. In definition (77), "Commence Construction," a completion time is clarified. In definition (137), "Gas/Gas Method," references to the prescribed methods in Rule 62–297.450 (2)(a) and Rule 62–297.450 (2)(c) are added. In definition (167), "Liquid/Gas Method," references to the prescribed methods in Rule 62–297.450 (2)(b) and Rule 62–297.450 (2)(d) are added.

Small Business Assistance Program

Rule 62–210.220—Provisions relating to the SBAP in the Division of Air Resources Management are moved from Chapter 62–202 to Rule 62–210.220.

Rule 62–210.200—The definition "Small Business Stationary Source," is amended to make it clear that facilities may be classified as small business stationary sources either by definition or by petition pursuant to the rule.

Final Action

EPA is approving the aforementioned changes to the SIP. The Agency has reviewed this request for revision of the Federally approved SIP for conformance with the provisions of the 1990 amendments enacted on November 15, 1990. The Agency has determined that this action conforms with those requirements.

EPA is publishing this rule without prior proposal because the Agency views this as a noncontroversial amendment and anticipates no adverse comments. However, in the proposed rules section of this **Federal Register** publication, EPA is publishing a separate document that will serve as the proposal to approve the SIP revision should relevant adverse comments be filed. This rule will be effective July 27, 1998 without further notice unless the Agency receives relevant adverse comments by June 26, 1998.

If the EPA receives such comments, then EPA will publish a document withdrawing the final rule and informing the public that the rule did not take effect. All public comments received will then be addressed in a subsequent final rule based on the proposed rule. The EPA will not institute a second comment period on the proposed rule. Only parties interested in commenting on the proposed rule should do so at this time. If no such comments are received, the public is advised that this rule will be effective on July 27, 1998 and no further action will be taken on the proposed rule.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any state implementation plan. Each request for revision to the state implementation plan shall be considered separately in light of specific technical, economic, and environmental factors and in relation to relevant statutory and regulatory requirements.

Administrative Requirements

A. Executive Order 12866

The Office of Management and Budget (OMB) has exempted this regulatory action from E.O. 12866 review.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act, 5 U.S.C. 600 *et seq.*, EPA must prepare a regulatory flexibility analysis assessing the impact of any proposed or final rule on small entities. 5 U.S.C. 603 and 604. Alternatively, EPA may certify that the rule will not have a significant impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and government entities

with jurisdiction over populations of less than 50,000.

SIP approvals under section 110 and subchapter I, part D of the Clean Air Act do not create any new requirements but simply approve requirements that the State is already imposing. Therefore, because the Federal SIP approval does not impose any new requirements, the Regional Administrator certifies that it does not have a significant impact on any small entities affected. Moreover, due to the nature of the Federal-State relationship under the CAA, preparation of a flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The Clean Air Act forbids EPA to base its actions concerning SIPs on such grounds. *Union Electric Co.* v. *U.S. EPA*, 427 U.S. 246, 255–66 (1976); 42 U.S.C. 7410(a)(2) and 7410(k)(3).

C. Unfunded Mandates

Under section 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated costs to State, local, or tribal governments in the aggregate; or to private sector, of $100 million or more. Under section 205, EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

EPA has determined that the approval action promulgated does not include a Federal mandate that may result in estimated costs of $100 million or more to either State, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves pre-existing requirements under State or local law, and imposes no new requirements. Accordingly, no additional costs to State, local, or tribal governments, or to the private sector, result from this action.

D. Submission to Congress and the General Accounting Office

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule is not a "major rule" as defined by 5 U.S.C. 804(2).

E. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by July 27, 1998. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

F. Executive Order 13045

Protection of Children from Environmental Health Risks and Safety Risks. Executive Order 13045 (62 FR 19885, April 23, 1997), applies to any rule that is (1) likely to be "economically significant" as defined under Executive Order 12866, and (2) the Agency has reason to believe that the environmental health or safety risk addressed by the rule may have a disproportionate effect on children. If a regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This rule is not subject to E.O. 13045, "Protection of Children from Environmental Health Risks and Safety Risks" because this is not an "economically significant" regulatory action as defined by E.O. 12866, and because it does not involve decisions on environmental health or safety risks that may disproportionately affect children.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Hydrocarbons, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements.

Dated: May 10, 1998.

A. Stanley Meiburg,

Acting Regional Administrator, Region 4.

Part 52 of chapter I, title 40, *Code of Federal Regulations*, is amended as follows:

PART 52—[AMENDED]

1. The authority citation for part 52 continues to read as follows:

Authority: 42.U.S.C. 7401 *et seq.*

Subpart K—Florida

2. Section 52.520, is amended by revising paragraph (c)(87) to read as follows:

§ 52.520 Identification of plan.

* * * * *

(c) * * *

(87) Revisions to the Florida State Implementation Plan submitted by the Department of Environmental Protection on December 10, 1996.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 63

[FRL–6014–5]

Delegation of National Emission Standards for Hazardous Air Pollutants for Source Categories; State of Nevada; Nevada Division of Environmental Protection; Washoe County District Health Department

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is taking direct final action to delegate the authority to implement and enforce specific national emission standards for hazardous air pollutants (NESHAPs) to the Nevada Division of Environmental Protection (NDEP) and the Washoe County District Health Department (WCDHD) in Nevada. EPA is also approving WCDHD's program for receiving delegation of unchanged NESHAPs applicable to sources not subject to Title V of the 1990 Clean Air Act Amendments. The preamble outlines the process that NDEP and WCDHD will

use to receive delegation of any future NESHAP, and identifies the NESHAP categories to be delegated by today's action. EPA has reviewed each agency's request for delegation and has found that these requests satisfy all of the requirements necessary to qualify for approval. Thus, EPA is hereby granting NDEP and WCDHD the authority to implement and enforce the unchanged NESHAP categories listed in this rule.

DATES: This rule is effective on July 27, 1998 unless EPA receives relevant adverse comments by June 26, 1998. If EPA receives such comment, then it will publish a timely withdrawal in the **Federal Register** informing the public that this rule will not take effect.

ADDRESSES: Comments must be submitted to Andrew Steckel at the Region IX office listed below. Copies of the requests for delegation and other supporting documentation are available for public inspection (docket number A–96–25) at the following location: U.S. Environmental Protection Agency, Region IX, Rulemaking Office (AIR–4), Air Division, 75 Hawthorne Street, San Francisco, California 94105–3901.

FOR FURTHER INFORMATION CONTACT: Mae Wang, Rulemaking Office (AIR–4), Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, California 94105–3901, (415) 744–1200.

SUPPLEMENTARY INFORMATION:

I. Background

Section 112(l) of the Clean Air Act, as amended in 1990 (CAA), authorizes EPA to delegate to state or local air pollution control agencies the authority to implement and enforce the standards set out in 40 CFR part 63, National Emission Standards for Hazardous Air Pollutants for Source Categories. On November 26, 1993, EPA promulgated regulations, codified at 40 CFR part 63, subpart E (hereinafter referred to as "subpart E"), establishing procedures for EPA's approval of state rules or programs under section 112(l) (see 58 FR 62262).

Any request for approval under CAA section 112(l) must meet the approval criteria in 112(l)(5) and 40 CFR part 63, subpart E. To streamline the approval process for future applications, a state or local agency may submit a one-time demonstration that it has adequate authorities and resources to implement and enforce any CAA section 112 standards. If such demonstration is approved, then the state or local agency would no longer need to resubmit a demonstration of these same authorities and resources for every subsequent request for delegation of CAA section 112 standards. However, EPA maintains the authority to withdraw its approval if the State does not adequately implement or enforce an approved rule or program.

On December 12, 1995, EPA approved the Nevada Division of Environmental Protection's (NDEP's) program for accepting delegation of section 112 standards that are unchanged from Federal standards as promulgated (see 60 FR 63631). The approved program reflects an adequate demonstration by NDEP of general resources and authorities to implement and enforce section 112 standards. However, formal delegation for an individual standard does not occur until NDEP obtains the necessary regulatory authority to implement and enforce that particular standard, and EPA approves NDEP's formal delegation request for that standard.

On January 5, 1995, EPA approved the Washoe County District Health Department's (WCDHD's) program for accepting delegation of section 112 standards (see 60 FR 1741). This approval extended only to sources that are subject to the CAA Title V operating permit program. WCDHD subsequently requested approval for its program to receive delegation of unchanged section 112 standards applicable to non-Title V sources (see letter from Brian L. Jennison, Director, Air Quality Management Division, WCDHD to Felicia Marcus, Regional Administrator, U.S. EPA Region IX, dated December 12, 1997). Therefore, today's action includes approval under section 112(l) of WCDHD's program for accepting delegation of section 112 standards applicable to non-Title V sources. The approved programs reflect an adequate demonstration by WCDHD of general resources and authorities to implement and enforce section 112 standards. However, formal delegation for an individual standard does not occur until WCDHD obtains the necessary regulatory authority to implement and enforce that particular standard, and EPA approves WCHDH's formal delegation request for that standard.

Both NDEP and WCDHD informed EPA that they intend to obtain the regulatory authority necessary to accept delegation of section 112 standards by incorporating section 112 standards into their respective state and local codes of regulation by reference to the Federal regulations; NDEP will be incorporating the section 112 standards into the Nevada Administrative Code, and WCDHD will be incorporating the standards into the WCDHD District Board of Health Regulations Governing Air Quality Management. The details of these delegation mechanisms are set forth in Memorandums of Agreement (MOAs) between each agency and EPA, and are available for public inspection at the U.S. EPA Region IX office (docket No. A–96–25).

On January 30, 1998, NDEP requested delegation for several individual section 112 standards that have been incoporated by reference into the Nevada Administrative Code. On December 3, 1997, WCDHD requested delegation for section 112 standards that have been incorporated by reference into the WCDHD District Board of Health Regulations. The standards that are being delegated by today's action are listed in a table at the end of this rule.

II. EPA Action

A. Delegation for Specific Standards

After reviewing NDEP's and WCDHD's requests for delegation of various national emissions standards for hazardous air pollutants (NESHAPs), EPA has determined that these requests meet all the requirements necessary to qualify for approval under CAA section 112(l) and 40 CFR 63.91. Accordingly, NDEP and WCDHD are granted the authority to implement and enforce the requested NESHAPs. These delegations will be effective on July 27, 1998. A table of the NESHAP categories that will be delegated to each agency is shown at the end of this rule. Although NDEP and WCDHD will have primary implementation and enforcement responsibility, EPA retains the right, pursuant to CAA section 112(l)(7), to enforce any applicable emission standard or requirement under CAA section 112. In addition, EPA does not delegate any authorities that require implementation through rulemaking in the **Federal Register**, or where Federal overview is the only way to ensure national consistency in the application of the standards or requirements of CAA section 112.

After a state or local agency has been delegated the authority to implement and enforce a NESHAP, the delegated agency becomes the primary point of contact with respect to that NESHAP. Pursuant to 40 CFR 63.9(a)(4)(ii) and 63.10(a)(4)(ii), EPA Region IX waives the requirement that notifications and reports for delegated standards be submitted to EPA as well as to NDEP or WCDHD.

In its December 3, 1997 request, WCDHD included a request for delegation of the regulations implementing CAA sections 112(g) and 112(j), codified at 40 CFR part 63, subpart B. These requirements apply to major sources only, and need not be

UMI
VOL
63
ISS
101
MAY
27
1998
UMI

delegated under the section 112(l) approval process. When promulgating the regulations implementing section 112(g), EPA stated its view that "the Act directly confers on the permitting authority the obligation to implement section 112(g) and to adopt a program which conforms to the requirements of this rule. Therefore, the permitting authority need not apply for approval under section 112(l) in order to use its own program to implement section 112(g)" (see 61 FR 68397). Similarly, when promulgating the regulations implementing section 112(j), EPA stated its belief that "section 112(l) approvals do not have a great deal of overlap with the section 112(j) provision, because section 112(j) is designed to use the title V permit process as the primary vehicle for establishing requirements" (see 59 FR 26447). Therefore, state or local agencies implementing the requirements under sections 112(g) and 112(j) do not need approval under section 112(l). As a result, EPA is not taking action to delegate 40 CFR part 63, subpart B to WCDHD.

B. Delegation Mechanism for Future Standards

Today's document takes action to approve WCDHD's program for receiving delegation of unchanged section 112 standards applicable to non-Title V sources, and serves to notify the public of the details of NDEP's and WCDHD's procedure for receiving delegation of future NESHAP. As set forth in the MOAs, NDEP and WCDHD intend to incorporate by reference, into their respective state and local codes of regulation, each newly promulgated NESHAP for which they intend to seek delegation. The agencies will then submit a letter to EPA Region IX, along with proof of regulatory authority, requesting delegation for each individual NESHAP. Region IX will respond in writing that delegation is either granted or denied. If a request is approved, the delegation of authorities will be considered effective upon the date of the response letter from Region IX. Periodically, EPA will publish in the **Federal Register** a listing of the standards that have been delegated. Although EPA reserves its right, pursuant to 40 CFR 63.96, to review the appropriateness of any future delegation request, EPA will not institute any additional comment periods on these future delegation actions. Any parties interested in commenting on this procedure for delegating future unchanged NESHAPs should do so at this time.

C. Opportunity for Public Comment

EPA is publishing this rule without prior proposal because the Agency views this as a noncontroversial action and anticipates no adverse comments. However, in the Proposed Rules section of this **Federal Register** publication, EPA is publishing a separate document that will serve as the proposal for this action should relevant adverse comments be filed. This action will be effective July 27, 1998 without further notice unless the Agency receives relevant adverse comments by June 26, 1998.

If EPA receives such comments, then EPA will publish a document withdrawing this final rule and informing the public that the rule will not take effect. All public comments received will then be addressed in a subsequent final rule based on the proposed rule. EPA will not institute a second comment period on the proposed rule. Any parties interested in commenting on the proposed rule should do so at this time. If no such comments are received, the public is advised that this rule will be effective on July 27, 1998 and no further action will be taken on the proposed rule.

IV. Administrative Requirements

A. Regulatory Flexibility Act

Under the Regulatory Flexibility Act, 5 U.S.C. 600 *et seq.*, EPA must prepare a regulatory flexibility analysis assessing the impact of any proposed or final rule on small entities. 5 U.S.C. 603 and 604. Alternatively, EPA may certify that the rule will not have a significant impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and government entities with jurisdiction over populations of less than 50,000.

Delegations of authority to implement and enforce unchanged Federal standards under section 112(l) of the Clean Air Act do not create any new requirements but simply transfer primary implementation authorities to the State. Therefore, because this action does not impose any new requirements, I certify that it does not have a significant impact on any small entities affected.

B. Unfunded Mandates Reform Act

Under section 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated costs to state, local, or tribal governments in the aggregate, or to private sector, of $100 million or more. Under section 205, EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

EPA has determined that the delegation action promulgated does not include a Federal mandate that may result in estimated costs of $100 million or more to either state, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves pre-existing requirements under state or local law, and imposes no new Federal requirements. Accordingly, no additional costs to state, local, or tribal governments, or to the private sector, result from this action.

C. Submission to Congress and the General Accounting Office

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This rule is not a "major" rule as defined by 5 U.S.C. 804(2).

D. Petitions for Judicial Review

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by July 27, 1998. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (*see* section 307(b)(2)).

E. Executive Order 12866

The Office of Management and Budget has exempted this regulatory action

from review under Executive Order 12866.

F. Executive Order 13045

Protection of Children from Environmental Health Risks and Safety Risks. Executive Order 13045 (62 FR 19885, April 23, 1997), applies to any rule that is (1) likely to be "economically significant" as defined under Executive Order 12866, and (2) the Agency has reason to believe that the environmental health or safety risk addressed by the rule may have a disproportionate effect on children. If a regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This rule is not subject to E.O. 13045, "Protection of Children from Environmental Health Risks and Safety Risks" because this is not an "economically significant" regulatory action as defined by E.O. 12866, and because it does not involve decisions on environmental health or safety risks that may disproportionately affect children.

List of Subjects in 40 CFR Part 63

Environmental protection, Administrative practice and procedure, Air pollution control, Hazardous substances, Intergovernmental relations, Reporting and recordkeeping requirements.

Authority: This action is issued under the authority of section 112 of the Clean Air Act, as amended, 42 U.S.C. 7412.

Dated: May 4, 1998.

Felicia Marcus,

Regional Administrator, Region IX.

Title 40, chapter I, part 63 of the Code of Federal Regulations is amended as follows:

PART 63—[AMENDED]

1. The authority citation for part 63 continues to read as follows:

Authority: 42 U.S.C. 7401, *et seq.*

Subpart E—Approval of State Programs and Delegation of Federal Authorities

2. Section 63.99 is amended by adding and reserving paragraphs (a)(6) through (a)(27), and adding paragraph (a)(28) to read as follows:

§ 63.99 Delegated Federal authorities.

(a) * * *

(6)–(27) (Reserved)

(28) Nevada.

(i) The following table lists the specific part 63 standards that have been delegated unchanged to the air pollution control agencies in the State of Nevada. The (X) symbol is used to indicate each category that has been delegated.

DELEGATION STATUS FOR PART 63 STANDARDS—NEVADA

40 CFR Part 180

[OPP–30114; FRL–5775–4]

Tolerance Processing Fees

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule increases fees charged for processing tolerance petitions for pesticides under the Federal Food, Drug, and Cosmetic Act (FFDCA). The change in fees reflects a 2.45 percent increase in locality pay for civilian Federal General Schedule (GS) employees working in the Washington, DC/Baltimore, MD metropolitan area in 1998.

EFFECTIVE DATE: June 26, 1998.

FOR FURTHER INFORMATION CONTACT: For information concerning this rule: By mail: Ed Setren, Immediate Office, Resources Management Staff (7501C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location, telephone number and e-mail address: Rm. 101E, CM#2, 1921 Jefferson Davis Highway, Arlington, VA (703) 305–5927, e-mail: setren.edward@epamail.epa.gov. For further information concerning tolerance petitions and individual fees contact: Sonya Brooks at the same address, telephone (703) 308–6428, e-mail: brooks.sonya@epamail.epa.gov.

SUPPLEMENTARY INFORMATION: The EPA is charged with administration of section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA). Section 408 authorizes the Agency to establish tolerance levels and exemptions from the requirements for tolerances for food commodities. Section 408(o) requires that the Agency collect fees as will, in the aggregate, be sufficient to cover the costs of processing petitions for pesticide products, i.e., that the tolerance process be as self-supporting as possible.

The current fee schedule for tolerance petitions (40 CFR 180.33) was published in the **Federal Register** on May 9, 1997 (62 FR 25524) (FRL–5714–1) and

became effective on June 9, 1997. At that time the fees were increased 3.33 percent in accordance with a provision in the regulation that provides for automatic annual adjustments to the fees based on annual percentage changes in Federal salaries. The specific language in the regulation is contained in paragraph (o) of § 180.33 and reads in part as follows:

(o) This fee schedule will be changed annually by the same percentage as the percent change in the Federal General Schedule (GS) pay scale... When automatic adjustments are made based on the GS pay scale, the new fee schedule will be published in the **Federal Register** as a final rule to become effective thirty days or more after publication, as specified in the rule.

The Federal Employees Pay Comparability Act of 1990 (FEPCA) initiated locality-based comparability pay, known as "locality pay". The intent of the legislation is to make Federal pay more responsive to local labor market conditions by adjusting General Schedule salaries on the basis of a comparison with non-Federal rates on a geographic, locality basis.

The processing and review of tolerance petitions is conducted by EPA employees working in the Washington, DC/Baltimore, MD pay area. The pay raise in 1998 for Federal General Schedule employees working in the Washington, DC/Baltimore, MD metropolitan pay area is 2.45 percent; therefore, the tolerance petition fees are being increased 2.45 percent. The entire fee schedule, § 180.33, is presented for the reader's convenience. (All fees have been rounded to the nearest $25.00.)

This action does not require review by the Office of Management and Budget (OMB) under Executive Order 12866, entitled Regulatory Planning and Review (58 FR 51735, October 4, 1993), the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 et seq., or Executive Order 13045, entitled Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885, April 23, 1997). Nor does it require any action under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104–4), Executive Order 12875, entitled Enhancing the Intergovernmental Partnership (58 FR 58093, October 28, 1993), or Executive Order 12898, entitled Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (59 FR 7629, February 16, 1994). Since this action does not require any proposal, no action is needed under the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.).

Pursuant to 5 U.S.C. 801(a)(1)(A), as added by the Small Business Regulatory Enforcement Fairness Act of 1996, the Agency will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the General Accounting Office prior to publication of this rule in today's **Federal Register**. This is not a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: May 6, 1998.

Marcia E. Mulkey,

Director, Office of Pesticide Programs.

Therefore, 40 CFR part 180 amended as follows:

PART 180–[AMENDED]

1. The authority citation for Part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

2. Section 180.33 is revised to read as follows:

§ 180.33 Fees.

(a) Each petition or request for the establishment of a new tolerance or a tolerance higher than already established, shall be accompanied by a fee of $65,600, plus $1,650 for each raw agricultural commodity more than nine on which the establishment of a tolerance is requested, except as provided in paragraphs (b), (d), and (h) of this section.

(b) Each petition or request for the establishment of a tolerance at a lower numerical level or levels than a tolerance already established for the same pesticide chemical, or for the establishment of a tolerance on additional raw agricultural commodities at the same numerical level as a tolerance already established for the same pesticide chemical, shall be accompanied by a fee of $15,000 plus $1,000 for each raw agricultural commodity on which a tolerance is requested.

(c) Each petition or request for an exemption from the requirement of a tolerance or repeal of an exemption shall be accompanied by a fee of $12,100.

(d) Each petition or request for a temporary tolerance or a temporary exemption from the requirement of a tolerance shall be accompanied by a fee of $26,200 except as provided in paragraph (e) of this section. A petition or request to renew or extend such temporary tolerance or temporary exemption shall be accompanied by a fee of $3,725.

(e) A petition or request for a temporary tolerance for a pesticide chemical which has a tolerance for other uses at the same numerical level or a higher numerical level shall be accompanied by a fee of $13,050 plus $1,000 for each raw agricultural commodity on which the temporary tolerance is sought.

(f) Each petition or request for repeal of a tolerance shall be accompanied by a fee of $8,200. Such fee is not required when, in connection with the change sought under this paragraph, a petition or request is filed for the establishment of new tolerances to take the place of those sought to be repealed and a fee is paid as required by paragraph (a) of this section.

(g) If a petition or a request is not accepted for processing because it is technically incomplete, the fee, less $1,650 for handling and initial review, shall be returned. If a petition is withdrawn by the petitioner after initial processing, but before significant Agency scientific review has begun, the fee, less $1,650 for handling and initial review, shall be returned. If an unacceptable or withdrawn petition is resubmitted, it shall be accompanied by the fee that would be required if it were being submitted for the first time.

(h) Each petition or request for a crop group tolerance, regardless of the number of raw agricultural commodities involved, shall be accompanied by a fee equal to the fee required by the analogous category for a single tolerance that is not a crop group tolerance, i.e., paragraphs (a) through (f) of this section, without a charge for each commodity where that would otherwise apply.

(i) Objections under section 408(d)(5) of the Act shall be accompanied by a filing fee of $3,275.

(j)(1) In the event of a referral of a petition or proposal under this section to an advisory committee, the costs shall be borne by the person who requests the referral of the data to the advisory committee.

(2) Costs of the advisory committee shall include compensation for experts as provided in § 180.11(c) and the expenses of the secretariat, including the costs of duplicating petitions and other related material referred to the committee.

(3) An advance deposit shall be made in the amount of $32,750 to cover the costs of the advisory committee. Further advance deposits of $32,750 each shall be made upon request of the Administrator when necessary to

prevent arrears in the payment of such costs. Any deposits in excess of actual expenses will be refunded to the depositor.

(k) The person who files a petition for judicial review of an order under section 408(d)(5) or (e) of the Act shall pay the costs of preparing the record on which the order is based unless the person has no financial interest in the petition for judicial review.

(l) No fee under this section will be imposed on the Inter-Regional Research Project Number 4 (IR-4 Program).

(m) The Administrator may waive or refund part or all of any fee imposed by this section if the Administrator determines in his or her sole discretion that such a waiver or refund will promote the public interest or that payment of the fee would work an unreasonable hardship on the person on whom the fee is imposed. A request for waiver or refund of a fee shall be submitted in writing to the Environmental Protection Agency, Office of Pesticide Programs, Registration Division (7505C), Washington, DC 20460. A fee of $1,650 shall accompany every request for a waiver or refund, except that the fee under this sentence shall not be imposed on any person who has no financial interest in any action requested by such person under paragraphs (a) through (k) of this section. The fee for requesting a waiver or refund shall be refunded if the request is granted.

(n) All deposits and fees required by the regulations in this part shall be paid by money order, bank draft, or certified check drawn to the order of the Environmental Protection Agency. All deposits and fees shall be forwarded to the Environmental Protection Agency, Headquarters Accounting Operations Branch, Office of Pesticide Programs (Tolerance Fees), P.O. Box 360277M, Pittsburgh, PA 15251. The payments should be specifically labeled "Tolerance Petition Fees" and should be accompanied only by a copy of the letter or petition requesting the tolerance. The actual letter or petition, along with supporting data, shall be forwarded within 30 days of payment to the Environmental Protection Agency, Office of Pesticide Programs, Registration Division, (7504C) Washington, DC 20460. A petition will not be accepted for processing until the required fees have been submitted. A petition for which a waiver of fees has been requested will not be accepted for processing until the fee has been waived or, if the waiver has been denied, the proper fee is submitted after notice of denial. A request for waiver or refund will not be accepted after scientific review has begun on a petition.

(o) This fee schedule will be changed annually by the same percentage as the percent change in the Federal General Schedule (GS) pay scale. In addition, processing costs and fees will periodically be reviewed and changes will be made to the schedule as necessary. When automatic adjustments are made based on the GS pay scale, the new fee schedule will be published in the **Federal Register** as a Final Rule to become effective 30 days or more after publication, as specified in the rule. When changes are made based on periodic reviews, the changes will be subject to public comment.

BILLING CODE 6560–50–F

DEPARTMENT OF TRANSPORTATION

Maritime Administration

46 CFR Part 360

[Docket No. MARAD–1998–3865]

RIN 2133—AB34 (FINAL)

Transfer of Marine Equipment to Ship Operators and Shipyards; Removal of Obsolete Regulations

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Final rule.

SUMMARY: The Maritime Administration (MARAD) is removing as obsolete its regulations relating to the transfer of marine equipment to ship operators and shipyards.

EFFECTIVE DATE: May 27, 1998.

FOR FURTHER INFORMATION CONTACT: Eugene Magee, Chief, Division of Reserve Fleet, Maritime Administration, 400 Seventh St, S.W., Room 2112, Tel. (202) 366–5752.

SUPPLEMENTARY INFORMATION: 46 CFR part 360 prescribes regulations for the transfer by MARAD of marine equipment on board vessels in the National Defense Reserve Fleet (NDRF) to operators of U.S.-flag merchant ships and to shipyards for the construction or repair of U.S.-flag merchant ships, on the basis of replacement at the earliest possible date.

The provisions contained in 46 CFR part 360 have been in effect over 25 years, and MARAD has found that such marine equipment on board NDRF vessels, which average 42 years in age, is now commercially obsolete and cannot be used by current U.S.-flag merchant ships. However, such equipment may be needed to support inactive ships in MARAD's Ready Reserve Force Fleet or other retention ships in the NDRF and therefore should be retained.

Accordingly, the subject transfer regulation serves no useful purpose, and MARAD is hereby removing 46 CFR Part 360 as obsolete in this final rule.

Rulemaking Analyses and Notices

Executive Order 12866 (Regulatory Planning and Review)

This rulemaking is not considered to be an economically significant regulatory action under section 3(f) of Executive Order 12866. Also, it is not a major rule under Pub. L. 104–121, 5 U.S.C. 804, or a significant rule under the Department's Regulatory Policies and Procedures. Accordingly, it has not been reviewed by the Office of Management and Budget.

MARAD has determined that this rulemaking presents no substantive issue which it could reasonably expect to produce meaningful public comment since it is merely removing obsolete regulations. Accordingly, MARAD has determined that the notice and public comment procedure otherwise required by the Administrative Procedure Act, 5 U.S.C. 553(c), is unnecessary and good cause exists, pursuant to 5 U.S.C. 553(d)(3), to make the changes effective upon publication.

Federalism

The Maritime Administration has analyzed this rulemaking in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that these regulations do not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Regulatory Flexibility Act

The Maritime Administration certifies that this rulemaking will not have a significant economic impact on a substantial number of small entities. 46 CFR Part 360 is being removed as obsolete, as it currently serves no useful purpose.

Environmental Assessment

The Maritime Administration has considered the environmental impact on this rulemaking and has concluded that an environmental impact statement is not required under the National Environmental Policy Act of 1969.

Paperwork Reduction Act

This rulemaking contains no reporting requirement that is subject to OMB approval under 5 CFR Part 320,

pursuant to the Paperwork Reduction Act of 1980 (44 U.S.C. 3501, *et seq.*).

List of Subjects in 46 CFR Part 360

Government property, Maritime carriers.

PART 360—[REMOVED]

Accordingly, under the authority of 46 App. U.S.C. 1114(b), 46 CFR part 360 is hereby removed in its entirety.

Dated: May 20, 1998.

By Order of the Maritime Administrator.

Joel C. Richard,

Secretary, Maritime Administration.

[FR Doc. 98–13878 Filed 5–26–98; 8:45 am]

BILLING CODE 4910–61–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 571

[Docket No. NHTSA–98–3837, Notice 1]

RIN 2127–AH07

Federal Motor Vehicle Safety Standards; Metric Conversion of Tire Standards

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Final rule; technical amendment.

SUMMARY: This document revises selected Federal Motor Vehicle Safety Standards (FMVSS) on tires by converting English measurements specified in those standards to metric measurements. This is one of several rulemaking actions that NHTSA is undertaking to implement the Federal policy that the metric system of measurement is the preferred system of weights and measures for United States trade and commerce. The conversions are not intended to make any changes in the stringency of the affected FMVSS. A companion final rule published in today's **Federal Register** converts, from English measurements to metric measurements, selected FMVSSs that do not relate to tires.

This document also includes a technical amendment to the standard on tire selection and rims for motor vehicles other than passenger cars so that tire information provided on labels may use abbreviations for units of weight (mass) measurement.

DATE: This final rule is effective May 27, 2003. Optional early compliance with the changes made in this final rule is permitted beginning May 27, 1998.

ADDRESSES: Petitions for reconsideration of this final rule should refer to the docket and notice number cited in the heading of this final rule and be submitted to: Administrator, National Highway Traffic Safety Administration, 400 Seventh Street, SW, Washington, DC 20590. It is requested, but not required, that 10 copies be submitted.

FOR FURTHER INFORMATION CONTACT: Mr. Kevin Cavey, National Highway Traffic Safety Administration, 400 Seventh Street, SW, Washington, DC 20590. Mr. Cavey's telephone number is: (202) 366–5271.

SUPPLEMENTARY INFORMATION:

I. Background Information

Section 5164 of the Omnibus Trade and Competitiveness Act (Pub. L. 100–418), makes it United States (U.S.) policy that the metric system of measurement is the preferred system of weights and measures for United States trade and commerce. Executive Order 12770 directs Federal agencies to comply with the Act by adopting a conversion schedule for their programs by September 30, 1992. In a **Federal Register** document of April 21, 1992 (57 FR 14619), the National Highway Traffic Safety Administration (NHTSA) published its plan to use the metric system in NHTSA programs, and included an implementation schedule to convert the Federal Motor Vehicle Safety Standards (FMVSSs) to metric measurements.

In a final rule published on March 15, 1995 (60 FR 13639), NHTSA completed the first phase of metrication, converting English measurements in the following FMVSSs to the metric system: Standard No. 102, *Transmission shift lever sequence, starter interlock, and transmission braking effect*; Standard No. 103, *Windshield defrosting and defogging systems*; Standard No. 104, *Windshield wiping and washing systems*; Standard No. 107, *Reflecting surfaces*; Standard No. 110, *Tire selection and rims*; Standard No. 112, *Headlamp concealment devices*; Standard No. 114, *Theft protection*; Standard No. 115, *Vehicle identification number—basic requirements*; Standard No. 120, *Tire selection and rims for motor vehicles other than passenger cars*; Standard No. 124, *Accelerator control systems*; Standard No. 126, *Truck-camper loading*; Standard No. 205, *Glazing materials*; Standard No. 206, *Door locks and door retention components*; Standard No. 207, *Seating systems*; Standard No. 212, *Windshield mounting*, and Standard No. 216, *Roof crush resistance*.

In the March 14, 1995 final rule, NHTSA established the following principles for converting English system measurements to the metric system:

(1) Equivalent conversions are generally favored, not exact ones;

(2) The term "mass" is favored over the term "weight," except when "weight" is used as part of a defined term;

(3) Force measurements are converted by specifying in the regulatory language the steps for making the conversion; and

(4) Dual measurements (i.e., both English and metric measurements) are used in a standard when it seems likely that it will be read by persons not fully accustomed to using the metric system. NHTSA stated its intent to follow these principles in future metrication rulemakings.

II. Notice of Proposed Rulemaking for Second Phase

On April 21, 1997, NHTSA began its second phase of metricating the FMVSSs by publishing a notice of proposed rulemaking to convert English measurements in the following Federal Motor Vehicle Safety Standards to the metric system: Standard No. 101, *Controls and displays*; Standard No. 109, *New pneumatic tires*; Standard No. 111, *Rearview mirrors*; Standard No. 116, *Motor vehicle brake fluids*; Standard No. 117, *Retreaded pneumatic tires*; Standard No. 119, *New pneumatic tires for vehicles other than passenger cars*; Standard No. 123, *Motorcycle controls and displays*; Standard No. 201, *Occupant protection in interior impact*; Standard No. 202, *Head restraints*; Standard No. 203, *Impact protection for the driver from the steering control system*; Standard No. 204, *Steering control rearward displacement*; Standard No. 209, *Seat belt assemblies*; Standard No. 210, *Seat belt assembly anchorages*; Standard No. 219, *Windshield zone intrusion*; Standard No. 220, *School bus rollover protection*; Standard No. 222, *School bus passenger seating and crash protection*; Standard No. 301, *Fuel system integrity*; and Standard No. 302, *Flammability of interior materials*.

The agency raised issues concerning the following proposed conversions: [1]

Exact Versus Equivalent Conversions—In the NPRM, NHTSA stated that although it generally favors the use of equivalent conversions, it will not use equivalent conversions where there is a specific safety need or other reason to make an exact conversion. For

[1] The issues relating to the other standards addressed in the NPRM are discussed in today's companion notice.

certain proposed conversions (i.e., ones involving requirements that specify the height of lettering, the minimum depth to which the lettering must be impressed, or the maximum height to which it must be embossed), NHTSA proposed exact conversions to minimize the possibility of manufacturers having to change molds and materials. NHTSA also proposed exact conversions for measurements in several non-tire standards to avoid a possibility that the standard would become more stringent after the conversion.

Dual Measurements—The agency stated its belief that converting some tables so that they contain only metric measurements may not be very informative to American tire manufacturers and retreaders and mirror manufacturers, many of whom may be more familiar with English measurements. Accordingly, in the case of the mirror and tire standards, NHTSA proposed that the tables and regulatory text provide both the English and metric systems of measurement. Specifically, for Standard No. 117, *Retreaded pneumatic tires*, NHTSA proposed to include both p.s.i. and kPa measurements in Table I—"Plies". For Standard No. 119, *New pneumatic tires for vehicles other than passenger cars*, NHTSA proposed to provide both English and metric measurements in Table I—"Strength Test Plunger Diameter", Table II—"Minimum Static Breaking Energy", and Table III—"Endurance Test Schedule".

NHTSA sought public comment on the proposal to use dual measurements for the specified tables and on the period of time after which use of the English units of measurements should be phased out.

Leadtime—NHTSA proposed that, if made final, the changes proposed in the NPRM take effect one year after the publication of the final rule, with manufacturers given the option to comply immediately with the new measurements. NHTSA stated its belief that one year is enough lead time for industry to make any necessary changes. In the past, NHTSA has consistently stated that it is not the agency's intent to impose unnecessary costs to manufacturers as a result of the metrication process. NHTSA stated it was aware that if some of the proposed changes in the tire standards were made final, tire mold manufacturers would have to change molds to accommodate the new metric/English measurements. Changing tire molds to accommodate labeling with metric measurements where the metric measurements are not specified may result in manufacturers incurring significant costs unless sufficient leadtime is given so that changes could be made when molds are changed.

NHTSA specifically sought comment on the amount of lead time that tire manufacturers should be given so that they could meet any changes that may result if the amendments proposed in NPRM are made final. NHTSA asked whether one year is enough lead time to permit tire manufacturers to purchase new molds that would meet the metricated standard.

III. Public Comments and NHTSA's Response

In response to the NPRM, NHTSA received comments from 17 commenters. Several commenters addressed only proposed metric conversions in the tire standards: Japan Automobile Tire Manufacturers' Association, Goodyear, Rubber Manufacturers' Assn., Toyota, and the European Tyre and Rim Technical Organization. The following comments were offered on Standard No. 109, *New pneumatic tires*; Standard No. 117, *Retreaded pneumatic tires*; and Standard No. 119, *New pneumatic tires for vehicles other than passenger cars*.

Most of the suggestions of commenters for changes to the three tire standards were to correct typographical errors or to make the conversions more consistent with established tire industry, European or other international standards. Many of the commenters made identical suggestions for changes. NHTSA has reviewed each suggested change and determined whether the change, if adopted, would have a substantive effect on the tire standard. The final rule incorporates the suggested changes, except as noted below.

The Rubber Manufacturers Association (RMA), in a June 19, 1997 submission, made detailed comments on proposed changes to Standards 109, 117, and 119. NHTSA has made almost all of RMA's suggested changes. However, the agency is not making RMA's suggested changes for Standard No. 119's S6.5(d) and S6.5(e). S6.5 specifies information that must be marked on tire sidewalls. That information includes the maximum load rating and corresponding inflation pressure of the tire (S6.5(d)) and the speed restriction of the tire, if 55 miles per hour or less (S6.5(e)). RMA's recommendation would make it optional, not mandatory, that the S6.5(d) and (e) information on tires be marked in metric and English system units. RMA's reason for its recommendation is that virtually every mold for tires regulated by Standard No. 119 would have to be restamped and there is "no justification for that kind of expense," even if spread out over several years.

In a submission dated August 28, 1997, RMA stated that its members estimate a cost to the industry of $18.2 million dollars to make changes to tire molds, if the one year implementation date proposed in the NPRM is adopted. The $18.2 million figure was calculated by adding the estimates provided by Goodyear, Michelin and Bridgestone-Firestone (a total of $15 million) and those provided by Dunlop, Continental, and Cooper (a total of $3.2 million).

Goodyear Tire and Rubber Company also asked that NHTSA not require metric markings for Standard No. 119. Goodyear stated that adding metric markings would mean that it would have to "virtually have to restamp every mold that currently exists for tires covered" by Standard No. 119. Goodyear stated that the restamping would be a major expense and not consistent with NHTSA's desire not to unduly burden tire manufactures.

NHTSA is not adopting RMA and Goodyear's request not to metricate Standard No. 119. NHTSA has undertaken this rulemaking to implement the Federal policy that the metric system of measurement is the preferred system of weights and measurements for United States trade and commerce. The metrication policy applies to all Federal Motor Vehicle Safety Standards, including Standard No. 119.

NHTSA notes that neither RMA nor Goodyear provided information on a leadtime for implementing the metrication of Standard No. 119 that would minimize the compliance burden on the tire industry. Therefore, in order to lessen the burden on tire manufacturers, NHTSA will not make the final rule effective in one year, as proposed in the NPRM, but will delay the effective date of the metricated tire standards for five years. Optional immediate compliance is also provided. NHTSA believes that during the course of five years, tire manufacturers will have the opportunity to replace molds as they become outmoded or worn out with new molds that incorporate both metric and English measurements.

IV. Technical Amendment to Standard No. 120

In the NPRM, NHTSA did not propose changes to Standard No. 120, *Tire selection and rims for motor vehicles other than passenger cars*. Nevertheless, Rover Group Ltd. suggested that the sample label titled "TRUCK EXAMPLE—SUITABLE TIRE-RIM

CHOICE" (following S5.3.2 of Standard No. 120) be amended to permit lower case letters for KG, the abbreviation for kilogram.

Land Rover's comment indicates that it believes "kilograms" used in the label may be abbreviated as "kg". At present, the label example specifies that units of weight be spelled out, i.e., "kilogram" or "pound". However, NHTSA has reexamined the label example and determined that consumers will not be confused by the abbreviations "kg" and "lbs" in lieu, respectively, of "kilograms" and "pounds." Thus, NHTSA in this final rule is also amending the label example that follows S5.3.2 of Standard No. 120 to permit abbreviations for kilograms and pounds.

However, NHTSA is not specifying that the abbreviation "kg" be in lower case letters because S5.3 *Label information* specifies that all information provided be "lettered in block capitals and numerals." NHTSA does not agree with Land Rover that persons seeing an upper case "KG" on the label will likely mistake this abbreviation for "Kelvin Giga" (which means Kelvin temperature of Celsius +273° times 10 to the ninth power) instead of the more common "kilogram."

V. Regulatory Impacts

A . Executive Order 12866 and DOT Regulatory Policies and Procedures

NHTSA has examined the impact of this rulemaking action under E.O. 12866 and the Department of Transportation's regulatory policies and procedures. This rulemaking document was not reviewed under E. O. 12866, "Regulatory Planning and Review." This action has been determined to be not "significant" under DOT's regulatory policies and procedures.

In converting the Federal Motor Vehicle Safety Standards from the English to the metric measurement system, the agency has made conversions in a way that does not substantively change the safety performance required of motor vehicle and motor vehicle equipment. As a result of this rule, manufacturers now providing consumer information (e.g., labeling) may incur minimal additional costs since they will have to add metric units to the information on their tires. In order to ensure that tire manufacturers can make the timing of their addition of the metrics unit information coincide with the timing of the replacement of their tire molds as they wear out and naturally reach the end of their useful life, the agency is providing five years of leadtime. The impacts of this action will be so minor that preparation of a full regulatory evaluation for this proposed rule is not warranted.

B. Regulatory Flexibility Act

The agency has considered the effects of this rulemaking action under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). I certify that this proposed rule will not have a significant economic impact on a substantial number of small entities. As noted above, converting from the English system to the metric system will not require a change in the performance of any tire. While tire molds may have to be changed to accommodate dual metric/English labeling on tires, tire manufacturers can schedule the change so that it coincides with the normal retirement of tire molds as they wear out.

NHTSA does not know of any U.S. small businesses that manufacture tires. The U.S. Small Business Administration (SBA)'s small business size standard for a tire manufacturer is at 13 CFR 121.601 *Standard Industrial Classification Codes and size standards.* The Standard Industrial Classification Code (SIC) for manufacturers of tires and inner tubes is 3011. For SIC 3011, the SBA has established a size standard of 1,000 employees or fewer.

C. Environmental Impacts

In accordance with the National Environmental Policy Act of 1969, the agency has considered the environmental impacts of this rulemaking action and determined that, as a final rule, it will not have a significant impact on the quality of the human environment.

D. Federalism

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that the final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

E. Civil Justice Reform

This proposed rule will not have a retroactive effect. Under 49 U.S.C. section 30103, whenever a Federal motor vehicle safety standard is in effect, a state may not adopt or maintain a safety standard applicable to the same aspect of performance which is not identical to the Federal standard. 49 U.S.C. section 30106 sets forth a procedure for judicial review of final rules establishing, amending or revoking Federal motor vehicle safety standards. That section does not require submission of a petition for reconsideration or other administrative proceedings before parties may file suit in court.

List of Subjects in 49 CFR Part 571

Imports, Motor vehicle safety, Motor vehicles, Rubber and rubber products, Tires.

In consideration of the foregoing, the Federal Motor Vehicle Safety Standards (49 CFR Part 571), are amended as set forth below.

PART 571—FEDERAL MOTOR VEHICLE SAFETY STANDARDS

1. The authority citation for part 571 continues to read as follows:

Authority: 49 U.S.C. 322, 30111, 30115, 30117, and 30166; delegation of authority at 49 CFR 1.50.

2. Section 571.109 is amended by revising in S4.2.1, paragraph (d); revising S4.2.2.3.1; revising S4.2.2.3.2; revising the first sentence of S4.3 *Labeling Requirements* introductory paragraph; revising the first sentence of S4.3.5; revising S5.2.2.1; revising S5.3.2.1; revising S5.3.2.3; revising S5.4.1.2; revising S5.4.2.1; revising S5.4.2.2; revising S5.4.2.3; revising S5.5.2; revising S5.5.3; and revising S5.5.4 to read as follows:

§ 571.109 Standard No. 109, New pneumatic tires.

* * * * *

S4.2.1. *General.* Each tire shall conform to each of the following:

* * * * *

(d) It shall incorporate a tread wear indicator that will provide a visual indication that the tire has worn to a tread depth of 1.6 mm (1/16 inch).

* * * * *

S4.2.2.3.1 When a tubeless tire that has a maximum inflation pressure other than 420 kPa (60 psi) is tested in accordance with S5.2, the applied force required to unseat the tire bead at the point of contact shall be not less than:

(a) 6,670 N (1,500 pounds) for tires with a designated section width of less than 160 mm (6 inches);

(b) 8,890 N (2,000 pounds) for tires with a designated section width of 160 mm (6 inches) or more but less than 205 mm (8 inches);

(c) 11,120 N (2,500 pounds) for tires with a designated section width of 205 mm (8 inches) or more, using the section width specified in a submission made by an individual manufacturer, pursuant to S4.4.1(a), or in one of the publications described in S4.4.1(b) for the applicable tire size designation and type.

S4.2.2.3.2 When a tire that has a maximum inflation pressure of 420 kPa

(60 psi) is tested in accordance with S5.2, the applied force required to unseat the bead at the point of contact shall be not less than:

(a) 6,670 N (1,500 pounds) for tires with a maximum load rating of less than 399 kg (880 pounds);

(b) 8,890 N (2,000 pounds) for tires with a maximum load rating of 399 kg (880 pounds) or more but less than 635 kg (1,400 pounds);

(c) 11,120 N (2,500 pounds) for tires with a maximum load rating of 635 kg (1,400 pounds) or more, using the maximum load rating marked on the sidewall of the tire.

* * * * *

S4.3 *Labeling Requirements.* Except as provided in S4.3.1 and S4.3.2, each tire shall have permanently molded into or onto both sidewalls, in letters and numerals not less than 2 mm (0.078 inches) high, the information shown in paragraphs S4.3 (a) and (g). * * *

* * * * *

S4.3.5 If the maximum inflation pressure of a tire is 420 kPa (60 psi), the tire shall have permanently molded into or onto both sidewalls, in letters and numerals not less than 12.7 mm (½ inch), the words "Inflate to 420 kPa (60 psi)". * * *

* * * * *

S5.2.2.1 Apply a load through the block to the tire's outer sidewall at the distance specified in Figure 1 for the applicable wheel size at a rate of 50 mm (2 inches) per minute, with the load arm substantially parallel to the tire and rim assembly at the time of engagement.

* * * * *

S5.3.2.1 Force a 19 mm (¾ inch) diameter cylindrical steel plunger with a hemispherical end perpendicularly into the tread rib as near to the centerline as possible, avoiding penetration into the tread groove, at the rate of 50 mm (2 inches) per minute.

* * * * *

S5.3.2.3 Compute the breaking energy for each test point by means of one of the two following formulas:

$W=[(F\times P)/2]\times 10^{\times 3}$ (joules)

Where

W=Energy, in joules;

F=Force, Newtons; and

P=Penetration, mm; or

$W=[(F\times P)/2]$

Where

W=Energy, inch-pounds;

F=Force, pounds; and

P=Penetration, inches.

* * * * *

S5.4.1.2 Condition the tire assembly to 38°±3° C (100°±5° F) for at least three hours.

* * * * *

S5.4.2.1 Mount the tire and wheel assembly on a test axle and press it against a flat-faced steel test wheel 1708 mm (67.23 inches) in diameter and at least as wide as the section width of the tire to be tested or an approved equivalent test wheel, with the applicable test load specified in the table in S5.4.2.3 for the tire's size designation, type and maximum permissible inflation pressure.

S5.4.2.2 During the test, the air surrounding the test area shall be 38°±3° C (100°±5° F).

S5.4.2.3 Conduct the test at 80 kilometers per hour (km/h)(50 miles per hour) in accordance with the following schedule without pressure adjustment or other interruptions:

The loads for the following periods are the specified percentage of the maximum load rating marked on the tire sidewall:

	Percent
4 hours	85
6 hours	90
24 hours	100

* * * * *

S5.5.2 Break in the tire by running it for 2 hours at 80 km/h (50 mph).

S5.5.3 Allow to cool to 38°±3° C (100°±5° F) and readjust the inflation pressure to the applicable pressure specified in Table II.

S5.5.4 Without readjusting inflation pressure, test at 121 km/h (75 mph) for 30 minutes, 129 km/h (80 mph) for 30 minutes, and 137 km/h (85 mph) for 30 minutes.

* * * * *

3. In § 571.109, Figure 1—"Bead Unseating Fixture—Dimensions in Inches", the Table titled "Figures for Standard No. 109", Figure 2—"Diagram of Beat Unseating Block Dimensions in Inches", and Figure 2A—"Diagram of Bead Unseating Block—Dimensions in Inches" after S6, and preceding Appendix A, are revised to read as follows:

[1] Dash Radial—Not an "R" Radial.

7. Section 571.119 is amended by revising S6.3; revising S6.4; revising in S6.5, the introductory paragraph and paragraphs (d) and (e); revising S7.1.2; revising in S7.2, paragraph (c); revising in S7.3, paragraphs (c), (e), and (f); and revising in S7.4, paragraph (c) to read as follows:

§ 571.119 Standard No. 119, New pneumatic tires for vehicles other than passenger cars.

* * * * *

S6.3 *High speed performance.* When tested in accordance with the procedures of S7.3, a tire shall meet the requirements set forth in S6.1.1 and S6.1.2(a) and (b). However, this requirement applies only to motorcycle tires and to non-speed-restricted tires of nominal rim diameter code 14.5 or less marked load range A, B, C, or D.

S6.4 *Treadwear indicators.* Except as specified in this paragraph, each tire shall have at least six treadwear indicators spaced approximately equally around the circumference of the tire that enable a person inspecting the tire to determine visually whether the tire has worn to a tread depth of 1.6 mm (one-sixteenth of an inch). Tires with a rim diameter code of 12 or smaller shall have at least three such treadwear indicators. Motorcycle tires shall have at least three such indicators which permit visual determination that the tire has worn to a tread depth of 0.8 mm (one-thirty-second of an inch).

S6.5 *Tire markings.* Except as specified in this paragraph, each tire shall be marked on each sidewall with the information specified in paragraphs (a) through (j) of this section. The markings shall be placed between the maximum section width (exclusive of sidewall decorations or curb ribs) and the bead on at least one sidewall, unless the maximum section width of the tire is located in an area which is not more than one-fourth of the distance from the bead to the shoulder of the tire. If the maximum section width falls within that area, the markings shall appear between the bead and a point one-half the distance from the bead to the shoulder of the tire, on at least one sidewall. The markings shall be in letters and numerals not less than 2 mm (0.078 inch) high and raised above or sunk below the tire surface not less that 0.4 mm (0.015 inch), except that the marking depth shall be not less than 0.25mm (0.010 inch) in the case of motorcycle tires. The tire identification and the DOT symbol labeling shall comply with part 574 of this chapter. Markings may appear on only one sidewall and the entire sidewall area may be used in the case of motorcycle tires and recreational, boat, baggage, and special trailer tires.

* * * * *

(d) The maximum load rating and corresponding inflation pressure of the tire, shown as follows:

(Mark on tires rated for single and dual load): Max load single ____kg (____lb) at ____kPa (____psi) cold. Max load dual ____kg (____lb) at ____kPa (____psi) cold.

(Mark on tires rated only for single load): Max load ____kg (____lb) at ____kPa (____psi) cold.

(e) The speed restriction of the tire, if 88 km/h (55 mph) or less, shown as follows:

Max speed ____km/h (____mph).

* * * * *

S7.1.2 The tire must be capable of meeting the requirements of S7.2 and S7.4 when conditioned to a temperature of 35° C (95° F) for 3 hours before the test is conducted, and with an ambient temperature maintained at 35° C (95° F) during all phases of testing. The tire must be capable of meeting the requirements of S7.3 when conditioned at a temperature of 21° C (70° F) for 3 hours before the test is conducted.

S7.2 *Endurance.*

* * * * *

(c) Mount the tire-rim assembly on an axle and press it against a flat-faced steel test wheel that is 1708 mm (67.23 inches) in diameter and at least as wide as the tread of the tire.

* * * * *

S7.3 *Strength.*

* * * * *

(c) Force a cylindrical steel plunger, with a hemispherical end and of the diameter specified in Table I for the tire size, perpendicularly into a raised tread element as near as possible to the centerline of the tread, at a rate of 50 mm (2 inches) per minute, until the tire breaks or the plunger is stopped by the rim.

* * * * *

(e) Repeat the plunger application at 72° intervals around the circumference of the tire, until five measurements are made. However, in the case of tires of 12 inch rim diameter code or smaller, repeat the plunger application at 120° intervals around the circumference of the tire, until three measurements are made.

(f) Compute the breaking energy for each test point by one of the two following formulas:

(1) $W = [(F \times P)/2] \times 10^{-3}$ (joules)

Where:

W = Breaking energy (in joules) (kJ)
F = Force in newtons (N) and
P = Penetration in millimeters (mm), or;

(2) $W = (FP/2)$

Where:

W = Breaking energy in inch-pounds,
F = Force in pounds,
P = Penetration in inches.

* * * * *

S7.4 *High speed performance.*

* * * * *

(c) Remove the load, allow the tire to cool to 35° C (95° F), and then adjust the pressure to that marked on the tire for single tire use.

* * * * *

8. In § 571.119, Table I—"Strength Test Plunger Diameter", Table II—"Minimum Static Breaking Energy (Inch-Pounds)", and Table III—"Endurance Test Schedule" that follow paragraph (e) of S7.4 is revised to read as follows:

TABLE I.—STRENGTH TEST PLUNGER DIAMETER

	Plunger diameter	
	(mm)	(inches)
Tire type:		
Light truck	19.05	3/4
Motorcycle		5/16
Tires for 12 rim diameter code or smaller rims except motorcycle	19.05	3/4
Tires other than the above types:		
Tubeless:		
17.5 diameter code or smaller rims	19.05	3/4
Larger than 17.5 rim diameter code rims:		
Load range F or less	31.75	1 1/4
Load range over F	38.10	1 1/2

49 CFR Part 571

[Docket No. NHTSA–98–3836]

RIN 2127–AG55

Federal Motor Vehicle Safety Standards; Metric Conversion

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Final rule.

SUMMARY: This document revises selected Federal Motor Vehicle Safety Standards (FMVSS) by converting English measurements specified in those standards to metric measurements. This is one of several rulemaking actions that NHTSA is undertaking to implement the Federal policy that the metric system of measurement is the preferred system of weights and measures for United States trade and commerce. The conversions are not intended to make any changes in the stringency of the affected FMVSS. A companion final rule published in today's **Federal Register** converts English measurements in selected safety standards on tires to metric measurements.

DATES: This final rule is effective May 27, 1999. Optional early compliance with the changes made in this final rule is permitted beginning May 27, 1998.

ADDRESSES: Petitions for reconsideration of this final rule should refer to the docket and notice number cited in the heading of this final rule and be submitted to: Administrator, National Highway Traffic Safety Administration, 400 Seventh St., SW, Washington, DC 20590. It is requested but not required, that 10 copies be submitted.

FOR FURTHER INFORMATION CONTACT: Mr. Kevin Cavey, National Highway Traffic Safety Administration, 400 Seventh Street, SW, Washington, DC 20590. Mr. Cavey's telephone number is: (202) 366–5271.

SUPPLEMENTARY INFORMATION:

I. Background Information

Section 5164 of the Omnibus Trade and Competitiveness Act (Pub. L. 100–418), makes it United States (U.S.) policy that the metric system of measurement is the preferred system of weights and measures for United States trade and commerce. Executive Order 12770 directs Federal agencies to comply with the Act by adopting a conversion schedule for their programs by September 30, 1992. In a **Federal Register** document of April 21, 1992 (57 FR 14619), the National Highway Traffic Safety Administration (NHTSA) published its plan to use the metric system in NHTSA programs, and included an implementation schedule to convert the Federal Motor Vehicle Safety Standards (FMVSSs) to metric measurements.

In a final rule published on March 14, 1995 (60 FR 13639), NHTSA completed the first phase of metrication, converting English measurements in the following FMVSSs to the metric system: Standard No. 102, *Transmission shift lever sequence, starter interlock, and transmission braking effect;* Standard No. 103, *Windshield defrosting and defogging systems;* Standard No. 104, *Windshield wiping and washing systems;* Standard No. 107, *Reflecting surfaces;* Standard No. 110, *Tire selection and rims;* Standard No. 112, *Headlamp concealment devices;* Standard No. 114, *Theft protection;* Standard No. 115, *Vehicle identification number—basic requirements;* Standard No. 120, *Tire selection and rims for motor vehicles other than passenger cars;* Standard No. 124, *Accelerator control systems;* Standard No. 126, *Truck-camper loading;* Standard No. 205, *Glazing materials;* Standard No. 206, *Door locks and door retention components;* Standard No. 207, *Seating systems;* Standard No. 212, *Windshield mounting,* and Standard No. 216, *Roof crush resistance.*

In the March 14, 1995 final rule, NHTSA established the following principles for converting English system measurements to the metric system:

(1) Equivalent conversions are generally favored, not exact ones;

(2) The term "mass" is favored over the term "weight," except when "weight" is used as part of a defined term;

(3) Force measurements are converted by specifying in the regulatory language the steps for making the conversion; and

(4) Dual measurements (i.e., both English and metric measurements) are used in a standard when it seems likely that it will be read by persons not fully accustomed to using the metric system. NHTSA stated its intent to follow these principles in future metrication rulemakings.

II. Notice of Proposed Rulemaking for Second Phase

On April 21, 1997, NHTSA began its second phase of metricating the FMVSSs by publishing a notice of proposed rulemaking to convert English measurements in the following Federal Motor Vehicle Safety Standards to the metric system: Standard No. 101, *Controls and displays;* Standard No. 109, *New pneumatic tires;* Standard No. 111, *Rearview mirrors;* Standard No. 116, *Motor vehicle brake fluids;* Standard No. 117, *Retreaded pneumatic tires;* Standard No. 119, *New pneumatic tires for vehicles other than passenger cars;* Standard No. 123, *Motorcycle controls and displays;* Standard No. 201, *Occupant protection in interior impact;* Standard No. 202, *Head restraints;* Standard No. 203, *Impact protection for the driver from the steering control system;* Standard No. 204, *Steering control rearward displacement;* Standard No. 209, *Seat belt assemblies;* Standard No. 210, *Seat belt assembly anchorages;* Standard No. 219, *Windshield zone intrusion;* Standard No. 220, *School bus rollover protection;* Standard No. 222, *School bus passenger seating and crash protection;* Standard No. 301, *Fuel system integrity;* and Standard No. 302, *Flammability of interior materials.*

The agency raised issues concerning the following proposed conversions: [1]

A. Exact Versus Equivalent Conversions—In the NPRM, NHTSA stated that although it generally favors the use of equivalent conversions, it will not use equivalent conversions where there is a specific safety need or other reason to make an exact conversion. For certain proposed conversions (i.e., ones involving requirements that specify the height of lettering, the minimum depth to which the lettering must be impressed, or the maximum height to which it must be embossed), NHTSA proposed exact conversions, to minimize the possibility of manufacturers' having to change molds and materials.

NHTSA also noted that it proposed in the following instances to make exact conversions to avoid a possibility that the standard would become more stringent as a result of the conversion: (1) In making any conversions of gross vehicle weight ratings (GVWRs); and (2) in the specifications for the loading of test vehicles in Standard No. 219, *Windshield zone intrusion,* and Standard No. 301, *Fuel system integrity.* Certain tested vehicles must be loaded to their unloaded vehicle weight plus 300 pounds. In the NPRM, the agency proposed to convert 300 pounds to 136 kilograms, the equivalent conversion. NHTSA proposed conversion to 136 kilograms, instead of 140 kilograms, because a slight increase in the load required for Standards Nos. 219 and 301 testing (resulting from a conversion to 140 kilograms) might result in manufacturers having to conduct a separate crash test for Standard No. 219 and Standard No. 301 certification.

B. "Mass" vs. "Weight"—NHTSA stated that in instances in which the safety standards use "weight" to mean "mass" in describing compliance testing conditions and procedures, or in other instances in which the standards are primarily directed to engineers or other technically trained persons, NHTSA will substitute "mass" for "weight" in the regulatory text. However, when "weight" is part of a term defined at 49 CFR 571.3, such as "curb weight,"

[1] The issues relating to the other standards addressed in the NPRM are discussed in today's companion notice.

"gross axle weight rating," or "unloaded vehicle weight," NHTSA stated it will not make any change.

C. Force Measurements—In making the metric conversion of the force measurements in Standard Nos. 220 and 222, NHTSA proposed to specify the steps of the conversion in the regulatory language, to minimize the chance of the wrong metric system conversion being made. For Standard No. 220, NHTSA proposed to amend the force measurement language (in S4) to provide that the roof of the vehicle's body structure shall be subjected to a force in Newtons equal to 1.5 times the unloaded vehicle weight, measured in kilograms and multiplied by 9.8 m/s^2. For Standard No. 222, NHTSA proposed to amend the force measurement language (in S5.1.5) to provide that the seat cushion shall not separate from the seat at any attachment point when subjected to an upward force in Newtons of 5 times the mass of the seat cushion in kilograms and multiplied by 9.8 m/s^2.

D. Dual Measurements—The agency stated its belief that converting some tables so that they contain only metric measurements would not be very informative to American mirror manufacturers or to American tire manufacturers and retreaders, many of whom may be more familiar with English measurements. Therefore, in the case of the mirror and tire standards, NHTSA proposed that the tables and regulatory text provide both the English and metric systems of measurement. Specifically, in Standard No. 111, *Rearview mirrors*, NHTSA proposed to provide both English and metric measurements for radii of curvature specified in Table I—"Conversion Table from Spherometer Dial Reading to Radius of Curvature." Proposed changes to the tire standards are discussed in the companion notice published in this **Federal Register** issue.

NHTSA sought public comment on the proposal to use dual measurements for the specified tables and on the period of time after which the English units of measurements should be phased out.

E. Leadtime—NHTSA proposed that, if made final, the changes proposed in the NPRM take effect one year after the publication of the final rule, with manufacturers given the option to comply immediately with the amended language.

F. Other Changes—NHTSA also proposed to correct typographical and or other nonsubstantive errors in Standard No. 207, *Seating systems*, and Standard No. 210, *Seat belt assembly anchorage*, and to remove outdated language in Standard No. 204, *Steering control rearward displacement*, and Standard No. 210, *Seat belt assembly anchorages*.

III. Public Comments and NHTSA's Response

In response to the NPRM, NHTSA received comments from eighteen commenters. The following commenters addressed only proposed metric conversions in the tire standards: Japan Automobile Tire Manufacturers Association; Goodyear; Rubber Manufacturers Association; Toyota; and the European Tyre and Rim Technical Organization. Comments on the tire standards are addressed in today's **Federal Register** notice on tire metrication.

The American Society for Testing and Materials (ASTM) sent NHTSA a copy of its 1996 version of ASTM G23 "Practice for operating light-exposure apparatus (carbon-arc type) with and without water for exposure of nonmetallic materials" as an example of how it was converting its recommended practices to the metric system. ASTM stated that the 1996 version has many improvements over the 1981 version.

Other commenters either addressed the principles used in making conversions, or suggested changes to specific proposed conversions. The following issues were addressed by commenters, and are followed by NHTSA's response:

Exact vs. equivalent measurements—Mr. Bruce Barrow of the Defense Information Systems Agency, on behalf of the Interagency Council on Metric Policy, cautioned NHTSA to "avoid implying much more precision than is warranted." As an example of what it believed to be excess precision, the Council cited the conversion of 10,000 lbs. to 4536 kilograms for gross vehicle weight ratings (GVWRs), recommending instead that the conversion be made to 4500 kg. On the other hand, Thomas Built and Volkswagen recommended that in converting the GVWR of 10,000 lbs, the exact conversion (4536 kg) be used, not the equivalent conversion (4500 kg).

NHTSA has resolved the issue of GVWR conversions in the first round of metrication (see final rule of March 14, 1995; 60 FR 13639) and will not readdress that issue. NHTSA decided to use exact conversions for GVWR measurements because, in some industries such as school bus manufacturing, 36 kilograms (approximately 80 pounds) makes a difference in determining whether a particular school bus must meet the school bus standards for vehicles over 10,000 lbs. GVWR or vehicles under 10,000 lbs.

The California Department of Transportation (CDOT) asked that NHTSA not change references to GVWR until all truck size and weight regulations are converted to the metric system. CDOT's request is consistent with NHTSA's stated approach of not changing "weight" to "mass" when "weight" is part of a term defined at 49 CFR 571.3 such as "gross vehicle weight rating" or "curb weight." Mr. Gary Vigen wrote that he favored equivalent conversions, rather than exact conversions. Mr. Vigen did not give a reason for his position.

"Mass" vs. "Weight"—The Interagency Council on Metric Policy commented that NHTSA should not consider redefining established terms such as "gross vehicle weight." As previously noted, NHTSA agrees with this comment. The Council also recommended that because of confusion regarding the use of the word "weight" vs. "mass", that each standard include in its preface the statement: "In this document the word 'weight' is used as a synonym for 'mass.'" Because adopting this recommendation may make substantive changes in affected standards, NHTSA is not making the suggested change in this final rule. However, in its future metrication efforts, NHTSA will consider including the Council's recommended statement for specific safety standards.

Professor E. A. Mechtly of the University of Illinois, Urbana, commented generally that the NPRM's use of "pound" and "weight" required correction. However, since he did not specify where the terms should be corrected, NHTSA is not making any changes in response to Professor Mechtly's comments on this issue.

Force measurements—The Interagency Council on Metric Policy recommended that in converting force measurements, the seat cushion or unloaded vehicle weight, measured in kilograms, be multiplied by 10 m/s^2 rather than 9.8 m/s^2. NHTSA is not adopting this comment because, in Standard No. 220, *School bus rollover protection*, and Standard No. 222, *School bus passenger seating and crash protection*, where force measurements are used, using a factor of 10 may have the effect of making the Standards slightly more stringent than under the English measurement system. However, NHTSA notes that use of 9.8 in the Standards would not preclude a manufacturer from using a factor of 10 when conducting its compliance testing with a safety standard.

Dual Measurements—Mr. Gary Vigen wrote that he did not favor dual unit tables because "(i)n the long run, there is less chance for error when only one set of units is used." The Interagency Council on Metric Policy recommended that dual measurements be avoided as much as possible. Land Rover questioned the necessity for dual English and metric measurements when "information is intended to be used by people in the manufacturing industry."

NHTSA agrees with the commenters that ideally, dual measurements need not be used. However, as stated in the NPRM, NHTSA believes that converting some tables so that they contain only metric measurements may not be very informative for American mirror manufacturers or for American tire manufacturers or retreaders, who may be more familiar with the English system. NHTSA received no comment addressing whether mirror manufacturers are familiar with the metric system and therefore do not need dual measurements. NHTSA is adopting the proposal in the NPRM for using dual measurements in Standard No. 111, *Rearview mirrors*. Dual measurements for the tire standards are addressed in today's companion final rule on metricating the tire standards.

Other Changes—Many commenters, including Ford, General Motors, Land Rover, Mitsubishi, Volkswagen, and Transport Canada commented on specific proposed changes to the safety standards. Many of the comments noted typographical errors, or provided the correct abbreviation for a metric measurement. NHTSA is adopting all of these technical comments. In particular, General Motors noted that NHTSA did not propose to convert to metric measurements, Figure 1 to Standard No. 219, *Windshield zone intrusion*. The oversight has been corrected in the final rule.

Land Rover also stated that in part 583, *Automobile Parts Content Labeling*, the "example provided * * * does not comply with the labeling typeface requirements (block capitals) in the regulation/standard." NHTSA does not believe that the "PARTS CONTENT INFORMATION" example provided for part 583 requires correction from the existing lower case to upper case because the specified information is correct. NHTSA is therefore not adopting Land Rover's suggestion.

NHTSA is not adopting Professor Mechtly's suggested changes to Standard No. 126, *Truck-camper loading*, because that standard was not proposed to be amended in the April 1997 notice of proposed rulemaking. NHTSA is also not adopting Professor Mechtly's recommended language for Standard No. 220, *Schoolbus rollover protection*, because it believes that adopting the language might result in a substantive change to the standard.

Ford noted that, in Standard No. 111, *Rearview mirrors*, NHTSA did not propose to convert Figure 3. NHTSA notes that Figure 3 "Camera Locations for School Bus Field-of-View Test" is already described in both metric and English system measurements.

Standard No. 201—In the notice of proposed rulemaking, NHTSA proposed metricating Standard No. 201, *Occupant Protection in Interior Impacts*. However, on April 8, 1997 (62 FR 16718), NHTSA published a final rule metricating Standard No. 201. Since Standard No. 201 has already been metricated, this final rule will not make changes to Standard No. 201.

Leadtime—In the NPRM, NHTSA proposed that, if made final, the changes in the NPRM take effect one year after the final rule is published in the **Federal Register**. NHTSA received no comments relating to the leadtime that should be provided for changes to standards for products other than tires. Thus, for the non-tire FMVSSs, the changes in this final rule will take effect one year after the publication of this final rule. Today's companion **Federal Register** notice addressing metric conversions in the tire standards addresses leadtime for the tire standards.

IV. Regulatory Impacts

A. Executive Order 12866 and DOT Regulatory Policies and Procedures

NHTSA has examined the impact of this rulemaking action under E.O. 12866 and the Department of Transportation's regulatory policies and procedures. This rulemaking document was not reviewed under E. O. 12866, "Regulatory Planning and Review." This action has been determined to be not "significant" under DOT's regulatory policies and procedures.

In converting the Federal Motor Vehicle Safety Standards from the English to the metric measurement system, the agency has made conversions in a way that does not substantively change the performance requirements of the FMVSS's. As a result of this rule, manufacturers now providing consumer information (e.g., labeling) may incur minimal additional costs since they would have to change their information to add the metric units. However, the agency believes additional costs would be minuscule, since manufacturers currently label and provide consumer information in English units. The impacts of this action are so minor that a full regulatory evaluation for this proposed rule has not been prepared.

B. Regulatory Flexibility Act

The agency has also considered the effects of this rulemaking action under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). I certify that this final rule will not have a significant economic impact on a substantial number of small entities. The rationale for this certification is that converting the FMVSS from the English system to the metric system will not substantively change the performance requirements of any of the Federal Motor Vehicle Safety Standards. Manufacturers that qualify as small businesses that have not been labeling their products in metric units or provide consumer information in metric units will incur some costs to include metric information on their labeling. However, the agency believes such costs will be minimal, given these manufacturers are currently labeling and providing the consumer information in English units.

C. Environmental Impacts

In accordance with the National Environmental Policy Act of 1969, the agency has considered the environmental impacts of this rulemaking action and determined that, as a final rule, it will not have a significant impact on the quality of the human environment.

D. Federalism

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that the final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

E. Civil Justice Reform

This rule will not have a retroactive effect. Under 49 U.S.C. section 30103, whenever a Federal motor vehicle safety standard is in effect, a state may not adopt or maintain a safety standard applicable to the same aspect of performance which is not identical to the Federal standard. 49 U.S.C. section 30106 sets forth a procedure for judicial review of final rules establishing, amending or revoking Federal motor vehicle safety standards. That section does not require submission of a petition for reconsideration or other administrative proceedings before parties may file suit in court.

List of Subjects in 49 CFR Part 571

Imports, Motor vehicle safety, Motor vehicles, Rubber and rubber products, Tires.

In consideration of the foregoing, the Federal Motor Vehicle Safety Standards (49 CFR part 571), are amended as set forth below.

PART 571—FEDERAL MOTOR VEHICLE SAFETY STANDARDS

1. The authority citation for part 571 continues to read as follows:

Authority: 49 U.S.C. 322, 30111, 30115, 30117, and 30166; delegation of authority at 49 CFR 1.50.

2. Section 571.101 is amended by revising S5(a) and revising S5.3.5 to read as follows:

§ 571.101 Standard No. 101, Controls and displays.

* * * * *

S5. *Requirements.* (a) Except as provided in paragraph (b) of this section, each passenger car, multipurpose passenger vehicle, truck and bus manufactured with any control listed in S5.1 or in column 1 of Table 1, and each passenger car, multipurpose passenger vehicle and truck or bus less than 4,536 kg GVWR with any display listed in S5.1 or in column 1 of Table 2 shall meet the requirements of this standard for the location, identification, and illumination of such control or display.

* * * * *

S5.3.5 Any source of illumination within the passenger compartment which is forward of a transverse vertical plane 110 mm rearward of the manikin "H" point with the driver's seat in its rearmost driving position, which is not used for the controls and displays regulated by this standard, which is not a telltale, and which is capable of being illuminated while the vehicle is in motion, shall have either (1) light intensity which is manually or automatically adjustable to provide at least two levels of brightness, (2) a single intensity that is barely discernible to a driver who has adapted to dark ambient roadway conditions, or (3) a means of being turned off. This requirement does not apply to buses that are normally operated with the passenger compartment illuminated.

* * * * *

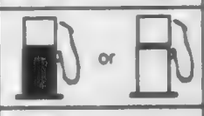
3. Section 571.101 is amended by revising Table 1 and Table 2 that follow S6 to read as follows:

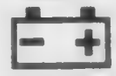
BILLING CODE 4910–59–P

Table 1
Identification and Illustration of Controls

Column 1	Column 2	Column 3	Column 4
Hand Operated Controls	*Identifying Words or Abbreviation*	*Identifying Symbol*	*Illumination*
MASTER LIGHTING SWITCH	Lights	 [5]	———
HEADLAMPS AND TAIL LAMPS	(Manufacturer Option) [2]	(Manufacturer Option) [2]	———
HORN	Horn		———
TURN SIGNAL	———	 [3] [5]	———
HAZARD WARNING SIGNAL	Hazard	 [5]	Yes
WINDSHIELD WIPING SYSTEM	Wiper or Wipe		Yes
WINDSHIELD WASHING SYSTEM	Washer or Wipe		Yes
WINDSHIELD WASHING AND WIPING COMBINED	Wash-Wipe or Washer-Wiper		Yes
HEATING AND OR AIR CONDITIONING FAN	Fan		Yes
WINDSHIELD DEFROSTING AND DEFOGGING SYSTEM	Defrost, Defrog or Def.		Yes
REAR WINDOW DEFROSTING AND DEFOGGING SYSTEM	Rear Defrost, Rear Defog. Rear Def., or R-Def.		Yes
IDENTIFICATION, SIDE MARKER AND OR CLEARANCE LAMPS	Marker Lamps or MK Lps		Yes
MANUAL CHOKE	Choke	———	———
ENGINE START	Engine Start[1]	———	———
ENGINE STOP	Engine Stop[1]	———	Yes
HAND THROTTLE	Throttle	———	———
AUTOMATIC VEHICLE SPEED	(Manufacturer Option)	———	Yes
HEATING AND AIR CONDITIONING SYSTEM	(Manufacturer Option)	(Manufacturer Option)	Yes

[1] Use when engine control is separate from the key locking system.





[2] Separate idenfication not required if controlled by master lighting switch.

[3] The pair of arrows is a single symbol. When the controls for left and right turn operate independently, however, the two arrows may be considered separate symbols and be spaced accordingly.

[4] Identification not required for vehicles when a GVWR greater then 10,000 lbs., or or narrow ring-type controls.

[5] Framed areas may be filed.

Table 2
Identification and Illustration of Displays

Column 1	Column 2	Column 3	Column 4	Column 5
Display	*Telltale Color*	*Identifying Words or Abbreviation*	*Identifying Symbol*	*Illumination*
TURN SIGNAL Telltale	Green	Also see FMVSS 108	 [1] [6]	—
HAZARD WARNING Telltale		Also see FMVSS 108	 [2] [6]	—
SEAT BELT Telltale	— [7]	Fasten Belts or Fasten Seat Belts Also see FMVSS 208		—
FUEL LEVEL Telltale		Fuel		—
Gauge	—			Yes
OIL PRESSURE Telltale		Oil		—
Gauge	—			Yes
COOLANT TEMPERATURE Telltale		Temp		—
Gauge	—			Yes
ELECTRICAL CHARGE Telltale		Volts, Charge or Amp		—
Gauge	—			Yes
HIGHBEAM Telltale	Blue or Green [4]	Also see FMVSS 108	 [6]	—
Brake System [8]	Red [4]	Brake, Also see FMVSS 105 and 135	—	—
MALFUNCTION IN Anti-Lock or	Yellow	Antilock, Anti-lock, or ABS. Also see FMVSS 105 and 135	—	—
VARIABLE BRAKE PROPORTIONING SYSTEM[8]	Yellow	Brake Propositioning, Also see FMVSS 135	—	—
PARKING BRAKE APPLIED[8]	Red [4]	Park or Parking Brake, Also see FMVSS 105 and 135	—	—
MALFUNCTION IN Anti-Lock or	Yellow	ABS, or Antilock; Trailer ABS, or Trailer Antilock, Also see FMVSS 121	—	—
BRAKE AIR PRESSURE Position Telltale		Brake Air, Also see FMVSS 121	—	—
SPEEDOMETER	—	MPH km/h [5]	—	Yes
ODOMETER	—	— [3]	—	—
AUTOMATIC GEAR POSITION	—	Also see FMVSS 102	—	Yes

[1] The pair of arrows is a single symbol. When the indicator for left and right turn operate independently, however, the two arrows will be considered separate symbols and may be spaced accordingly.

[2] Not required when arrows of turn signal tell-tales that otherwise operate independently flash simultaneously as hazard warning tell-tale.

[3] If the odometer indicates kilometers, then "KILOMETERS" or "km" shall appear, otherwise, no identification is required.

[4] Red can be red-orange. Blue can be blue-green.

[5] If the speedometer is graduated in miles per hour and in kilometers per hour, the identifying words or abbreviations shall be "MPH and km/h" in any combination of upper or lower case letters.

[6] Framed areas may be filled.

[7] The color of the telltale required by S4.5.3.3 of Standard No 208 is red; the color of the telltale required by S7.3 of Standard No. 208 is not specified.

BILLING CODE 4910–59–C

4. Section 571.111 is amended by revising S5.1.1; revising S5.1.2; revising S5.2.1; revising S5.4.2; revising S5.4.3; revising S6; revising S6.1; revising S7; revising S7.1; revising S8; revising S8.1; revising S9.2; revising S9.3; revising S10.1; revising S12.2; revising S12.3; revising S12.4; and revising S13.2 to read as follows:

§ 571.111 Standard No. 111, Rearview mirrors.

* * * * *

S5.1.1 *Field of view.* Except as provided in S5.3, the mirror shall provide a field of view with an included horizontal angle measured from the projected eye point of at least 20 degrees, and sufficient vertical angle to provide a view of a level road surface extending to the horizon beginning at a point not greater than 60 m to the rear of the vehicle when the vehicle is occupied by the driver and four passengers or the designated occupant capacity, if less, based on an average occupant weight of 68 kg. The line of sight may be partially obscured by seated occupants or by head restraints. The location of the driver's eye reference points shall be those established in Motor Vehicle Safety Standard No. 104 (§ 571.104) or a nominal location appropriate for any 95th percentile male driver.

S5.1.2 *Mounting.* The mirror mounting shall provide a stable support for the mirror, and shall provide for mirror adjustment by tilting in both the horizontal and vertical directions. If the mirror is in the head impact area, the mounting shall deflect, collapse or break away without leaving sharp edges when the reflective surface of the mirror is subjected to a force of 400 N in any forward direction that is not more than 45° from the forward longitudinal direction.

S5.2.1 *Field of view.* Each passenger car shall have an outside mirror of unit magnification. The mirror shall provide the driver a view of a level road surface extending to the horizon from a line, perpendicular to a longitudinal plane tangent to the driver's side of the vehicle at the widest point, extending 2.4 m out from the tangent plane 10.7 m behind the driver's eyes, with the seat in the rearmost position. The line of sight may be partially obscured by rear body or fender contours. The location of the driver's eye reference points shall be those established in Motor Vehicle Safety Standard No. 104 (§ 571.104) or a nominal location appropriate for any 95th percentile male driver.

* * * * *

S5.4.2 Each convex mirror shall have permanently and indelibly marked at the lower edge of the mirror's reflective surface, in letters not less than 4.8 mm nor more than 6.4 mm high the words "Objects in Mirror Are Closer Than They Appear."

S5.4.3 The average radius of curvature of each such mirror, as determined by using the procedure in S12., shall be not less than 889 mm and not more than 1,651 mm.

S6. *Requirements for multipurpose passenger vehicles, trucks, and buses, other than school buses, with GVWR of 4,536 kg or less.*

S6.1 Each multipurpose passenger vehicle, truck and bus, other than a school bus, with a GVWR of 4,536 kg or less shall have either—

(a) Mirrors that conform to the requirements of S5.; or

(b) Outside mirrors of unit magnification, each with not less than 126 cm^2 of reflective surface, installed with stable supports on both sides of the vehicle, located so as to provide the driver a view to the rear along both sides of the vehicle, and adjustable in both the horizontal and vertical directions to view the rearward scene.

S7. *Requirements for multipurpose passenger vehicles and trucks with a GVWR of more than 4,536 kg and less than 11,340 kg and buses, other than school buses, with a GVWR of more than 4,536 kg.*

S7.1 Each multipurpose passenger vehicle and truck with a GVWR of more than 4,536 kg and less than 11,340 kg and each bus, other than a school bus, with a GVWR of more than 4,536 kg shall have outside mirrors of unit magnification, each with not less than 323 cm^2 of reflective surface, installed with stable supports on both sides of the vehicle. The mirrors shall be located so as to provide the driver a view to the rear along both sides of the vehicle and shall be adjustable both in the horizontal and vertical directions to view the rearward scene.

S8. *Requirements for multipurpose passenger vehicles and trucks with a GVWR of 11,340 kg or more.*

S8.1 Each multipurpose passenger vehicle and truck with a GVWR of 11,340 kg or more shall have outside mirrors of unit magnification, each with not less than 323 cm^2 of reflective surface, installed with stable supports on both sides of the vehicle. The mirrors shall be located so as to provide the driver a view to the rear along both sides of the vehicle and shall be adjustable both in the horizontal and vertical directions to view the rearward scene.

* * * * *

S9.2 System A shall be located with stable supports so that the portion of the system on the bus's left side, and the portion on its right side, each:

(a) Includes at least one mirror of unit magnification with not less than 323 cm^2 of reflective surface; and

(b) Includes one or more mirrors which together provide, at the driver's eye location, a view of:

(1) For the mirror system on the right side of the bus, the entire top surface of cylinder N in Figure 2, and of that area of the ground which extends rearward from the mirror surface not less than 61 meters.

(2) For the mirror system on the left side of the bus, the entire top surface of cylinder M in Figure 2, and of that area of the ground which extends rearward from the mirror surface not less than 61 meters.

S9.3(a) For each of the cylinders A though P whose entire top surface is not directly visible from the driver's eye location, System B shall provide, at that location:

(1) A view of the entire top surface of that cylinder.

(2) A view of the ground that overlaps with the view of the ground provided by System A.

(b) Each mirror installed in compliance with S9.3(a) shall meet the following requirements:

(1) Each mirror shall have a projected area of at least 258 cm^2, as measured on a plane at a right angle to the mirror's axis.

(2) Each mirror shall be located such that the distance from the center point of the eye location of a 25th percentile adult female seated in the driver's seat to the center of the mirror shall be at least 95 cm^2.

(3) Each mirror shall have no discontinuities in the slope of the surface of the mirror.

(4) Each mirror shall be installed with a stable support.

(c) Each school bus which has a mirror installed in compliance with S9.3(a) that has an average radius of curvature of less than 889 mm, as determined under S12, shall have a label visible to the seated driver. The label shall be printed in a type face and color that are clear and conspicuous. The label shall state the following:

"USE CROSS VIEW MIRRORS TO VIEW PEDESTRIANS WHILE BUS IS STOPPED. DO NOT USE THESE MIRRORS TO VIEW TRAFFIC WHILE BUS IS MOVING. IMAGES IN SUCH MIRRORS DO NOT ACCURATELY SHOW ANOTHER VEHICLE'S LOCATION."

* * * * *

S10.1 Each motorcycle shall have either a mirror of unit magnification

with not less than 8065 mm² of reflective surface, or a convex mirror with not less than 6450 mm² of reflective surface and an average radius of curvature not less than 508 mm and not greater than 1524 mm, installed with a stable support, and mounted so that the horizontal center of the reflective surface is at least 279 mm outward of the longitudinal centerline of the motorcycle. The mirror shall be adjustable by tilting in both the horizontal and vertical directions.

* * * * *

S12.2 The 3-point linear spherometer has two outer fixed legs 38 mm apart and one inner movable leg at the midpoint. The spherometer has a dial indicator with a scale that can be read accurately to .0025 mm, with the zero reading being a flat surface.

S12.3 The 10 test positions on the image display consist of two positions at right angles to each other at each of five locations as shown in Figure 1. The locations are at the center of the mirror, at the left and right ends of a horizontal line that bisects the mirror and at the top and bottom ends of a vertical line that bisects the mirror. None of the readings are within a 6.4 mm border on the edge of the image display.

S12.4 At each position, the spherometer is held perpendicular to the convex mirror-surface and a record is made of the reading on the dial indicator to the nearest .0025 mm.

* * * * *

S13.2 The cylinders are 0.3048 m high and 0.3048 m in diameter, except for cylinder P which is 0.9144 m high and 0.3048 m in diameter.

* * * * *

5. In § 571.111, Table I—"Conversion Table from Spherometer Dial Reading to Radius of Curvature", following Figure 1 in S12.8, would be revised to read as follows:

TABLE I.—CONVERSION TABLE FROM SPHEROMETER DIAL READING TO RADIUS OF CURVATURE

Dial reading	Radius of curvature (inches)	Radius of curvature (mm)
.00330	85.2	2164.1
.00350	80.4	2042.2.
.00374	75.2	1910.1
.00402	70.0	1778.0
.00416	67.6	1717.0
.00432	65.1	1653.5
.00450	62.5	1587.5
.00468	60.1	1526.5
.00476	59.1	1501.1
.00484	58.1	1475.7
.00492	57.2	1452.9
.00502	56.0	1422.4
.00512	54.9	1394.5
.00522	53.8	1369.1
.00536	55.5	1333.5
.00544	51.7	1313.2
.00554	50.8	1290.3
.00566	49.7	1262.4

6. In § 571.111, Figure 2 "Location of Test Cylinders for School Bus Field-of-View Test", after S13.3(g), is revised to read as follows:

BILLING CODE 4910–59–P

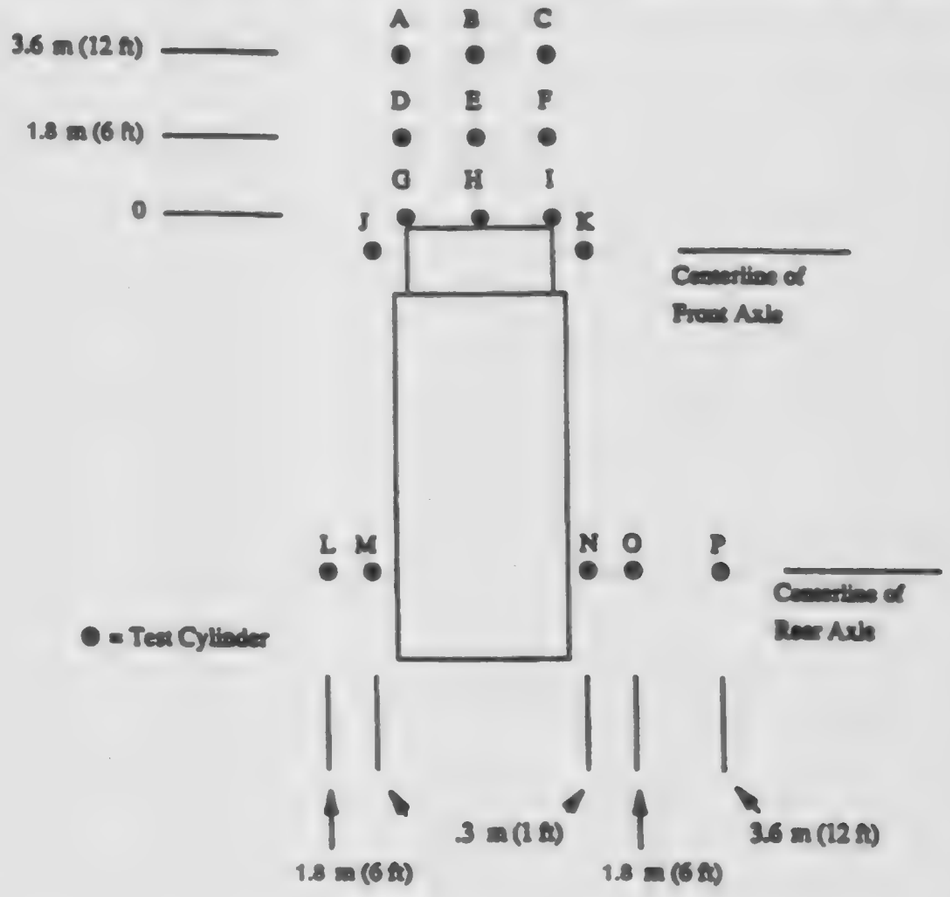

Figure 2.—Location of Test Cylinders for School Bus Field-of-View Test
All Dimensions in Meters (m)

BILLING CODE 4910–59–C

7. Section 571.116 is amended by revising S5.1.3; revising S5.2.1; revising in S5.2.2.2, the introductory paragraph and paragraph (g)(4); revising in S5.2.2.3, the introductory paragraph, paragraph (d) and paragraph (e)(4); revising S6.3; revising in S6.6.6, paragraph (a); revising S6.8.3; revising in S6.10.3, paragraph (a); revising S6.11.1; revising S6.11.6; revising, in S6.13.2, paragraph (b); revising in S6.13.3, paragraph (b), revising in S6.13.4, paragraph (c)(1); revising S7.4.2; and revising in S7.5.1, paragraph (b), to read as follows:

§ 571.116 Standard No. 116, Motor vehicle brake fluids.

* * * * *

S5.1.3. *Kinematic viscosities.* When brake fluid is tested according to S6.3, the kinematic viscosities in square millimeters per second at stated temperatures shall be neither less than 1.5 mm^2/s at 100° C. (212° F.) nor more than the following maximum value for the grade indicated:

(a) DOT 3: 1,500 mm^2/s at minus 40° C. (minus 40° F.).

(b) DOT 4: 1,800 mm^2/s at minus 40° C. (minus 40° F.).

(c) DOT 5: 900 mm^2/s at minus 40° C. (minus 40° F.).

* * * * *

S5.2.1 *Container sealing.* Each brake fluid or hydraulic system mineral oil container with a capacity of 177 mL or more shall be provided with a resealable closure that has an inner seal impervious to the packaged brake fluid. The container closure shall include a tamper-proof feature that will either be destroyed or substantially altered when the container closure is initially opened.

* * * * *

S5.2.2.2 Each packager of brake fluid shall furnish the information specified in paragraphs (a) through (g) of this S5.2.2.2 by clearly marking it on each brake fluid container or on a label (labels) permanently affixed to the container, in any location except a removable part such as a lid. After being subjected to the operations and conditions specified in S6.14, the information required by this section shall be legible to an observer having corrected visual acuity of 20/40 (Snellen ratio) at a distance of 305 mm, and any label affixed to the container in compliance with this section shall not be removable without its being destroyed or defaced.

* * * * *

(g) * * *

(4) *CAUTION:* DO NOT REFILL CONTAINER, AND DO NOT USE FOR OTHER LIQUIDS. (Not required for containers with a capacity in excess of 19 L.)

S5.2.2.3 Each packager of hydraulic system mineral oil shall furnish the information specified in paragraphs (a) through (e) of this S5.2.2.3 by clearly marking it on each brake fluid container or on a label (labels) permanently affixed to the container, in any location except a removable part such as a lid. After being subjected to the operations and conditions specified in S6.14, the information required by this section shall be legible to an observer having corrected visual acuity of 20/40 (Snellen ratio) at a distance of 305 mm and any label affixed to the container in compliance with this section shall not be removable without its being destroyed or defaced.

* * * * *

(d) Designation of the contents as "HYDRAULIC SYSTEM MINERAL OIL" in capital letters at least 3 mm high.

(e) The following safety warnings in capital and lowercase letters as indicated:

* * * * *

(4) *CAUTION:* STORE HYDRAULIC SYSTEM MINERAL OIL ONLY IN ITS ORIGINAL CONTAINER. KEEP CONTAINER CLEAN AND TIGHTLY CLOSED. DO NOT REFILL CONTAINER OR USE OTHER LIQUIDS. (The last sentence is not required for containers with a capacity in excess of 19 L.)

* * * * *

S6.3 *Kinematic viscosity.* Determine the kinematic viscosity of a brake fluid in mm^2s by the following procedure. Run duplicate samples at each of the specified temperatures, making two timed runs on each sample.

* * * * *

S6.6.6 *Calculation*

(a) Measure the area of each type of test strip to the nearest square centimeter. Divide the average change in mass for each type by the area of that type.

* * * * *

S6.8.3 *Procedure.* Obtain the tare weight of each of the four covered petri dishes to the nearest 0.01 gram. Place 25±1 ml. of brake fluid in each dish, replace proper covers and reweigh. Determine the weight of each brake fluid test specimen by the difference. Place the four dishes, each inside its inverted cover, in the oven at 100°±2° C. (212°±4° F.) for 46±2 hours. (Note: Do not simultaneously heat more than one fluid in the same oven.) Remove the dishes from the oven, allow to cool to 23°±5° C. (73.4°±9° F.), and weigh. Return to the oven for an additional 24±2 hours. If at the end of 72±4 hours the average loss by evaporation is less than 60 percent, discontinue the evaporation procedure and proceed with examination of the residue. Otherwise, continue this procedure either until equilibrium is reached as evidenced by an incremental mass loss of less than 0.25 gram in 24 hours on all individual dishes or for a maximum of 7 days. During the heating and weighing operation, if it is necessary to remove the dishes from the oven for a period of longer than 1 hour, the dishes shall be stored in a desiccator as soon as cooled to room temperature. Calculate the percentage of fluid evaporated from each dish. Examine the residue in the dishes at the end of 1 hour at 23°±5° C. (73.4°±9° F.). Rub any sediment with the fingertip to determine grittiness or abrasiveness. Combine the residues from all four dishes in a 118 mL (4-ounce) oil-sample bottle and store vertically in a cold chamber at minus 5°±1° C. (23°±5° F.) for 60±10 minutes. Quickly remove the bottle and place in the horizontal position. The residue must flow at least 5 mm (0.2 inch) along the tube within 5 seconds.

* * * * *

S6.10.3 *Procedure*

(a) *At low temperature.*

Mix 50±0.5 mL of brake fluid with 50±0.5 mL of SAE RM–66–04 Compatibility Fluid. Pour this mixture into a centrifuge tube and stopper with a clean dry cork. Place tube in the cold chamber maintained at minus 40°±2° C. (minus 40°±4° F). After 24±2 hours, remove tube, quickly wipe with a clean lint-free cloth saturated with ethanol (isopropanol when testing DOT 5 fluids) or acetone. Examine the test specimen for evidence of slugging, sedimentation, or crystallization. Test fluids, except DOT 5 SBBF, shall be examined for stratification.

* * * * *

S6.11.1 *Summary of procedure.*

Brake fluids, except DOT 5 SBBF, are activated with a mixture of approximately 0.2 percent benzoyl peroxide and 5 percent water. DOT 5 SBBF is humidified in accordance with S6.2 eliminating determination of the ERBP, and then approximately 0.2 percent benzoyl peroxide is added. A corrosion test strip assembly consisting of cast iron and an aluminum strip separated by tinfoil squares at each end is then rested on a piece of SBR WC cup positioned so that the test strip is half immersed in the fluid and oven aged at 70° C. (158° F.) for 168 hours. At the end of this period, the metal strips are examined for pitting, etching, and loss of mass.

* * * * *

S6.11.6 *Calculation.* Determine corrosion loss by dividing the change in mass of each metal strip by the total surface area of each strip measured in square millimeters (mm^2), to the nearest square millimeter (mm^2). Average the results for the two strips of each type of metal, rounding to the nearest 0.05 mg. per 100 square millimeter (mm^2). If only one of the duplicates fails for any reason, run a second set of duplicate samples. Both repeat samples shall meet all requirements of S5.1.11.

* * * * *

S6.13.2 *Apparatus and equipment.*

* * * * *

(b) *Braking pressure actuation mechanism.* An actuating mechanism for applying a force to the master cylinder pushrod without side thrust. The amount of force applied by the actuating mechanism shall be adjustable and capable of applying sufficient thrust to the master cylinder to create a pressure of at least 6895 kPa (1,000 p.s.i.) in the simulated brake system. A hydraulic gage or pressure recorder, having a range of at least 0 to 6895 kPa (0 to 1,000 p.s.i), shall be installed between the master cylinder and the brake assemblies and shall be provided with a shutoff valve and with a bleeding valve for removing air from the connecting tubing. The actuating mechanism shall be designed to permit adjustable stroking rates of approximately 1,000 strokes per hour. Use a mechanical or electrical counter to record the total number of strokes.

* * * * *

S6.13.3 *Materials.*

* * * * *

(b) *Steel tubing.* Double wall steel tubing meeting SAE specification J527. A complete replacement of tubing is essential when visual inspection indicates any corrosion or deposits on inner surface of tubing. Tubing from master cylinder to one wheel cylinder shall be replaced for each test (minimum length .9 m.) Uniformity in tubing size is required between master cylinder and wheel cylinder. The standard master cylinder has two outlets for tubing, both of which must be used.

* * * * *

S6.13.4 *Preparation of test apparatus.*

* * * * *

(c) *Assembly and adjustment of test apparatus.*

(1) When using a shoe and drum type apparatus, adjust the brake shoe toe clearances to 1.0±0.1 mm (0.040±0.004 inch). Fill the system with brake fluid, bleeding all wheel cylinders and the pressure gage to remove entrapped air. Operate the actuator manually to apply a pressure greater than the required operating pressure and inspect the system for leaks. Adjust the actuator and/or pressure relief valve to obtain a pressure of 6895 kPa±345 kPa (1,000±50 p.s.i.). A smooth pressure stroke pattern is required when using a shoe and drum type apparatus. The pressure is relatively low during the first part of the stroke and then builds up smoothly to the maximum stroking pressure at the end of the stroke, to permit the primary cup to pass the compensating hole at a relatively low pressure. Using stroking fixtures, adjust the actuator and/or pressure relief valve to obtain a pressure of 6895 kPa±345 kPa (1,000±50 p.s.i.).

* * * * *

S7.4.2 *Procedure.* Make hardness measurements at 23°±2° C. (73.4°±4°F.). Equilibrate the tester and anvils at this temperature prior to use. Center brake cups lip side down on an anvil of appropriate hardness. Following the manufacturer's operating instructions for the hardness tester, make one measurement at each of four points 6 mm from the center of the cup and spaced 90° apart. Average the four values, and round off to the nearest IRHD.

* * * * *

S7.5.1 *Apparatus.*

* * * * *

(b) *Centrifuge.* A centrifuge capable of whirling two or more filled centrifuge tubes at a speed which can be controlled to give a relative centrifugal force (r.c.f.) between 600 and 700 at the tip of the tubes. The revolving head, trunnion rings, and trunnion cups, including the rubber cushion, shall withstand the maximum centrifugal force capable of being delivered by the power source. The trunnion cups and cushions shall firmly support the tubes when the centrifuge is in motion. Calculate the speed of the rotating head using this equation:

$$r.p.m. = 265[\sqrt{25.4 \times r.c.f./d}]$$

Where:

r.c.f. = Relative centrifugal force, and

d = Diameter of swing, in millimeters, measured between tips of opposing tubes when in rotating position.

Table VI shows the relationship between diameter, swing, relative centrifugal force (r.c.f.), and revolutions per minute.

TABLE VI.—ROTATION SPEEDS FOR CENTRIFUGES OF VARIOUS DIAMETERS

Diameter of swing in millimeters [a]	r.p.m. at 600 r.c.f	r.p.m. at 700 r.c.f.
483	1490	1610
508	1450	1570
533	1420	1530
559	1390	1500

[a] Measured in millimeters between tips of opposite tubes when in rotating position.

* * * * *

8. Section 571.123 would be amended by revising S5.2.3 to read as follows:

§ 571.123 Standard No. 123, Motorcycle controls and displays.

* * * * *

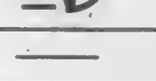
S5.2.3 *Control and display identification.* If an item of equipment in Table 3, Column 1, is provided, the item and its operational function shall be identified by:

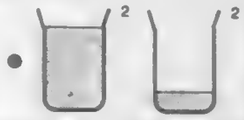
(a) A symbol substantially in the form shown in Column 3; or

(b) Wording shown in both Column 2 and Column 4; or

(c) A symbol substantially in the form shown in Column 3 and wording shown in both Column 2 and Column 4.

(d) The abbreviations "M.P.H.", "km/h", "r/min", "Hi", "Lo", "L", "R", and "Res" appearing in Column 2 and Column 4 may be spelled in full. Symbols and words may be provided for equipment items where none are shown in Column 2, Column 3, and Column 4. Any identification provided shall be placed on or adjacent to the control or display position, and shall appear upright to the operator.





* * * * *

9. In § 571.123, Table 3 "Motorcycle Control and Display Identification Requirements" that follows S5.2.5 and Tables 1 and 2 would be revised to read as follows:

BILLING CODE 4910-59-P

UMI
VOL
63
ISS

MY
27
1998
UMI

Table 3
Motorcycle Control and Display Identification Requirements

No.	Column 1	Column 2	Column 3	Column 4
	EQUIPMENT	*Control and Display Identification Word*	*Control and Display Identification Symbol*	*Identification at Appropriate Position of Control and Display*
1	IGNITION	Ignition	—	Off
2	SUPPLEMENTAL ENGINE STOP (OFF, RUN)	Engine Stop		Off, Run
3	MANUAL CHOKE OR MIXTURE ENRICHMENT	Choke or Enricher		—
4	ELECTRIC STARTER	—		Start [1]
5	HEADLAMP UPPER-LOWER BEAM CONTROL	Lights		Hi, Lo
6	HORN	Horn		
7	TURN SIGNAL	Turn		L, R
8	SPEEDOMETER	km/h [5] mph	—	km/h [5] mph [4]
9	NEUTRAL INDICATOR	Neutral	N	Yes
10	UPPER BEAM INDICATOR	High Beam		—
11	TACHOMETER	R.P.M. or r/min.	—	—
12	FUEL TANK SHUTOFF VALVE (OFF, ON, RES.)	Fuel		Off, On, Res.

[1] Required only if electric starter is separate from ignition switch.

[2] Framed areas may be filed..

[3] The pair of arrows is a single symbol. When the indicators for left and right turn operate independently, however, the two arrows will be considered separate symbols and may be spaced accordingly.

[4] M.P.H. increase in a clockwise direction. Major graduations and numerals appear at 10 mph intervals, minor graduations at the 5 mph intervals. (37 F.R. 17474–August 29, 1972. Effective: 9/1/74.

[5] If the speedometer is graduated in miles per hour (MPH) and in kilometers per hour (km/h), the identifying words or abbreviation shall be MPH and km/h in any combination of upper or lower case letters.

BILLING CODE 4910–59–P

10. Section 571.202 is amended by revising S2; revising S4.2; revising S4.3; revising in S5.1, paragraph (c), and revising S5.2 to read as follows:

§ 571.202 Standard No. 202, Head restraints.

* * * * *

S2. *Application.* This standard applies to passenger cars, and to multipurpose passenger vehicles, trucks and buses with a GVWR of 4,536 kg or less.

* * * * *

S4.2 Each truck, multipurpose passenger vehicle and bus with a GVWR of 4,536 kg or less, shall comply with S4.3.

S4.3 *Performance levels.* Except for school buses, a head restraint that conforms to either (a) or (b) shall be provided at each outboard front designated seating position. For school buses, a head restraint that conforms to either (a) or (b) shall be provided for the driver's seating position.

(a) It shall, when tested in accordance with S5.1, during a forward acceleration of at least 78 m/s^2 on the seat supporting structure, limit rearward angular displacement of the head reference line to 45° from the torso reference line; or

(b) It shall, when adjusted to its fully extended design position, conform to each of the following—

(1) When measured parallel to torso line, the top of the head restraint shall not be less than 700 mm above the seating reference point;

(2) When measured either 64 mm below the top of the head restraint or 635 mm above the seating reference point, the lateral width of the head restraint shall be not less than—

(i) 254 mm for use with bench-type seats; and

(ii) 171 mm for use with individual seats:

(3) When tested in accordance with S5.2, the rearmost portion of the head form shall not be displaced to more than 102 mm perpendicularly rearward of the displaced extended torso reference line during the application of the load specified in S5.2(c); and

(4) When tested in accordance with S5.2, the head restraint shall withstand an increasing load until one of the following occurs:

(i) Failure of the seat or seat back; or

(ii) Application of a load of 890 N.

* * * * *

(c) During forward acceleration applied to the structure supporting the seat as described in this paragraph, measure the maximum rearward angular displacement between the dummy torso reference line and head reference line. When graphically depicted, the magnitude of the acceleration curve shall not be less than that of a half-sine wave having the amplitude of 78 m/s^2 and a duration of 80 milliseconds and not more than that of a half-sine wave curve having an amplitude of 94 m/s^2 and a duration of 96 milliseconds.

S5.2 Compliance with S4.3(b) shall be demonstrated in accordance with the following with the head restraint in its fully extended design position:

(a) Place a test device, having the back plan dimensions and torso line (centerline of the head room probe in full back position), of the three dimensional SAE J826 manikin, at the manufacturer's recommended design seated position.

(b) Establish the displaced torso reference line by applying a rearward moment of 373 Nm moment about the seating reference point to the seat back through the test device back pan located in (a).

(c) After removing the back pan, using a 165 mm diameter spherical head form or cylindrical head form having a 165 mm diameter in plan view and a 152 mm height in profile view, apply, perpendicular to the displaced torso reference line, a rearward initial load 64 mm below the top of the head restraint that will produce a 373 Nm moment about the seating reference point.

(d) Gradually increase this initial load to 890 N or until the seat or seat back fails, whichever occurs first.

11. Section 571.203 is amended by revising S2; revising S4; and revising S5.1 to read as follows:

§ 571.203 Standard No. 203, Impact protection for the driver from the steering control system.

* * * * *

S2. *Application.* This standard applies to passenger cars and to multipurpose passenger vehicles, trucks and buses with a gross vehicle weight rating of 4,536 kg or less. However, it does not apply to vehicles that conform to the frontal barrier crash requirements (S5.1) of Standard No. 208 (49 CFR 571.208) by means of other than seat belt assemblies. It also does not apply to walk-in vans.

* * * * *

S4. *Requirements.* Each passenger car and each multipurpose passenger vehicle, truck and bus with a gross vehicle weight rating of 4,536 kg or less manufactured on or after September 1, 1981 shall meet the requirements of S5.1 and S5.2.

S5. *Impact protection requirements.*

S5.1 Except as provided in this paragraph, the steering control system of any vehicle to which this standard applies shall be impacted in accordance with S5.1(a). However, the steering control system of any such vehicle manufactured on or before August 31, 1996, may be impacted in accordance with S5.1(b).

(a) When the steering control system is impacted by a body block in accordance with SAE Recommended Practice J944 JUN80 *Steering Control System—Passenger Car—Laboratory Test Procedure,* at a relative velocity of 24.1 km/h, the impact force developed on the chest of the body block transmitted to the steering control system shall not exceed 11,110 N, except for intervals whose cumulative duration is not more than 3 milliseconds.

(b) When the steering control system is impacted in accordance with Society of Automotive Engineers Recommended Practice J944, "Steering Wheel Assembly Laboratory Test Procedure," December 1965, or an approved equivalent, at a relative velocity of 24 km/h, the impact force developed on the chest of the body block transmitted to the steering control system shall not exceed 11,120 N, except for intervals whose cumulative duration is not more than 3 milliseconds.

* * * * *

12. Section 571.204 is amended by revising S4.2 to read as follows:

§ 571.204 Standard No. 204, Steering control rearward displacement.

* * * * *

S4.2 *Vehicles manufactured on or after September 1, 1991.* When a passenger car or a truck, bus or multipurpose passenger vehicle with a gross vehicle weight rating of 4,536 kg or less and an unloaded vehicle weight of 2,495 kg or less is tested under the conditions of S5 in a 48.3 km/h perpendicular impact into a fixed collision barrier, the upper end of the steering column and shaft in the vehicle shall not be displaced more than 127 mm in a horizontal rearward direction parallel to the longitudinal axis of the vehicle. The amount of displacement shall be measured relative to an undisturbed point on the vehicle and shall represent the maximum dynamic movement of the upper end of the steering column and shaft during the crash test.

* * * * *

13. Section 571.207 is amended by revising S5.1.2 to read as follows:

§ 571.207 Standard No. 207, Seating systems.

* * * * *

S5.1.2 If the seat back and the seat bench are attached to the vehicle by different attachments, attach to each

component a fixture capable of transmitting a force to that component. Apply forces, in newtons, equal to 20 times the mass of the seat back in kilograms multiplied by 9.8 m/s² horizontally through the center of gravity of the seat back, as shown in Figure 2 and apply forces, in newtons, equal to 20 times the mass of the seat bench in kilograms multiplied by 9.8 m/s² horizontally through the center of gravity of the seat bench, as shown in Figure 3.

* * * * *

14. Section 571.209 is amended by revising in S4.1, paragraphs (f) and (g)(3); revising in S4.2, paragraphs (a), (b) and (c); revising in S4.3, paragraphs (c), (d), (e), (g), (h), (i), and (j); revising S4.4; revising in S5.1, paragraphs (a), (b), (c), (d), (e), and (f); revising in S5.2, paragraph (a) except for the NOTE, and paragraphs (c), (d), (e), (f), (g), (h), (i), (j), and (k); and revising in S5.3, paragraphs (a), (b), and (c) to read as follows:

§ 571.209 Standard No. 209, Seat belt assemblies.

* * * * *

S4.1 (a) * * *

(f) *Attachment hardware.* A seat belt assembly shall include all hardware necessary for installation in a motor vehicle in accordance with Society of Automotive Engineers Recommended Practice J800c, "Motor Vehicle Seat Belt Installation," November 1973. However, seat belt assemblies designed for installation in motor vehicles equipped with seat belt assembly anchorages that do not require anchorage nuts, plates, or washers, need not have such hardware, but shall have 7/16–20 UNF–2A or 1/2–13UNC–2A attachment bolts or equivalent metric hardware. The hardware shall be designed to prevent attachment bolts and other parts from becoming disengaged from the vehicle while in service. Reinforcing plates or washers furnished for universal floor, installations shall be of steel, free from burrs and sharp edges on the peripheral edges adjacent to the vehicle, at least 1.5 mm in thickness and at least 2580 mm² in projected area. The distance between any edge of the plate and the edge of the bolt hole shall be at least 15 mm. Any corner shall be rounded to a radius of not less than 6 mm or cut so that no corner angle is less than 135° and no side is less than 6 mm in length.

(g) *Adjustment.* * * *

(3) The adult occupants referred to in S4.1(g)(1) shall have the following measurements:

	5th percentile adult female	95th percentile adult male
Weight	46.3 kg	97.5 kg.
Erect sitting height.	785 mm	965 mm.
Hip breadth (sitting).	325 mm	419 mm.
Hip circumference (sitting).	925 mm	1199 mm.
Waist circumference (sitting).	599 mm	1080 mm.
Chest depth	190 mm	267 mm.
Chest circumference:		
Nipple	775 mm	1130 mm.
Upper	757 mm	1130 mm.
Lower	676 mm	1130 mm.

* * * * *

S4.2 *Requirements for webbing.*

(a) *Width.* The width of the webbing in a seat belt assembly shall be not less than 46 mm, except for portions that do not touch a 95th percentile adult male with the seat in any adjustment position and the seat back in the manufacturer's nominal design riding position when measured under the conditions prescribed in S5.1(a).

(b) *Breaking strength.* The webbing in a seat belt assembly shall have not less than the following breaking strength when tested by the procedures specified in S5.1(b): Type 1 seat belt assembly—26.7 kN; Type 2 seat belt assembly—22.2 kN for webbing pelvic restraint and 17.8 kN for webbing in upper torso restraint.

(c) *Elongation.* Except as provided in S4.5, the webbing in a seat belt assembly shall not extend to more than the following elongation when subjected to the specified forces in accordance with the procedure specified in S5.1(c): Type 1 seat belt assembly—20 percent at 11,120 N; Type 2 seat belt assembly 30 percent at 11,120 N for webbing in pelvic restraint and 40 percent at 11,120 N for webbing in upper torso restraint.

* * * * *

(c) *Attachment hardware.* (1) Eye bolts, shoulder bolts, or other bolt used to secure the pelvic restraint of seat belt assembly to a motor vehicle shall withstand a force of 40,034 N when tested by the procedure specified in S5.2(c)(1), except that attachment bolts of a seat belt assembly designed for installation in specific models of motor vehicles in which the ends of two or more seat belt assemblies cannot be attached to the vehicle by a single bolt shall have breaking strength of not less than 22,241 N.

(2) Other attachment hardware designed to receive the ends of two seat belt assemblies shall withstand a tensile force of at least 26,689 N without fracture of a section when tested by the procedure specified in S5.2(c)(2).

(3) A seat belt assembly having single attachment hooks of the quick-disconnect type for connecting webbing to an eye bolt shall be provided with a retaining latch or keeper which shall not move more than 2 mm in either the vertical or horizontal direction when tested by the procedure specified in S5.2(c)(3).

(d) *Buckle release.* (1) The buckle of a Type 1 or Type 2 seat belt assembly shall release when a force of not more than 133 N is applied.

(2) A buckle designed for pushbutton application of buckle release force shall have a minimum area of 452 mm² with a minimum linear dimension of 10 mm for applying the release force, or a buckle designed for lever application of buckle release force shall permit the insertion of a cylinder 10 mm in diameter and 38 mm in length to at least the midpoint of the cylinder along the cylinder's entire length in the actuation portion of the buckle release. A buckle having other design for release shall have adequate access for two or more fingers to actuate release.

(3) The buckle of a Type 1 or Type 2 seat belt assembly shall not release under a compressive force of 1779 N applied as prescribed in paragraph S5.2(d)(3). The buckle shall be operable and shall meet the applicable requirement of paragraph S4.4 after the compressive force has been removed.

(e) *Adjustment force.* The force required to decrease the size of a seat belt assembly shall not exceed 49 N when measured by the procedure specified in S5.2(e).

* * * * *

(g) *Buckle latch.* The buckle latch of a seat belt assembly when tested by the procedure specified in S5.2(g) shall not fail, nor gall or wear to an extent that normal latching and unlatching is impaired, and a metal-to-metal buckle shall separate when in any position of partial engagement by a force of not more than 22 N.

(h) *Nonlocking retractor.* The webbing of a seat belt assembly shall extend from a nonlocking retractor within 6 mm of maximum length when a tension is applied as prescribed in S5.2(h). A nonlocking retractor on upper torso restraint shall be attached to the nonadjustable end of the assembly, the reel of the retractor shall be easily visible to an occupant while wearing the assembly, and the maximum retraction force shall not exceed 5 N in any strap or webbing that contacts the shoulder when measured by the procedure

specified in S5.2(h), unless the retractor is attached to the free end of webbing which is not subjected to any tension during restraint of an occupant by the assembly.

(i) *Automatic-locking retractor.* The webbing of a seat belt assembly equipped with an automatic locking retractor, when tested by the procedure specified in S5.2(i), shall not move more than 25 mm between locking positions of the retractor, and shall be retracted with a force under zero acceleration of not less than 3 N when attached to pelvic restraint, and not less that 2 N nor more than 5 N in any strap or webbing that contacts the shoulders of an occupant when the retractor is attached to upper torso restraint. An automatic locking retractor attached to upper torso restraint shall not increase the restraint on the occupant of the seat belt assembly during use in a vehicle traveling over rough roads as prescribed in S5.2(i).

(j) *Emergency-locking retractor.* An emergency-locking retractor of a Type 1 or Type 2 seat belt assembly, when tested in accordance with the procedures specified in paragraph S5.2(j)—

(1) Shall lock before the webbing extends 25 mm when the retractor is subjected to an acceleration of 7 m/s^2;

(2) Shall not lock, if the retractor is sensitive to webbing withdrawal, before the webbing extends 51 mm when the retractor is subjected to an acceleration of 3 m/s^2 or less;

(3) Shall not lock, if the retractor is sensitive to vehicle acceleration, when the retractor is rotated in any direction to any angle of 15° or less from its orientation in the vehicle;

(4) Shall exert a retractive force of at least 3 N under zero acceleration when attached only to the pelvic restraint;

(5) Shall exert a retractive force of not less than 1 N and not more than 5 N under zero acceleration when attached only to an upper torso restraint;

(6) Shall exert a retractive force of not less than 1 N and not more than 7 N under zero acceleration when attached to a strap or webbing that restrains both the upper torso and the pelvis.

* * * * *

S4.4 *Requirements for assembly performance.*

(a) *Type I seat belt assembly.* Except as provided in S4.5, the complete seat belt assembly including webbing, straps, buckles, adjustment and attachment hardware, and retractors shall comply with the following requirements when tested by the procedures specified in S5.3(a):

(1) The assembly loop shall withstand a force of not less than 22,241 N; that is, each structural component of the assembly shall withstand a force of not less than 1,120 N.

(2) The assembly loop shall extend not more than 7 inches or 178 mm when subjected to a force of 22,241 N; that is, the length of the assembly between anchorages shall not increase more than 356 mm.

(3) Any webbing cut by the hardware during test shall have a breaking strength at the cut of not less than 18,683 N.

(4) Complete fracture through any solid section of metal attachment hardware shall not occur during test.

(b) *Type 2 seat belt assembly.* Except as provided in S4.5, the components of a Type 2 seat belt assembly including webbing, straps, buckles, adjustment and attachment hardware, and retractors shall comply with the following requirements when tested by the procedure specified in S5.3(b):

(1) The structural components in the pelvic restraint shall withstand a force of not less than 11,120 N.

(2) The structural components in the upper torso restraint shall withstand a force of not less than 6,672 N.

(3) The structural components in the assembly that are common to pelvic and upper torso restraints shall withstand a force of not less than 13,345 N.

(4) The length of the pelvic restraint between anchorages shall not increase more than 508 mm when subjected to a force of 11,120 N.

(5) The length of the upper torso restraint between anchorages shall not increase more than 508 mm when subjected to a force of 6,672 N.

(6) Any webbing cut by the hardware during test shall have a breaking strength of not less than 15,569 N at a cut in webbing of the pelvic restraint, or not less than 12,455 N at a cut in webbing of the upper torso restraint.

(7) Complete fracture through any solid section of metal attachment hardware shall not occur during test.

* * * * *

S5. *Demonstration procedures.*

S5.1 *Webbing*—(a) *Width.* The width of webbing from three seat belt assemblies shall be measured after conditioning for at least 24 hours in an atmosphere having relative humidity between 48 and 67 percent and a temperature of 23° ±2°C. The tension during measurement of width shall be not more than 22 N on webbing from a Type 1 seat belt assembly, and 9786 N ± 450 N on webbing from a Type 2 seat belt assembly. The width of webbing from a Type 2 seat belt assembly may be measured during the breaking strength test described in paragraph (b) of this section.

(b) *Breaking strength.* Webbing from three seat belt assemblies shall be conditioned in accordance with paragraph (a) of this section and tested for breaking strength in a testing machine of capacity verified to have an error of not more than one percent in the range of the breaking strength of the webbing in accordance with American Society for Testing and Materials E4–79 "Standard Methods of Load Verification of Testing Machines." The machine shall be equipped with split drum grips illustrated in Figure 1, having a diameter between 51 and 102 mm. The rate of grip separation shall be between 51 and 102 mm per minute. The distance between the centers of the grips at the start of the test shall be between 102 and 254 mm. After placing the specimen in the grips, the webbing shall be stretched continuously at a uniform rate to failure. Each value shall be not less than the applicable breaking strength requirement in S4.2(b), but the median value shall be used for determining the retention of breaking strength in paragraphs (d), (e) and (f) of this section.

(c) *Elongation.* Elongation shall be measured during the breaking strength test described in paragraph (b) of this section by the following procedure: A preload between 196 N and 245 N shall be placed on the webbing mounted in the grips of the testing machine and the needle points of an extensometer, in which the points remain parallel during test, are inserted in the center of the specimen. Initially the points shall be set at a known distance apart between 102 and 203 mm. When the force on the webbing reaches the value specified in S4.2(c), the increase in separation of the points of the extensometer shall be measured and the percent elongation shall be calculated to the nearest 0.5 percent. Each value shall be not more than the appropriate elongation requirement in S4.2(c).

(d) *Resistance to abrasion.* The webbing from three seat belt assemblies shall be tested for resistance to abrasion by rubbing over the hexagon bar prescribed in Figure 2 in the following manner: The webbing shall be mounted in the apparatus shown schematically in Figure 2. One end of the webbing (A) shall be attached to a mass (B) of 2.35 kg ± .05 kg, except that a mass of 1.5 kg ± .05 kg shall be used for webbing in pelvic and upper torso restraints of a belt assembly used in a child restraint system. The webbing shall be passed over the two new abrading edges of the hexagon bar (C) and the other end attached to an oscillating drum (D) which has a stroke of 330 mm. Suitable guides shall be used to prevent

UMI

1998
UMI

movement of the webbing along the axis of hexagonal bar C. Drum D shall be oscillated for 5,000 strokes or 2,500 cycles at a rate of 60 ± 2 strokes per minute or 30 ± 1 cycles per minute. The abraded webbing shall be conditioned as prescribed in paragraph (a) of this section and tested for breaking strength by the procedure described in paragraph (b) of this section. The median values for the breaking strengths determined on abraded and unabraded specimens shall be used to calculate the percentage of breaking strength retained.

(e) *Resistance to light.* Webbing at least 508 mm in length from three seat belt assemblies shall be suspended vertically on the inside of the specimen track in a Type E carbon-arc light exposure apparatus described in Standard Practice for Generating Light-Exposure Apparatus (Carbon-Arc Type) With and Without Water for Exposure of Nonmetallic Materials, ASTM Designation: G23 81, published by the American Society for Testing and Materials, except that the filter used for 100 percent polyester yarns shall be chemically strengthened soda-lime glass with a transmittance of less than 5 percent for wave lengths equal to or less than 305 nanometers and 90 percent or greater transmittance for wave lengths of 375 to 800 nanometers. The apparatus shall be operated without water spray at an air temperature of 60° ± 2° Celsius (°C) measured at a point 25 ± 5 mm outside the specimen rack and midway in height. The temperature sensing element shall be shielded from radiation. The specimens shall be exposed to light from the carbon-arc for 100 hours and then conditioned as prescribed in paragraph (a) of this section. The colorfastness of the exposed and conditioned specimens shall be determined on the Geometric Gray Scale issued by the American Association of Textile Chemists and Colorists. The breaking strength of the specimens shall be determined by the procedure prescribed in paragraph (b) of this section. The median values for the breaking strengths determined on exposed and unexposed specimens shall be used to calculate the percentage of breaking strength retained.

(f) *Resistance to micro-organisms.* Webbing at least 508 millimeters (mm) in length from three seat belt assemblies shall first be preconditioned in accordance with Appendix A(1) and (2) of American Association of Textile Chemists and Colorists Test Method 381, "Fungicides Evaluation on Textiles; Mildew and Rot Resistance of Textiles," and then subjected to Test I, "Soil Burial Test" of that test method. After soil-burial for a period of 2 weeks, the specimen shall be washed in water, dried and conditioned as prescribed in paragraph (a) of this section. The breaking strengths of the specimens shall be determined by the procedure prescribed in paragraph (b) of this section. The median values for the breaking strengths determined on exposed and unexposed specimens shall be used to calculate the percentage of breaking strength retained.

Note: This test shall not be required on webbing made from material which is inherently resistant to micro-organisms.

* * * * *

S5.2 *Hardware.*

(a) *Corrosion resistance.* Three seat belt assemblies shall be tested in accordance with American Society for Testing and Materials B11773, "Standard Method of Salt Spray (Fog) Testing." Any surface coating or material not intended for permanent retention on the metal parts during service life shall be removed prior to preparation of the test specimens for testing. The period of test shall be 50 hours for all attachment hardware at or near the floor, consisting of two periods of 24 hours exposure to salt spray followed by 1 hour drying and 25 hours for all other hardware, consisting of one period of 24 hours exposure to salt spray followed by 1 hour drying. In the salt spray test chamber, the parts from the three assemblies shall be oriented differently, selecting those orientations most likely to develop corrosion on the larger areas. At the end of test, the seat belt assembly shall be washed thoroughly with water to remove the salt. After drying for at least 24 hours under standard laboratory conditions specified in S5.1(a) attachment hardware shall be examined for ferrous corrosion on significant surfaces, that is, all surfaces that can be contacted by a sphere 19 mm in diameter, and other hardware shall be examined for ferrous and nonferrous corrosion which may be transferred, either directly or by means of the webbing, to a person or his clothing during use of a seat belt assembly incorporating the hardware.

* * * * *

(c) *Attachment hardware.* (1) Attachment bolts used to secure the pelvic restraint of a seat belt assembly to a motor vehicle shall be tested in a manner similar to that shown in Figure 3. The load shall be applied at an angle of 45° to the axis of the bolt through attachment hardware from the seat belt assembly, or through a special fixture which simulates the loading applied by the attachment hardware. The attachment hardware or simulated fixture shall be fastened by the bolt to the anchorage shown in Figure 3, which has a standard 7/16–20UNF–2B or 1/2-UNF–2B or metric equivalent threaded hole in a hardened steel plate at least 10 mm in thickness. The bolt shall be installed with two full threads exposed from the fully seated position. The appropriate force required by S4.3(c) shall be applied. A bolt from each of three seat belt assemblies shall be tested.

(2) Attachment hardware, other than bolts, designed to receive the ends of two seat belt assemblies shall be subjected to a tensile force of 26,689 N in a manner simulating use. The hardware shall be examined for fracture after the force is released. Attachment hardware from three seat belt assemblies shall be tested.

(3) Single attachment hook for connecting webbing to any eye bolt shall be tested in the following manner: The hook shall be held rigidly so that the retainer latch or keeper, with cotter pin or other locking device in place, is in a horizontal position as shown in Figure 4. A force of 667 N ± 9 N shall be applied vertically as near as possible to the free end of the retainer latch, and the movement of the latch by this force at the point of application shall be measured. The vertical force shall be released, and a force of 667 N ± 9 N shall be applied horizontally as near as possible to the free end of the retainer latch. The movement of the latch by this force at the point of load application shall be measured. Alternatively, the hook may be held in other positions, provided the forces are applied and the movements of the latch are measured at the points indicated in Figure 4. A single attachment hook from each of three seat belt assemblies shall be tested.

(d) *Buckle release.* (1) Three seat belt assemblies shall be tested to determine compliance with the maximum buckle release force requirements, following the assembly test in S5.3. After subjection to the force applicable for the assembly being tested, the force shall be reduced and maintained at 667 N on the assembly loop of a Type 1 seat belt assembly, 334 N the components of a Type 2 seat belt assembly. The buckle release force shall be measured by applying a force on the buckle in a manner and direction typical of those which would be employed by a seat belt occupant. For push button-release buckles, the force shall be applied at least 3 mm from the edge of the push button access opening of the buckle in a direction that produces maximum releasing effect. For lever-release buckles, the force shall be applied on the centerline of the buckle lever or

finger tab in a direction that produces maximum releasing effect.

(2) The area for application of release force on pushbutton actuated buckle shall be measured to the nearest 30 mm^2. The cylinder specified in S4.3(d) shall be inserted in the actuation portion of a lever released buckle for determination of compliance with the requirement. A buckle with other release actuation shall be examined for access of release by fingers.

(3) The buckle of a Type 1 or Type 2 seat belt assembly shall be subjected to a compressive force of 1779 N applied anywhere on a test line that is coincident with the center line of the belt extended through the buckle or on any line that extends over the center of the release mechanism and intersects the extended centerline of the belt at an angle of 60°. The load shall be applied by using a curved cylindrical bar having a cross section diameter of 19 mm and a radius of curvature of 152 mm, placed with its longitudinal center line along the test line and its center directly above the point or the buckle to which the load will be applied. The buckle shall be latched, and a tensile force of 334 N shall be applied to the connected webbing during the application of the compressive force. Buckles from three seat belt assemblies shall be tested to determine compliance with paragraph S4.3(d)(3).

(e) *Adjustment Force.* Three seat belt assemblies shall be tested for adjustment force on the webbing at the buckle, or other manual adjusting device normally used to adjust the size of the assembly. With no load on the anchor end, the webbing shall be drawn through the adjusting device at a rate of 508 mm ±5 mm per minute and the maximum force shall be measured to the nearest 1 N after the first 25 mm of webbing movement. The webbing shall be precycled 10 times prior to measurement.

(f) *Tilt-lock adjustment.* This test shall be made on buckles or other manual adjusting devices having tilt-lock adjustment normally used to adjust the size of the assembly. Three buckles or devices shall be tested. The base of the adjustment mechanism and the anchor end of the webbing shall be oriented in planes normal to each other. The webbing shall be drawn through the adjustment mechanism in a direction to increase belt length at a rate of 508 mm ±50 mm per minute while the plane of the base is slowly rotated in a direction to lock the webbing. Rotation shall be stopped when the webbing locks, but the pull on the webbing shall be continued until there is a resistance of at least 89 N. The locking angle between the anchor end of the webbing and the base of the adjustment mechanism shall be measured to the nearest degree. The webbing shall be precycled 10 times prior to measurement.

(g) *Buckle latch.* The buckles from three seat belt assemblies shall be opened fully and closed at least 10 times. Then the buckles shall be clamped or firmly held against a flat surface so as to permit normal movement of buckle part, but with the metal mating plate (metal-to-metal buckles) or of webbing end (metal-to-webbing buckles) withdrawn from the buckle. The release mechanism shall be moved 200 times through the maximum possible travel against its stop with a force of 133 N ±13 N at a rate not to exceed 30 cycles per minute. The buckle shall be examined to determine compliance with the performance requirements of S4.3(g). A metal-to-metal buckle shall be examined to determine whether partial engagement is possible by means of any technique representative of actual use. If partial engagement is possible, the maximum force of separation when in such partial engagement shall be determined.

(h) *Nonlocking retractor.* After the retractor is cycled 10 times by full extension and retraction of the webbing, the retractor and webbing shall be suspended vertically and a force of 18 N shall be applied to extend the webbing from the retractor. The force shall be reduced to 13 N when attached to a pelvic restraint, or to 5 N per strap or webbing that contacts the shoulder of an occupant when retractor is attached to an upper torso restraint. The residual extension of the webbing shall be measured by manual rotation of the retractor drum or by disengaging the retraction mechanism. Measurements shall be made on three retractors. The location of the retractor attached to upper torso restraint shall be examined for visibility of reel during use of seat belt assembly in a vehicle.

Note: This test shall not be required on a nonlocking retractor attached to the free end of webbing which is not subjected to any tension during restraint of an occupant by the assembly.

(i) *Automatic-locking retractor.* Three retractors shall be tested in a manner to permit the retraction force to be determined exclusive of the gravitational forces on hardware or webbing being retracted. The webbing shall be fully extended from the retractor. While the webbing is being retracted, the average force or retraction within plus or minus 51 mm of 75 percent extension (25 percent retraction) shall be determined and the webbing movement between adjacent locking segments shall be measured in the same region of extension. A seat belt assembly with automatic locking retractor in upper torso restraint shall be tested in a vehicle in a manner prescribed by the installation and usage instructions. The retraction force on the occupant of the seat belt assembly shall be determined before and after traveling for 10 minutes at a speed of 24 kilometers per hour (km/h) or more over a rough road (e.g., Belgian block road) where the occupant is subjected to displacement with respect to the vehicle in both horizontal and vertical directions. Measurements shall be made with the vehicle stopped and the occupant in the normal seated position.

(j) *Emergency-locking retractor.* A retractor shall be tested in a manner that permits the retraction force to be determined exclusive of the gravitational forces on hardware or webbing being retracted. The webbing shall be fully extended from the retractor, passing over or through any hardware or other material specified in the installation instructions. While the webbing is being retracted, the lowest force of retraction within plus or minus 51 mm of 75 percent extension shall be determined. A retractor that is sensitive to webbing withdrawal shall be subjected to an acceleration of $3 m/s^2$ within a period of 50 milliseconds (ms) while the webbing is at 75 percent extension, to determine compliance with S4.3(j)(2). The retractor shall be subjected to an acceleration of $7 m/s^2$ within a period of 50 milliseconds (ms), while the webbing is at 75 percent extension, and the webbing movement before locking shall be measured under the following conditions: For a retractor sensitive to webbing withdrawal, the retractor shall be accelerated in the direction of webbing retraction while the retractor drum's central axis is oriented horizontally and at angles of 45°, 90°, 135°, and 180° to the horizontal plane. For a retractor sensitive to vehicle acceleration, the retractor shall be:

(1) Accelerated in the horizontal plane in two directions normal to each other, while the retractor drum's central axis is oriented at the angle at which it is installed in the vehicle; and,

(2) Accelerated in three directions normal to each other while the retractor drum's central axis is oriented at angles of 45°, 90°, 135°, and 180° from the angle at which it is installed in the vehicle, unless the retractor locks by gravitational force when tilted in any direction to any angle greater than 45° from the angle at which it is installed in the vehicle.

(k) *Performance of retractor.* After completion of the corrosion-resistance test described in paragraph (a) of this section, the webbing shall be fully extended and allowed to dry for at least 24 hours under standard laboratory conditions specified in S5.1(a). The retractor shall be examined for ferrous and nonferrous corrosion which may be transferred, either directly or by means of the webbing, to a person or his clothing during use of a seat belt assembly incorporating the retractor, and for ferrous corrosion on significant surfaces if the retractor is part of the attachment hardware. The webbing shall be withdrawn manually and allowed to retract for 25 cycles. The retractor shall be mounted in an apparatus capable of extending the webbing fully, applying a force of 89 N at full extension, and allowing the webbing to retract freely and completely. The webbing shall be withdrawn from the retractor and allowed to retract repeatedly in this apparatus until 2,500 cycles are completed. The retractor and webbing shall then be subjected to the temperature resistance test prescribed in paragraph (b) of this section. The retractor shall be subjected to 2,500 additional cycles of webbing withdrawal and retraction. Then, the retractor and webbing shall be subjected to dust in a chamber similar to one illustrated in Figure 8 containing about 0.9 kg of coarse grade dust conforming to the specification given in Society of Automotive Engineering Recommended Practice J726, "Air Cleaner Test Code" Sept. 1979. The dust shall be agitated every 20 minutes for 5 seconds by compressed air, free of oil and moisture, at a gage pressure of 550 ±55 kPa entering through an orifice 1.5 ± 0.1 mm in diameter. The webbing shall be extended to the top of the chamber and kept extended at all times except that the webbing shall be subjected to 10 cycles of complete retraction and extension within 1 to 2 minutes after each agitation of the dust. At the end of 5 hours, the assembly shall be removed from the chamber. The webbing shall be fully withdrawn from the retractor manually and allowed to retract completely for 25 cycles. An automatic-locking retractor or a nonlocking retractor attached to pelvic restraint shall be subjected to 5,000 additional cycles of webbing withdrawal and retraction. An emergency locking retractor or a nonlocking retractor attached to upper torso restraint shall be subjected to 45,000 additional cycles of webbing withdrawal and retraction between 50 and 100 per cent extension. The locking mechanism of an emergency locking retractor shall be actuated at least 10,000 times within 50 to 100 percent extension of webbing during the 50,000 cycles. At the end of test, compliance of the retractors with applicable requirements in S4.3 (h), (i), and (j) shall be determined. Three retractors shall be tested for performance.

S5.3 *Assembly performance—(a) Type 1 seat belt assembly.* Three complete seat belt assemblies, including webbing, straps, buckles, adjustment and attachment hardware, and retractors, arranged in the form of a loop as shown in Figure 5, shall be tested in the following manner:

(1) The testing machine shall conform to the requirements specified in S5.1(b). A double-roller block shall be attached to one head of the testing machine. This block shall consist of two rollers 102 mm in diameter and sufficiently long so that no part of the seat belt assembly touches parts of the block other than the rollers during test. The rollers shall be mounted on antifriction bearings and spaced 305 mm between centers, and shall have sufficient capacity so that there is no brinelling, bending or other distortion of parts which may affect the results. An anchorage bar shall be fastened to the other head of the testing machine.

(2) The attachment hardware furnished with the seat belt assembly shall be attached to the anchorage bar. The anchor points shall be spaced so that the webbing is parallel in the two sides of the loop. The attaching bolts shall be parallel to, or at an angle of 45° or 90° to the webbing, whichever results in an angle nearest to 90° between webbing and attachment hardware except that eye bolts shall be vertical, and attaching bolts or nonthreaded anchorages of a seat belt assembly designed for use in specific models of motor vehicles shall be installed to produce the maximum angle in use indicated by the installation instructions, utilizing special fixtures if necessary to simulate installation in the motor vehicle. Rigid adapters between anchorage bar and attachment hardware shall be used if necessary to locate and orient the adjustment hardware. The adapters shall have a flat support face perpendicular to the threaded hole for the attaching bolt and adequate in area to provide full support for the base of the attachment hardware connected to the webbing. If necessary, a washer shall be used under a swivel plate or other attachment hardware to prevent the webbing from being damaged as the attaching bolt is tightened.

(3) The length of the assembly loop from attaching bolt to attaching bolt shall be adjusted to about 1295 mm, or as near thereto as possible. A force of 245 N shall be applied to the loop to remove any slack in webbing at hardware. The force shall be removed and the heads of the testing machine shall be adjusted for an assembly loop between 1220 and 1270 mm in length. The length of the assembly loop shall then be adjusted by applying a force between 89 and 98 N to the free end of the webbing at the buckle, or by the retraction force of an automatic-locking or emergency-locking retractor. A seat belt assembly that cannot be adjusted to this length shall be adjusted as closely as possible. An automatic-locking or emergency locking retractor when included in a seat belt assembly shall be locked at the start of the test with a tension on the webbing slightly in excess of the retractive force in order to keep the retractor locked. The buckle shall be in a location so that it does not touch the rollers during test, but to facilitate making the buckle release test in S5.2(d) the buckle should be between the rollers or near a roller in one leg.

(4) The heads of the testing machine shall be separated at a rate between 51 and 102 mm per minute until a force of 22,241 ± 222 N is applied to the assembly loop. The extension of the loop shall be determined from measurements of head separation before and after the force is applied. The force shall be decreased to 667 ± 45 N and the buckle release force measured as prescribed in S5.2(d).

(5) After the buckle is released, the webbing shall be examined for cutting by the hardware. If the yarns are partially or completely severed in a line for a distance of 10 percent or more of the webbing width, the cut webbing shall be tested for breaking strength as specified in S5.1(b) locating the cut in the free length between grips. If there is insufficient webbing on either side of the cut to make such a test for breaking strength, another seat belt assembly shall be used with the webbing repositioned in the hardware. A tensile force of 11,120 ± 111 N shall be applied to the components or a force of 22,241 ± 222 N shall be applied to the assembly loop. After the force is removed, the breaking strength of the cut webbing shall be determined as prescribed above.

(6) If a Type 1 seat belt assembly includes an automatic-locking retractor or an emergency-locking retractor, the webbing and retractor shall be subjected to a tensile force of 11,120 ± 111 N with the webbing fully extended from the retractor.

(7) If a seat belt assembly has a buckle in which the tongue is capable of inverted insertion, one of the three assemblies shall be tested with the tongue inverted.

(b) *Type 2 seat belt assembly.* Components of three seat belt assemblies shall be tested in the following manner:

(1) The pelvic restraint between anchorages shall be adjusted to a length between 1220 and 1270 mm, or as near this length as possible if the design of the pelvic restraint does not permit its adjustment to this length. An automatic-locking or emergency-locking retractor when included in a seat belt assembly shall be locked at the start of the test with a tension on the webbing slightly in excess of the retractive force in order to keep the retractor locked. The attachment hardware shall be oriented to the webbing as specified in paragraph (a)(2) of this section and illustrated in Figure 5. A tensile force 11,120 ± 111 N shall be applied on the components in any convenient manner and the extension between anchorages under this force shall be measured. The force shall be reduced to 334 ± 22 N and the buckle release force measured as prescribed in S5.2(d).

(2) The components of the upper torso restraint shall be subjected to a tensile force of 6,672 ± 67 N following the procedure prescribed above for testing pelvic restraint and the extension between anchorages under this force shall be measured. If the testing apparatus permits, the pelvic and upper torso restraints may be tested simultaneously. The force shall be reduced to 334 ± 22 N and the buckle release force measured as prescribed in S5.2(d).

(3) Any component of the seat belt assembly common to both pelvic and upper torso restraint shall be subjected to a tensile force of 13,344 ± 134 N.

(4) After the buckle is released in tests of pelvic and upper torso restraints, the webbing shall be examined for cutting by the hardware. If the yarns are partially or completely severed in a line for a distance of 10 percent or more of the webbing width, the cut webbing shall be tested for breaking strength as specified in S5.1(b) locating the cut in the free length between grips. If there is insufficient webbing on either side of the cut to make such a test for breaking strength, another seat belt assembly shall be used with the webbing repositioned in the hardware. The force applied shall be 11,120 ± 111 N for components of pelvic restraint, and 6,672 ± 67 N for components of upper torso restraint. After the force is removed, the breaking strength of the cut webbing shall be determined as prescribed above.

(5) If a Type 2 seat belt assembly includes an automatic-locking retractor or an emergency-locking retractor the webbing and retractor shall be subjected to a tensile force of 11,120 ± 111 N with the webbing fully extended from the retractor, or to a tensile force of 6,672 ± 67 N with the webbing fully extended from the retractor if the design of the assembly permits only upper torso restraint forces on the retractor.

(6) If a seat belt assembly has a buckle in which the tongue is capable of inverted insertion, one of the three assemblies shall be tested with the tongue inverted.

(c) *Resistance to buckle abrasion.* Seat belt assemblies shall be tested for resistance to abrasion by each buckle or manual adjusting device normally used to adjust the size of the assembly. The webbing of the assembly to be used in this test shall be exposed for 4 hours to an atmosphere having relative humidity of 65 per cent and temperature of 18° C. The webbing shall be pulled back and forth through the buckle or manual adjusting device as shown schematically in Figure 7. The anchor end of the webbing (A) shall be attached to a mass (B) of 1.4 kg. The webbing shall pass through the buckle (C), and the other end (D) shall be attached to a reciprocating device so that the webbing forms an angle of 8° with the hinge stop (E). The reciprocating device shall be operated for 2,500 cycles at a rate of 18 cycles per minute with a stroke length of 203 mm. The abraded webbing shall be tested for breaking strength by the procedure described in paragraph S5.1(b).

* * * * *

15. Section 571.210 is amended by revising in S4.2.1 the introductory paragraph; revising S4.2.2; revising S4.2.4; revising S4.3.1.1; revising S4.3.1.4; removing S4.3.1.5; revising S5.1; revising S5.2; and revising in S6, the introductory sentence, to read as follows:

§ 571.210 Standard No. 210, Seat belt assembly anchorages.

* * * * *

S4.2.1 Except as provided in S4.2.5, and except for side-facing seats, the anchorages, attachment hardware, and attachment bolts for any of the following seat belt assemblies shall withstand a 22,241 N force when tested in accordance with S5.1 of this standard:

* * * * *

S4.2.2 Except as provided in S4.2.5, the anchorages, attachment hardware, and attachment bolts for all Type 2 and automatic seat belt assemblies that are installed to comply with Standard No. 208 (49 CFR 571.208) shall withstand 13,345 N forces when tested in accordance with S5.2.

* * * * *

S4.2.4 Anchorages, attachment hardware, and attachment bolts shall be tested by simultaneously loading them in accordance with the applicable procedures set forth in S5 of this standard if the anchorages are either:

(a) For designated seating positions that are common to the same occupant seat and that face in the same direction, or

(b) For laterally adjacent designated seating positions that are not common to the same occupant seat, but that face in the same direction, if the vertical centerline of the bolt hole for at least one of the anchorages for one of those designated seating positions is within 305 mm of the vertical center line of the bolt hole for an anchorage for one of the adjacent seating positions.

* * * * *

S4.3.1.1 In an installation in which the seat belt does not bear upon the seat frame:

(a) If the seat is a nonadjustable seat, then a line from the seating reference point to the nearest contact point of the belt with the anchorage shall extend forward from the anchorage at an angle with the horizontal of not less than 30 degrees and not more than 75 degrees.

(b) If the seat is an adjustable seat, then a line from a point 64 mm forward of and 10 mm above the seating reference point to the nearest contact point of the belt with the anchorage shall extend forward from the anchorage at an angle with the horizontal of not less than 30 degrees and not more than 75 degrees.

* * * * *

S4.3.1.4 Anchorages for an individual seat belt assembly shall be located at least 165 mm apart laterally, measured between the vertical center line of the bolt holes or, for designs using other means of attachment to the vehicle structure, between the centroid of such means.

S4.3.1.5 [Reserved]

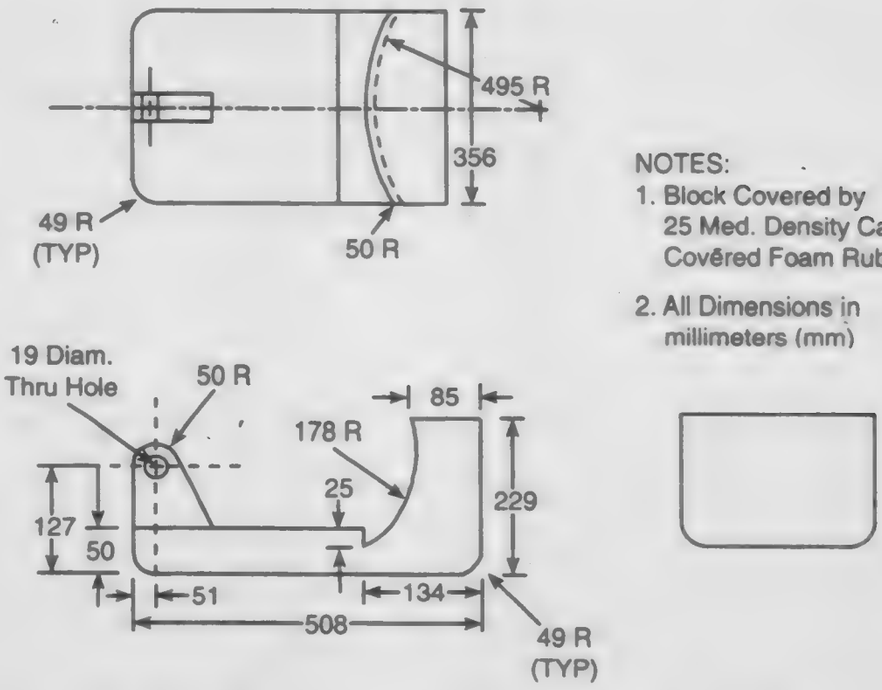
* * * * *

S5.1 *Seats with Type 1 or Type 2 seat belt anchorages.* With the seat in its rearmost position, apply a force of 22,241 N in the direction in which the seat faces to a pelvic body block as described in Figure 2A, in a plane parallel to the longitudinal centerline of the vehicle, with an initial force application angle of not less than 5 degrees or more than 15 degrees above the horizontal. Apply the force at the onset rate of not more than 222,411 N

per second. Attain the 22,241 N force in not more than 30 seconds and maintain it for 10 seconds. At the manufacturer's option, the pelvic body block described in Figure 2B may be substituted for the pelvic body block described in Figure 2A to apply the specified force to the center set(s) of anchorages for any group of three or more sets of anchorages that are simultaneously loaded in accordance with S4.2.4 of this standard.

S5.2 *Seats with Type 2 or automatic seat belt anchorages.* With the seat in its rearmost position, apply forces of 13,345 N in the direction in which the seat faces simultaneously to a pelvic body block, as described in Figure 2A, and an upper torso body block, as described in Figure 3, in a plane parallel to the longitudinal centerline of the vehicle, with an initial force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. Apply the forces at the onset rate of not more than 133,447 N per second. Attain the 13,345 N force in not more than 30 seconds and maintain it for 10 seconds. At the manufacturer's option, the pelvic body block described in Figure 2B may be substituted for the pelvic body block described in Figure 2A to apply the specified force to the center set(s) of anchorages for any group of three or more sets of anchorages that are simultaneously loaded in accordance with S4.2.4 of this standard.

* * * * *



S6. *Owner's Manual Information.* The owner's manual in each vehicle with a gross vehicle weight rating of 4,536 kg or less manufactured after September 1, 1987 shall include:

* * * * *

16. In § 571.210, Figure 2 "Body Block for Lap Belt Anchorage" would be removed. Figure 2A "Body Block for Lap Belt Anchorage," Figure 2B "Optional Body Block for Center Seating Positions," and Figure 3 "Body Block for Combination Shoulder and Lap Belt Anchorage" after S5.2, and preceding S6, would be revised to read as follows:

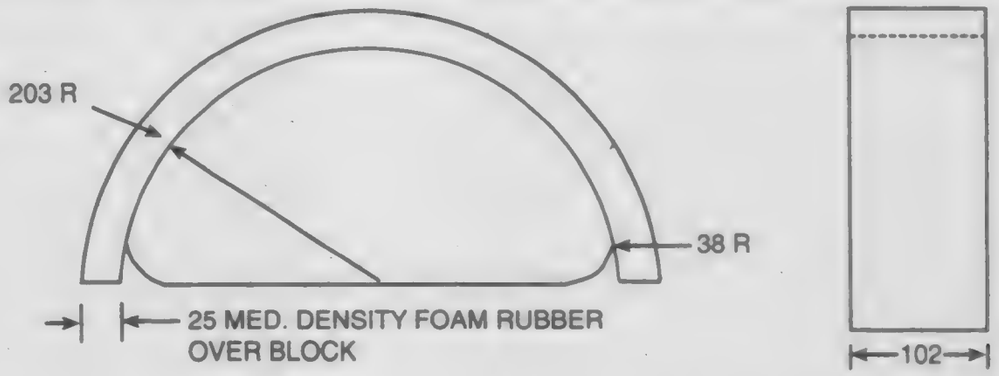

Figure 3.—BODY BLOCK FOR COMBINATION SHOULDER AND LAP BELT ANCHORAGE
All dimensions in millimeters (mm)

BILLING CODE 4910–59–C

17. Section 571.219 is amended by revising S3; revising S5; revising S6.1; revising S6.2; and revising in S7.7, paragraph (b) to read as follows:

§ 571.219 Standard No. 219, Windshield zone intrusion.

* * * * *

S3. *Application.* This standard applies to passenger cars and to multipurpose passenger vehicles, trucks and buses of 4,536 kilograms or less gross vehicle weight rating. However, it does not apply to forward control vehicles, walk-in van-type vehicles, or to open-body-type vehicles with fold-down or removable windshields.

* * * * *

S5. *Requirement.* When the vehicle travelling longitudinally forward at any speed up to and including 48 km/h impacts a fixed collision barrier that is perpendicular to the line of travel of the vehicle, under the conditions of S7, no part of the vehicle outside the occupant compartment, except windshield molding and other components designed to be normally in contact with the windshield, shall penetrate the protected zone template, affixed according to S6, to a depth of more than 6 mm, and no such part of a vehicle shall penetrate the inner surface of that portion of the windshield, within the DLO, below the protected zone defined in S6.

S6. *Protected zone template.*

S6.1 The lower edge of the protected zone is determined by the following procedure (See Figure 1).

(a) Place a 165 mm diameter rigid sphere, with a mass of 6.8 kg in a position such that it simultaneously contacts the inner surface of the windshield glazing and the surface of the instrument panel, including padding. If any accessories or equipment such as the steering control system obstruct positioning of the sphere, remove them for the purposes of this procedure.

(b) Draw the locus of points on the inner surface of the windshield contactable by the sphere across the width of the instrument panel. From the outermost contactable points, extend the locus line horizontally to the edges of the glazing material.

(c) Draw a line on the inner surface of the windshield below and 13 mm distant from the locus line.

(d) The lower edge of the protected zone is the longitudinal projection onto the outer surface of the windshield of the line determined in S6.1(c).

S6.2 The protected zone is the space enclosed by the following surfaces, as shown in Figure 1:

(a) The outer surface of the windshield in its precrash configuration.

(b) The locus of points 76 mm outward along perpendiculars drawn to each point on the outer surface of the windshield.

(c) The locus of lines forming a 45° angle with the outer surface of the windshield at each point along the top and side edges of the outer surface of the windshield and the lower edge of the protected zone determined in S6.1, in the plane perpendicular to the edge at that point.

* * * * *

(b) Except as specified in S7.6, a multipurpose passenger vehicle, truck or bus is loaded to its unloaded vehicle weight, plus 136 kg or its rated cargo and luggage capacity, whichever is less, secured to the vehicle, plus a 50th-percentile test dummy as specified in part 572 of this chapter at each front outboard designated seating postion and at any other position whose protection system is required to be tested by a dummy under the provisions of Standard No. 208. Each dummy is restrained only by means that are installed for protection at its seating position. The load is distributed so that the mass on each axle as measured at the tire-ground interface is in proportion to its GAWR. If the mass on any axle when the vehicle is loaded to its unloaded vehicle weight plus dummy mass exceeds the axle's proportional share of the test mass, the remaining mass is placed so that the mass on that axle remains the same. For the purposes of this section, unloaded vehicle weight does not include the mass of work-performing accessories. Vehicles are tested to a maximum unloaded vehicle weight of 2,495 kg.

* * * * *

18. Section 571.219 is amended by revising Figure 1 that follows S7.7 to read as follows:

BILLING CODE 4910-59-P

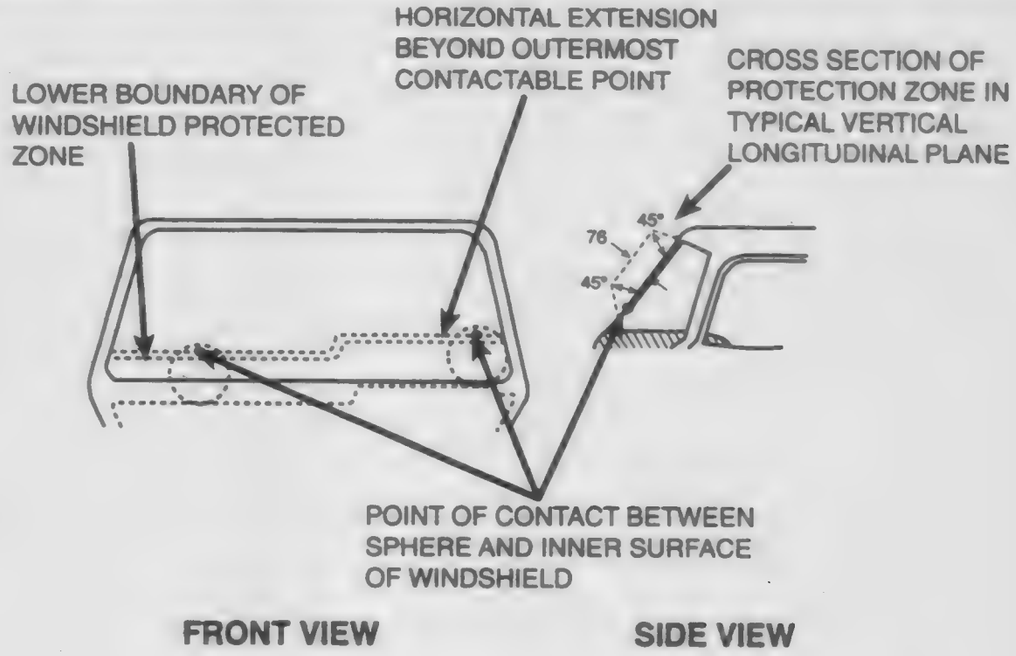

Figure 1.—WINDSHIELD PROTECTION ZONE
All dimensions in millimeters (mm)

BILLING CODE 4910–59–C

UMI

19. Section 571.220 is amended by revising S4; revising S5.2; revising S5.4; revising S5.5; and revising S6.1 to read as follows:

§ 571.220 Standard No. 220, School bus rollover protection.

* * * * *

S4. *Requirements.* When a force in Newtons equal to 1½ times the unloaded vehicle weight in kilograms multiplied by 9.8 m/sec² is applied to the roof of the vehicle's body structure through a force application plate as specified in S5, Test procedures—

(a) The downward vertical movement at any point on the application plate shall not exceed 130 mm and

(b) Each emergency exit of the vehicle provided in accordance with Standard No. 217 (§ 571.217) shall be capable of opening as specified in that standard during the full application of the force and after release of the force, except that an emergency exit located in the roof of the vehicle is not required to be capable of being opened during the application of the force. A particular vehicle (i.e., test specimen) need not meet the emergency exit opening requirement after release of force if it is subjected to the emergency exit opening requirements during the full application of the force.

* * * * *

S5.2 Use a flat, rigid, rectangular force application plate that is measured with respect to the vehicle roof longitudinal and lateral centerlines,

(a) In the case of a vehicle with a GVWR of more than 4,536 kg, 305 mm shorter than the vehicle roof and 914 mm wide; and

(b) In the case of a vehicle with a GVWR of 4,536 kg or less, 127 mm longer and 127 mm wider than the vehicle roof. For purposes of these measurements, the vehicle roof is that structure, seen in the top projected view, that coincides with the passenger and driver compartment of the vehicle.

* * * * *

S5.4 Apply an evenly-distributed vertical force in the downward direction to the force application plate at any rate not more than 13 mm per second, until a force of 2,224 N has been applied.

S5.5 Apply additional vertical force in the downward direction to the force application plate at a rate of not more than 13 mm per second until the force specified in S4. has been applied, and maintain this application of force.

* * * * *

S6.1 *Temperature.* The ambient temperature is any level between 0° C and 32° C.

* * * * *

20. Section 571.222 is amended by revising in S4, the definition of "contactable surface"; revising S4.1; revising in S5., paragraphs (a) and (b); revising S5.1.2; revising S5.1.3; revising S5.1.3.1; revising S5.1.3.2; revising S5.1.3.3; revising S5.1.3.4; revising S5.1.4; revising S5.1.4.1; revising S5.1.4.2; revising S5.1.5; revising S5.2; revising S5.2.1; revising S5.2.3; revising S5.3.1.1; revising S5.3.1.2; revising S5.3.1.3; revising S5.3.2.1; revising S5.3.2.2; revising S6.3; revising S6.5; revising S6.5.1; revising S6.6; and revising S6.7 to read as follows:

S571.222 Standard No. 222, School bus passenger seating and crash protection.

* * * * *

S4. *Definitions. Contactable surface* means any surface within the zone specified in S5.3.1.1 that is contactable from any direction by the test device described in S6.6, except any surface on the front of a seat back or restraining barrier 76 mm or more below the top of the seat back or restraining barrier.

* * * * *

S4.1 The number of seating positions considered to be in a bench seat is expressed by the symbol W, and calculated as the bench width in millimeters divided by 381 and rounded to the nearest whole number.

S5. *Requirements.* (a) Each vehicle with a gross vehicle weight rating of more than 4,536 kg shall be capable of meeting any of the requirements set forth under this heading when tested under the conditions of S6. However, a particular school bus passenger seat (i.e., test specimen) in that weight class need not meet further requirements after having met S5.1.2 and S5.1.5, or having been subjected to either S5.1.3, S5.1.4, or S5.3.

(b) Each vehicle with a gross vehicle weight rating of 4,536 kg or less shall be capable of meeting the following requirements at all seating positions other than the driver's seat:

(1)(A) In the case of vehicles manufactured before September 1, 1991, the requirements of §§ 571.208, 571.209, and 571.210 as they apply to multipurpose passenger vehicles; or

(B) In the case of vehicles manufactured on or after September 1, 1991, the requirements of S4.4.3.3 of § 571.208 and the requirements of §§ 571.209 and 571.210 as they apply to school buses with a gross vehicle weight rating of 4,536 kg or less; and

(2) The requirements of S5.1.2, S5.1.3, S5.1.4, S5.1.5, S5.3, and S5.4 of this standard. However, the requirements of §§ 571.208 and 571.210 shall be met at W seating positions in a bench seat using a body block as specified in Figure 2 of this standard, and a particular school bus passenger seat (i.e., a test specimen) in that weight class need not meet further requirements after having met S5.1.2 and S5.1.5, or after having been subjected to either S5.1.3, S5.1.4, or S5.3 of this standard or § 571.210.

* * * * *

S5.1.2 *Seat back height and surface area.* Each school bus passenger seat shall be equipped with a seat back that, in the front projected view, has a front surface area above the horizontal plane that passes through the seating reference point, and below the horizontal plane 508 mm above the seating reference point, of not less than 90 percent of the seat bench width in millimeters multiplied by 508.

S5.1.3 *Seat performance forward.* When a school bus passenger seat that has another seat behind it is subjected to the application of force as specified in S5.1.3.1 and S5.1.3.2, and subsequently, the application of additional force to the seat back as specified in S5.1.3.3 and S5.1.3.4:

(a) The seat back force/deflection curve shall fall within the zone specified in Figure 1;

(b) Seat back deflection shall not exceed 356 mm; (for determination of (a) and (b) the force/deflection curve describes only the force applied through the upper loading bar, and only the forward travel of the pivot attachment point of the upper loading bar, measured from the point at which the initial application of 44 N of force is attained.)

(c) The seat shall not deflect by an amount such that any part of the seat moves to within 102 mm of any part of another school bus passenger seat or restraining barrier in its originally installed position;

(d) The seat shall not separate from the vehicle at any attachment point; and

(e) Seat components shall not separate at any attachment point.

S5.1.3.1 Position the loading bar specified in S6.5 so that it is laterally centered behind the seat back with the bar's longitudinal axis in a transverse plane of the vehicle and in any horizontal plane between 102 mm above and 102 mm below the seating reference point of the school bus passenger seat behind the test specimen.

S5.1.3.2 Apply a force of 3,114W newtons horizontally in the forward direction through the loading bar at the pivot attachment point. Reach the specified load in not less than 5 nor more than 30 seconds.

S5.1.3.3 No sooner than 1.0 second after attaining the required force, reduce

that force to 1,557W newtons and, while maintaining the pivot point position of the first loading bar at the position where the 1,557W newtons is attained, position a second loading bar described in S6.5 so that it is laterally centered behind the seat back with the bar's longitudinal axis in a transverse plane of the vehicle and in the horizontal plane 406 mm above the seating reference point of the school bus passenger seat behind the test specimen, and move the bar forward against the seat back until a force of 44 N has been applied.

S5.1.3.4 Apply additional force horizontally in the forward direction through the upper bar until 452W joules of energy have been absorbed in deflecting the seat back (or restraining barrier). Apply the additional load in not less than 5 seconds nor more than 30 seconds. Maintain the pivot attachment point in the maximum forward travel position for not less than 5 seconds nor more than 10 seconds and release the load in not less than 5 nor more than 30 seconds. (For the determination of S5.1.3.4 the force/deflection curve describes only the force applied through the upper loading bar, and the forward and rearward travel distance of the upper loading bar pivot attachment point measured from the position at which the initial application of 44 N of force is attained.)

S5.1.4 *Seat performance rearward.* When a school bus passenger seat that has another seat behind it is subjected to the application of force as specified in S5.1.4.1 and S5.1.4.2:

(a) Seat back force shall not exceed 9,786 N;

(b) Seat back deflection shall not exceed 254 mm; (for determination of (a) and (b) the force/deflection curve describes only the force applied through the loading bar, and only the rearward travel of the pivot attachment point of the loading bar, measured from the point at which the initial application of 222 N is attained.

(c) The seat shall not deflect by an amount such that any part of the seat moves to within 102 mm of any part of another passenger seat in its originally installed position;

(d) The seat shall not separate from the vehicle at any attachment point; and

(e) Seat components shall not separate at any attachment point.

S5.1.4.1 Position the loading bar described in S6.5 so that it is laterally centered forward of the seat back with the bar's longitudinal axis in a transverse plane of the vehicle and in the horizontal plane 343 mm above the seating reference point of the test specimen, and move the loading bar rearward against the seat back until a force of 222 N has been applied.

S5.1.4.2 Apply additional force horizontally rearward through the loading bar until 316W joules (J) of energy has been absorbed in deflecting the seat back. Apply the additional load in not less than 5 seconds nor more than 30 seconds. Maintain the pivot attachment point in the maximum rearward travel position for not less than 5 seconds nor more than 10 seconds and release the load in not less than 5 seconds nor more than 30 seconds. (For determination of S5.1.4.2 the force deflection curve describes the force applied through the loading bar and the rearward and forward travel distance of the loading bar pivot attachment point measured from the position at which the initial application of 222 N of force is attained.)

S5.1.5 *Seat cushion retention.* In the case of school bus passenger seats equipped with seat cushions, with all manual attachment devices between the seat and the seat cushion in the manufacturer's designated position for attachment, the seat cushion shall not separate from the seat at any attachment point when subjected to an upward force in newtons of 5 times the mass of the seat cushion in kilograms and multiplied by 9.8 m/s^2, applied in any period of not less than 1 nor more than 5 seconds, and maintained for 5 seconds.

S5.2 *Restraining barrier requirements.* Each vehicle shall be equipped with a restraining barrier forward of any designated seating position that does not have the rear surface of another school bus passenger seat within 610 mm of its seating reference point, measured along a horizontal longitudinal line through the seating reference point in the forward direction.

S5.2.1 *Barrier-seat separation.* The horizontal distance between the restraining barrier's rear surface and the seating reference point of the seat in front of which the barrier is required shall not be more than 610 mm measured along a horizontal longitudinal line through the seating reference point in the forward direction.

* * * * *

S5.2.3 *Barrier performance forward.* When force is applied to the restraining barrier in the same manner as specified in S5.1.3.1 through S5.1.3.4 for seating performance tests:

(a) The restraining barrier force/deflection curve shall fall within the zone specified in Figure 1;

(b) Restraining barrier deflection shall not exceed 356 mm; (for computation of (a) and (b) the force/deflection curve describes only the force applied through the upper loading bar, and only the forward travel of the pivot attachment point of the loading bar, measured from the point at which the initial application of 44 N of force is attained.)

(c) Restraining barrier deflection shall not interfere with normal door operation;

(d) The restraining barrier shall not separate from the vehicle at any attachment point; and

(e) Restraining barrier components shall not separate at any attachment point.

* * * * *

S5.3.1.1 The head protection zones in each vehicle are the spaces in front of each school bus passenger seat which are not occupied by bus sidewall, window, or door structure and which, in relation to that seat and its seating reference point, are enclosed by the following planes;

(a) Horizontal planes 305 mm and 1016 mm above the seating reference point;

(b) A vertical longitudinal plane tangent to the inboard (aisle side) edge of the seat; and

(c) A vertical longitudinal plane 83 mm inboard of the outboard edge of the seat;

(d) Vertical transverse planes through and 762 mm forward of the reference point.

S5.3.1.2 *Head form impact requirement.* When any contactable surface of the vehicle within the zones specified in S5.3.1.1 is impacted from any direction at 6.7 m/s by the head form described in S6.6, the axial acceleration at the center of gravity of the head form shall be such that the expression

$$\left[\frac{1}{t1-t2}\int_{t1}^{t2} a\,dt\right]^{2.5}(t1-t2)$$

shall not exceed 1,000 where "a" is the axial acceleration expressed as a multiple of "g" (the acceleration due to gravity), and "t_1" and "t_2" are any two points in time during the impact.

S5.3.1.3 *Head form force distribution.* When any contactable surface of the vehicle within the zones specified in S5.3.1.1 is impacted from any direction at 6.7 m/s by the head form described in S6.6, the energy necessary to deflect the impacted material shall be not less than 4.5 joules before the force level on the head form exceeds 667 N. When any contactable surface within such zones is impacted by the head form from any direction at 1.5 m/s the contact area on the head

form surface shall be not less than 1,935 mm².

* * * * *

S5.3.2.1 The leg protection zones of each vehicle are those parts of the school bus passenger seat backs and restraining barriers bounded by horizontal planes 305 mm above and 102 mm below the seating reference point of the school bus passenger seat immediately behind the seat back or restraining barrier.

S5.3.2.2 When any point on the rear surface of that part of a seat back or restraining barrier within any zone specified in S5.3.2.1 is impacted from any direction at 4.9 m/s by the knee form specified in S6.7, the resisting force of the impacted material shall not exceed 2,669 N and the contact area on the knee form surface shall not be less than 1,935 mm².

* * * * *

S6.3 *Temperature.* The ambient temperature is any level between 0 degrees C and 32 degrees C.

* * * * *

S6.5 *Loading bar.* The loading bar is a rigid cylinder with an outside diameter of 152 mm that has hemispherical ends with radii of 76 mm and with a surface roughness that does not exceed 1.6 μm, root mean square. The length of the loading bar is 102 mm less than the width of the seat back in each test. The stroking mechanism applies force through a pivot attachment at the center point of the loading bar which allows the loading bar to rotate in a horizontal plane 30 degrees in either direction from the transverse position.

S6.5.1 A vertical or lateral force of 17,792 N applied externally through the pivot attachment point of the loading bar at any position reached during a test specified in this standard shall not deflect that point more than 25 mm.

S6.6 *Head form.* The head form for the measurement of acceleration is a rigid surface comprised of two hemispherical shapes, with total equivalent mass of 5.2 kg. The first of the two hemispherical shapes has a diameter of 166 mm. The second of the two hemispherical shapes has a 50 mm diameter and is centered as shown in Figure 3 to protrude from the outer surface of the first hemispherical shape. The surface roughness of the hemispherical shapes does not exceed 1.6 μm, root mean square.

* * * * *

S6.7 *Knee form.* The knee form for measurement of force is a rigid 76 millimeter-diameter cylinder, with an equivalent weight of 44 N that has one hemispherical end with a 38 mm radius forming a contact surface of the knee form. The hemispherical surface roughness does not exceed 1.6 μm, root mean square.

* * * * *

21. In § 571.222, Figure 1, "Force/Deflection Zone", Figure 2, "Body Block for Lap Belt", and Figure 3 after S6.8 are revised to read as follows:

BILLING CODE 4910-59-P

BILLING CODE 4910–59–C

22. Section 571.301 is amended by revising S3; revising S5.5; revising S5.6; revising S6; revising S6.1; revising S6.2; revising S6.3; revising S6.5; revising S6.6; revising S7.1.6; revising S7.3; revising S7.5.1; revising S7.5.2; revising S7.5.4; and revising S7.5.5 to read as follows:

S571.301 Standard No. 301, Fuel system integrity.

* * * * *

S3. *Application.* This standard applies to passenger cars, and to multipurpose passenger vehicles, trucks and buses that have a GVWR of 4,536 kg or less and use fuel with a boiling point above 0° C, and to school buses that have a GVWR greater than 4,536 kg and use fuel with a boiling point above 0° C.

* * * * *

S5.5 *Fuel spillage; Barrier crash.* Fuel spillage in any fixed or moving barrier crash test shall not exceed 28 g from impact until motion of the vehicle has ceased, and shall not exceed a total of 142 g in the 5-minute period following cessation of motion. For the subsequent 25-minute period, fuel spillage during any 1 minute interval shall not exceed 28 g.

S5.6 *Fuel spillage; rollover.* Fuel spillage in any rollover test, from the onset of rotational motion, shall not exceed a total of 142 g for the first 5 minutes of testing at each successive 90° increment. For the remaining test period, at each increment of 90° fuel spillage during any 1 minute interval shall not exceed 28 g.

* * * * *

S6. *Test requirements.* Each vehicle with a GVWR of 4,536 kg or less shall be capable of meeting the requirements of any applicable barrier crash test followed by a static rollover, without alteration of the vehicle during the test sequence. A particular vehicle need not meet further requirements after having been subjected to a single barrier crash test and a static rollover test.

S6.1 *Frontal barrier crash.* When the vehicle travelling longitudinally forward at any speed up to and including 48 km/h impacts a fixed collision barrier that is perpendicular to the line of travel of the vehicle, or at any angle up to 30° in either direction from the perpendicular to the line of travel of the vehicle, with 50th-percentile test dummies as specified in part 572 of this chapter at each front outboard designated seating position and at any other position whose protection system is required to be tested by a dummy under the provisions of Standard No. 208, under the applicable conditions of S7., fuel spillage shall not exceed the limits of S5.5.

S6.2 *Rear moving barrier crash.* When the vehicle is impacted from the rear by a barrier moving at 48 km/h, with test dummies as specified in part 572 of this chapter at each front outboard designated seating position, under the applicable conditions of S7., fuel spillage shall not exceed the limits of S5.5.

S6.3 *Lateral moving barrier crash.* When the vehicle is impacted laterally on either side by a barrier moving at 32 km/h with 50th-percentile test dummies as specified in part 572 of this chapter at positions required for testing to Standard No. 208, under the applicable conditions of S7., fuel spillage shall not exceed the limits of S5.5.

* * * * *

S6.5 *Moving contoured barrier crash.* When the moving contoured barrier assembly traveling longitudinally forward at any speed up to and including 48 km/h impacts the test vehicle (school bus with a GVWR exceeding 4,536 kg) at any point and angle, under the applicable conditions of S7.1 and S7.5, fuel spillage shall not exceed the limits of S5.5.

S6.6 *Anti-siphoning test for alcohol fuel vehicles.* Each vehicle shall have means that prevent any hose made of vinyl plastic or rubber, with a length of not less than 1200 millimeters (mm) and an outside diameter of not less than 5.2 mm, from contacting the level surface of the liquid fuel in the vehicle's fuel tank or fuel system, when the hose is

inserted into the filler neck attached to the fuel tank with the fuel tank filled to any level from 90 to 95 percent of capacity.

* * * * *

S7.1.6 The vehicle, including test devices and instrumentation, is loaded as follows:

(a) Except as specified in S7.1.1, a passenger car is loaded to its unloaded vehicle weight plus its rated cargo and luggage capacity weight, secured in the luggage area, plus the necessary test dummies as specified in S6., restrained only by means that are installed in the vehicle for protection at its seating position.

(b) Except as specified in S7.1.1, a multipurpose passenger vehicle, truck, or bus with a GVWR of 4,536 kg or less is loaded to its unloaded vehicle weight, plus the necessary test dummies, as specified in S6., plus 136 kg or its rated cargo and luggage capacity weight, whichever is less, secured to the vehicle and distributed so that the weight on each axle as measured at the tire-ground interface is proportional to its GAWR. If the weight on any axle, when the vehicle is loaded to unloaded vehicle weight plus dummy weight, exceeds the axle's proportional share of the test weight, the remaining weight shall be placed so that the weight on that axle remains the same. Each dummy shall be restrained only by means that are installed in the vehicle for protection at its seating position.

(c) Except as specified in S7.1.1, a school bus with a GVWR greater than 4,536 kg is loaded to its unloaded vehicle weight, plus 54 kg of unsecured mass at each designated seating position.

* * * * *

S7.3 *Rear moving barrier test conditions.* The rear moving barrier test conditions are those specified in S8.2 of Standard No. 208, 49 CFR 571.208, except for the positioning of the barrier and the vehicle. The barrier and test vehicle are positioned so that at impact—

(a) The vehicle is at rest in its normal attitude;

(b) The barrier is traveling at 48 km/h with its face perpendicular to the longitudinal centerline of the vehicle; and

(c) A vertical plane through the geometric center of the barrier impact surface and perpendicular to that surface coincides with the longitudinal centerline of the vehicle.

* * * * *

S7.5.1 The moving barrier, which is mounted on a carriage as specified in Figure 1, is of rigid construction, symmetrical about a vertical longitudinal plane. The contoured impact surface, which is 629 mm high and 1,981 mm wide, conforms to the dimensions shown in Figure 2, and is attached to the carriage as shown in that figure. The ground clearance to the lower edge of the impact surface is 133 mm ± 13 mm. The wheelbase is 3,048 mm ± 50 mm.

S7.5.2 The moving contoured barrier, including the impact surface, supporting structure, and carriage, has a mass of 1,814 kg ± 23 kg with the mass distributed so that 408 kg ± 11 kg is at each rear wheel and 499 kg ± 11 kg is at each front wheel. The center of gravity is located 1,372 mm ± 38 mm rearward of the front wheel axis, in the vertical longitudinal plane of symmetry, 401 mm above the ground. The moment of inertia about the center of gravity is:

$I_x = 367\ kgm^2 \pm 18.4\ kgm^2$

$I_z = 4{,}711\ kgm^2 \pm 236\ kgm^2$

* * * * *

S7.5.4 The moving barrier assembly is equipped with G78–15 pneumatic tires with a tread width of 152 mm ± 25 mm, inflated to 165 kPa.

S7.5.5 The concrete surface upon which the vehicle is tested is level, rigid, and of uniform construction, with a skid number of 75 when measured in accordance with American Society of Testing and Materials Method E: 274–65T at 64 km/h, omitting water delivery as specified in paragraph 7.1 of that method.

* * * * *

23. Section 571.302 is amended by revising S4.2; revising the text of S4.2.2; revising S4.3; revising S5.1; revising S5.1.1; revising S5.1.2; revising S5.1.3; revising S5.1.4; revising S5.2.1; revising S5.2.3; and revising S5.3 to read as follows:

§ 571.302 Flammability of interior materials.

* * * * *

S4.2 Any portion of a single or composite material which is within 13 mm of the occupant compartment air space shall meet the requirements of S4.3.

* * * * *

S4.2.2 Any material that adheres to other materials at every point of contact shall meet the requirements of S4.3 when tested as a composite with the other material(s).

* * * * *

Material A has a non-adhering interface with material B and is tested separately. Part of material B is within 13 mm of the occupant compartment air space, and materials B and C adhere at every point of contact; therefore, B and C are tested as a composite. The cut is in material C as shown, to make a specimen 13 mm thick.

S4.3(a) When tested in accordance with S5, material described in S4.1 and S4.2 shall not burn, nor transmit a flame front across its surface, at a rate of more than 102 mm per minute. The requirement concerning transmission of a flame front shall not apply to a surface created by cutting a test specimen for purposes of testing pursuant to S5.

(b) If a material stops burning before it has burned for 60 seconds from the start of timing, and has not burned more than 51 mm from the point where the timing was started, it shall be considered to meet the burn-rate requirement of S4.3(a).

S5.1 *Conditions.*

S5.1.1 The test is conducted in a metal cabinet for protecting the test specimens from drafts. The interior of the cabinet is 381 mm long, 203 mm deep, and 356 mm high. It has a glass observation window in the front, a closable opening to permit insertion of the specimen holder, and a hole to accommodate tubing for a gas burner. For ventilation, it has a 13 mm clearance space around the top of the cabinet, ten holes in the base of the cabinet, each hole 19 mm in diameter and legs to elevate the bottom of the cabinet by 10 mm, all located as shown in Figure 1.

S5.1.2 Prior to testing, each specimen is conditioned for 24 hours at a temperature of 21° C, and a relative humidity of 50 percent, and the test is conducted under those ambient conditions.

S5.1.3 The test specimen is inserted between two matching U-shaped frames of metal stock 25 mm wide and 10 mm high. The interior dimensions of the U-shaped frames are 51 mm wide by 330 mm long. A specimen that softens and bends at the flaming end so as to cause erratic burning is kept horizontal by supports consisting of thin, heat-resistant wires, spanning the width of the U-shaped frame under the specimen at 25 mm intervals. A device that may be used for supporting this type of material is an additional U-shaped frame, wider than the U-shaped frame containing the specimen, spanned by 10-mil wires of heat-resistant composition at 25 mm intervals, inserted over the bottom U-shaped frame.

S5.1.4 A bunsen burner with a tube of 10 mm inside diameter is used. The gas adjusting valve is set to provide a flame, with the tube vertical, of 38 mm in height. The air inlet to the burner is closed.

* * * * *

S5.2.1 Each specimen of material to be tested shall be a rectangle 102 mm wide by 356 mm long, wherever possible. The thickness of the specimen is that of the single or composite material used in the vehicle, except that if the material's thickness exceeds 13 mm, the specimen is cut down to that thickness measured from the surface of the specimen closest to the occupant compartment air space. Where it is not possible to obtain a flat specimen because of surface curvature, the specimen is cut to not more than 13 mm in thickness at any point. The maximum available length or width of a specimen is used where either dimension is less than 356 mm or 102 mm, respectively, unless surrogate testing is required under S4.1.1.

* * * * *

S5.2.3 Material with a napped or tufted surface is placed on a flat surface and combed twice against the nap with a comb having seven to eight smooth, rounded teeth per 25 mm.

S5.3 *Procedure.*

(a) Mount the specimen so that both sides and one end are held by the U-shaped frame, and one end is even with the open end of the frame. Where the maximum available width of a specimen is not more than 51 mm, so that the sides of the specimen cannot be held in the U-shaped frame, place the specimen in position on wire supports as described in S5.1.3, with one end held by the closed end of the U-shaped frame.

(b) Place the mounted specimen in a horizontal position, in the center of the cabinet.

(c) With the flame adjusted according to S5.1.4, position the bunsen burner and specimen so that the center of the burner tip is 19 mm below the center of the bottom edge of the open end of the specimen.

(d) Expose the specimen to the flame for 15 seconds.

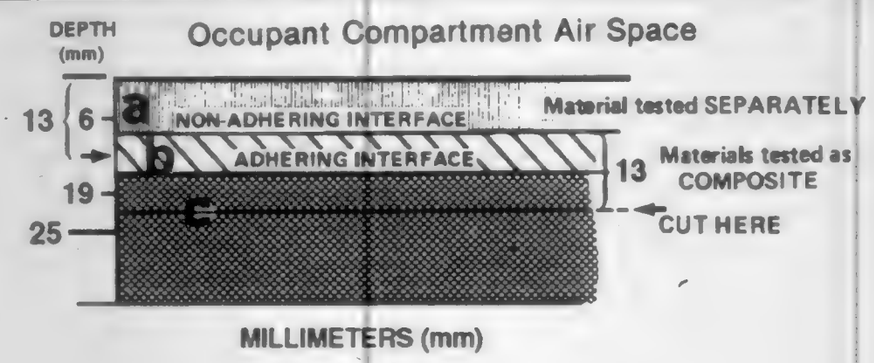
(e) Begin timing (without reference to the period of application of the burner flame) when the flame from the burning specimen reaches a point 38 mm from the open end of the specimen.

(f) Measure the time that it takes the flame to progress to a point 38 mm from the clamped end of the specimen. If the flame does not reach the specified end point, time its progress to the point where flaming stops.

(g) Calculate the burn rate from the formula:

$$B = 60 \times (D/T)$$

Where:



B = Burn rate in millimeters per minute

D = Length the flame travels in millimeters, and

T = Time in seconds for the flame to travel D millimeters.

24. In § 571.302, the Figure named "Illustrative Example—Occupant Compartment Air Space" at S4.2.2 after the first sentence, and Figure 1, after S5.1.1 are revised to read as follows:

Proposed Rules

Federal Register
Vol. 63, No. 101
Wednesday, May 27, 1998

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[REG–119449–97]

RIN 1545–AV75

Qualified Zone Academy Bonds; Hearing Cancellation

AGENCY: Internal Revenue Service, Treasury.

ACTION: Cancellation of notice of public hearing on proposed regulations.

SUMMARY: This document provides notice of cancellation of a public hearing on proposed regulations under section 7805(f) providing guidance to holders and issuers of qualified zone academy bonds.

DATES: The public hearing originally scheduled for Wednesday, May 27, 1998, beginning at 10:00 a.m. is cancelled.

FOR FURTHER INFORMATION CONTACT: LaNita Van Dyke of the Regulations Unit, Assistant Chief Counsel (Corporate), (202) 622–7190, (not a toll free number).

SUPPLEMENTARY INFORMATION: The subject of the public hearing is proposed regulations under section 7805(f) of the Internal Revenue Code. A notice of proposed rulemaking and notice of public hearing appearing in the **Federal Register** on Wednesday, January 7, 1998 (63 FR 707), announced that the public hearing on proposed regulations under section 7805(f) of the Internal Revenue Code would be held on Wednesday, May 27, 1998, beginning at 10:00 a.m., in room 2615, Internal Revenue Building, 1111 Constitution Avenue, NW, Washington DC. The public hearing scheduled for Wednesday, May 27, 1998, is cancelled.

Cynthia E. Grigsby,

Chief, Regulations Unit, Assistant Chief Counsel, (Corporate).

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[CA 013–0073; FRL–6102–1]

Approval and Promulgation of Implementation Plans; California State Implementation Plan Revision, Bay Area Air Quality Management District

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing a limited approval and limited disapproval of a revision to the California State Implementation Plan (SIP). This revision concerns the general provisions and definitions that are applicable to all regulations in the Bay Area Air Quality Management District.

The intended effect of proposing a limited approval and limited disapproval of this rule is to clarify the general provisions and definitions that apply to the regulation of emissions of volatile organic compounds (VOCs), oxides of nitrogen (NO_X), and other pollutants in accordance with the requirements of the Clean Air Act, as amended in 1990 (CAA or the Act). EPA's final action on this proposed rule will incorporate this rule into the federally approved SIP. EPA has evaluated the rule and is proposing a simultaneous limited approval and limited disapproval under provisions of the CAA regarding EPA action on SIP submittals and general rulemaking authority. While strengthening the SIP, this revision contains a public nuisance provision and references to a Manual of Procedures that are inappropriate for incorporation into the SIP. The limited disapproval portion of this proposed rulemaking will exclude elements that are not required by the Act.

DATES: Comments must be received on or before June 26, 1998.

ADDRESSES: Comments may be mailed to: Andrew Steckel, Rulemaking Office [AIR–4], Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105–3901.

Copies of the rule are available for public inspection at EPA's Region IX office during normal business hours and at the following locations:

Bay Area Air Quality Management District, 939 Ellis Street, San Francisco, CA 94109

California Air Resources Board, Stationary Source Division, Rule Evaluation Section, 2020 "L" Street, Sacramento, CA 95812

FOR FURTHER INFORMATION CONTACT: Yvonne Fong, Rulemaking Office, [AIR–4], Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105–3901, Telephone: (415) 744–1199.

SUPPLEMENTARY INFORMATION:

I. Applicability

The rule being proposed for approval into the California SIP is Bay Area Air Quality Management District, BAAQMD, Regulation 1, General Provisions and Definitions. This rule was submitted by the California Air Resources Board to EPA on May 13, 1991.

II. Background

On March 3, 1978, EPA promulgated a list of ozone nonattainment areas under the provisions of the 1977 Clean Air Act (1977 CAA or pre-amended Act), that included the San Francisco Bay Area. 43 FR 8964. On May 26, 1988, EPA notified the Governor of California, pursuant to section 110(a)(2)(H) of the pre-amended Act, that the Bay Area Air Quality Management District's portion of the SIP was inadequate to attain and maintain the ozone standard and requested that deficiencies in the existing SIP be corrected (EPA's SIP-Call). On November 15, 1990, amendments to the 1977 CAA were enacted. Pub. L. 101–549, 104 Stat. 2399, codified at 42 U.S.C. 7401–7671q.

On November 12, 1993, BAAQMD submitted a request for redesignation to attainment of the ozone standard. Subsequently, EPA evaluated and approved BAAQMD's request and the San Francisco Bay Area was reclassified as an attainment area.[1] 40 CFR 81.305.

This document addresses EPA's proposed action for BAAQMD Regulation 1, General Provisions and Definitions. The BAAQMD adopted this

[1] The San Francisco Bay Area was redesignated to attainment. See 60 FR 98 (May 22, 1995). The EPA proposed to redesignate the San Francisco Bay Area back to nonattainment for ozone based on a number of violations of the National Ambient Air Quality Standards (NAAQS) on December 19, 1997. See 62 FR 66578.

rule on December 19, 1990. This submitted rule was found to be complete on July 10, 1991, pursuant to EPA's completeness criteria that are set forth in 40 CFR part 51, appendix V;[2] and is being proposed for limited approval and limited disapproval.

BAAQMD Regulation 1 clarifies the definitions and general provisions that apply to the regulation of emissions of VOCs, NO_X, and other pollutants. These pollutants contribute to the production of ground level ozone and smog. BAAQMD Regulation 1 was originally adopted as part of BAAQMD's effort to achieve the National Ambient Air Quality Standard (NAAQS) for ozone and has been revised in response to EPA's SIP-Call. The following is EPA's evaluation and proposed action for BAAQMD Regulation 1.

III. EPA Evaluation and Proposed Action

In determining the approvability of a rule, EPA must evaluate the rule for consistency with the requirements of the CAA and EPA regulations, as found in section 110 of the CAA and 40 CFR part 51 (Requirements for Preparation, Adoption, and Submittal of Implementation Plans).

In addition, this rule was evaluated against the SIP enforceability guidelines found in "Issues Relating to VOC Regulation Cutpoints, Deficiencies, and Deviations—Clarification to appendix D of November 24, 1987 **Federal Register**" (EPA's 'Blue Book') and the EPA Region IX—California Air Resources Board document entitled "Guidance Document for Correcting VOC Rule Deficiencies" (April, 1991), and against other EPA policies. In general, these guidance documents have been set forth to ensure that VOC and other rules are fully enforceable and strengthen or maintain the SIP.

EPA previously approved various portions of BAAQMD Regulation 1, General Provisions and Definitions, into the SIP on September 2, 1981, July 6, 1982, and November 10, 1982. These portions were originally adopted by BAAQMD on September 5, 1979, May 21, 1980, December 17, 1980, and March 17, 1982. EPA has evaluated BAAQMD Regulation 1, submitted May 13, 1991, and compared it to the rule currently incorporated in the SIP. BAAQMD's submitted Regulation 1 includes the following significant changes from the SIP:

- The scope of the exemption in section 110.5 has been narrowed to prohibit the disposal of waste propellants, explosives, or pyrotechnics by manufacturing facilities in open outdoor fires, and
- Definitions for volatile organic compound and reduced sulfur compounds have been added in sections 236 and 237.

Although these changes will strengthen the SIP, this rule also contains elements that are not appropriate for incorporation into the SIP. Regulation 1 includes provisions in sections 600–604, which have been approved into the SIP, and section 605, which is a new portion of the rule, that reference the BAAQMD's Manual of Procedures (MOP). The MOP sets policy and procedures for permitting, CEQA review, sample and source testing, emission monitoring, and mobile source emission credits. Because the MOP contains policies which are regularly and often revised by the BAAQMD and because those policies are not always submitted to EPA for approval, the references to the MOP potentially provide for director's discretion which may alter the stringency of the federally approved SIP. While EPA previously approved some MOP references, we should not repeat or aggravate that error by approving sections 600–605 at this time.

Regulation 1, section 301 of the May 13, 1991 submittal contains a new provision that has not been previously incorporated into the SIP which prohibits sources from discharging quantities of air contaminants that cause a nuisance. EPA believes that nuisance provisions are inappropriate for inclusion in the SIP because they are not in any way required by the Act and do not specifically control criteria air pollutants. Nuisance provisions generally deal with complaints relating to odor or dust, problems which are appropriate for local air quality management district response. For these reasons, EPA believes it is inappropriate to incorporate nuisance provisions into the federally enforceable SIP. The removal of section 301 of Regulation 1 from the BAAQMD SIP submittal will have no effect on BAAQMD's ability to enforce its nuisance provision.

Because the elements described above are inappropriate for inclusion in the SIP, EPA cannot grant full approval of this rule under section 110(k)(3). Also, because the submitted rule is not composed of separable parts which meet all the applicable requirements of the CAA, EPA cannot grant partial approval of the rule under section 110(k)(3). However, EPA may grant a limited approval of the submitted rule under section 110(k)(3) in light of EPA's authority pursuant to section 301(a) to adopt regulations necessary to further air quality by strengthening the SIP. The approval is limited because EPA's action also contains a simultaneous limited disapproval. In order to strengthen the SIP, EPA is proposing a limited approval of BAAQMD's submitted Regulation 1 under sections 110(k)(3) and 301(a) of the CAA.

It should be noted that the rule covered by this proposed rulemaking has been adopted by the BAAQMD and is currently in effect in the BAAQMD. EPA's final limited disapproval action will not prevent the BAAQMD or EPA from enforcing this rule.

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any state implementation plan. Each request for revision to the state implementation plan shall be considered separately in light of specific technical, economic, and environmental factors and in relation to relevant statutory and regulatory requirements.

IV. Administrative Requirements

A. Executive Order 12866

The Office of Management and Budget (OMB) has exempted this regulatory action from E.O. 12866 review.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act, 5 U.S.C. 600 *et seq.*, EPA must prepare a regulatory flexibility analysis assessing the impact of any proposed or final rule on small entities. 5 U.S.C. 603 and 604. Alternatively, EPA may certify that the rule will not have a significant impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and government entities with jurisdiction over populations of less than 50,000.

SIP approvals under sections 110 and 301 of the CAA do not create any new requirements but simply approve requirements that the State is already imposing. Therefore, because the Federal SIP approval does not impose any new requirements, the Administrator certifies that it does not have a significant impact on any small entities affected. Moreover, due to the nature of the Federal-State relationship under the CAA, preparation of a flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The Clean Air Act forbids EPA to base its action concerning SIPs on such grounds. *Union Electric Co.* v. *U.S. EPA*, 427 U.S.

[2] EPA adopted completeness criteria on February 16, 1990 (55 FR 5830) and, pursuant to section 110(k)(1)(A) of the CAA, revised the criteria on August 26, 1991 (56 FR 42216).

246, 255–66 (1976); 42 U.S.C. 7410(a)(2).

C. Unfunded Mandates

Under section 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated costs to State, local, or tribal governments in the aggregate; or to the private sector, of $100 million or more. Under section 205, EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

EPA has determined that the approval action proposed does not include a Federal mandate that may result in estimated costs of $100 million or more to either State, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves pre-existing requirements under State or local law, and imposes no new Federal requirements. Accordingly, no additional costs to State, local, or tribal governments, or to the private sector, result from this action.

D. Executive Order 13045

Protection of Children from Environmental Health Risks and Safety Risks. Executive Order 13045 (62 FR 19885, April 23, 1997), applies to any rule that is (1) likely to be "economically significant" as defined under Executive Order 12866, and (2) the Agency has reason to believe that the environmental health or safety risk addressed by the rule may have a disproportionate effect on children. If a regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

This rule is not subject to E.O. 13045, "Protection of Children from Environmental Health Risks and Safety Risks" because this is not an "economically significant" regulatory action as defined by E.O. 12866, and because it does not involve decisions on environmental health or safety risks that may disproportionately affect children.

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Hydrocarbons, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides, Volatile organic compounds.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: May 12, 1998.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FL–071–9810b; FRL–6015–5]

Approval and Promulgation of Implementation Plans; State of Florida

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The EPA proposes to approve the State implementation plan (SIP) revision submitted by the Florida Department of Environmental Protection. In the final rules section of this **Federal Register**, the EPA is approving the State's SIP revision as a direct final rule without prior proposal because the Agency views this as a noncontroversial revision amendment and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this proposed rule, no further activity is contemplated in relation to this proposed rule. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. The EPA will not institute a second comment period on this document. Any parties interested in commenting on this document should do so at this time.

DATES: To be considered, comments must be received by June 26, 1998.

ADDRESSES: Written comments on this action should be addressed to Karla L. McCorkle at the Environmental Protection Agency, Region 4 Air Planning Branch, 61 Forsyth Street, SW, Atlanta, Georgia 30303. Copies of documents relative to this action are available for public inspection during normal business hours at the following locations. The interested persons wanting to examine these documents should make an appointment with the appropriate office at least 24 hours before the visiting day. Reference file FL–071. The Region 4 office may have additional background documents not available at the other locations.

Air and Radiation Docket and Information Center (Air Docket 6102), U.S. Environmental Protection Agency, 401 M Street, SW, Washington, DC 20460.

Environmental Protection Agency, Region 4 Air Planning Branch, 61 Forsyth Street, SW, Atlanta, Georgia 30303. Florida Department of Environmental Protection, Air Resources Management Division, Twin Towers Office Building, 2600 Blair Stone Road, Tallahassee, Florida 32399–2400.

FOR FURTHER INFORMATION CONTACT: Karla L. McCorkle at 404/562–9043 (E-mail: mccorkle.karla@epamail.epa.gov).

SUPPLEMENTARY INFORMATION: For additional information see the direct final rule which is published in the rules section of this **Federal Register**.

Dated: May 10, 1998.

A. Stanley Meiburg,

Acting Regional Administrator, Region 4.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 63

[FRL–6014–6]

Delegation of National Emission Standards for Hazardous Air Pollutants for Source Categories; State of Nevada; Nevada Division of Environmental Protection; Washoe County District Health Department

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to section 112(l) of the 1990 Clean Air Act (CAA), the Nevada Division of Environmental Protection (NDEP) and the Washoe County District Health Department (WCDHD) requested delegation of specific national emission standards for hazardous air pollutants (NESHAPs). WCDHD also requested approval for its program for receiving delegation of unchanged NESHAPs applicable to sources not subject to Title V of the CAA. In the Rules section of this **Federal Register**, EPA is granting NDEP and WCDHD the authority to implement and enforce specified NESHAPs, and is

approving WCDHD's general program for receiving delegation of unchanged NESHAPs. The direct final rule also explains the procedure for future delegation of NESHAPs to NDEP and WCDHD. EPA is taking direct final action without prior proposal because the Agency views this as a noncontroversial action and anticipates no adverse comments. A detailed rationale for this approval is set forth in the direct final rule. If no relevant adverse comments are received in response to this document, no further activity is contemplated in relation to this proposed rule. If EPA receives relevant adverse comments, the direct final rule will not take effect and all public comments received will be addressed in a subsequent final rule based on this proposed rule. The EPA will not institute a second comment period on this proposal. Any parties interested in commenting on this proposal should do so at this time.

DATES: Comments on this proposed rule must be received in writing by June 26, 1998.

ADDRESSES: Written comments on this action should be addressed to: Andrew Steckel, Rulemaking Office (AIR–4), Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105–3901.

Copies of the submitted requests are available for public inspection at EPA's Region IX office during normal business hours (docket number A–96–25).

FOR FURTHER INFORMATION CONTACT: Mae Wang, Rulemaking Office (AIR–4), Air Division, U.S. Environmental Protection Agency, Region IX, 75 Hawthorne Street, San Francisco, CA 94105–3901, Telephone: (415) 744–1200.

SUPPLEMENTARY INFORMATION: This document concerns delegation of unchanged NESHAPs to the Nevada Division of Environmental Protection and the Washoe County District Health Department. For further information, please see the information provided in the direct final action which is located in the Rules section of this **Federal Register**.

Authority: This action is issued under the authority of section 112 of the Clean Air Act, as amended, 42 U.S.C. 7412.

Dated: May 4, 1998.

Felicia Marcus,

Regional Administrator, Region IX.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 300

[FRL–6102–3]

National Oil and Hazardous Substances Contingency Plan; National Priorities List

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of intent to delete the Novaco Industries Superfund site from the National Priorities List; request for comments.

SUMMARY: The United States Environmental Protection Agency (EPA) Region 5 announces its intent to delete the Novaco Industries Site from the National Priorities List (NPL) and requests public comment on this proposed action. The NPL constitutes Appendix B of 40 CFR part 300 which is the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), which EPA promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, as amended. EPA and the Michigan Department of Environmental Quality (MDEQ) have determined that the Site no longer poses a significant threat to public health or the environment and, therefore, further remedial measures pursuant to CERCLA are not appropriate.

DATES: Comments concerning this Site may be submitted on or before June 26, 1998.

ADDRESSES: Comments may be mailed to: Russell D. Hart, U.S. EPA Region 5, Superfund Division, 77 West Jackson Boulevard, Mail Stop: SR–6J, Chicago, Illinois 60604. Comprehensive information on this Site is available through the administrative record which is available for viewing at the following locations:

U.S. EPA Records Center—Seventh Floor, 77 West Jackson Boulevard, Chicago, Illinois 60604.

Bedford Township Hall and Monroe County Library—Bedford Branch, Bedford, Michigan.

FOR FURTHER INFORMATION CONTACT: Russell D. Hart, U.S. EPA Region 5, Superfund Division, SR–6J Chicago, Illinois 60604, (312) 886–4844.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. NPL Deletion Criteria
III. Deletion Procedures
IV. Basis of Intended Site Deletion

I. Introduction

EPA Region 5 announces its intent to delete the Novaco Industries Site location in Temperance, Michigan from the NPL, Appendix B of the NCP, 40 CFR part 300, and requests comments on this deletion. EPA identifies sites that appear to present a significant risk to public health, welfare, or the environment and maintains the NPL as the list of these sites. As described in section 300.425(e)(3) of the NCP, sites deleted from the NPL remain eligible for remedial actions in the unlikely event that conditions at the site warrant such action.

EPA will accept comments on the proposal to delete this Site for thirty days after publication of this document in the **Federal Register**.

Section II of this document explains the criteria for deleting sites from the NPL. Section III discusses the procedures that EPA is using for this action. Section IV discusses the Novaco Industries Site and explains how the Site meets the deletion criteria.

II. NPL Deletion Criteria

Section 300.425(e) of the NCP provides that releases may be deleted from, or recategorized on the NPL where no further response is appropriate. In making a determination to delete a release from the NPL, EPA shall consider, in consultation with the State, whether any of the following criteria have been met:

(i) Responsible parties or other parties have implemented all appropriate response actions required;

(ii) All appropriate response under CERCLA has been implemented, and no further action by responsible parties is appropriate; or

(iii) The remedial investigation has shown that the release poses no significant threat to public health or the environment and, therefore, taking of remedial measures is not appropriate.

Even if a site is deleted from the NPL, where hazardous substances, pollutants, or contaminants remain at the site above levels that allow for unlimited use and unrestricted exposure, EPA's policy is that a subsequent review of the site will be conducted at least every five years after the initiation of the remedial action at the site to ensure that the site remains protective of public health and the environment. In the case of this Site, the selected remedy is protective of human health and the environment. The five year groundwater monitoring program required by the 1991 Record of Decision (ROD) Amendment has indicated that no hazardous substances or contaminants remain on site above

levels that allow for unlimited use or exposure. Therefore no five year review of this remedy is required. If new information becomes available which indicates a need for further action, EPA may initiate remedial actions. Whenever there is a significant release from a site deleted from the NPL, the site may be restored to the NPL without the application of the Hazardous Ranking System.

III. Deletion Procedures

The following procedures were used for the intended deletion of this Site: (1) EPA Region 5 issued a ROD in 1986 which called for groundwater extraction, on-site treatment of chromium contaminated groundwater, and discharge to Indian Creek; (2) EPA Region 5 amended the ROD in 1991 by requiring only additional monitoring well installation and a five year monitoring program to verify that no unacceptable levels of contaminants from the site remain in the groundwater; (3) based on the findings of that five year monitoring program the EPA Region 5 determined that no further response is appropriate for this site since during the monitoring program no exceedances occurred of either hexavalent chromium or total chromium drinking water Maximum Contaminant Limit (MCL) of 50 ug/l as established by the Safe Drinking Water Act; (4) MDEQ concurrence concerning Novaco Industries Site deletion was sought and obtained; (5) a notice has been published in the local newspaper and has been distributed to appropriate federal, state, and local officials and other interested parties announcing the commencement of a 30-day public comment period on EPA's Notice of Intent to Delete; and (6) all relevant documents, including a tabulation summary of all 1993–1997 sampling results have been made available for public review in the local Site information repositories.

Deletion of the Site from the NPL does not itself create, alter, or revoke any individual's rights or obligations. The NPL is designed primarily for informational purposes and to assist Agency management. As mentioned in section II of this document, section 300.425(e)(3) of the NCP states that the deletion of a site from the NPL does not preclude eligibility for future response actions.

For deletion of this Site, EPA's Regional office will accept and evaluate public comments on EPA's Notice of Intent to Delete before making a final decision to delete. If necessary, the Agency will prepare a Responsiveness Summary to address any significant public comments received.

A deletion occurs when the Regional Administrator places a final notice in the **Federal Register**. Generally, the NPL will reflect deletions in the final update following the document.

Public notices and copies of the Responsiveness summary will be made available to local residents by the Regional office.

IV. Basis for Intended Site Deletion

The following site summary provides the Agency's rational for the proposal to delete this Site from the NPL.

A. Site Background

The Novaco Industries site is located at 9411 Summerfield Road, at the intersection of Summerfield and Piehl in Temperance, Michigan. The site lies approximately 50 miles south of Detroit and 5 miles north of Toledo. The facility occupies a 2.6 acre parcel. The Novaco study area consists of Novaco Industries, the Veterans of Foreign Wars (VFW) Post #9656, and nearby residences having water supply wells screened within the sand/gravel aquifer or limestone aquifer which could be affected by the Novaco site.

B. History

The Novaco Industries site formerly performed tool and die manufacturing and repair. Approximately 85 residences and businesses are located within a half-mile of the site. Around 1979, a buried tank of chromic acid, used for plating purposes, developed a leak and an unknown quantity of acid leaked into the surrounding soils. By the early 1980s, chromium was detected at concentrations above both federal and state drinking water standards, in three water supply wells at Novaco Industries, the nearby VFW Post, and the Moyer's residence and one observation well. Novaco replaced the three water supply wells and extracted and treated contaminated groundwater in 1979. Following winter shutdown of the groundwater purge and treat system, Novaco never resumed its operation and declared bankruptcy.

The Novaco site was subsequently placed on the NPL in September 1983. While Novaco's short-term remedial operation did succeed in removing substantial amounts of contamination (approximately 400 pounds of hexavalent chromium), the remaining contamination continued to migrate. The Remedial Investigation (RI), performed by the EPA, identified a small area of contaminated groundwater with concentrations of chromium that exceeded relevant cleanup criteria. Based on these studies the EPA issued a Record of Decision (ROD) on June 27, 1986, which required the installation of a groundwater purge and on-site treatment system to remove the remaining contamination.

Design investigations conducted during spring 1988, determined that the previously defined nature and extent of groundwater contamination no longer held true at Novaco. Additional investigations were performed in the spring of 1989. Based on those studies, which indicated the concentrations of chromium contamination no longer exceeded relevant cleanup criteria, the EPA proposed to amend the existing ROD to a "no action ROD" with groundwater monitoring for five years and if the chromium concentrations remained below the cleanup criteria no further action would be warranted. The state concurred with this amended ROD. The EPA issued the amended ROD in September 1991. The groundwater monitoring network established during the RI was further developed and sampling for the five year program began in February 1993. During the first year samples were collected quarterly. Since the results of that sampling indicated all samples were below the detection limits stated in the quality assurance project plan the frequency of sampling was reduced to semi-annually. The five year program has been completed and indicated there are no chromium concentrations above relevant cleanup criteria. Therefore no further remedial action is needed.

EPA periodically sent summaries of analytical results to concerned residents.

EPA's ARCS contractor has completed the task of dismantling the groundwater monitoring network in accordance with procedures established by the Michigan Department of Environmental Quality. This work was accomplished in December 1997, and was in part overseen in the field by MDEQ representatives.

C. Characterization of Risk

Confirmational monitoring of groundwater conducted from 1993–1997 demonstrated that no significant risk to public health or the environment is posed by residual materials remaining at the Site. EPA and MDEQ believe that conditions at the site do not now pose unacceptable risks to human health or the environment.

One of the three criteria for deletion specifies that EPA may delete a site from the NPL if "all appropriate response under CERCLA has been implemented, and no further action by responsible parties is appropriate."

EPA, with the concurrence of MDEQ, believes that this criterion for deletion has been met. Subsequently, EPA is proposing deletion of this Site from the NPL. Documents supporting this action are available from the docket.

Dated: May 14, 1998.

David Ullrich,

Acting Regional Administrator, Region V.

BILLING CODE 6560–50–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; 12-Month Finding for a Petition To List the Stone Mountain Fairy Shrimp as Endangered and Designate Critical Habitat

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of 12-month petition finding.

SUMMARY: The Fish and Wildlife Service (Service) announces a 12-month finding for a petition to list the Stone Mountain fairy shrimp (*Branchinella lithaca*) under the Endangered Species Act, as amended. After review of all available scientific and commercial information, the Service finds that listing this species is not warranted. The Service will continue to monitor the status of this species and its habitat.

DATES: The finding announced in this document was made on May 11, 1998.

ADDRESSES: Questions, comments, or information concerning this petition should be sent to the U.S. Fish and Wildlife Service, 6620 Southpoint Drive South, Suite 310, Jacksonville, Florida 32216. The petition finding, supporting data, and comments are available for public inspection, by appointment, during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Mr. John F. Milio (904/232–2580, ext. 112) (see **ADDRESSES** section).

SUPPLEMENTARY INFORMATION:

Background

Section 4(b)(3)(B) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*), requires that, for any petition to list, delist, or reclassify a species that contains substantial scientific and commercial information, the Service make a finding within 12 months of receipt of the petition on whether the petitioned action is (a) not warranted; (b) warranted; or (c) warranted but precluded from immediate proposal by other pending proposals of higher priority. Such 12-month findings are to be published promptly in the **Federal Register**.

The processing of this petition conforms with the Service's listing priority guidance published in the **Federal Register** on December 5, 1996 (61 FR 64475), and extended on October 23, 1997, for fiscal year 1998 (62 FR 55268). Administrative findings for listing petitions that are not assigned to tier 1 (emergency listing actions) are processed as a tier 3 priority. The processing of this petition falls under tier 3. At this time, the Southeast Region has no pending tier 1 actions and has completed its pending tier 2 actions (resolving the status of outstanding proposed listings).

On March 31, 1995, the Service received a petition from Mr. Larry Winslett, President of the "Friends of Georgia," Lithonia, Georgia. The petition, dated March 29, 1995, requested the Service to emergency list the Stone Mountain fairy shrimp, *Branchinella lithaca*, as endangered and designate critical habitat. The petitioner believed that previous and ongoing impacts to vernal (temporary) pool habitat at Stone Mountain, the shrimp's only known location, and potential physical and chemical effects from a then impending renovation project at the mountain's summit, threatened the survival of the species. The Service, in the 90-day finding, determined that the petition presented substantial information indicating that listing the species may be warranted. The finding concluded that an emergency listing action was not appropriate, and noted the Service would consider critical habitat designation if it found at 12 months that listing was warranted. A notice announcing the 90-day finding and initiation of a status review of the species was published in the **Federal Register** on July 22, 1997 (62 FR 39210).

The Service has reviewed the petition, the literature cited in the petition, other available literature and information, and consulted with species experts and other researchers familiar with vernal pool habitats. On the basis of the best scientific and commercial information available, the Service finds the petition is not warranted at this time. The status review documented habitat modifications such as disturbance of vernal pool sediments and physical debris entering pools at and near the mountain summit from recreational and construction activities, and facility operations. Solid wastes and liquid discharges may also directly impact the fairy shrimp. These modifications did not appear to occur at all pools or to an equal extent at affected pools. Due to this variability, lack of current and historic information on specific distribution and abundance of *B. lithaca*, and lack of historic data on the habitat, the Service is not able to confirm that these modifications, as well as other manmade or natural factors, threaten the continued existence of the Stone Mountain fairy shrimp.

The status review also did not reveal any threats to the species from disease or predation, or overutilization for commercial, recreational, scientific, or educational purposes. The Service does not believe that existing regulatory mechanisms are inadequate. Because of likely habitat overlap between the Stone Mountain fairy shrimp and two federally-listed plants, the black-spored quillwort (*Isoetes melanospora*) and little amphianthus (*Amphianthus pusillus*) at Stone Mountain, the Federal and State regulations that protect and conserve those plants and their vernal pools are also benefitting *B. lithaca*. In addition, special legislation passed in 1997 by the Georgia General Assembly promotes the continuation of protection and conservation for the designated natural district at State-owned Stone Mountain Park, as outlined in its current Master Plan (Alice Richards, Stone Mountain Memorial Association, *in litt.* 1998). Since Stone Mountain and its vernal pools all occur within the park's natural district, the Service believes that this legislation provides further protection for the Stone Mountain fairy shrimp and its habitat.

Casual surveys to locate *B. lithica* at Stone Mountain earlier this decade were unsuccessful. The last documented collection of the species was in 1951. At the 90-day finding the Service felt that a regular survey involving collection of water and sediment samples at various sites was needed to accurately determine the species' status. This survey was conducted in 1997 and also failed to find evidence of the species' continued existence at Stone Mountain, which may mean the species is extinct. Despite this latest failure (A. Richards, *in litt.* 1997, pers. comm. 1998, Denton Belk, The World Conservation Union, *in litt.* 1998), the erratic occurrence of some anostracans (Donald 1983) led Belk (*in litt.* 1998) to believe the species may still exist at Stone Mountain. There is also some potential that the species may exist at locations other than Stone Mountain (L. Winslett, Friends of Georgia, *in litt.* 1996). Within the Georgia Piedmont physiographic area there are other rock outcrops whose

invertebrate fauna has been little studied (J. Spooner, University of South Carolina, *in litt.* 1997), although quarrying and other human activities have destroyed or modified a number of these sites (L. Winslett, Friends of Georgia, *in litt.* 1996). The Service supports continued monitoring and protection of all temporary pools on Stone Mountain, and encourages systematic surveys of vernal pools at other rock outcrops, particularly those where the two federally-listed plants, black-spored quillwort and little amphianthus, are known to occur. The Stone Mountain Memorial Association (SMMA), manager of the natural district and all vernal pools within Stone Mountain Park, has fenced some habitat in response to a recovery plan recommendation for the listed plants (U.S. Fish and Wildlife Service 1993). The Friends of Georgia, Inc., with technical assistance from the Service, has prepared a conservation agreement that it hopes to finalize this year with the SMMA. The agreement stresses continued surveying for *B. lithaca;* additional site specific protection, conservation, and recovery actions; and public education.

The Service will continue to seek new information on the biology, ecology, distribution, and habitat of the Stone Mountain fairy shrimp, as well as threats to its continued survival. If additional data become available in the future to indicate that the species is extant, the Service will reassess the need for listing, including the need to emergency list.

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

Conservation Reservation Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Solicitation of proposals for the Conservation Reserve Enhancement Program.

SUMMARY: The Commodity Credit Corporation (CCC) is publishing this notice to invite State governments to propose Conservation Reserve Enhancement Program (CREP) projects under the general Conservation Reserve Program, which is governed by regulations under 7 CFR Part 1410. CREP is an opportunity for the joining of resources of the Federal and State governments to address critical environmental issues such as soil erosion, water quality degradation and wildlife habitat loss associated with agricultural activities. This action is also part of the National Performance Review Initiative to deliver better service and foster partnership and community solutions.

ADDRESSES: Submission of CREP proposals by a State should be addressed to the Secretary of Agriculture, Attention: Deputy Administrator for Farm Programs, Farm Service Agency, STOP 0510, 1400 Independence Avenue, S.W., Washington, D.C. 20250–0510.

FOR FURTHER INFORMATION CONTACT: Caroline Roe, Environmental Program Specialist, Environmental Activities Branch, Farm Service Agency, Room 4715 South Agriculture Building, 1400 Independence Avenue, SW, Washington, D.C. 20250–0510, telephone (202) 720–6221, email at caroline_roe@wdc.fsa.usda.gov or contact the Conservation Program Specialist in the State Farm Service Agency (FSA) office.

SUPPLEMENTARY INFORMATION: The Conservation Reserve Program (CRP) is authorized by Title XII of the Food Security Act of 1985, as amended. The purpose of the CRP is to assist farmers and ranchers in conserving soil, water, and wildlife resources by converting highly erodible and other environmentally sensitive acreage normally devoted to the production of agricultural commodities and marginal pastureland to a long-term resource-conserving cover. CRP participants enroll in contracts for periods of 10- to 15-years in exchange for annual rental payments and cost-share assistance for installing those long-term resource-conserving practices. Up to 36.4 million acres are authorized to be enrolled in the CRP at any one time.

CCC enrolls land through periodic general signups in which CCC entertains offers from applicants seeking enrollment in the program. CCC evaluates the costs and benefits associated with each offer, its program goals, and any other related issues and accepts only those offers that provide the most cost-effective environmental benefits.

CCC also uses a continuous signup for certain highly valued environmental practices such as filter strips, riparian buffers, and grass waterways. Because of the significant environmental benefits to be obtained from the enrollment of these areas, CCC permits the enrollment of these acreages at any time at certain prescribed rental rates.

The "Conservation Reserve Enhancement Program" (CREP) is the name given to special joint undertakings between States and the Federal government using CRP contracts and payments to encourage enrollments and practices that may address particularly pressing environmental needs. CRP rules in 7 CFR Part 1410.50(b) provide explicitly for such agreements to further "specific conservation and environmental objectives of that State and the nation." Some States have already submitted CREP proposals and CCC hereby further invites other interested States to do the same.

CREP creates an opportunity where the resources of a State government and CRP can be targeted in a coordinated manner to cost-effectively address specific conservation and environmental objectives of that State and the nation in order to improve water quality, erosion control, and wildlife habitat, including endangered species habitat, in specific geographic areas that have been adversely impacted by agricultural activities.

In order for a State's proposal to be considered for CREP, it should be directly related to mitigation of adverse agriculture-related environmental impacts and should document why program objectives cannot be met through other existing programs, in particular the general or continuous sign-ups under the CRP or other Department of Agriculture conservation programs.

Any proposed obligations beyond the term of any CRP contract, such as through long term agreements and/or permanent easements, would be between State government and the participant.

CCC encourages State governments to work closely with all interested groups within the State when developing options for obligations beyond the term of the CRP contract. It is CCC's experience that successful CREP agreements are the result of State governments, in preparing CREP proposals, working closely with all interested local parties including, but not limited to, farm, commodity, conservation, environmental, and landowner groups. Working with all interested local parties ensures the broad range of support needed for a successful CREP.

To ensure proper Federal/State cooperation, each proposal should specify the level of non-federal funding needed to fulfill objectives of the proposal. Normally, USDA expects that non-federal funding would be equal to at least 20 percent of the overall program-related costs of the CREP project. Examples of non-federal funding include, but are not limited to: funding of contract extensions or easements, cost-share assistance for conservation practices, and program monitoring costs. The CREP is anticipated to be initially limited to a maximum of 100,000 acres for each State, with possible expansion after the initial 100,000 acres are enrolled.

Submissions by a State should provide for a complete understanding of the proposal. To ensure consistency, each proposal should include: (1) an abstract; (2) a discussion of existing conditions; (3) an analysis of

UMI
VOL
63
ISS
101
MAY
27
1998
UMI

agriculture-related adverse impacts; (4) project objectives; (5) project description; (6) proposals for the monitoring program; (7) a discussion of public support and ongoing public information that will accompany the project; (8) an analysis of the cost-effectiveness of the project; and (9) any additional documentation to ensure compliance with any other laws, including environmental laws. A description of each of these criteria follows.

Abstract

A single page summary of the project should be provided to include: project name; description of the project area; summary of existing conditions and agricultural impacts to be addressed; brief description of the project; total area of the project (including a list of the counties in which the project is located); and estimated cost of the project.

Existing Conditions

A synopsis of relevant existing conditions should be provided to include: a brief description of the importance to the community of the resource to be protected; a detailed map outlining the geographic area of the project; a description of the various human activities and land uses within the project boundary (including a summary of such information within each watershed); a summary of agricultural activities within the project boundary/watershed; and a brief description of relevant environmental factors (precipitation, soils, geology, vegetation patterns, wildlife, Federally listed endangered and threatened species, air quality, and water resources).

Analysis of Agriculture-Related Environmental Impacts

An analysis of agriculture-related environmental impacts to be addressed by the project should be provided to include: magnitude of agricultural impacts on the environment; past and projected trends in agricultural impacts, including any scientific data that demonstrates such trends; nature of any public health-related agricultural impacts; and past and ongoing efforts to address agricultural impacts through other Federal and State conservation programs, such as the CRP.

Project Objectives

A list of project objectives should be provided to include specific and measurable objectives in addition to any general objectives.

Project Description

The description of the project should include the following: summary of the project; conservation practices to be adopted; number of acres proposed to be included in the project; length of time for project implementation; analysis of both Federal and non-Federal costs (including a justification for special incentive payments to be made); and an analysis of the likelihood that project objectives will be achieved. The project description should also address such process and interagency coordination questions as: how applicant eligibility determinations will be made; which agency will provide technical assistance; how the application process will be coordinated among agencies; and how contract oversight will be conducted.

Monitoring Program

A comprehensive monitoring and evaluation plan should be provided to include: specific targets to be met in the accomplishment of project objectives; a description of the methods for collecting data to measure accomplishment of specific targets; the process for refinement of the project, if monitoring indicates that project objectives are not being met; and the identification of funding for the monitoring program. The proposal should identify the nature and funding sources for the preparation of annual reports to record and summarize the conclusions developed in the monitoring program.

Education, Outreach, and Public Support

A program for public participation should be presented that indicates: the level of public support for the proposal, among producers, conservation groups and other interested organizations, at the time the proposal is submitted; an analysis of the number of producers expected to enroll in the program; and the measures that will be taken for continued public involvement and education over the duration of the project.

Cost-Effectiveness Analysis

Proposals should include a cost-effectiveness analysis which compares the cost and likelihood of accomplishing project goals under the CREP proposal versus other State and Federal programs, such as the general and continuous signups under CRP.

Compliance With Other Laws

The application should include adequate information and documentation to demonstrate compliance with any applicable laws.

Each proposal should be developed in conjunction with the State FSA office and the USDA-established "State Technical Committee." Following submittal to the Secretary of Agriculture, each proposal will be reviewed by an interagency team for consistency with overall program goals, magnitude of environmental benefits, likelihood that project benefits will be achieved and cost-effectiveness. The team is expected to make a recommendation for action to the Deputy Administrator within 60 days of receipt of a completed proposal. Further negotiation and discussion will follow as needed to implement the joint effort of the CCC and the State. To effectuate the joint agreement, a draft Memorandum of Agreement should be developed by the State based on discussions regarding the proposal. No agreement will be final until signed by authorized representatives of CCC and the State.

Signed at Washington, DC, on May 21, 1998.

Keith Kelly,

Executive Vice President, Commodity Credit Corporation

Food Safety and Inspection Service

[Docket No. 98–010N]

International Standard-Setting Activities

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Notice.

SUMMARY: This notice informs the public of the sanitary and phytosanitary standard-setting activities of the Codex Alimentarius Commission (Codex), in accordance with section 491 of the Trade Agreements Act of 1979, as amended, and the Uruguay Round Agreements Act, Pub. L. 103–465, 108 Stat. 4809, and seeks comments on standards currently under consideration and recommendations for new standards. It also lists other standard-setting activities of Codex, including commodity standards, guidelines, codes of practice, and revised texts. This notice covers the time periods from June 1, 1997, to May 31, 1998, and May 31, 1998, to June 1, 1999.

ADDRESSES: Submit written comments to: FSIS Docket Clerk, U.S. Department of Agriculture, Food Safety and Inspection Service, Room 102, Cotton

Annex, Washington, DC 20250–3700. Please state that your comments refer to Codex and, if your comments relate to specific Codex committees, please identify those committees in your comments and submit a copy of your comments to the delegate from that particular committee. All comments submitted will be available for public inspection in the Docket Clerk's Office between 8:30 a.m. and 4:30 p.m., Monday through Friday.

FOR FURTHER INFORMATION CONTACT: F. Edward Scarbrough, Ph.D., United States Manager for Codex Alimentarius, U.S. Department of Agriculture, Office of the Undersecretary for Food Safety, Room 4861, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20250–3700; (202) 205–7760. For information pertaining to particular committees, the delegate of that committee may be contacted. (A complete list of U.S. delegates and alternate delegates can be found in *Appendix 1* to this notice.)

SUPPLEMENTARY INFORMATION:

Background

The World Trade Organization (WTO) was established on January 1, 1995, as the common international institutional framework for the conduct of trade relations among its members in matters related to the Uruguay Round Trade Agreements. The WTO is the successor organization to the General Agreements on Tariffs and Trade (GATT). U.S. membership in the WTO was approved and the Uruguay Round Agreements Act was signed into law by the President on December 8, 1994. The Uruguay Round Agreements became effective, with respect to the United States, on January 1, 1995. Pursuant to section 491 of the Trade Agreements Act of 1979, as amended, the President is required to designate an agency to be responsible for informing the public of the sanitary and phytosanitary (SPS) standard-setting activities of each international standard-setting organization, Codex, International Office of Epizootics, and the International Plant Protection Convention. The President, pursuant to Proclamation No. 6780 of March 23, 1995 (60 FR 15845), designated the U.S. Department of Agriculture as the agency responsible for informing the public of sanitary and phytosanitary standard-setting activities of each international standard-setting organization. The Secretary of Agriculture has delegated to the Administrator, Food Safety and Inspection Service (FSIS), the responsibility to inform the public of the SPS standard-setting activities of Codex. The FSIS Administrator has, in turn, assigned the responsibility for informing the public of the SPS standard-setting activities of Codex to the Office of U.S. Codex Alimentarius, FSIS.

Codex was created in 1962 by two U.N. organizations, the Food and Agriculture Organization (FAO) and the World Health Organization (WHO). Codex is the principal international organization for encouraging fair international trade in food and protecting the health and economic interests of consumers. Through adoption of food standards, codes of practice, and other guidelines developed by its committees and by promoting their adoption and implementation by governments, Codex seeks to ensure that the world's food supply is sound, wholesome, free from adulteration, and correctly labeled. In the United States, the United States Department of Agriculture (USDA); the Food and Drug Administration (FDA), Department of Health and Human Services (HHS), and the Environmental Protection Agency (EPA) manage and carry out U.S. Codex activities.

As the agency responsible for informing the public of the sanitary and phytosanitary standard-setting activities of Codex, FSIS will publish this notice in the **Federal Register** annually, setting forth the following information:

1. The sanitary or phytosanitary standards under consideration or planned for consideration; and
2. For each sanitary or phytosanitary standard specified:
   a. A description of the consideration or planned consideration of the standard;
   b. Whether the United States is participating or plans to participate in the consideration of the standard;
   c. The agenda for United States participation, if any; and
   d. The agency responsible for representing the United States with respect to the standard.

TO OBTAIN COPIES OF THOSE STANDARDS LISTED IN THIS NOTICE THAT ARE UNDER CONSIDERATION BY CODEX, PLEASE CONTACT THE CODEX DELEGATE OR THE OFFICE OF U.S. CODEX ALIMENTARIUS. This notice also solicits public comment on those standards that are under consideration and on recommendations for new standards. The delegate, in conjunction with the responsible agency, will take the comments received into account in participating in the consideration of the standards and in proposing matters to be considered by Codex.

The United States' delegate will facilitate public participation in the United States Government's activities relating to Codex Alimentarius. The United States' delegate will maintain a list of individuals, groups, and organizations that have expressed an interest in the activities of the Codex committees and will disseminate information regarding United States' delegation activities to interested parties. This information will include the current status of each agenda item, the United States Government's position or preliminary position on the agenda items, and the time and place of planning meetings and debriefing meetings following Codex committee sessions. Please notify the appropriate U.S. delegate or the Office of U.S. Codex Alimentarius, Room 4861, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20250–3700, if you would like to receive information about specific committees.

The information provided below describes the status of Codex standard-setting activities by the Codex Committees for the two year period from June 1, 1997 to June 1, 1999. In addition, the following information is included with this **Federal Register** notice:

Appendix 1. List of U.S. Codex Officials (includes U.S. delegates and alternate delegates).
Appendix 2. Timetable of Codex Sessions (June 1997 through June 1999)
Appendix 3. Definitions for the Purpose of Codex Alimentarius
Appendix 4.
(A) Uniform Procedure for the Elaboration of Codex Standards and Related Texts
(B) Uniform Accelerated Procedure for the Elaboration of Codex Standards and Related Texts
Appendix 5. Nature of Codex Standards
Appendix 6. Lists of Standards and Related Texts Adopted by the 22nd Session of the Codex Alimentarius Commission, June 1997

F. Edward Scarbrough,
United States Manager for Codex Alimentarius.

Codex Alimentarius Commission and Executive Committee

The Codex Alimentarius Commission will hold its Twenty-third Session June 28–July 3, 1999 in Rome, Italy. At that time it will consider the standards, codes of practice, and related matters brought to its attention by the general subject committees, commodity committees, and member delegations.

Prior to the Commission meeting, the Executive Committee will meet in June

1998 and June 1999. It is composed of the chairperson, vice-chairpersons and six members elected from the Commission, one from each of the following geographic regions: Africa, Asia, Europe, Latin America and the Caribbean, North America, and South-West Pacific. At its session in June 1998, it will consider the following items:

- Budgetary and financial matters;
- Review of Codex Subsidiary Bodies;
- Consideration of the Draft Medium-Term Plan for 1998 to 2000;
- Implementation of the Commission's Programme of Work:
- Implementation of decisions taken by the 22nd Session of the Commission
- Consideration of new work proposals
- Consideration of Proposed Draft Standards and Related Texts at Step 5
- Matters arising from Codex Committees
- Report on Matters Relating to the Implementation of the WTO Agreement on the Application of Sanitary and Phytosanitary (SPS) Measures and the Agreement on Technical Barriers to Trade (TBT)

Responsible Agency: USDA/FSIS.
U.S. Participation: Yes.

Codex Committee on Residues of Veterinary Drugs in Foods

The Codex Committee on Residues of Veterinary Drugs determines priorities for the consideration of residues of veterinary drugs in foods and recommends Maximum Residue Limits (MRLs) for veterinary drugs. A Codex Maximum Limit for Residues of Veterinary Drugs (MRLVD) is the maximum concentration of residue resulting from the use of a veterinary drug (expressed in mg/kg or ug/kg on a fresh weight basis) that is recommended by the Codex Alimentarius Commission to be legally permitted or recognized as acceptable in or on a food.

An MRLVD is based on the type and amount of residue considered to be without any toxicological hazard for human health as expressed by the Acceptable Daily Intake (ADI)*, or on the basis of a temporary ADI that utilizes an additional safety factor. An MRLVD also takes into account other relevant public health risks as well as food technological aspects.

When establishing an MRLVD, consideration is also given to residues that occur in food of plant origin and/or the environment. Furthermore, the MRLVD may be reduced to be consistent with good practices in the use of veterinary drugs and to the extent that practical analytical methods are available.

* Acceptable Daily Intake (ADI): An estimate by the Joint FAO/WHO Expert Committee on Food Additives (JECFA) of the amount of a veterinary drug, expressed on a body weight basis, that can be ingested daily over a lifetime without appreciable health risk (standard man = 60 kg).

The next meeting of the Codex Committee on Residues of Veterinary Drugs in Foods will take place September 14–17, 1998, in Washington, DC. The following matters will be considered:

To be considered at Step 7:

Abamectin
Azaperone
Cetiofur
Chlorotetracycline/Oxtetracycline/Tetracycline
Cypermethrin
α=Cypermethrin
Dexamethasone
Diclazuril
Dihydrostreptomycin/Streptomycin
Febantel/Febendazole/Oxyfendazole
Gentamicin
Neomycin
Spectinomycin
Thiamphenicol
Tilmicosin

To be considered at Step 4:

- Clenbuterol.

New work:

- Porcine Somatotropin (PST).
- Draft Code of Practice on Good Animal Feeding.

In addition, the following matters will be discussed:

- Guidelines on Residues at Injection Sites;
- Methods of Analysis and Sampling; Review of Performance-based Criteria and Identification of Routine Methods;
- Risk Analysis in Codex and the Committee on Residues of Veterinary Drugs in Foods;
- Amendments to the Guidelines for the Establishment of a Regulatory Programme for Control of Veterinary Drug Residues in Foods—Residues of Veterinary Drugs in Milk and Milk Products;
- Harmonization of Technical Requirements for Registration of Veterinary Medicinal Products; and
- Maximum Residue Limits for Certain Veterinary Drugs in Foods (Priority List); and
- Data Requirements for the Establishment of Maximum Residue Limits for Veterinary Drugs for Minor Species.

Responsible Agency: HHS/FDA USDA/FSIS.
U.S. Participation: Yes.

Food Additives and Contaminants

The Codex Committee on Food Additives and Contaminants (CCFAC) establishes or endorses permitted maximum or guideline levels for individual food additives, contaminants, and naturally occurring toxicants in food and animal feed. The 30th Session of the CCFAC met March 9–13, 1998, in the Hague, The Netherlands. The 31st Session of the CCFAC is tentatively scheduled for March 22–26, 1999, in the Hague, The Netherlands. The following matters contained in ALINORMS 99/12 and 97/12A are under consideration by the CCFAC:

Food Additives

- Proposed Draft General Standard for Food Additives: Annex A (Guidelines for the Estimation of Appropriate Levels of Use of Food Additives) to be revised for consideration at Step 3; additives with specified conditions for use in specific food categories or foodstuffs (forwarded to Executive Committee at Step 5); (see Table 1, below).
- Specifications for the following food additives are recommended by the CCFAC for adoption by the Twenty-third Session of the Codex Commission: agar, alginic acid, ammonium alginate, calcium alginate, carbon dioxide, diacetyltartaric and fatty acid esters of glycerol, ethyl hydroxyethyl cellulose, gellan gum, hydrogenated poly-1-decene, isoamyl acetate, malitol syrup, microcrystalline wax, mixed carotenoids, modified starches, potassium alginate, potassium propionate, propylene glycol, propylene glycol alginate, propylene glycol esters of fatty acids, salatrim, sodium alginate, sucroglycerides, sulfur dioxide, and *tertiary*-butylhydroquinone.
- Specifications for the following flavouring agents are recommended by the CCFAC for adoption by the Twenty-third Session of the Codex Commission (numbers in parentheses are the Joint FAO/WHO Expert Committee on Food Additives (JECFA) flavour identification numbers): allyl cyclohexane propionate (13), ethyl octanoate (33), ethyl nonanoate (34), isoamyl acetate (43), isoamyl butyrate (45), isoamyl isobutyrate (49), isoamyl isovalerate (50), citronellyl formate (53), geranyl formate (54), neryl formate (55), rhodinyl formate (56), citronellyl acetate (57), neryl acetate (59), rhodinyl acetate (60), citronellyl propionate (61), geranyl propionate (62), cis-3,7-dimethyl-2,6-octadien-1-yl propionate (63), citronellyl butyrate (65), geranyl butyrate (66), neryl butyrate (67), rhodinyl butyrate (68), citronellyl isobutyrate (71), neryl isobutyrate (73), neryl isovalerate (76), formic acid (79), acetaldehyde (80), acetic acid (81), propyl alcohol (82), propionaldehyde

(83), propionic acid (84), butyl alcohol (85), butyraldehyde (86), butyric acid (87), amyl alcohol (88), valeraldehyde (89), valeric acid (90), hexyl alcohol (91), hexanal (92), hexanoic acid (93), heptyl alcohol (94), heptanal (95), heptanoic acid (96), 1-octanol (97), octanal (98), octanoic acid (99), nonyl alcohol (100), nonanal (101), nonanoic acid (102), 1-decanol (103), decanal (104), decanoic acid (105), undecyl alcohol (106), undecanal (107), undecanoic acid (108), lauryl alcohol (109), lauric aldehyde (110), lauric acid (111), myristaldehyde (112), myristic acid (113), 1-hexadecanol (114), palmitic acid (115), stearic acid (116), propyl formate (117), butyl formate (118), n-amyl formate (119), hexyl formate (120), octyl formate (122), cis-3-hexenyl formate (123), methyl acetate (125), propyl acetate (126), butyl acetate (127), hexyl acetate (128), heptyl acetate (129), octyl acetate (130), nonyl acetate (131), decyl acetate (132), lauryl acetate (133), cis-3-hexynl acetate (134), trans-3-heptynl acetate (135), 10-undecen-1-yl acetate (136), isobutyl acetate (137), 2-methylbutyl acetate (138), methyl propionate (141), propyl propionate (142), butyl propionate (143), hexyl propionate (144), octyl propionate (145), decyl propionate (146), cis-3 & trans-2-hexenyl propionate (147), isobutyl propionate (148), methyl butyrate (149), propyl butyrate (150), butyl butyrate (151), n-amyl butyrate (152), hexyl butyrate (153), cis-3-hexenyl butyrate (157), isobutyl butyrate (158), methyl valerate (159), butyl valerate (160) propyl hexanoate (161), butyl hexanoate (162), n-amyl hexanoate (163), hexyl hexanoate (164), isobutyl hexanoate (166), methyl heptanoate (167), n-amyl heptanoate (170), methyl octanoate (173), n-amyl octanoate (174), hexyl octanoate (175), methyl nonanoate (179), methyl laurate (180), butyl laurate (180), butyl laurate (181), methyl myristate (183), methyl isobutyrate (185), ethyl isobutyrate (186), propyl isobutyrate (187), butyl isobutyrate (188), hexyl isobutyrate (189), heptyl isobutyrate (190), trans-3-heptenyl 2-methyl propanoate (191), octyl isobutyrate (192), dodecyl isobutyrate (193), isobutyl isobutyrate (194), methyl isovalerate (195), ethyl isovalerate (196), propyl isovalerate (197), butyl isovalerate (198), hexyl 3-methylbutanoate (199), octyl isovalerate (200), nonyl isovalerate (201), 3-hexynl 3-methylbutanoate (202), 2-methylpropyl 3-methylbutyrate (203), methyl 2-methylbutyrate (205), ethyl 2-methylbutyrate (206), n-butyl 2-methylbutyrate (207), hexyl 2-methylbutanoate (208), octyl 2-methylbutyrate (209), 2-methylbutyl 2-methylbutyrate (212), ethyl 2-methyl pentanoate (214), methyl 4-methylvalerate (216), trans-anethole (217), and citric acid (218).

• Specifications for the following food additive is recommended by the CCFAC for adoption by the Twenty-third Session of the Codex Commission after changes considered editorial have been made: sodium propionate.

• Specifications for the following flavouring agents are recommended by the CCFAC for adoption by the Twenty-third Session of the Codex Commission after changes considered editorial have been made: geranyl acetate (58) and isobutyl formate (124).

Contaminants

• Methodology and Principles for Exposure Assessment in the Codex General Standard for Contaminants and Toxins in Food (paper to be revised for consideration at 31st CCFAC);

• Draft Maximum Levels and Sampling Plan for Aflatoxins in Raw Peanuts for Further Processing (forwarded to Codex Commission at Step 8);

• Draft Maximum Level for Aflatoxin M1 in milk (forwarded to Codex Commission at Step 8);

• Position Paper on Ochratoxin A (paper to be revised for consideration at 31st CCFAC);

• Position Paper on Patulin (paper to be revised for consideration at 31st CCFAC, and maximum level in apple juice and the apple juice ingredient in ready made soft drinks to be circulated for comment at Step 3);

• Position Paper on zearalenone to be circulated for comment and consideration at the 31st CCFAC;

• Draft Code of Practice for source directed measures to reduce contamination of foodstuffs (paper to be revised for consideration at 31st CCFAC);

• Draft Maximum Levels for Lead (revised levels to be circulated for comment and consideration at 31st CCFAC);

• Discussion Paper on Cadmium (paper to be revised and circulated for comment and consideration at 31st CCFAC);

• Position Paper on Arsenic (paper to be revised and circulated for comment and consideration at 31st CCFAC);

• Position Paper on Tin (draft maximum levels to be circulated for comment at Step 3 for further consideration at the 31st CCFAC).

The 30th CCFAC agreed to establish an ad hoc working group for contaminants to be chaired by Denmark. This ad hoc working group will meet prior to the plenary session of the 31st CCFAC.

Responsible Agency: HHS/FDA.

U.S. Participation: Yes.

Food Additives

For the purposes of Codex, a food additive means any substance not normally consumed as a food by itself and not normally used as a typical ingredient in the food, whether or not it has nutritive value, the intentional addition of which to food for a technological (including organoleptic) purpose in the manufacture, processing, preparation, treatment, packing, packaging, transport, or holding of such food results, or may be reasonably expected to result (directly or indirectly), in it or its by-products becoming a component of or otherwise affecting the characteristics of such foods. The food additive term does not include "contaminants" or substances added to food for maintaining or improving nutritional qualities.

The General Standard for Food Additives (GSFA) will set forth maximum levels of use of food additives in various foods and food categories. The maximum levels will be based on the food additive provisions of previously established Codex commodity standards, as well as on the use of the additives in non-standardized foods.

Only those food additives for which an acceptable daily intake (ADI) has been established by the Joint FAO/WHO Expert Committee on Food Additives (JECFA) are included in the general Standard for Food Additives (GSFA) at this time. All of the additives that are currently under consideration for inclusion in the draft GFSA are listed in Table 1 below. Provisions for the use of these additives are at Step 5 (See ALINORM 99/12).

Codex Committee on Pesticide Residues

The Codex Committee on Pesticide Residues recommends to the Codex Alimentarius Commission establishment of maximum limits for pesticide residues for specific food items or in groups of food. A Codex Maximum Limit for Pesticide Residues (MRLP) is the maximum concentration of a pesticide residue (expressed as mg/kg), recommended by the Codex Alimentarius Commission to be legally permitted in or on food commodities and animal feeds. Foods derived from commodities that comply with the respective MRLPs are intended to be toxicologically acceptable, that is, consideration of the various dietary residue intake estimates and determinations both at the national and international level in comparison with the ADI*, should indicate that foods complying with Codex MRLPs are safe for human consumption.

Codex MRLPs are primarily intended to apply in international trade and are derived from reviews conducted by the Joint Meeting on Pesticide Residues (JMPR) following:

(a) review of residue data from supervised trials and supervised uses including those reflecting national good agricultural practices (GAP). Data from supervised trials conducted at the highest nationally recommended, authorized, or registered uses are included in the review. In order to accommodate variations in national pest control requirements, Codex MRLPs take into account the higher levels shown to arise in such supervised trials, which are considered to represent effective pest control practices, and

(b) toxicological assessment of the pesticide and its residue.

MRLs recommended for advancement to step 5 by the 30th CCPR will be considered by the Executive Committee at its Forty-Fifth Session in June 1998 and those to Steps 5/8 and 8 by the 23rd Session of the Codex Alimentarius Commission in July 1999 (see table below). The Commission also will consider the Draft Revised Recommended Methods of Sampling for Determination of Pesticide Residues for Compliance with MRLs at Step 8.

* Acceptable Daily Intake (ADI) of a chemical is the daily intake which, during an entire lifetime, appears to be without appreciable risk to the health of the consumer on the basis of all the known facts at the time of the evaluation of the chemical by the Joint FAO/WHO Meeting on Pesticide Residues. It is expressed in milligrams of the chemical per kilogram of body weight.

Codex committee	Standard	Status of consideration	US participation/ agenda	Responsible agency
Pesticide Residues (considered at the 30th CCPR) (Annex II to ALINORMS 99/24).	Acephate	MRLs under consideration at Step 5/8	YES	EPA/ARS

Codex Committee on Methods of Analysis and sampling

The Codex Committee on Methods of Analysis and Sampling:

(a) Defines the criteria appropriate to Codex Methods of Analysis and Sampling;

(b) Serves as a coordinating body for Codex with other international groups working in methods of analysis and sampling and quality assurance systems for laboratories;

(c) Specifies, on the basis of final recommendations submitted to it by the other bodies referred to in (b) above, Reference Methods of Analysis and Sampling appropriate to Codex Standards which are generally applicable to a number of foods;

(d) Considers, amends, if necessary, and endorses, as appropriate, methods of analysis and sampling proposed by Codex (Commodity) Committees, except that methods of analysis and sampling for residues of pesticides or veterinary drugs in food, the assessment of

microbiological quality and safety in food, and the assessment of specifications for food additives do not fall within the terms of reference of this Committee;

(e) Elaborates sampling plans and procedures, as may be required;

(f) Considers specific sampling and analysis problems submitted to it by the Commission or any of its Committees; and

(g) Defines procedures, protocols, guidelines or related texts for the assessment of food laboratory proficiency, as well as quality assurance systems for laboratories.

The following matters will be considered by the Committee at its next meeting in Budapest, Hungary on November 23–27, 1998:

- Proposed Draft Codex General Guidelines on Sampling;
- Criteria for Evaluating Acceptable Methods of Analysis for Codex purposes;
- Harmonization of Test Results Corrected for Recovery Factors;
- Report of Inter-Agency Meeting on "limits" Provisions in Codex Standards;
- Endorsement of Methods of Analysis for Codex; and
- Measurement Uncertainty.

New work approved by the 22nd Session of the Codex Alimentarius Commission:

- Intra-Laboratory Method Validation.

Responsible Agency: HHS/FDA USDA/AMS.

U.S. Participation: Yes.

Codex Committee on Food Import and Export Inspection and Certification Systems

The Codex Committee on Food Import and Export Certification and Inspection Systems is charged with developing principles and guidelines for food import and export inspection and certification systems. Additionally, the Committee develops principles and guidelines for the application of measures by competent authorities to provide assurance that foods comply with essential requirements. This encompasses work on equivalence of inspection systems, guidelines on food import control systems and food product certification and information exchange. The development of guidelines for the appropriate utilization of quality assurance systems to ensure that foodstuffs conform to requirements and to facilitate trade are also included in the Committee's terms of reference. Current work activities of the Committee are the following:

Draft guidelines to be considered at Step 5 by the Executive Committee at its Forty-fifth Session in July, 1998:

- Draft Guidelines for the Development of Equivalence Agreements Regarding Food Import and Export Inspection and Certification Systems

Continuing matters to be discussed at the Seventh Session of the Committee:

- Discussion Paper on Issues Relating to the Judgement of Equivalence; and
- Discussion Paper on the Development of Guidelines for the Utilization and Promotion of Quality Assurance Systems.

New work to be proposed to the Executive Committee:

- Development of Guidelines or a similar document on Food Import Control Systems;
- Development of Guidelines and Criteria for a Generic Official Certificate Format and Rules Relating to the Production and Issue of Certificates; and
- Discussion Paper on Guidelines for the Establishment of a Database on Importing Country Legislation.

Responsible Agency: HHS/FDA. USDA/FSIS.

U.S. Participation: Yes.

Codex Committee on General Principles

The Codex Committee on General Principles deals with rules and procedures referred to it by the Codex Alimentarius Commission. None of the following recommendations for changing the rules of procedure for Codex are in the Step Procedure. The following items will be considered at the next meeting of the Codex Committee on General Principles, which will take place in Paris, France, on September 7–11, 1998:

- Risk Analysis;
- Definitions related to Risk Management
- Working Priniciples for Risk Analysis
- Food Safety Objectives
- Measures Intended to Facilitate Consensus;
- Review of the General Principles of Codex;
- Consideration of special treatment of developing countries
- Revision of the Acceptance Procedure
- Review of the Status and Objectives of Codex Texts;
- Review of the Statements of Principle on the Role of Science and the Extent to Which Other Factors are Taken into Account—Application in the Case of BST and PST;
- Revision of the Procedural Manual;
- Procedures concerning the participation of INGOs
- Other aspects
- Review of the Code of Ethics for International Trade in Foods.

Responsible Agency: USDA/FSIS.

U.S. Participation: Yes.

Codex Committee on Food Labelling

The Codex Committee on Food Labelling is responsible for drafting provisions on labelling problems assigned by the Codex Alimentarius Commission. The following draft guidelines and standards were considered by the Committee at its May 1998 meeting.

The Committee is continuing work on:

- Proposed Draft Amendment to the Labelling Section of the Standard for Quick Frozen Fish Sticks (Fish Fingers), Fish Portions and Fish Fillets, Breaded or in Batter at Step 7;
- Draft Guidelines for Labelling Foods that can cause Hypersensitivity at Step 7;
- Draft Guidelines for Organically Produced Foods at Step 7;
- Proposed Draft Amendment to the General Labelling Standard (Biotechnology) at Step 4;
- Proposed Draft Recommendations for the Use of Health Claims at Step 4.

New work:

- Review of General Guidelines for Nutrition Labelling;
- Definition of the Claim "Vegetarian;"
- "Sports Drinks" and "Energy Drinks"

Responsible Agency: HHS/FDA. USDA/FSIS.

U.S. Participation: Yes.

Codex Committee on Food Hygiene

The Codex Committee on Food Hygiene drafts basic provisions on food hygiene for all foods. The term "hygiene" also includes, where applicable, microbiological specifications for food and associated methodology. The following Code of Hygienic Practice will be considered by the Codex Alimentarius Commission at its 23rd Session in June 1999:

- Draft Code of Practice for Refrigerated Packaged Foods with Extended Shelf-Life.

The following Guidelines and Codes of Hygienic Practice will be discussed at the Committee's next meeting in Washington, DC on October 26–30, 1998:

To be considered at Step 7:

- Proposed Draft Principles and Guidelines for the Conduct of Microbiological Risk Assessment; and
- Proposed Draft Code of Hygienic Practice for Packaged (Bottled) Drinking Waters (Other than Natural Mineral Water).

To be considered at Step 4 of the Accelerated Procedure:

• Proposed Draft Amendment to the General Principles of Food Hygiene (on the need for sufficient rinsing after chemical disinfection).

To be considered at Step 4:

• Proposed Draft Code of Hygienic Practice for the Transport of Foodstuffs in Bulk and Semi-Packaged Foodstuffs;

• Proposed Draft Recommendations for the control of *Listeria monocytogenes* in Foods in International Trade;

• Proposed Draft Code of Practice on Good Animal Feeding;

• Implications for the Broader Applications of the HACCP System;

• Broader Implications on the Application of Microbiological Risk Evaluation in International Foods and Feed Trade;

• Development of Risk-Based Guidance for the Use of HACCP-like Systems in Small Businesses, with Special References to Developing Countries; and

• Recommendations for the Management of Microbiological Hazards for Foods in International Trade.

Other committee work:

• Code of Hygienic Practice for Milk and Milk Products;

• Discussion paper on the Hygienic Recycling of Processing Water in Food Plants;

• Discussion paper on the Proposed Draft Code of Hygienic Practice for Primary Production, Harvesting and Packaging of Fresh Produce;

• Discussion paper on the Proposed Draft of Hygienic Practice for Pre-cut Fruits and Vegetables;

• Discussion paper on the Proposed Draft Annex on "Cleaning and Disinfection" to the Recommended International Code of Practice—General Principles of Food Hygiene;

• Comments and Information on Prioritization of the Revision of Codes of Hygienic Practice;

• Application of Risk Analysis Principles in Codex: Microbiological Hazards; and

• Revision of the Standard Wording for Food Hygiene Provisions, Section K of the Procedural Manual.

Responsible Agency: DOC/NMFS, HHS/FDA, USDA/FSIS.

U.S. Participation: Yes.

Codex Committee on Fresh Fruits and Vegetables

The Codex Committee on Fresh Fruits and Vegetables is responsible for elaborating world-wide standards and codes of practice for fresh fruits and vegetables. The following draft standards will be considered by the Codex Alimentarius Commission at its 23rd Session in June 1999. The draft standards listed below are contained in ALINORM 99/35.

To be considered at Step 8:

• Draft Standard for Chayote;

• Draft Standard for Lime;

• Draft Standard for Pummelo; and

• Draft Standard for Guava.

To be considered for adoption at Step 5/8 of the accelerated procedure:

• Draft Standard for Mexican Limes: and

• Draft Standard for Ginger.

To be considered at Step 5 by the Codex Executive Committee at its June 1998 meeting:

• Draft Revised Standard for Pineapple;

• Draft Standard for Asparagus;

• Draft Standard for Grapefruit;

• Draft Standard for Longan;

The committee is continuing work on:

• Draft Standard for Oranges, including guide for use in scoring freezing injury; and

• Draft Code of Practice for the Quality Inspection and Certification of Fresh Fruits and Vegetables.

Proposals to be forwarded to the Executive Committee for new work include Tiquisque (lilac and white), Yucca, Uchuva, Yellow Pitahaya and Papaya.

Responsible Agency: USDA/AMS.

U.S. Participation: Yes.

Codex Committee on Nutrition and Foods for Special Dietary Uses

The Codex Committee on Nutrition and Foods for Special Dietary Uses is responsible for studying nutritional problems referred by the Codex Alimentarius Commission. The Committee also drafts provisions on nutritional aspects for all foods and develops guidelines, general principles, and standards for foods for special dietary uses. The following draft standards and guidelines will be considered at the Committee's next meeting, September 21–25, 1998, in Berlin, Germany. The reference document for the following matters is ALINORM 97–26 and other documents as specifically noted.

To be considered at Step 7:

• Proposed Draft Revised Standards for Gluten-Free Foods; and

• Draft Table of Conditions for Nutrient Contents (Part B).

To be considered at Step 5:

• Proposed Draft Amendment to the Standard for Infant Formula (Vitamin B^{12} content)

To be considered at Step 4:

• Proposal Draft Guidelines for Vitamin and Mineral Supplements;

• Proposed Draft Revised Standard for Infant Formula (CL 1997/13–NFSDU); and

• Proposed Draft Revised Standards for Processed Cereal-Based Foods for Infants and Young Children.

The committee is continuing work on:

• Proposed Definitions for Vitamins and Minerals as Nutrient Reference Values for Labeling;

• Proposed Levels of Vitamins and Minerals in Foods for Special Medical Purposes (CL 1997/11–NFSDU);

• Dietary Modelling (CL 1997/12–NFSDU); and

• Nutrient Reference Values for Labelling Purposes (CL 1997/12–NFSDU).

Responsible Agency: HHS/FDA.

U.S. Participation: Yes.

Codex Committee on Fish and Fishery Products

The Fish and Fishery Products Committee is responsible for elaborating standards for fresh and frozen fish, crustaceans and mollusks. The following draft guidelines and codes of practice will be considered at the next meeting of the Committee, scheduled for June 8–12, 1998, in Bergen, Norway.

To be considered at Step 7:

• Proposed Draft Standard for Dried Salted Anchovies

• Proposed Draft Standard for Crackers from Marine and Freshwater Fish, Crustacean and Molluscan Shellfish

Guidelines to be considered at Step 7:

• Proposed Draft Guidelines for the Sensory Evaluation of Fish and Shellfish including a Proposed Draft Section on Training of Assessors at Step 3

Codes to be considered at Step 3:

• Proposed Draft Code of Practice for Fish and Fishery Products (Fresh Fish, Frozen Fish, Minced Fish, Canned Fish, Surimi, Salted Fish and Smoked Fish)

In addition, the Committee is working on the following proposed draft codes: (1) Products of Aquaculture; (2) Frozen Shrimps and Prawns; and (3) Molluscan Shellfish.

New work to be elaborated:

• Standard for Molluscan Shellfish

• Standard for Smoked Fish

• Standard for Salted Atlantic Herring

Responsible Agency: HHS/FDA USDC/NOAA/NMFS.

U.S. Participation: Yes.

Codex Committee on Milk and Milk Products

The Codex Committee on Milk and Milk Products is responsible for establishing international codes and standards for milk and milk products. The following revised standards and draft revised codes of principles were considered at the last meeting of the committee, May 18–22, 1998.

Considered at Step 7:
- Draft Revised Standard for Butter;
- Draft Revised Standard for Milkfat Products;
- Draft Revised Standard for Evaporated Milks;
- Draft Revised Standard for Sweetened Condensed Milk;
- Draft Revised Standard for Milk and Cream Powders;
- Draft Revised Standard for Cheese;
- Draft Revised Standard for Whey Cheese;
- Draft Revised Standard for Cheeses in Brine;
- Draft Code of Principles Concerning Milk and Milk Products (General Standard for the Labelling of Milk and Milk Products);
- Draft Standard for Unripened Cheese, including Fresh Cheese.

Considered at Step 4:
- Proposed Draft Revised Standard for Processed Cheese;
- Proposed Draft Revised Standard for Cream;
- Proposed Draft Revised Individual Standards for Cheese;
- Proposed Draft Revised Standard for Fermented Milk Products;
- Proposed Draft Standard for Dairy Spread; and
- Proposed Draft Standard for Mozzarella.

Other work:
- Model Export Certificate by the CCFICS;
- Nutrition and Quality Descriptors for Milk Products; and
- Heat Treatment Definitions.

New work:
- Proposal for new standard for "Parmesan"

Responsible Agency: USDA/AMS, HHS/FDA.

U.S. Participation: Yes.

Codex Committee on Fats and Oils

The Codex Committee on Fats and Oils is responsible for elaborating standards for fats and oils of animal, vegetable, and marine origin. The reference document is ALINORM 97/17. The Fifteenth Session of the Committee recommended the following be adopted by the Commission in June 1997:
- Draft Standard for Named Animal Fats at Step 8;
- Draft Standard for Edible Fats and Oils Not Covered by Individual Standards at Step 8;
- Draft Revised Code of Practice for the Storage and Transport of Fats and Oils in Bulk at Step 8;

The 22nd Session of the Commission noted that there was controversy on the proposed peroxide value and provisions for additives in the Draft Standards and decided to return them to Step 6 for government comments and further consideration by the Committee. At the Commission meeting several delegates objected to adopting the Draft Revised Code of Practice because of a number of unaddressed issues. In addition, it noted that Thermal Heating Fluids were not generally allowed and this represented a serious problem to many exporting countries. The Commission decided to discontinue work on the revision and revoke the current Standard for Specified Vegetable Fat products and Specified Animal and Vegetable Fat products. The Commission agreed to discontinue work on converting the European Regional Standard for mayonnaise into a world-wide standard.

In addition to the two Draft Standards and the Draft Revised Code listed above, the Sixteenth Session of the Committee, tentatively scheduled for Spring 1999, will consider the following at Step 7:
- Draft Standard for Named Vegetable Oils; and
- Draft Standard for Olive Oils and Olive-Pomace Oils.

The Committee will also consider the Draft Standard for Fat Spreads and Blended Fat Spreads at Step 4.

Responsible Agency: HHS/FDA, USDA/ARS.

U.S. Participation: Yes.

Codex Committee on Cocoa Products and Chocolate

The Codex Committee on Cocoa Products and Chocolate held 15 sessions. The last meeting, at which the original program of work was completed, was held in 1982. The Committee elaborated world-wide standards for cocoa products and chocolate.

The Commission in 1991 decided to embark on a program of work to update and revise all of the standards.

The revisions were to include updating of the sections on food hygiene and food labeling and removal from the standards of all non-essential details. The standards, when updated and revised, should contain only those provisions that are necessary to protect consumer health and prevent fraud.

Provisions of an advisory nature reflecting quality factors and criteria typically used in trade to define or describe the quality of the product are to be removed from the standard. These guidance provisions are intended to assist users of the Codex standard when making international purchases and are, therefore, not subject to formal acceptance by users of the standard.

The 21st Session of the Commission endorsed the recommendation of the forty-second session of the Executive Committee to initiate the revision of the Cocoa Products and Chocolate Standards.

The Swiss Secretariat prepared updated versions of the Standards and requested government comments in CL 1995/28 CPC. The technical contents of the standards were not amended and comments were requested from governments on amendments.

The amended standards for chocolate and chocolate products were considered at Step 4 by the Sixteenth Session of the Committee, October 1996. The Committee returned the Proposed Draft Revised Standard for Chocolate and Chocolate Products to Step 3 for further consideration.

Proposed Draft Revised Standards for Cocoa Butter, Cocoa (Cacao) Nib, Cocoa (Cacao) Mass, Cocoa Press Cake and Cocoa Dust (Cocoa Fines) for use in the manufacture of Cocoa and Chocolate products, and for Cocoa Powders (Cacaos) and Dry Cocoa-Sugar Mixture will be considered at the Seventeenth Session of the Committee scheduled for the Fall of 1998.

Responsible Agency: HHS/FDA.

U.S. Participation: Yes.

Codex Committee on Processed fruits and vegetables

The United States-hosted Codex Committee on Processed Fruits and Vegetables (CCPFV) elaborated 37 standards for various types of processed fruits and vegetables, including many canned products (except juices), some dried products and other related products. The CCPFV held 18 sessions from 1964 through 1986 and then adjourned sine die. The CCPFV reconvened for its 19th session in March 1998 in order to consider, at Step 4, proposed draft revisions of the 37 existing Codex standards for processed fruits and vegetables. These proposed draft revisions were prepared and distributed in a circular letter in January 1997 in an effort to simplify the standards and thereby increase the likelihood of their use and acceptance by national governments.

During the 19th session, the Committee agreed in general with the principle of simplifying standards and, when practical, covering like products under a single standard. Due to time constraints, the meeting focused its discussions on a limited number of standards. The Committee also noted the status of the other standards and agreed on steps to consolidate certain standards and on recommendations for future work.

As a result of the 19th session, the status of work covered by the CCPFV is as follows:

- Draft Standard for Canned Bamboo Shoots at Step 7;
- Proposed Draft Revised Standard for Canned Applesauce at Step 5; and
- Proposed Draft Revised Standard for Canned Pears at Step 5.
- Proposed Draft Standards at Step 3:
- Canned Stone Fruits (*new work*);
- Canned Citrus Fruits;
- Canned Berry Fruits;
- Canned Mangoes;
- Canned Pineapple;
- Canned Fruit Cocktail;
- Canned Tropical Fruit Salad;
- Canned Chestnuts and Chestnut Puree;
- Canned Vegetables (*new work*)*;
- Canned Tomatoes;
- Canned Mushrooms;
- Jams, Jellies and Marmalades (*new work*);
- Mango Chutney**;
- Pickled Cucumbers (Cucumber Pickles);
- Table Olives;
- Processed Tomato Concentrates;
- Dried Apricots;
- Dates;
- Raisins;
- Grated Desiccated Coconut;
- Unshelled Pistachio Nuts;
- Dried Edible Fungi;
- Edible Fungi and Fungus Products;
- Soy Sauce (*new work*);
- Proposed Draft Guidelines for Packing Media in Canned Fruits (*new work*); and
- Proposed Draft Guidelines for Packing Media in Canned Vegetables (*new work*).

* The following products will be considered for inclusion into the proposed draft standards for canned vegetables: canned green beans and wax beans, canned sweet corn, canned asparagus, canned green peas, canned mature processed peas, canned carrots, canned palmito and possible canned tomatoes and canned mushrooms.

** In the future, mango chutney may be included in a general Codex standard for chutney.

There will be two additional standards forthcoming from the Codex Coordinating Committee for Asia, namely, the Proposed Draft Standard for Pickles and the Proposed Draft Standard for Kimchi. The Committee agreed to keep the Codex European Regional Standard for Vinegar, a regional standard, rather than consider it for worldwide status. The Committee also recommended that the European regional standard be referred to the Codex Coordinating Committee for Europe for updating into the current Codex format. In addition, the CCPFV agreed to recommend that any future work on converting the Codex European Regional Standard for Fresh Fungus Chanterelle into a worldwide standard be transferred to the Codex Committee for Fresh Fruits and Vegetables. The Committee also acknowledges that cherries may be considered for inclusion in the proposed draft standard for canned stone fruits and artichokes and potatoes may be considered for inclusion in the proposed draft standard for canned vegetables.

New work for the CCPFV is subject to approval by the Executive Committee at its next meeting.

The next session of the CCPFV is tentatively scheduled for March 20–24, 2000. The exact location and dates are to be decided between the U.S. and Codex Secretariat.

Responsible Agency: HHS/FDA USDA/AMS.

U.S. Participation: Yes.

Certain Codex Commodity Committees

Several Codex Alimentarius Commodity Committees have adjourned sine die. The following Committees fall into this category:

- *Cereals, Pulses and Legumes**

Responsible Agency: HHS/FDA, USDA/GIPSA

U.S. Participation: Yes

- *Meat Hygiene**

Responsible Agency: USDA/FSIS

U.S. Participation: Yes

- *Processed Meat and Poultry Products**

Responsible Agency: USDA/FSIS

U.S. Participation: Yes

- *Sugars*

Responsible Agency: HHS/FDA

U.S. Participation: Yes

- *Soups and Broths**

Responsible Agency: USDA/FSIS

U.S. Participation: Yes

- *Vegetable Proteins**

Responsible Agency: HHS/FDA, USDA/ARS

U.S. Participation: Yes

*There is no planned activity for these Committees in the next year.

A brief report on activities of the Codex Committees on Edible Ices, Soups and Broths, and Sugars follows:

Codex Committee on Edible Ices

The Committee on Edible Ices was responsible for elaborating standards for all types of edible ices, including mixes and powders used for their manufacture. The 43rd Session of the Executive Committee in June 1996 recommended that the Codex Standard for Edible Ices and Edible Ice Mixes be revoked. It was reported that there was no need for the standard as there was not a significant international trade. The Executive Committee further recommended that the Codex Committee on Edible Ices be abolished. The 22nd Session of the Codex Alimentarius Commission decided in June 1997 to revoke the standard and abolish the committee.

Codex Committee on Soups and Broths

The Codex Committee on Soups and Broths elaborated worldwide standards for soups, broths, bouillons and consommes. The committee adjourned *sine die*. The main tasks of the Committee were completed. However, at its June 1997 meeting, the Codex Alimentarius Commission requested that the Committee commence work revising the Standard for Bouillons and Consommes.

Responsible Agency: USDA/FSIS.

U.S. Participation: Yes.

Codex Committee on Sugars

The Codex Committee on Sugars elaborated standards for all types of sugars and sugar products. The Committee was adjourned *sine die*, but has been asked to revise the standards for Sugar and Honey. The Codex Alimentarius Commission at its 22nd Session returned the Draft Revised Standards for Sugar and Honey, which had been submitted for consideration at Step 8, to the Committee for a new round of comments.

Responsible Agency: HHS/FDA.

U.S. Participation: Yes.

Joint U.N.E.C.E. Codex Alimentarius Groups of Experts

Two groups of experts dealt with specific commodities much as the Codex Commodity Committees do. The Joint Groups of Experts have completed their main tasks and have adjourned. They could be called to meet again if the Codex Alimentarius Commission so decides. These Groups are:

- Standardization of Quick Frozen Foods; and
- Standardization of Fruit Juices.

There are no standards from either group being considered by the Twenty-third session of the Commission in June, 1999.

Responsible Agency: HHS/FDA.

U.S. Participation: Yes.

Codex Committee for Natural Mineral Waters

The Codex Committee for Natural Mineral Waters (CCNMW) is responsible for elaborating standards for natural mineral waters. The Codex Alimentarius Commission at its 22nd meeting approved the development of a standard for bottled/packaged water other than natural mineral waters. The United States prepared the initial proposed draft standard. The Committee will meet to discuss the draft in November 1998.

Responsible Agency: HHS/FDA.
U.S. Participation: Yes.

FAO/WHO Regional Coordinating Committees

The Codex Alimentarius Commission is made up of an Executive Committee, as well as approximately 25 subsidiary bodies. Included in these subsidiary bodies are several coordinating committees.

There are currently five Regional Coordinating Committees:

—Coordinating Committee for Africa
—Coordinating Committee for Asia
—Coordinating Committee for Europe
—Coordinating Committee for Latin America and the Caribbean
—Coordinating Committee for North America and the South-West Pacific

The United States participates as an active member of the Coordinating Committee for North America and the South-West Pacific, and is informed of the other coordinating committees through meeting documents, final reports, and representation at meetings.

Each regional committee:

—Defines the problems and needs of the region concerning food standards and food control;
—Promotes within the committee contacts for the mutual exchange of information on proposed regulatory initiatives and problems arising from food control and stimulates the strengthening of food control infrastructures;
—Recommends to the Commission the development of world-wide standards for products of interest to the region, including products considered by the committee to have an international market potential in the future; and
—Exercises a general coordinating role for the region and such other functions as may be entrusted to it by the Commission.

Codex Coordinating Committee for North America and the South-West Pacific

The Coordinating Committee is responsible for defining problems and needs concerning food standards and food control of all Codex member countries of the regions. The Fifth Session of the Committee is to be held October 6–9, 1998, in the United States. It will address the following matters of interest to the Commission:

- Report on Activities Related to Risk Analysis in Codex and Other Bodies;
- Review and Promotion of Acceptances of Codex Standards and Codex Maximum Residue Limits for Pesticides by Countries in the Region;
- Information and Reports on Food Safety, Food Control and Food Standards Issues in the Region;
- Promotion of Codex Activities in the Region; and
- Consumer Participation in Codex Work and Related Matters.

Agency Responsible: USDA/FSIS.
U.S. Participation: Yes.

Appendix 1—U.S. Codex Alimentarius Officials

Codex Committee Chairpersons

Mr. Steven N. Tanner, Director, Technical Services Division, Grain Inspection, Packers & Stockyards, Administration, U.S. Department of Agriculture, 10383 N. Executive Hills Blvd., Kansas City, MO 64153–1394, Phone #: (816) 891–0401, Fax #: (816) 891–0478—Cereals, Pulses and Legumes (adjourned Sine Die)

Dr. I. Kaye Wachsmuth, Deputy Administrator, Office of Public Health and Science, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 341–E, Jamie L. Whitten Federal Building, 1400 Independence Avenue, SW., Washington, DC 20250–3700, Phone #≤(202) 720–2644, Fax # (202) 690–2980—Food Hygiene

Mr. David L. Priester, International Standards Coordinator, Fresh Products Branch, Fruit and Vegetable Programs, Agricultural Marketing Service, U.S. Department of Agriculture, P.O. Box 96456, Room 2069, South Agriculture Building, Washington, DC 20090–6456, Phone #: (202) 720–2184, Fax #: (202) 720–0016—Processed Fruits and Vegetables

Dr. Stephen F. Sundlof, Director, Center for Veterinary Medicine, Food and Drug Administration 7500 Standish Place (HFV–1), Rockville, MD 20855, Phone #: (301) 594–1740, Fax #: (301) 594–1830—Residues of Veterinary Drugs in Foods

LISTING OF U.S. DELEGATES AND ALTERNATE DELEGATES

[Worldwide General Subject Codex Committees]

Codex Committee on Residues of Veterinary Drugs in Foods (Host Government—United States)	
U.S. Delegate	Dr. Robert C. Livingston, Director, Office of New Animal, Drug Evaluation, Center for Veterinary Medicine (HFV–100), Food and Drug Administration, 7500 Standish Place, Rockville, MD 20855, Phone #: (301) 594–1620 Fax #: (301) 594–2297.
Alternate Delegate	Dr. Pat Basu, Director, Chemistry and Toxicology Division, Office of Public Health and Science, Food Safety and Inspection Service, U.S. Department of Agriculture, 6912 Franklin Court, 1099 14th Street, NW, Washington, DC 20250–3700, Phone #: (202) 501–7319, Fax: (202) 501–7639.
Codex Committee on Food Additives and Contaminants (Host Government—The Netherlands)	
U.S. Delegate	Dr. Alan Rulis, Director, Office of Premarket Approval, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW, (HFS–200), Washington, DC 20204, Phone #: (202) 418–3100, Fax #: (202) 418–3131.
Alternate Delegate	Dr. Terry C. Troxell, Director, Division of Programs and Enforcement Policy, Center for Food Safety and Applied Nutrition, Food and Drug Administration 200 C Street, SW, (HFS–456), Washington, DC 20204, Phone #: (202) 205–5321, Fax #: (202) 205–4422.

LISTING OF U.S. DELEGATES AND ALTERNATE DELEGATES—Continued

[Worldwide General Subject Codex Committees]

Codex Committee on Pesticide Residues (Host Government—The Netherlands)	
U.S. Delegate	Mr. Fred Ives, Health Effects Division (7509C), Office of Pesticide Programs, U.S. Environmental Protection Agency 401 M Street, SW, Washington, DC 20460, Phone #: (703) 305–6378, Fax #: (703) 305–5147, E-mail: ives.fred@epamail.epa.gov.
Alternate Delegate	Dr. Richard Parry, Jr., Assistant Administrator, Cooperative Interactions, Agricultural Research Service, U.S. Department of Agriculture, Room 358–A, Jamie L. Whitten Federal Bldg., Washington, DC 20250–3700, Phone #: (202) 720–3973 Fax #: (202) 720–5427.
Codex Committee on Methods of Analysis and Sampling (Host Government—Hungary)	
U.S. Delegate	Dr. William Horwitz, Scientific Advisor, Center for Food Safety and Applied, Nutrition (HFS–500), Food and Drug Administration, Room 3832, 200 C Street, SW, Washington, DC 20204, Phone #: (202) 205–4346, Fax #: (202) 401–7740.
Alternate Delegate	Mr. William Franks, Director, Science and Technology Division, Agricultural Marketing Service, U.S. Department of Agriculture, Room 3507, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20250–3700, Phone #: (202) 720–5231, Fax #: (202) 720–6496.
Codex Committee on Food Import and Export Certification and Inspection Systems (Host Government—Australia)	
Delegate	VACANT.
Alternate Delegate	Mr. Mark Manis, Director, International Policy Development Division, Office of Policy, Program Development, and Evaluation, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 4434, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20250–3700, Phone #: (202) 720–6400, Fax #: (202) 720–7990.
Codex Committee on General Principles (Host Government—France)	
Delegate	Note: A member of the Steering Committee heads the delegation to meetings of the General Principles Committee.
Codex Committee on Food Labelling (Host Government—Canada)	
Delegate	Ms. Elizabeth J. Campbell, Acting Director, Office of Food Labeling, Center for Food Safety and Applied Nutrition (HFS–150), Food and Drug Administration, 200 C Street, SW, Room 1832, Washington, DC 20204, Phone #: (202) 205–4561, Fax #: (202) 205–4594.
Alternate Delegate	Dr. Robert Post, Director, Labeling & Compounds Review Division, Office of Policy, Program Development, and Evaluation, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 602, Cotton Annex, Washington, DC 20250–3700, Phone #: (202) 205–0279, Fax #: (202) 205–3625.
CODEX COMMITTEE ON FOOD HYGIENE (Host Government—United States)	
Acting Delegate	Mr. E. Spencer Garrett, Director, National Seafood Inspection Laboratory, National Marine Fisheries, 705 Convent Street, Pascagoulla, MS 39568–1207, Phone #: (601) 769–8964, Fax #: (601) 762–7144.
Alternate Delegate	VACANT.
Codex Committee on Nutrition and Foods for Special Dietary Uses (Host Government—Germany)	
Delegate	Dr. Elizabeth Yetley, Director, Office of Special Nutritionals, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW (HFS–450), Washington, DC 20204, Phone #: (202) 205–4168, Fax #: (202) 205–5295.
Alternate Delegate	Dr. Robert J. Moore, Senior Regulatory Scientist, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW (HFS–456), Washington, DC 20204, Phone #: (202) 205–4605, Fax #: (202) 260–8957.

LISTING OF U.S. DELEGATES AND ALTERNATE DELEGATES—Continued

[Worldwide General Subject Codex Committees]

Codex Committee on Fresh Fruits And Vegetables (Host Government—Mexico)	
Delegate	Mr. David L. Priester, International Standards Coordinator, Fresh Products Branch, Fruit and Vegetable Programs, Agricultural Marketing Service, U.S. Department of Agriculture, P.O. Box 96456, Room 2069, South Agriculture Building, Washington, DC 20090–6456, Phone #: (202) 720–2184, Fax #: (202) 720–0016.
Alternate Delegate	Mr. Larry B. Lace, Branch Chief, Fresh Products Branch, Fruits and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture, Room 2049, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20090–6456, Phone #: (202) 720–5870, Fax #: (202) 720–0393.
Codex Committee on Fish and Fishery Products (Host Government—Norway)	
Delegate	Mr. Philip C. Spiller, Director, Office of Seafood (HFS–400) VERB, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW, Washington, DC 20204, Phone #: (202) 418–3133, Fax #: (202) 418–3198.
Alternate Delegate	Mr. Samuel W. McKeen, Director, Office of Trade and Industry Services, National Oceanic and Atmospheric Administration, NMFS, 1335 East-West Highway, Room 6490, Silver Spring, MD 20910, Phone #: (301) 713–2351, Fax #: (301) 713–1081.
Codex Committee on Milk and Milk Products (Host Government—New Zealand)	
Delegate	Mr. Duane Spomer, Chief, Dairy Standardization Branch, U.S. Department of Agriculture, Agricultural Marketing Service, Room 2750, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20250–0230, Phone #: (202) 720–9382, Fax #: (202) 720–2643.
Alternate Delegate	Mr. John C. Mowbray, Division of Programs and Enforcement Policy, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW (HFS–306), Washington, DC 20204, Phone #: (202) 205–1731, Fax #: (202) 205–4422.
Codex Committee on Fats and Oils (Host Government—United Kingdom)	
Delegate	Mr. Charles W. Cooper, Director, International Activities Staff, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW, Room 5823 (HFS–585), Washington, DC 20204, Phone #: (202) 205–5042, Fax #: (202) 401–7739.
Alternate Delegate	Dr. Dwayne Buxton, National Program Leader for Oilseeds and Bioscience, Agricultural Research Service, Room 212, Building 005, BARC West, Beltsville, MD 20705, Phone #: (301) 504–5321, Fax #: (301) 504–5467.
Codex Committee on Processed Fruits and Vegetables (Host Government—United States)	
Delegate	Mr. Richard B. Boyd, Senior Marketing Specialist, Fruit and Vegetable Division, Agriculture Marketing Service, U.S. Department of Agriculture, Room 0717, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20090–0247, Phone #: (202) 720–5021, Fax #: (202) 690–1527.
Alternate Delegate	Mr. Charles W. Cooper, Director, International Activities Staff, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW, Room 5823 (HFS–585), Washington, DC 20204, Phone #: (202) 205–5042, Fax #: (202) 401–7739.
Codex Committee on Cocoa Products and Chocolate (Host Government—Switzerland)	
U.S. Delegate	Mr. Charles W. Cooper, Director, International Activities Staff, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW, Room 5823 (HFS–585), Washington, DC 20204, Phone #: (202) 205–5042, Fax #: (202) 401–7739.
Alternate Delegate	Dr. Michelle Smith, Food Technologist, Office of Food Labeling, Center for Food Safety and Applied Nutrition (HFS–158), 200 C Street, SW, Washington, DC 20204, Phone #: (202) 205–5099, Fax #: (202) 205–4594.

LISTING OF U.S. DELEGATES AND ALTERNATE DELEGATES—Continued

[Worldwide General Subject Codex Committees]

Codex Committee on Natural Mineral Waters
(Host Government—Switzerland)

Delegate	Dr. Terry C. Troxell, Director, Division of Programs and Enforcement Policy, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW (HFS–305), Washington, DC 20204, Phone #: (202) 205–5321, Fax #: (202) 205–4422.
Alternate Delegate	Ms. Shellee Davis, Division of Programs and Enforcement Policy, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW (HFS–306), Washington, DC 20204, Phone #: (202) 205–4681, Fax #: (202) 205–4422.

Codex Committee On Sugars
(Host Government—United Kingdom)

Delegate	VACANT.
Alternate Delegate	Dennis M. Keefe, Office of Premarket Approval Center for Food Safety and Applied Nutrition, Food and Drug Administration 200 C Street, SW (HFS–206), Washington, DC 20204, Phone #: (202) 418–3113, Fax #: (202) 418–3131.

Codex Committee on Cereals, Pulses And Legumes [1]
(Host Government—United States)

Delegate	Mr. Charles W. Cooper, Director, International Activities Staff, Center for Food Safety and Applied Nutrition, Room 5823 (HFS–585), Food and Drug Administration, 200 C Street, SW, Washington, DC 20204, Phone #: (202) 205–5042, Fax #: (202) 401–7739.
Alternate Delegate	Mr. David Shipman, Deputy Administrator, Grain Inspection Packers and Stockyards Administration, U.S. Department of Agriculture, Room 1092, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20250–3601, Phone #: (202) 720–9170, Fax #: (202) 720–1015.

Codex Committee on Soups and broths [1]
(Host Government—Switzerland)

Delegate	Mr. Charles Edwards, Director, Labeling, Products and Technology Standards Division, Office of Policy, Program Development and Evaluation, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 405, Cotton Annex, 300 C Street, SW, Washington, DC 20250–3700, Phone #: (202) 205–0675, Fax #: (202) 205–0080.
Alternate Delegate	Dr. Robert Post, Director, Labeling and Compounds Review Division, Office of Policy, Program Development and Evaluation, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 602, Cotton Annex, 300 C Street, SW, Washington, DC 20250–3700, Phone #: (202) 205–0279, Fax #: (202) 205–3625.

Codedx Committee on Vegetable proteins [1]
(Host Government—Canada)

U.S. Delegate	Dr. Wilda H. Martinez, Associate Deputy Administrator, Aqua Products and Human Nutrition, Sciences, U.S. Department of Agriculture, Agricultural Research Service, Room 107, B–005, Beltsville, MD 20705, Phone #: (301) 504–6275, Fax #: (301) 504–6699.
Alternate Delegate	Ms. Elizabeth J. Campbell, Acting Director, Office of Food Labeling, Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C Street, SW (HFS–150), Washington, DC 20204, Phone #: (202) 205–4561, Fax #: (202) 205–4594,

Codex Committee on Meat Hygiene [1]
(Host Government—New Zealand)

Delegate	Dr. John Prucha, Assistant Deputy Administrator, International and Domestic Policy, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 4866, South Agriculture Building, Washington, DC 20250–3700, Phone #: (202) 720–3473, Fax #: (202) 690–3856.
Alternate Delegate	Vacant.

Codex Committee on Processed Meat and Poultry Products [1]
(Host Government—Denmark)

U.S. Delegate	Mr. Daniel Engeljohn, Branch Chief, Standards Development Branch, Inspection Systems Development Division, Office of Policy, Program Development and Evaluation, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 405, Cotton Annex, 300 C Street, SW, Washington, DC 20250–3700, Phone #: (202) 205–0210, Fax #: (202) 205–0080.

LISTING OF U.S. DELEGATES AND ALTERNATE DELEGATES—Continued

[Worldwide General Subject Codex Committees]

Alternate Delegate	Mr. Charles Edwards, Director, Labeling, Products and Technology Standards Division, Office of Policy, Program Development and Evaluation, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 405, Cotton Annex, 300 C Street, SW, Washington, DC 20250–3700, Phone #: (202) 205–0675, Fax #: (202) 205–0080.
Joint U.N.E.C.E. Codex Alimentarius Groups of Experts Joint ECE/Codex Alimentarius Group of Experts on Standardization of Quick Frozen Foods [1]	
U.S. Delegate	Mr. Richard B. Boyd, Senior Marketing Specialist, Fruit and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture, Room 0717, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20090–0247, Phone #: (202) 720–5021, Fax #: (202) 690–1527.
1Alternate Delegate	Mr. Charles W. Cooper, Director, International Activities Staff, Center for Food Safety and Applied Nutrition, Room 5823 (HFS–585), Food and Drug Administration, 200 C Street, SW, Washington, DC 20204, Phone #: (202) 205–5042, Fax #: (202) 401–7739.
Joint ECE/Codex Alimentarius Group of Experts on Standardization of Fruit Juices [1]	
U.S. Delegate	Mr. Charles W. Cooper, Director, International Activities Staff, Center for Food Safety and Applied Nutrition, Room 5823 (HFS–585), Food and Drug Administration, 200 C Street, SW, Washington, DC 20204, Phone #: (202) 205–5042, Fax #: (202) 401–7739.
Alternate Delegate	Mr. Richard B. Boyd, Senior Marketing Specialist, Fruit and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture, Room 0717, Agriculture South Building, 1400 Independence Avenue, SW, Washington, DC 20090–0247, Phone #: (202) 720–5021, Fax #: (202) 690–1527.
Subsidiary Bodies of the Codex Alimentarius	
There are five regional coordinating committees: Coordinating Committee for Africa Coordinating Committee for Asia Coordinating Committee for Europe Coordinating Committee for Latin America and the Caribbean, and Coordinating Committee for North America and the South-West Pacific	
Contact	Mr. Patrick Clerkin, Director, U.S. Codex Office, Food Safety and Inspection Service, U.S. Department of Agriculture, Room 4861, South Agriculture Building, 1400 Independence Avenue, SW, Washington, DC 20250–3700, Phone #: (202) 205–7760, Fax #: (202) 720–3157.

[1] Adjourned sine die. The main tasks of these Committees are completed. However, the committees may be called to meet again if required.

Appendix 2—Timetable of Codex Sessions

(June 1997 Through June 1999)

1997:			
CX 702–44	Executive Committee of the Codex Alimentarius Commission (44th Session)	19–20 June	Geneva.
CX 701–22	CODEX ALIMENTARIUS COMMISSION (44th Session)	23–28 June	Geneva.
CX 731–7	Codex Committee on Fresh Fruits and Vegetables (7th Session)	8–12 September	Mexico City.
CX 712–30	Codex Committee on Food Hygiene (30th Session)	20–24 October	Washington, DC.
CX 727–11	Codex Regional Coordinating Committee for Asia (11th Session)	16–19 December	Chiang Rai.
1998:			
CX 733–6	Codex Committee on Food Import and Export Certification and Inspection (6th Session).	23–27 February	Melbourne.
CX 711–30	Codex Committee on Food Additives and Contaminants (30th Session)	9–13 March	The Hague.
CX 713–20	Codex Committee on Processed Fruits and Vegetables (19th Session)	16–20 March	Washington, DC.
CX 718–30	Codex Committee on Pesticide Residues (30th Session)	20–25 April	The Hague.
CX 719–21	Codex Regional Coordinating Committee for Europe (21st Session)	5–8 May	Madrid.
CX 703–3	Codex Committee on Milk and Milk Products (3rd Session)	18–22 May	Montevideo.
CX 714–26	Codex Committee on Food Labelling (26th Session)	25–29 May	Ottawa.
CX 702–45	Executive Committee of the Codex Alimentarius Commission (45th Session)	3–5 June	Rome.
CX 722–23	Codex Committee on Fish and Fishery Products (23rd Session)	8–12 June	Bergen.
CX 716–13	Codex Committee on General Principals (13th Session)	7–11 September	Paris.
CX 730–11	Codex Committee on Residues of Veterinary Drugs in Foods (11th Session)	14–17 September	Washington, DC.
CX 720–21	Codex Committee on Nutrition and Foods for Special Dietary Uses (21st Session).	21–25 September	Berlin.
CX 732–5	Codex Regional Coordinating Committee for North America and the South-West Pacific (5th Session).	6–9 October	TBA.

CX 712–31	Codex Committee on Food Hygiene (31st Session)	26–30 October	Washington, DC.
CX 707–13	Codex Regional Coordinating Committee for Africa (13th Session)	3–6 November	Harare.
CX 708–17	Codex Committee on Cocoa Products and Chocolate (17th Session)	16–18 November	Switzerland.
CX 719–6	Codex Committee on Natural Mineral Waters (6th Session)	19–21 November	Switzerland.
CX 715–22	Codex Committee on Methods of Analysis and Sampling (22nd Session)	23–27 November	Budapest.
CX 725–11	Codex Regional Coordinating Committee for Latin America and the Caribbean (11th Session).	8–11 December	Montevideo.
1999:			
CX 733–7	Codex Committee on Food Import and Export Certification and Inspection (7th Session).	22–26 February	TBA.
CX 731–8	Codex Committee on Fresh Fruits and Vegetables (8th Session)	1–5 March	Mexico City.
CX 709–16	Codex Committee on Fats and Oils (16th Session)	8–12 March	London.
CX 711–31	Codex Committee on Food Additives and Contaminants (31st Session)	22–26 March	The Hague.
CX 718–31	Codex Committee on Pesticide Residues (31st Session)	12–17 April	The Hague.
CX 714–27	Codex Committee on Food Labelling (27th Session)	19–23 April	Ottawa.
CX 716–13	Codex Committee on General Principles (14th Session)	26–30 April	Paris.
CX 702–46	Executive Committee of the Codex Alimentarius Commission (46th Session)	24–25 June	Rome.
CX 701–23	Codex Alimentarius Commission (23rd Session)	28 June–3 July	Rome.

Appendix 3—Definitions for the Purpose of Codex Alimentarius

Words and phrases have specific meanings when used by the Codex Alimentarius. For the purposes of Codex, the following definitions apply:

1. *Food* means any substance, whether processed, semi-processed or raw, which is intended for human consumption, and includes drink, chewing gum, and any substance which has been used in the manufacture, preparation or treatment of "food" but does not include cosmetics or tobacco or substances used only as drugs.

2. *Food hygiene* comprises conditions and measures necessary for the production, processing, storage and distribution of food designed to ensure a safe, sound, wholesome product fit for human consumption.

3. *Food additive* means any substance not normally consumed as a food by itself and not normally used as a typical ingredient of the food, whether or not it has nutritive value, the intentional addition of which to food for a technological (including organoleptic) purpose in the manufacture, processing, preparation, treatment, packing, packaging, transport, or holding of such food results, or may be reasonably expected to result, (directly or indirectly) in it or its by-products becoming a component of or otherwise affecting the characteristics of such foods. The food additive term does not include "contaminants" or substances added to food for maintaining or improving nutritional qualities.

4. *Contaminant* means any substance not intentionally added to food, which is present in such food as a result of the production (including operations carried out in crop husbandry, animal husbandry, and veterinary medicine), manufacture, processing, preparation, treatment, packing, packaging, transport or holding of such food or as a result of environmental contamination. The term does not include insect fragments, rodent hairs and other extraneous matters.

5. *Pesticide* means any substance intended for preventing, destroying, attracting, repelling, or controlling any pest including unwanted species of plants or animals during the production, storage, transport, distribution and processing of food, agricultural commodities, or animal feeds or which may be administered to animals for the control of ectoparasites. The term includes substances intended for use as a plant-growth regulator, defoliant, desiccant, fruit thinning agent, or sprouting inhibitor and substances applied to crops either before or after harvest to protect the commodity from deterioration during storage and transport. The term pesticides excludes fertilizers, plant and animal nutrients, food additives, and animal drugs.

6. *Pesticide residue* means any specified substance in food, agricultural commodities, or animal feed resulting from the use of a pesticide. The term includes any derivatives of a pesticide, such as conversion products, metabolites, reaction products, and impurities considered to be of toxological significance.

7. *Good Agricultural Practice in the Use of Pesticides (GAP)* includes the nationally authorized safe uses of pesticides under actual conditions necessary for effective and reliable pest control. It encompasses a range of levels of pesticide applications up to the highest authorized use, applied in a manner which leaves a residue which is the smallest amount practicable.

Authorized safe uses are determined at the national level and include nationally registered or recommended uses, which take into account public and occupational health and environmental safety considerations.

Actual conditions include any stage in the production, storage, transport, distribution and processing of food commodities and animal feed.

8. *Codex Maximum Limit for Pesticide Residues (MRLP)* is the maximum concentration of a pesticide residue (expressed as mg/kg), recommended by the Codex Alimentarius Commission to be legally permitted in or on food commodities and animal feeds. MRLPs are based on their toxological affects and on GAP data and foods derived from commodities that comply with the respective MRLPs are intended to be toxologically acceptable.

Codex MRLPs, which are primarily intended to apply in international trade, are derived from reviews conducted by the JMPR following:

(a) toxological assessment of the pesticide and its residue, and

(b) review of residue data from supervised trials and supervised uses including those reflecting national good agricultural practices. Data from supervised trials conducted at the highest nationally recommended, authorized, or registered uses are included in the review. In order to accommodate variations in national pest control requirements, Codex MRLPs take into account the higher levels shown to arise in such supervised trials, which are considered to represent effective pest control practices.

Consideration of the various dietary residue intake estimates and determinations both at the national and international level in comparison with the ADI, should indicate that foods complying with Codex MRLPs are safe for human consumption.

9. *Veterinary Drug* means any substance applied or administered to any food-producing animal, such as meat or milk-producing animals, poultry, fish or bees, whether used for therapeutic, prophylactic or diagnostic purposes or for modification of physiological functions or behavior.

10. *Residues of Veterinary Drugs* include the parent compounds and/or their metabolites in any edible portion of the animal product, and include residues of associated impurities of the veterinary drug concerned.

11. *Codex Maximum Limit for Residues of Veterinary Drugs (MRLVD)* is the maximum concentration of residue resulting from the use of a veterinary drug (expressed in mg/kg or µg/kg on a fresh weight basis) that is recommended by the Codex Alimentarius Commission to be legally permitted or recognized as acceptable in or on food.

An MRLVD is based on the type and amount of residue considered to be without any toxological hazard for human health as expressed by the Acceptable Daily Intake (ADI), or on the basis of a temporary ADI that utilizes an additional safety factor. An MRLVD also takes into account other relevant public health risks as well as food technological aspects.

When establishing an MRLVD, consideration is also given to residues that occur in food of plant origin and/or the environment. Furthermore, the MRLVD may be reduced to be consistent with good practices in the use of veterinary drugs and to the extent that practical and analytical methods are available.

12. *Good Practice in the Use of Veterinary Drugs* (GPVD)is the official recommended or authorized usage including withdrawal

periods approved by national authorities, of veterinary drugs under practicable conditions.

13. *Processing Aid* means any substance or material, not including apparatus or utensils, not consumed as a food ingredient by itself, intentionally used in the processing of raw materials, foods or its ingredients, to fulfill a certain technological purpose during treatment or processing and which may result in the non-intentional but unavoidable presence of residues or derivatives in the final product.

Appendix 4

Part 1—Uniform Procedure for the Elaboration of Codex, Standards and Related Texts

Steps 1, 2 and 3

(1) The Commission decides, taking into account the "Criteria for the Establishment of Work Priorities and for the Establishment of Subsidiary Bodies," to elaborate a Worldwide Codex Standard and also decides which subsidiary body or other body should undertake the work. A decision to elaborate a Worldwide Codex Standard may also be taken by subsidiary bodies of the Commission in accordance with the above-mentioned criteria, subject to subsequent approval by the Commission or its Executive Committee at the earliest possible opportunity. In the case of Codex Regional Standards, the Commission shall base its decision on the proposal of the majority of members belonging to a given region or group of countries submitted at a session of the Codex Alimentarius Commission.

(2) The Secretariat arranges for the preparation of a proposed draft standard. In the case of Maximum Limits for Residues of Pesticides or Veterinary Drugs, the Secretariat distributes the recommendations for maximum limits, when available from the Joint Meetings of the FAO Panel of Experts on Pesticide Residues in Food and the Environment and the WHO Panel of Experts on Pesticide Residues (JMPR), or the Joint FAO/WHO Expert Committee on Food Additives (JECFA). In the cases of milk and milk products or individual standards for cheeses, the Secretariat distributes the recommendations of the International Dairy Federation (IDF).

(3) The proposed draft standard is sent to members of the Commission and interested international organizations for comment on all aspects including possible implications of the proposed draft standard for their economic interests.

Step 4

The comments received are sent by the Secretariat to the subsidiary body or other body concerned which has the power to consider such comments and to amend the proposed draft standard.

Step 5 [1]

The proposed draft standard is submitted through the Secretariat to the Commission or to the Executive Committee with a view to its adoption as a draft standard. When making any decision at this step, the Commission or the Executive Committee will give due consideration to any comments that may be submitted by any of its members regarding the implications which the proposed draft standard or any provisions of the standard may have for their economic interests. In the case of Regional Standards, all members of the Commission may present their comments, take part in the debate and propose amendments, but only the majority of the Members of the region or group of countries concerned attending the session can decide to amend or adopt the draft. When making any decisions at this step, the members of the region or group of countries concerned will give due consideration to any comments that may be submitted by any of the members of the Commission regarding the implications which the proposed draft standard or any provisions of the proposed draft standard may have for their economic interests.

Step 6

The draft standard is sent by the Secretariat to all members and interested international organizations for comment on all aspects, including possible implications of the draft standard for their economic interests.

Step 7

The comments received are sent by the Secretariat to the subsidiary body or other body concerned, which has the power to consider such comments and amend the draft standard.

Step 8

The draft standard is submitted through the Secretariat to the Commission together with any written proposals received from members and interested international organizations for amendments at Step 8 with a view to its adoption as a Codex Standard. In the case of Regional standards, all members and interested international organizations may present their comments, take part in the debate and propose amendments but only the majority of members of the region or group of countries concerned attending the session can decide to amend and adopt the draft.

Appendix 4

Part 2—Uniform Accelerated Procedure for the Elaboration of Codex Standards and Related Texts

Steps 1, 2 and 3

(1) The Commission or the Executive Committee between Commission sessions, on the basis of a two-thirds majority of votes cast, taking into account the "Criteria for the Establishment of Work Priorities and for the Establishment of Subsidiary Bodies", shall identify those standards which shall be the subject of an accelerated elaboration process. The identification of such standards may also be made by subsidiary bodies of the Commission, on the basis of a two-thirds majority of votes cast, subject to confirmation at the earliest opportunity by the Commission or its Executive Committee by a two-thirds majority of votes cast.

(2) The Secretariat arranges for the preparation of a proposed draft standard. In the case of Maximum Limits for Residues of Pesticides or Veterinary Drugs, the Secretariat distributes the recommendations for maximum limits, when available from the Joint Meetings of the FAO Panel of Experts on Pesticide Residues in Food and the Environment and the WHO Panel of Experts on Pesticide Residues (JMPR), or the Joint FAO/WHO Expert Committee on Food Additives (JECFA). In the cases of milk and milk products or individual standards for cheeses, the Secretariat distributes the recommendations of the International Dairy Federation (IDF).

(3) The proposed draft standard is sent to Members of the Commission and interested international organizations for comment on all aspects including possible implications of the proposed draft standard for their economic interests. When standards are subject to an accelerated procedure, this fact shall be notified to the Members of the Commission and the interested international organizations.

Step 4

The comments received are sent by the Secretariat to the subsidiary body or other body concerned which has the power to consider such comments and to amend the proposed draft standard.

Step 5

In the case of standards identified as being subject to an accelerated elaboration procedure, the draft standard is submitted through the Secretariat to the Commission together with any written proposals received from Members and interested international organizations for amendments with a view to its adoption as a Codex standard. In taking any decision at this step, the Commission will give due consideration to any comments that may be submitted by any of its Members regarding the implications which the proposed draft standard or any provisions thereof may have for their economic interests.

Appendix 5—Nature of Codex Standards

Codex standards contain requirements for food aimed at ensuring for the consumer a sound, wholesome food product free from adulteration, and correctly labelled. A Codex standard for any food or foods should be drawn up in accordance with the Format for Codex Commodity Standards and contain, as appropriate, the criteria listed therein.

---

[1] Without prejudice to any decision that may be taken by the Commission at Step 5, the proposed draft standard may be sent by the Secretariat for government comment prior to its consideration at Step 5, when, in the opinion of the subsidiary body or other body concerned, the time between the relevant session of the Commission and the subsequent session of the subsidiary or other body concerned requires such actions in order to advance the work.

FORMAT FOR CODEX COMMODITY STANDARDS INCLUDING STANDARDS ELABORATED UNDER THE CODE OF PRINCIPLES CONCERNING MILK AND MILK PRODUCTS

Introduction

The format is also intended for use as a guide by the subsidiary bodies of the Codex Alimentarius Commission in presenting their standards, with the object of achieving, as far as possible, a uniform presentation of commodity standards. The format also indicates the statements which should be included in standards as appropriate under the relevant headings of the standard. The sections of the format required to be completed for a standard are only those provisions that are appropriate to an international standard for the food in question.

Name of the Standard
Scope
Description
Essential Composition and Quality Factors
Food Additives
Contaminants
Hygiene
Weights and Measures
Labelling
Methods of Analysis and Sampling

Format for Codex Standards

Name of the Standard

The name of the standard should be clear and as concise as possible. It should usually be the common name by which the food covered by the standard is known or, if more than one food is dealt with in the standard, by a generic name covering them all. If a fully informative title is inordinately long, a subtitle could be added.

Scope

This section should contain a clear, concise statement as to the food or foods to which the standard is applicable unless the name of the standard clearly and concisely identifies the food or foods. A generic standard covering more than one specific product should clearly identify the specific products to which the standard applies.

Description

This section should contain a definition of the product or products with an indication, where appropriate, of the raw materials from which the product or products are derived and any necessary references to processes of manufacture. The description may also include references to types and styles of product and to type of pack. The description may also include additional definitions when these additional definitions are required to clarify the meaning of the standard.

Essential Composition and Quality Factors

This section should contain all quantitative and other requirements as to composition including, where necessary, identity characteristics, provisions on packing media and requirements as to compulsory and optional ingredients. It should also include quality factors which are essential for the designation, definition, or composition of the product concerned. Such factors could include the quality of the raw material, with the object of protecting the health of the consumer, provisions on taste, odor, color, and texture which may be apprehended by the senses, and basic quality criteria for the finished products, with the object of preventing fraud. This section may refer to tolerances for defects, such as blemishes or imperfect material, but this information should be contained in appendix to the standard or in another advisory text.

Food Additives

This section should contain the names of the additives permitted and, where appropriate, the maximum amount permitted in the food. It should be prepared in accordance with guidance given on pages 93 to 96 of the Codex Procedural Manual and may take the following form:

"The following provisions in respect of food additives and their specifications as contained in section * * * of the Codex Alimentarius are subject to endorsement [have been endorsed] by the Codex Committee on Food Additives and Contaminants."

A tabulation should then follow, viz.:

"*Name of additive, maximum level* (in percentage or mg/kg)."

Contaminants

(a) *Pesticide Residues*: This section should include, by reference, any levels for pesticide residues that have been established by the Codex Committee on Pesticide Residues for the product concerned.

(b) *Other Contaminants*: In addition, this section should contain the names of other contaminants and where appropriate the maximum level permitted in the food, and the text to appear in the standard may take the following form:

"The following provisions in respect of contaminants, other than pesticide residues, are subject to endorsement [have been endorsed] by the Codex Committee on Food Additives and Contaminants."

A tabulation should then follow, viz.:

"*Name of contaminant, maximum level* (in percentage or mg/kg)."

Hygiene

Any specific mandatory hygiene provisions considered necessary should be included in this section. They should be prepared in accordance with the guidance given on pages 96 to 98 of the Codex Procedural Manual. Reference should also be made to applicable codes of hygienic practice. Any parts of such codes, including in particular any end-product specifications, should be set out in the standard, if it is considered necessary that they should be made mandatory. The following statement should also appear:

"The following provisions in respect of the food hygiene of the product are subject to endorsement [have been endorsed] by the Codex Committee on Food Hygiene."

Weights and Measures

This section should include all provisions, other than labelling provisions, relating to weights and measures, e.g. where appropriate, fill of container, weight, measure or count of units determined by an appropriate method of sampling and analysis. Weights and measures should be expressed in S.I. units. In the case of standards which include provisions for the sale of products in standardized amounts, e.g. multiples of 100 grams, S.I. units should be used, but this would not preclude additional statements in the standards of these standardized amounts in approximately similar amounts in other systems of weights and measures.

Labelling

This section should include all the labelling provisions contained in the standard and should be prepared in accordance with the guidance given on pages 91 to 93 of the Codex Procedural Manual. Provisions should be included by reference to the General Standard for the Labelling of Prepackaged Foods. The section may also contain provisions which are exemptions from, additions to, or which are necessary for the interpretation of the General Standard in respect of the product concerned provided that these can be justified fully. The following statement should also appear:

"The following provisions in respect of the labelling of this product are subject to endorsement [have been endorsed] by the Codex Committee on Food Labelling."

Methods of Analysis and Sampling

This section should include, either specifically or by reference, all methods of analysis and sampling considered necessary and should be prepared in accordance with the guidance given on pages 99 to 102 of the Codex Procedural Manual. If two or more methods have been proved to be equivalent by the Codex Committee on Methods of Analysis and Sampling, these could be regarded as alternative and included in this section either specifically or by reference. The following statement should also appear:

"The methods of analysis and sampling described hereunder are to be endorsed [have been endorsed] by the Codex Committee on Methods of Analysis and Sampling."

BILLING CODE 3410–DM–P

DEPARTMENT OF AGRICULTURE

Special Provision for Frozen Concentrated Orange Juice Under the North American Free Trade Agreement Implementation Act

AGENCY: Foreign Agricultural Service.

ACTION: Notice of determination of termination of existence of price conditions necessary for imposition of temporary duty on frozen concentrated orange juice from Mexico.

SUMMARY: Pursuant to Section 309(a) of the North American Free Trade Agreement Implementation Act of 1993 ("NAFTA Implementation Act"), this is a notification that for 5 consecutive business days the daily price for frozen concentrated orange juice has exceeded the trigger price.

FOR FURTHER INFORMATION CONTACT: Joseph Somers, Horticultural and Tropical Products Division, Foreign Agricultural Service, U.S. Department of Agriculture, Washington, DC 20250–1000 or telephone at (202) 720–3423.

SUPPLEMENTARY INFORMATION: The NAFTA Implementation Act authorizes the imposition of a temporary duty (snapback) for Mexican frozen concentrated orange juice when certain conditions exist. Mexican articles falling under subheading 2009.11.00 of the Harmonized Tariff Schedule of the United States (HTS) are subject to the snapback duty provision.

Under Section 309(a) of the NAFTA Implementation Act, certain price conditions must exist before the United States can apply a snapback duty on imports of Mexican frozen concentrated orange juice. In addition, such imports must exceed specified amounts before the snapback duty can be applied. The price conditions exist when for each period of 5 consecutive business days the daily price for frozen concentrated orange juice is less than the trigger price.

For the purpose of this provision, the term "daily price" means the daily closing price of the New York Cotton Exchange, or any successor as determined by the Secretary of Agriculture (the "Exchange"), for the closest month in which contracts for frozen concentrated orange juice are being traded on the Exchange. The term "business day" means a day in which contracts for frozen concentrated orange juice are being traded on the Exchange.

The term "trigger price" means the average daily closing price of the Exchange for the corresponding month during the previous 5-year period, excluding the year with the highest average price for the corresponding month and the year with the lowest average price for the corresponding month.

Price conditions no longer exist when the Secretary determines that for a period of 5 consecutive business days the daily price for frozen concentrated orange juice has exceeded the trigger price. Whenever the price conditions are determined to exist or to cease to exist the Secretary is required to immediately notify the Commissioner of Customs of such determination. Whenever the determination is that the price conditions exist and the quantity of Mexican articles of frozen concentrated orange juice entered exceeds (1) 264,978,000 liters (single strength equivalent) in any of calendar years 1994 through 2002, or (2) 340,560,000 liters (single strength equivalent) in any calendar years 2003 through 2007, the rate of duty on Mexican articles of frozen concentrated orange juice that are entered after the date on which the applicable quantity limitation is reached and before the date of publication in the **Federal Register** of the determination that the price conditions have ceased to exist shall be the lower of—(1) the column 1—General rate of duty in effect for such articles on July 1, 1991; or (2) the column 1—General rate of duty in effect on that day. For the purpose of this provision, the term "entered" means entered or withdrawn from warehouse for consumption in the customs territory of the United States.

In accordance with Section 309(a) of the NAFTA Implementation Act, it has been determined that for the period May 5–11, 1998, the daily price for frozen concentrated orange juice has exceeded the trigger price.

Issued at Washington, D.C. the 19th day of May 1998.

Timothy J. Galvin,

Acting Administrator, Foreign Agricultural Service.

DEPARTMENT OF AGRICULTURE

Rural Housing Service

Notice of Request for Extension of a Currently Approved Information Collection

AGENCY: Rural Housing Service (RHS), USDA.

ACTION: Proposed collection: comments request.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Rural Housing Service's intention to request an extension for a currently approved information collection in support of the program for Farm Labor Housing Loan and Grant Policies, Procedures and Authorizations for Multi-Family Housing.

DATES: Comments on this notice must be received by July 27, 1998 to be assured of consideration.

FOR FURTHER INFORMATION CONTACT: Mary Fox, Senior Loan Specialist, Multi-Family Housing Processing Division, RHS, United States Department of Agriculture, Stop 0782, 1400 Independence Ave., SW, Washington, DC 20250–0782, Telephone (202) 720–1606.

SUPPLEMENTARY INFORMATION:

Title: Farm Labor Housing Loan and Grant Policies, Procedures and Authorizations.

OMB Number: 0575–0045.

Expiration Date of Approval: July 31, 1998.

Type of Request: Extension of a currently approved information collection.

Abstract: The Rural Housing Service (RHS) is authorized under Section 514, 515, 516, and 521 of Title V of the Housing Act of 1949, as amended, to make initial and subsequent loans and grants to provide housing and related facilities for domestic farm labor. A loan only can be made to a farmowner, family farm partnership, family farm corporation, or an association of farmers whose farming operations demonstrate a need for farm labor housing and that is engaged in agricultural or aquacultural farming operations and which will own the housing and operate it on a nonprofit basis. A loan and/or grant can be made to public, private nonprofit organizations for domestic farm labor in areas where need exists. In some cases, rental assistance may be provided to eligible tenants.

RHS has the responsibility of assuring the public that funds for LH projects are financed to build, buy, improve or repair farm labor housing and related facilities. The facilities financed are to have decent, safe and sanitary living conditions and are managed and operated as mandated by Congress. 7 CFR part 1944, subpart D was issued to set forth the policies and procedures and delegation of authority for making initial and subsequent insured loans under Section 514 and grants under Section 516 to provide housing and related facilities for domestic farm labor and to assure that applicable laws and authorities are carried out as intended.

With the provisions of this regulation, RHS will be able to provide the financial assistance and necessary guidance to applicants in the development of their project proposals. It provides the Agency the capacity to meaningfully evaluate the feasibility of the proposed projects. RHS will be able to assure Congress and the general public that all LH projects will be operated for purposes that are intended, and for the benefit of those they are mandated to serve.

The required information is collected on a project-by-project basis and is done so in accordance with the amended Housing Act of 1949, so that RHS can provide guidance and be assured of compliance with terms and conditions of loan, grant, and or subsidy agreements.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 11 hours per response.

Respondents: Farms, Not-for-profit Institutions, and State, Local or Tribal Government.

Estimated Number of Respondents: 100.

Estimated Number of Responses per Respondent: 7.5.

Estimated Total Annual Burden on Respondents: 8,610 hours.

Copies of this information collection can be obtained from Michele Brooks, Regulations and Paperwork Management Branch, Support Services Division, at (202) 692–0036.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of RHS, including whether the information will have practical utility; (b) the accuracy of RHS's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments may be sent to Michele Brooks, Regulations and Paperwork Management Branch, U.S. Department of Agriculture, Rural Development, STOP 0743, 1400 Independence Ave. SW, Washington, DC 20250. All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Dated: May 14, 1998.

Jan E. Shadburn,

Administrator, Rural Housing Service.

BILLING CODE 3410–XV–U

DEPARTMENT OF COMMERCE

Economics and Statistics Administration

Secretary's 2000 Census Advisory Committee

AGENCY: Economics and Statistics Administration, Department of Commerce.

ACTION: Notice of public meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act (P.L. 92–463, as amended by P.L. 94–409, P.L. 96–523, and P.L. 97–375), we are giving notice of a meeting of the Commerce Secretary's 2000 Census Advisory Committee. The meeting will convene on June 11–12, 1998, in the Francis Amasa Walker Conference Center, Bureau of the Census, 4700 Silver Hill Road, Suitland, MD 20746. The Committee will continue to review and discuss Dress Rehearsal operations and procedures as well as Census 2000,including plans for data products. The Committee also will discuss the results of the June 3 Joint Advisory Committee Meeting on the tabulation of racial data from Census 2000.

DATES: On Thursday, June 11, 1998, the meeting will begin at 8:45 a.m. and adjourn for the day at 4:30 p.m. On Friday, June 12, 1998, the meeting will begin at 8:45 a.m. and adjourn at 4:15 p.m.

ADDRESSES: The meeting will take place in the Francis Amasa Walker Conference Center, Bureau of the Census, 4700 Silver Hill Road, Suitland, MD 20746.

FOR FURTHER INFORMATION CONTACT: Anyone wishing additional information about this meeting, or who wishes to submit written statements or questions, may contact Maxine Anderson-Brown, Committee Liaison Officer, Department of Commerce, Bureau of the Census, Room 3039, Federal Building 3, Washington, DC 20233, telephone 301–457–2308, TDD 301–457–2540.

SUPPLEMENTARY INFORMATION: The Committee is composed of a Chair, Vice-Chair, and up to thirty-five member organizations, all appointed by the Secretary of Commerce. The Committee will consider the goals of Census 2000 and user needs for information provided by that census. The Committee will provide an outside user community perspective about how operational planning and implementation methods proposed for Census 2000 will realize those goals and satisfy those needs. The Committee shall consider all aspects of the conduct of the Census 2000 of Population and Housing and shall make recommendations for improving that census.

A brief period will be set aside on Friday afternoon for public comment and questions. However, individuals with extensive questions or statements for the record must submit them in writing to the Commerce Department official named above at least three working days prior to the meeting.

The meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Kathy Maney at 301–457–2308, TDD 301–457–2540.

Dated: May 19, 1998.

Robert J. Shapiro,

Under Secretary for Economic Affairs, Economics and Statistics Administration.

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Malcolm Baldrige National Quality Award's Board of Overseers

AGENCY: National Institute of Standards and Technology, Commerce.

ACTION: Notice of public meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act, 5 U.S.C. app. 2, notice is hereby given that there will be a meeting of the Board of Overseers of the Malcolm Baldrige National Quality Award on Monday, June 8, 1998, from 8:30 a.m. to 4 p.m. The Board of Overseers consists of ten members prominent in the field of quality management and appointed by the Secretary of Commerce, assembled to advise the Secretary of Commerce on the conduct of the Baldrige Award. The purpose of the meeting on June 8, 1998, will be for the Board of Overseers to discuss and review information received from the National Institute of Standards and Technology with the members of the Judges Panel of the Malcolm Baldrige National Quality Award. The Agenda will include reviewing the roles and responsibilities of Judges and Overseers; Award marketing efforts; discussion of proposed program changes to include two award/category cap; health care and education awards including fund raising and 1999 criteria; and 1998 Award criteria changes and future criteria evolution.

DATE: The meeting will convene June 8, 1998 at 8:30 a.m., and adjourn at 4 p.m. on June 8, 1998.

ADDRESS: The meeting will be held at the National Institute of Standards and Technology, Administration Building Conference Room (seating capacity 36, includes 24 participants), Gaithersburg, Maryland 20899.

FOR FURTHER INFORMATION CONTACT: Dr. Harry Hertz, Director, National Quality Program, National Institute of Standards and Technology, Gaithersburg, Maryland 20899, telephone number (301) 975–2361.

Dated: May 19, 1998.

Robert E. Hebner,

Acting Deputy Director.

BILLING CODE 3510–30–M

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Judges Panel of the Malcolm Baldrige National Quality Award

AGENCY: National Institute of Standards and Technology, Department of Commerce.

ACTION: Notice of closed meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act, 5 U.S.C. app. 2, notice is hereby given that there will be a closed meeting of the Judges Panel of the Malcolm Baldrige National Quality Award on Tuesday, June 9, 1998. The Judges Panel is composed of nine members prominent in the field of quality management and appointed by the Secretary of Commerce. The purpose of this meeting is to review final judging interaction, survey of applicants and judging process improvement discussions, and to begin the review process of the 1998 Award applicants to be recommended as Award winners. The applications under review contain trade secrets and proprietary commercial information submitted to the Government in confidence.

DATES: The meeting will convene June 9, 1998, at 8:30 a.m. and adjourn at 3:00 p.m. on June 9, 1998. The entire meeting will be closed.

ADDRESSES: The meeting will be held at the National Institute of Standards and Technology, Administration Building Conference Room, Gaithersburg, Maryland 20899.

FOR FURTHER INFORMATION CONTACT: Dr. Harry Hertz, Director, National Quality Program, National Institute of Standards and Technology, Gaithersburg, Maryland 20899, telephone number (301) 975–2361.

SUPPLEMENTARY INFORMATION: The Assistant Secretary for Administration, with the concurrence of the General Counsel, formally determined on May 19, 1998, that the meeting of the Judges Panel will be closed pursuant to Section 10(d) of the Federal Advisory Committee Act, 5 U.S.C. app. 2, as amended by Section 5(c) of the Government in the Sunshine Act, Pub. L. 94–409. The meeting, which involves examination of records and discussion of Award applicant data, may be closed to the public in accordance with Section 552b(c)(4) of Title 5, United States Code, since the meeting is likely to disclose trade secrets and commercial or financial information obtained from a person and privileged or confidential.

Dated: May 19, 1998.

Robert E. Hebner,

Acting Deputy Director.

RIN 0648–ZA38

Halibut and Sablefish Fisheries Quota-Share Loan Program; Final Program Notice and Announcement of Availability of Federal Assistance

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration, Commerce.

ACTION: Announcement of availability of Federal assistance.

SUMMARY: NMFS announces the availability of long-term loans for financing or refinancing the purchase cost of quota share (QS) in the halibut and sablefish fisheries off Alaska. Only entry-level fishermen or fishermen who fish from small vessels are eligible for these loans.

DATES: NMFS will accept applications only during an application open season. The application open season will begin on June 10, 1998 and will end on June 24, 1998. All loan funds available for FY 1998 must be committed before September 30, 1998.

ADDRESSES: Applicants should send loan applications to the Northwest Financial Services Branch, National Marine Fisheries Service, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 7600 Sand Point Way, NE (BIN C15700), Building No. 1, Seattle, WA 98115.

FOR FURTHER INFORMATION CONTACT: Kimberly Berryhill at (206) 526–6122 (voice) or (206) 526–6306 (facsimile).

SUPPLEMENTARY INFORMATION:

I. Introduction

A. Background

The Sustainable Fisheries Act (SFA) (P.L. 104–297) amended section 1104A(a)(7) of Title XI of the Merchant Marine Act (46 U.S.C. App. 1274) and section 303(d)(4) of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) (16 U.S.C. 1801 *et seq.*) to authorize financing and refinancing the cost of entry-level fishermen and fishermen who fish from small boats purchasing individual fishing quota (IFQ).

Although the SFA indicates that loans are available for purchasing IFQ, the basic fishing permit for the halibut and sablefish fisheries is termed "QS" rather than "IFQ." In these fisheries, IFQ is an annual allocation of the pounds of fish that each QS holder may harvest. Consequently, NMFS interprets the SFA to allow loans for the cost of purchasing basic fishing permits rather than annual harvest allocations under those permits. These loans will finance the purchase of halibut and sablefish QS rather than IFQ.

Title XI of the Merchant Marine Act, 1936, is the credit authority under which NMFS will make these loans. This authority is subject to the Federal Credit Reform Act of 1990 (FRCA) (2 U.S.C. 661). This Act requires estimated net loan losses (FCRA cost) to be appropriated in cash at the time Congress authorizes annual loan ceilings.

FY 1998 appropriations for the U.S. Department of Commerce included a $100,000 advance to fund the FCRA cost of this loan program during its first year (from October 1, 1997, through September 30, 1998).

The amount of annual FCRA credit authority available is a ratio of the FCRA cost rate and the FCRA cost appropriated. NMFS preliminarily estimates the FCRA cost rate of these loans to be 2 percent. Consequently, the $100,000 appropriated for this loan program's FY 1998 FCRA cost will preliminarily support a $5,000,000 credit authority ($5,000,000 times 0.2 equals $100,000).

The FY 1998 credit authority may not support more than 20 to 35 loans. FY 1998 loan demand will most likely exceed supply. NMFS will, to the maximum extent possible, process loan applications (up to the maximum FY 1998 credit authority available) in the order in which applicants submit them during an application open season. For the specific dates upon which the application open season begins and ends, see the DATES heading at the beginning of this document. All applications must be submitted by first-class U.S. mail. No other form of application submission is acceptable. To reduce the open-season paperwork burden, applicants need complete only a small portion (Section A) of the

application form at the time of open season application.

These loans will, until further notice, continue to be available in any year for which adequate FCRA credit authority exists.

SFA amendments to section 303(d)(4) and section 304(d)(2) of the Magnuson-Stevens Act authorize the FCRA cost of IFQ lending to be funded by up to 25 percent of the IFQ and Community Development Quota (CDQ) fee revenue from the IFQ fishery involved. Presumably, a portion of halibut and sablefish fees from this revenue source will, in the future, fund the annual FCRA cost of these loans for purchasing halibut and sablefish QS.

B. Catalog of Federal Domestic Assistance

The program of which halibut and sablefish QS loans are a part is listed in the "Catalog of Federal Domestic Assistance" under number 11.415, Fisheries Obligation Guarantee Program.

II. Definitions

Applicant means either an entry-level fisherman who applies for a loan or a fisherman who fishes from a small vessel who applies for a loan.

Application means an application for a loan from an applicant.

Application form means NOAA Form 88–1 (bearing OMB approval No. 0648–0082 and expiring on September 30, 1998).

Base year means the year in which an applicant applies for a loan.

Entry-level fisherman means a fisherman who:

(1) Does not own any QS;

(2) Applies for a loan to purchase QS that involves an IFQ total not greater than 8,000 lb (3,628.7 kg) during the base year; and

(3) Will be a crew member aboard the vessel that harvests the IFQ for the loan QS.

Fisherman who fishes from a small vessel means a fisherman:

(1) Who applies for a loan to purchase halibut or sablefish QS previously assigned under § 676.20(c)(2), sablefish QS previously assigned under § 676.20(c)(3), halibut QS previously assigned under § 676.20(c)(4), and/or halibut QS previously assigned under § 676.20(c)(5);

(2) Whose aggregate ownership of QS (including the loan QS) will involve an IFQ not greater than 50,000 lb (22,679.6 kg) during the base year;

(3) Who will be a crew member aboard the vessel that harvests the IFQ for the aggregate QS such fisherman owns (including the loan QS) at the time the loan QS transfers to such fisherman;

(4) Who has, for at least a total of 150 days at any point in the past, been a crewman aboard any vessel in any U.S. commercial fishery; and

(5) Who does not own, in whole or in part, any vessel of the type involved in the previous assignment of halibut or sablefish QS under § 676.20(c)(1) or (c)(2).

Halibut/sablefish means halibut, sablefish, or halibut and sablefish from the QS fishery off Alaska for halibut and/or the QS fishery off Alaska for sablefish.

IFQ means the annual catch limit of halibut/sablefish that may be harvested by a person who is lawfully allocated a harvest privilege for a specific portion of the total allowable catch of halibut/sablefish.

Loan means a program loan for financing or refinancing the cost of purchasing halibut/sablefish QS.

Loan QS means the QS purchased with the proceeds of a loan.

NMFS means the National Marine Fisheries Service, National Oceanic and Atmospheric Administration, United States Department of Commerce.

Notice date means the date this document is published in the Federal Register.

NWFSB means the Northwest Financial Services Branch (F/SF23), National Marine Fisheries Service, National Oceanic and Atmospheric Administration, U.S. Department of Commerce, 7600 Sand Point Way, NE (BIN C15700), Building No. 1, Seattle, WA 98115.

Open season means the period beginning and ending on the dates specified under the DATES heading at the beginning of this document.

Program means the halibut/sablefish loan program described in this document.

QS means a halibut/sablefish permit, the face amount of which is used as a basis for the annual calculation of a person's IFQ.

RAM Program means the Restricted Access Management activities in the Alaska Regional Office of the National Marine Fisheries Service.

§ 676.20(c) means § 676.20(c) of Title 50, Code of Federal Regulations (as revised as of October 1, 1995).

Title XI means Title XI of the Merchant Marine Act, 1936 (the statutory credit authority under which lending the purchase cost of IFQ is but one of the eligible fisheries loan purposes).

III. Eligible Applicants

Any entry-level fisherman or fisherman who fishes from a small vessel and is a U.S. citizen is eligible to apply for a loan.

IV. Loan Purpose

(1) *General.* The loan purpose is financing or refinancing the cost of purchasing QS.

(2) *Fishermen who fish from small vessels.* The loan QS must be: halibut or sablefish QS previously assigned under § 676.20(c)(2), sablefish QS previously assigned under § 676.20(c)(3), halibut QS previously assigned under § 676.20(c)(4), and/or halibut QS previously assigned under § 676.20(c)(5). Applicants must be eligible to receive (hold) the loan QS. The amount of QS any applicant will own at the time the loan QS transfers to the applicant may not have involved an aggregate IFQ greater than 50,000 lb (22,679.6 kg) during the base year. The IFQ for such QS during any year other than the base year is irrelevant.

If, for example, an applicant who owns QS that involved a 20,000–lb (9,071.8–kg) IFQ during the base year wants a loan to finance the purchase of additional QS, the loan QS may not have involved more than an additional 30,000–lb (13,607.8–kg) IFQ during the base year.

Applicants may not own, in whole or in part, any vessel of the type involved in the previous assignment of halibut or sablefish QS under § 676.20(c)(1) or (c)(2).

Although CFR part 676 is not the CFR part that presently regulates halibut/sablefish, § 676.20(c) is the section that the Sustainable Fisheries Act requires NMFS to use for the matters involved in this notice. NWFSB can provide applicants copies of § 676.20(c) and explain how this section controls the loan QS.

Each applicant must be a crewman aboard the vessel that will harvest the total IFQ for all QS that the applicant owns at the time the loan QS transfers to applicant.

(3) *Entry-level fishermen.* The loan QS may be of any type for which the RAM Program will issue a Quota Share Certificate in the purchaser's name. The loan QS may not have involved an IFQ greater than 8,000 lb (3,628.7 kg) during the base year. The IFQ for such QS during any year other than the base year is irrelevant.

(4) *Applicants' indirect QS or vessel ownership interests.* NMFS will count against the poundage ceilings in paragraphs IV(2) and (3) of this notice whatever portion of QS interests (and the base-year IFQ for them) applicants indirectly own by virtue of owning corporations, partnerships, or other forms of business organizations that directly own QS. For example, if an

applicant owns one-third of the stock in a corporation that owns QS with a base-year IFQ of 30,000–lb (13,607.8–kg), NMFS will, for the purposes of the ceilings, regard the applicant as also owning QS with a base-year IFQ of 10,000 lb (4,535.9 kg).

NMFS will also, for the purpose of the vessel ownership restriction in paragraph IV(2) of this notice, consider that applicants indirectly have an ownership interest in vessels which are owned by corporations, partnerships, or other forms of business organization in which applicants own any corporate shares, partnership interests, or other interests. For example, if an applicant owns one share of stock in a corporation that owns a vessel of the type involved in the previous assignment of halibut or sablefish QS under § 676.20(c)(1) or (c)(2), NMFS will consider the applicant to partly own such a vessel. Such an applicant will not be eligible for a loan.

(5) *Refinancing.* Applicants may refinance with the proceeds of loans any existing debts which previously financed the purchase cost of QS, provided that the QS purchases would themselves have been eligible for program financing if the program had been available at the time of QS purchase. In the instance of refinancing only, NMFS will consider loans in amounts up to 80 percent of QS' current market value (rather than original purchase cost), provided that loans will, in no event, be for an amount greater than the amount required to fully repay the QS debt being refinanced.

V. Loan Terms and Conditions

(1) *Down payment.* Applicants financing (rather than refinancing) QS purchase cost must fund 20 percent of the purchase cost from funds other than loan proceeds. If the current market value of QS whose purchase cost is being refinanced (rather than financed) is higher than its original purchase price, applicants may need less, or no, down payment.

(2) *Loan amount.* The amount of a loan that finances (rather than refinances) QS purchase cost may not exceed 80 percent of QS purchase cost. Loan amounts may, however, exceed 80 percent if the current market value of QS whose purchase cost is being refinanced (rather than financed) is higher than its original purchase price.

(3) *Interest rate.* Each loan's annual interest rate will be 2 percent higher than the U.S. Treasury's cost of borrowing public funds of an equivalent maturity. For example, the annual loan interest rate would, on February 20, 1998, have been approximately 7.9 percent for a 20-year maturity. Interest is simple interest.

(4) *Maturity.* Loan maturity may not exceed 25 years, but may be shorter depending on credit and other considerations.

(5) *Repayment.* Repayment will generally be by equal quarterly installments of principal and interest.

(6) *Security.* The loan QS will, in every case, secure the loan. NMFS will require all parties with significant ownership interests in corporate or partnership applicants to personally guarantee loan repayment. Some credit risks may require additional security.

VI. Application

(1) *Open Season.* NMFS will accept for processing only those applications submitted during the open season. NMFS will not accept applications submitted before or after the open season.

(2) *Method of submission.* NMFS will accept only those applications submitted by first-class U.S. mail. NMFS will not accept applications submitted by any other method (including, but not limited to: any form of U.S. mail other than first class mail, any other delivery service, personal delivery, delivery by facsimile, etc.).

(3) *Submission address.* NMFS will accept only those applications addressed directly to NWFSB at the mailing address listed both under the ADDRESSES heading of this document and in this document's definition of the term "NWFSB".

(4) *Date of submission.* The date of each application's submission will be the date on which the U.S. Postal Service postmarks the envelope containing the application. The sole exception will be applications that NWFSB first receives later than five business days after the last day of the open season (even though applicants might have submitted such applications before the end of the open season). Applications subject to this exception will have the same submission date as the last day of the open season.

(5) *Processing Priority.* All applications submitted on each day of the open season will have a processing priority higher than all applications submitted on every later day in the open season. Relative processing priority among applications submitted on the same date will be decided by random selection from among all applications submitted on that date. The sole exception will be applications that NWFSB first receives later than five business days after the last day of the open season (even though applicants might have submitted such applications before the end of the open season). Applications subject to this exception will have the lowest priority of all applications received on the last day of the open season, and the date and time at which NWFSB actually first receives them will determine their relative priority.

Processing priority does not mean that applications will be approved. It merely means that NWFSB will process applications in the order of their assigned processing priority.

(6) *Application form.* All applicants must use the application form. NMFS will not accept any other form of application. Open-season applicants need complete only Section A of the application form. After the open season, NWFSB will contact each applicant whose processing priority makes the applicant's application eligible for processing as a

FY 1998 loan and begin a standard due-diligence credit investigation. The application form is available from NWFSB. NWFSB will send only Section A of the application form to parties requesting the application form for the purpose of submitting an open-season application. NWFSB can, upon request, do this by facsimile. On the notice date, NWFSB will immediately do so for all parties who have previously expressed an interest in applying for a loan.

(7) *Notification of processing priority.* NWFSB will, within 7 working days after the last day of the open season, enumerate the processing priority of all open-season applications that NWFSB received. NWFSB will immediately thereafter notify each open-season applicant of its processing priority and the relative likelihood of its application being processed as a FY 1998 loan. NWFSB will then accomplish a due-diligence credit investigation for each application whose processing priority (and other factors) makes it eligible for processing as a FY 1998 loan.

(8) *Application fee.* The application fee is 0.5 percent of the loan amount for which a successful open-season applicant applies. Application fees will be due only for those open-season applications that NWFSB actually accepts for processing as FY 1998 loans. No application fee is due for any open-season application that NWFSB does not accept for processing as a FY 1998 loan. Although the application fee is due at the time of application, it is not payable until NMFS requests its payment. NMFS will not request application fee payment until after it has accepted an application for processing as a FY 1998 loan and an application review and/or interview with the applicant and other necessary

parties prospectively indicates the applicant's compliance with basic loan eligibility and credit criteria. Half the application fee is fully earned at the time NMFS requests its payment. NMFS will not return this half regardless of subsequent application disposition. The other half is fully earned only when NMFS issues an approval in principal letter approving an application. Once it has issued an approval in principle letter, NMFS will not return the second half of the application fee.

(9) *Transfer eligibility certificate.* Transfer eligibility certificates certify that parties are eligible to receive (hold) QS. The RAM Program issues these certificates to prospective QS purchasers. If, at the time of application, an applicant does not already have a transfer eligibility certificate, NWFSB will advise the applicant how to apply for one. If applicants cannot get transfer eligibility certificates for the QS they prospectively intend to purchase, pursuing the loan application process further is pointless. Applicants who do not obtain appropriate transfer eligibility certificates promptly enough may lose their processing priority to applicants who do.

VII. Loan Processing

NMFS will, to the maximum extent possible, process loan applications in the order of their submission during the open season. If, however, applicants cannot, in NWFSB's discretion, reasonably promptly comply with application processing requirements, they may lose their processing priority to applicants who can. NWFSB will, from time to time, specify compliance time requirements that are responsive to the administrative need to have all credit authority fully obligated before the end of FY 1998. Applicants must comply or lose their application priority to other applicants who will.

NWFSB will conduct a standard due-diligence credit investigation. This should be a relatively simple and quick process. Once NMFS has made a due-diligence credit decision, loan approval requires certain internal clearances that will add some time to processing, but NMFS will try to accelerate processing as much as possible. Upon formal loan approval, NMFS will issue an approval in principle letter for the applicant's acceptance.

VIII. Loan Closing

NMFS will establish all loan terms and conditions, prepare all closing documents, close all loans, and record all security interests. NMFS should generally have no need for applicants to hire attorneys for any loan purpose, but applicants may do so if they wish. Generally, the only closing costs to applicants will be the cost of doing title/lien searches on, or recording security interests in, loan QS. NWFSB may need to do title/lien searches, and record security interests, in several different jurisdictions.

IX. Title XI and 50 CFR Part 253

The general rules implementing Title XI are 50 CFR part 253, subpart B. Loans will be subject to so much of the other provisions of Title XI and of its implementing rules as can reasonably be applied to loans involving the purchase under this notice of QS (rather than the purchase of fishing vessels, fisheries shoreside facilities, or aquacultural facilities).

X. Administrative Requirements

(1) In accordance with the provisions of the Debt Collection Improvement Act of 1996, a person may not obtain any Federal financial assistance in the form of a loan (other than a disaster loan) or loan guarantee if the person has an outstanding debt (other than a debt under the Internal Revenue Code of 1986) with any Federal agency which is in a delinquent status, as determined under standards prescribed by the Secretary of the Treasury.

(2) Applicants are subject to a name check review process. Name checks are intended to reveal if any key individuals associated with the applicant have been convicted of or are presently facing criminal charges such as fraud, theft, perjury, or other matters which significantly reflect on the applicant's management honesty or financial integrity.

(3) A false statement on an application is grounds for denial or termination of funds and grounds for possible punishment by a fine or imprisonment as provided in 18 U.S.C. 1001.

(4) Applicants must submit a completed Form CD–511, "Certifications Regarding Debarment, Suspension and Other Responsibility Matters; Drug-Free Workplace Requirements and Lobbying," and the following explanations are hereby provided:

i. *Nonprocurement Debarment and Suspension.* Prospective participants (as defined at 15 CFR Part 26, Section 105) are subject to 15 CFR Part 26, "Nonprocurement Debarment and Suspension" and the related section of the certification form prescribed above applies;

ii. *Anti-Lobbying.* Persons (as defined at 15 CFR Part 28, Section 105) are subject to the lobbying provisions of 31 U.S.C. 1352, "Limitation on use of appropriated funds to influence certain Federal contracting and financial transactions," and the lobbying section of the certification form prescribed above applies to applications/bids for grants, cooperative agreements, and contracts for more than $100,000, and loans and loan guarantees for more than $150,000.

Classification

Neither the Administrative Procedure Act nor any other law requires prior notice and opportunity for public comment about this notice (which concerns loans). Consequently, the Regulatory Flexibility Act does not require a regulatory flexibility analysis.

This notice is not significant for purposes of E.O. 12866.

This document contains a collection-of-information requirement subject to the Paperwork Reduction Act. OMB has, under control number 0648–0012, approved the collection of this information.

Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB control number.

Dated: May 20, 1998.

David L. Evans,

Deputy Assistant Administrator for Fisheries, National Marine Fisheries Service.

Regional Nonindigenous Species Research and Outreach and Improved Methods for Ballast Water Treatment and Management: Request for Proposals for 1998

AGENCIES: National Sea Grant College Program, National Oceanic and Atmospheric Administration, Department of Commerce and Fish and Wildlife Service, Department of Interior.

ACTION: Notice of request for proposals.

UMI
VOL
63
ISS
101
MAY
27
1998
UMI

SUMMARY: The purpose of this notice is to advise the public that the National Sea Grant College Program (Sea Grant) and the U.S. Fish and Wildlife Service (USFWS) are entertaining proposals to participate in innovative research, outreach, and demonstration projects that address the problems of nonindigenous species in U.S. coastal waters. Sea Grant will support regional projects to prevent and/or control nonindigenous species invasions in the marine environment. Sea Grant and the Service will support demonstration projects to improve ballast water treatment and management in U.S. marine waters in general (Service), and in Chesapeake Bay in particular (Sea Grant).

DATES: Proposals must be received by 4:00 p.m. EDT on July 8, 1998.

ADDRESSES: Proposals should be addressed to: National Sea Grant College Program, R/SG, Attn: Nonindigenous Species Competition, Room 11877, NOAA, 1315 East-West Highway, Silver Spring, MD 20910.

FOR FURTHER INFORMATION CONTACT: Leon M. Cammen, Nonindigenous Species Coordinator, or Mary Robinson, Secretary, National Sea Grant Office, 301–713–2435; facsimile 301–713–0799; or Robert A. Peoples, U.S. Fish and Wildlife Service, 703–358–2025; facsimile 703–358–2044.

SUPPLEMENTARY INFORMATION:

I. Program Authority

Authority: 16 U.S.C. 4701 *et seq.*; 33 U.S.C. 1121 *et seq.*

Catalog of Federal Assistance Numbers: 11.417, Sea Grant Support; 15.FFA, Fish and Wildlife Management Assistance.

II. Program Description

Background

Nonindigenous species introductions are increasing in frequency and causing substantial damage to the Nation's environment and economy. Although the most prominent of these has been the zebra mussel, many other nonindigenous species have been introduced and have truly become a nationwide problem that threatens many aquatic ecosystems. While some intentional introductions may have had beneficial effects, there are many other nonindigenous species already present in U.S. waters, or with the potential to invade, that may cause significant damage to coastal resources and the economies that depend upon them. In response, the Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990 (16 U.S.C. 4701 *et seq.*) established a framework for the Nation to address the problems of aquatic nuisance species invasions of coastal and Great Lakes ecosystems.

Although problems such as the zebra mussel and the sea lamprey within the Great Lakes have received the most attention, invasions of nonindigenous species in coastal marine environments are an increasing and serious threat. The National invasive Species Act of 1996 (Pub. L. 104–332, 110 Stat. 4073) recognized this by calling for Federal funding to support aquatic nuisance species prevention and control in five regions of the U.S. coast: Chesapeake Bay, the Gulf of Mexico, the Pacific coast, the Atlantic coast, and the San Francisco Bay—Delta estuary.

In addition, the Act recognized the serious threat posed by ballast water discharge in causing new invasions and called for ballast water management demonstration programs. A 1996 National Research Council study of the ballast water problem, "Stemming the Tide," concluded that with the growth of global shipping, and the changes in modern shipping practices, introductions of nonindigenous species through ballast water discharge were likely to remain a serious problem. The study called for the development of improved technology for the management of ballast water to eliminate this threat to the Nation's ecosystems. A demonstration project is currently underway in the Great Lakes testing filtration of ballast water as method of reducing introductions, but it is acknowledged that there is unlikely to be a single solution that is acceptable for all modes of shipping operations and classes of vessels.

Funding Availability and Priorities

The National Sea Grant College Program encourages proposals that address one of the following two program areas:

(1) Regional Research and Outreach to Prevent and Control Nonindigenous Species Invasions in Marine Environments

Projects should provide an "end-to-end" approach that integrates the research with the outreach necessary to ensure that the results will be applied to address the problem in that region. Projects must be targeted toward one (or more) of the following regions: Chesapeake Bay, the Gulf of Mexico, the Pacific coast, the Atlantic coast, and the San Francisco Bay-Delta estuary. Possible topics include (but are not limited to): identification of vectors of introduction, development of cost-effective, realistic methods of prevention; development of selective, effective controls that minimize adverse ecological/environmental impacts—engineering (redesigning water intakes, etc.), physical (scraping, filtering, etc.), chemical (biocides, antifoulants, etc.), biological (parasites, predators, etc.), and/or physicochemical (heat, salinity, pH, etc.); and identification of mechanisms for further dispersal of individual established species that will lead to the development of safeguards and protocols to prevent and/or slow the spread of nonindigenous species to uninfested areas.

A total of $420,000 is available for this activity in FY1998; an additional $425,000 will be made available in FY1999 if appropriated. Proposals may be submitted for one or two years of activity; the second year of funding is contingent upon availability of funds and submission of an annual report showing satisfactory progress. Project activities should include identified milestones for each project year. Proposals may request up to $140,000 per year and must include additional matching funds equivalent to 33% of the Federal funds requested; for example, a proposal requesting a total of $270,000 for two years would have to include at least an additional $90,000 in matching funds. The total dollar amount of indirect costs proposed in an application under this program area must not exceed the indirect cost rate negotiated and approved by the cognizant Federal agency prior to the proposed effective date of the award or 100 percent of the total proposed direct costs dollar amount in the application, whichever is less. It is anticipated that from three to five projects will be supported; no more than one project will be funded in each region.

(2) Chesapeake Bay Ballast Water Management

Research to develop workable and effective methods to eliminate ballast water discharge as a source of nonindigenous species introductions without imposing undue hardships on the shipping industry. Possible approaches include (but are not limited to) development and/or demonstration of technologies for treatment or management of ballast water on-board ship or for on-shore management. Projects that include on-vessel or on-shore demonstrations of feasibility will be given priority. Projects must be clearly targeted toward addressing ballast water management in Chesapeake Bay, but investigators located outside the Chesapeake Bay region may participate if all demonstrations are carried out on Chesapeake Bay.

A total of $500,000 is available for this activity in FY1998. Proposals are limited to one year of funding, but activities may extend for up to two years; an annual report showing satisfactory progress must be submitted at the end of the first year. Project activities should include identified milestones for each project year. Proposals may request up to the full $500,000; matching fund are encouraged, but not required. The total of dollar amount of indirect costs proposed in an application under this program area must not exceed the indirect cost rate negotiated and approved by the cognizant Federal agency prior to the proposed effective date of the award or 100 percent of the total proposed direct costs dollar amount in the application, whichever is less.

The U.S. Fish and Wildlife Service encourages proposals that address the following program area:

(3) National Ballast Water Management

Research to develop workable and effective methods to eliminate ballast water discharge as a source of nonindigenous species introductions without imposing undue hardships on the shipping industry. Possible approaches include (but are not limited to) development and/or demonstration of technologies for treatment or management of ballast water on-board ship or for on-shore management. Projects may be carried out in any U.S. waters except Chesapeake Bay.

A total of $150,000 is available for this activity in FY1998; support will be made available at the same level in FY1999 and FY2000 if funds are appropriated. Proposals may request up to three years of funding; the second and third years of funding are contingent upon availability of funds and submission of an annual report showing satisfactory progress. Project activities may be phased in and should include identified milestones for each project year. Proposals may request up to the full $150,000; matching funds are encouraged, but not required. For proposals submitted under this program area only, indirect costs may not exceed 15% of direct costs.

III. Eligibility

Applications requesting support under the "Regional Research and Outreach to Prevent and Control Nonindigenous Species Invasions in Marine Environments" program area are restricted to universities and non-Federal research institutions. Applications requesting support under the "Chesapeake Bay Ballast Water Management" or "National Ballast Water Management" program areas may be submitted by individuals; public or private corporations, partnerships, or other associations or entities (including institutions of higher education, institutes, or non-Federal laboratories), or any State, political subdivision of a State, or agency or officer thereof.

IV. Evaluation Criteria

The evaluation criteria for proposals submitted for support under the "Regional Research and Outreach to Prevent and Control Nonindigenous Species Invasions in Marine Environments" program area are:

(1) Impact of proposed project (50%): Significance of the nonindigenous species problem that will be addressed; the effect this activity will have on reducing the impact of nonindigenous species on the environment and/or the economy, or the need for this activity as a necessary step toward such a reduction in impact.

(2) Scientific or Professional Merit (20%): Degree to which the activity will advance the state of the science or discipline through use and extension of state-of-the-art methods.

(3) User Relationships (15%): Degree to which potential users of the results of the proposed activity has been involved in planning the activity, will be involved in the execution of the activity, and/or are providing matching funds.

(4) Innovativeness (10%): Degree to which new approaches to solving problems and exploiting opportunities in resource management or development, or in public outreach on such issues will be employed; alternatively, the degree to which the activity will focus on new types of important or potentially important resources and issues.

(5) Qualifications and Past Record of Investigators (5%): Degree to which investigators are qualified by education, training, and/or experience to execute the proposed activity; record of achievement with previous funding.

The evaluation criteria for proposals submitted for support under the "Chesapeake Bay Ballast Water Management" and "National Ballast Water Management" program areas are:

(1) Impact of proposed project (40%): Potential effectiveness of ballast water treatment technologies or practices in reducing introductions of nonindigerous species.

(2) Field-Scale Demonstration (10%): Inclusion of a field-scale demonstration of the proposed ballast water treatment technology or practices.

(3) Scientific or Professional Merit (20%): Degree to which the activity will advance the state of the science or discipline through use and extension of state-of-the-art methods.

(4) User Relationships (15%): Degree to which potential users of the results of the proposed activity have been involved in planning the activity, will be involved in the execution of the activity, and/or are providing matching funds.

(5) Innovativeness (10%): Degree to which new approaches to solving problems and exploiting opportunities in resource management or development, or in public outreach on such issues will be employed; alternatively, the degree to which the activity will focus on new types of important or potentially important resources and issues.

(6) Qualifications and Past Record of Investigators (5%): Degree to which investigators are qualified by education, training, and/or experience to execute the proposed activity; record of achievement with previous funding.

V. Selection Procedures

All proposals will be evaluated and ranked in accordance with the assigned weights of the above evaluation criteria by one of two independent peer review panels consisting of government, academic, and industry experts; one panel will review the Regional Research Proposals and a second panel will review the Ballast Water Management proposals. These panel members will provide individual evaluations on each proposal, but there will be no consensus advice. Their recommendations and evaluations will be considered by the Program Managers in the final selection. Those proposals ranked by the panel as "not recommended for funding" will not be given further consideration. For the proposals rated either Excellent, Very Good or Good, the Sea Grant and USFWS Program Managers will: (a) ascertain which proposals meet the objectives, fit the criteria posted, and do not substantially duplicate other projects that are currently funded by NOAA or USFWS or are approved for funding by other federal agencies, hence, awards may not necessarily be made to the highest-scored proposals; (b) select the proposals to be funded; (c) determine which components of the selected projects will be funded; (d) determine the total duration of funding for each proposal; and (e) determine the amount of funds available for each proposal. No more than one "Regional Research" project will be funded from any single region, but this limit will not be applied to the "Ballast Water" competitions. Investigators may be asked to modify objectives, work plans,

or budgets prior to final approval of the award. Subsequent grant administration procedures will be in accordance with the individual policies of the awarding agency. A summary statement of the scientific review by the peer panel will be provided to each applicant.

VI. Instructions for Application

General Guidelines

The ideal proposal attacks a well-defined problem that will be or is a significant societal issue. The organization or people whose task it will be to make related decisions, or who will be able to make specific use of the projects results, will have been identified and contacted by the Principal Investigator(s). The project will show an understanding of what constitutes necessary and sufficient information for responsible decision-making or for applied use, and will show how that information will be provided by the proposed activity, or in concert with other planned activities.

Research projects are expected to have: a rigorous, hypothesis-based scientific work plan, or a well-defined, logical approach to address an engineering problem; a strong rationale for the proposed research; and a clear and established relationship with the ultimate users of the information. Research undertaken jointly with industry, business, or other agencies with interest in the problem will be seen as being meritorious. Their contribution to the research may be in the form of collaboration, in-kind services, or dollar support. Projects that are solely monitoring efforts are not appropriate for funding.

What To Submit

Each proposal should include the items listed below. All pages should be single- or double-spaced, typewritten in at least a 10-point font, and printed on metric A4 (210 mm x 297 mm) or 8½" x 11" paper. Brevity will assist reviewers and program staff in dealing effectively with proposals. Therefore, the Project Description may not exceed 15 pages. Tables and visual materials, including charts, graphs, maps, photographs and other pictorial presentations are included in the 15-page limitation. Conformance to the 15-page limitation will be strictly enforced. All information needed for review of the proposal should be included in the main text; no appendices are permitted.

(1) Signed title page: The title page should be signed by the Principal Investigator and the institutional representative and should clearly identify the program area being addressed by starting the project title with either "Regional Research and Outreach", "Chesapeake Bay Ballast Water", or "National Ballast Water" as appropriate. The Principal Investigator and institutional representative should be identified by full name, title, organization, telephone number and address. The total amount of Federal funds being requested should be listed for each budget period.

(2) Project Summary: This information is very important. Prior to attending the peer review panel meetings, some of the panelists may read only the project summary. Therefore, it is critical that the project summary accurately describe the research being proposed and convey all essential elements of the research. The project summary should include: 1. Title: Use the exact title as it appears in the rest of the application. 2. Investigators: List the names and affiliations of each investigator who will significantly contribute to the project. Start with the Principal Investigator. 3. Funding request for each year of the project, including matching funds if appropriate. 4. Project Period: Start and completion dates. Proposals should request a start date of October 1, 1998, or later. 5. Project Summary: This should include the rationale for the project, the scientific or technical objectives and/or hypotheses to be tested, and a brief of summary of work to be completed.

(3) Project Description (15-page limit): (a) Introduction/Background/ Justification: Subjects that the investigator(s) may wish to include in this section are: a) current state of knowledge; b) contributions that the study will make to the particular discipline or subject area; and c) contributions the study will make toward addressing the problem of nonindigenous species.

(b) Research or Technical Plan: a) Objectives to be achieved, hypotheses to be tested; b) Plan of work—discuss how stated project objectives will be achieved; and c) Role of project personnel.

(c) Output: Describe the project outputs that will enhance the Nation's ability to manage and control nonindigenous species impacts.

(d) Coordination with others Program Elements: Describe any coordination with other agency programs or ongoing research efforts. Describe any other proposals that are essential to the access of this proposal.

(4) Budget and Budget Justification: There should be a separate budget for each year of the project as well as a cumulative annual budget for the entire project. Applicants are encouraged to use the Sea Grant Budget Form 90–4, but may use their own form as long as it provides the same information as the Sea Grant form. Subcontracts should have a separate budget page. Matching funds must be indicated if required; failure to provide adequate matching funds will result in the proposal being rejected without review. Applicants should provide justification for all budget items in sufficient detail to enable the reviewers to evaluate the appropriateness of the funding requested. For applications submitted for the "Regional Research and Outreach to Prevent and Control Nonindigenous Species Invasions in Marine Environments" and the "Chesapeake Bay Ballast Water Management" program areas, the total dollar amount of indirect costs must not exceed the indirect cost rate negotiated and approved by the cognizant Federal agency prior to the proposed effective date of the award or 1000 percent of the total proposed direct costs dollar amount in the application whichever is less. For proposals submitted for the "National Ballast Water Management" program area only, indirect costs may not exceed 15% of direct costs. The Sea Grant Budget Form 90–4 is available through the World Wide Web (www.mdsg.umd.umd.edu/NSGO/research/nonindigenous/RFP98.html) or form Dr. Leon Cammen at the National Sea Grant Office (phone: 301–713–2435 x136 or e-mail: leon.cammmen@noaa.gov).

(5) Current and Pending Support: Applicants must provide information on all current and pending support for ongoing projects and proposals, including subsequent funding in the case of continuing grants. All current project support from whatever source (e.g., Federal, State or local government agencies, private foundations, industrial or other commercial organizations) must be listed. The proposed project and all other projects or activities requiring a portion of time of the principal investigator and other senior personnel should be included, even if they receive no Federal salary support from the project(s). The number of person-months per year to be devoted to the projects must be stated, regardless of source of support. Similar information must be provided for all proposals already submitted or submitted concurrently to other possible sponsors, including those within NOAA and the USFWS.

(6) Vitae (2 pages maximum per investigator).

(7) Research Protocol (if appropriate): Research activities funded under this

program must not accelerate the spread of nonindigenous species to non-infested watersheds. Therefore, investigators whose laboratories or research study sites are in currently uninfested areas must adopt procedures for handling the particular nonindigenous species that will prevent its release into the environment. Such proposals must contain a research protocol for review by an interagency committee created under the Nonindigenous Aquatic Nuisance Prevention and Control Act of 1990 before the grant can be awarded. Guidelines for developing suitable protocols are available through the World Wide Web (www.mdsg.umd.edu/NSGO/research/nonindigenous/RFP98.html) or from Dr. Leon Cammen at the National Sea Grant Office (phone: 301–713–2435 x136 or e-mail: leon.cammen@noaa.gov). Proposals lacking a suitable protocol will not be eligible for funding.

(8) Declaration of Vessel Selection (if appropriate): Applications proposing on-board demonstrations of ballast water management should address the requirements and priorities listed in the National Invasive Species Act of 1996 for selecting vessels for demonstration projects. These requirements are available through the World Wide Web (www.mdsg.umd.edu/NSGO/research/nonindigenous/RFP98.html) or from Dr. Leon Cammen at the National Sea Grant Office (phone: 301–713–2435 x136 or e-mail: leon.cammen@noaa.gov).

(9) Standard Application Forms: Applicants may obtain all required application forms through the World Wide Web (www.mdsg.umd.edu/NSGO/research/nonindigenous/RFP98.html) or from Dr. Leon Cammen at the National Sea Grant Office (phone: 301–713–2435 x136 or e-mail: leon.cammen@noaa.gov). The following forms must be included:

(a) Standard Forms 424, Application for Federal Assistance, 424A, Budget Information—Non-Construction Programs; and 424B, Assurances—Non-Construction Programs, (Rev 4–88). Applications should clearly identify the program area being addressed by starting the project title with either "Regional Research and Outreach", "Chesapeake Bay Ballast Water", or "National Ballast Water" as appropriate. Please note that both the Principal Investigator and an administrative contact should be identified in Section 5 of the SF424. For Section 10, applicants for the Regional Research and Outreach to Prevent and Control Nonindigenous Species Invasions in Marine Environments and Chesapeake Bay Ballast Water Management program areas should enter "11.417" for the CFDA Number and "Sea Grant Support" for the title; applicants for the National Ballast Water Management program area should enter "15.FFA" for the CFDA Number and "Fish and Wildlife Management Assistant" for the title. The form must contain the original signature of an authorized representative of the applying institution.

(b) Primary Applicant Certifications. All primary applicants must submit a completed Form CD–511, "Certifications Regarding Debarment, Suspension and Other Responsibility Matters; Drug-Free Workplace Requirements and Lobbying," and the following explanations are hereby provided:

(i) Nonprocurement Debarment and Suspension. Prospective participants (as defined at 15 CFR part 26, section 105) are subject to 15 CFR part 26, "Nonprocurement Debarment and Suspension" and the related section of the certification form prescribed above applies;

(ii) Drug-Free Workplace. Grantees (as defined at 15 CFR Part 26, Section 605) are subject to 15 CFR Part 26, Subpart F, "Governmentwide Requirements for Drug-Free Workplace (Grants)" and the related section of the certification form prescribed above applies;

(iii) Anti-Lobbying. Persons (as defined at 15 CFR Part 28, Section 105) are subject to the lobbying provisions of 31 U.S.C. 1352, "Limitation on use of appropriated funds to influence certain Federal contracting and financial transactions," and the lobbying section of the certification form prescribed above applies to applications/bids for grants, cooperative agreements, and contracts for more than $100,000, and loans and loan guarantees for more than $150,000, or the single family maximum mortgage limit for affected programs, whichever is greater; and

(iv) Anti-Lobbying Disclosures. Any applicant that has paid or will pay for lobbying using any funds must submit an SF–LLL, "Disclosure of Lobbying Activities," as required under 15 CFR Part 28, Appendix B.

(c) Lower Tier Certifications. Recipients shall require applicant/bidders for subgrants, contracts, subcontracts, or other lower tier covered transactions at any tier under the award to submit, if applicable, a completed Form CD–512, "Certifications Regarding Debarment, Suspension, Ineligibility and Volumtary Exclusion-Lower Tier Covered Transactions and Lobbying" and disclosure form, SF–LLL, "Disclosure of Lobbying Activities." Form CD–512 is intended for the use of recipients and should not be transmitted to the Department of Commerce (DOC). SF–LLL submitted by any tier recipient or subrecipient should be submitted to DOC in accordance with the instructions contained in the award document.

VII. How To Submit

The original and two (2) copies of each proposal must be received in the National Sea Grant Office no later than 4:00 p.m. EDT on the closing date July 8, 1998. Although investigators are not required to submit more than 3 copies of the proposal, the normal review process requires 10 copies. Investigators are encouraged to submit sufficient proposal copies for the full review process if they wish all reviewers to receive color, unusually sized (not 8.5×11"), or otherwise unusual materials submitted as part of the proposal. Only three copies of the Federally required forms are needed. Completed applications should be sent via regular mail to: National Sea Grant Office, R/SG, Attn: Nonindigenous Species Competition, NOAA, 1315 East-West Highway, Silver Spring, MD 20910.

For express mail or courier-delivered applications, the following address must be used: National Sea Grant Office, R/SG, Attn: Nonindigenous Species Competition, NOAA, Room 11877, 1315 East-West Highway, Silver Spring, MD 20910. Phone: 301–713–2435 (for express mail applications).

Applications received after the deadline and application that deviate from the format described above will be returned to the sender without review. Fascimile transmissions and electronic mail submission of full proposals will not be accepted. If you have any questions or require further information, contact one of the agency coordinators listed above

VIII. Other Requirements

(A) Federal Policies and Procedures—Recipients and subrecipients are subject to all Federal laws and Federal, Department of Commerce (DOC), and Department of Interior (DOI) policies, regulations, and procedures applicable to Federal financial assistance awards.

(B) Past Performance—Unsatisfactory performance under prior Federal awards may result in an application not being considered for funding.

(C) Preaward Activities—If applicants incur any costs prior to an award being made, they do so solely at their own risk of not being reimbursed by the Government. Notwithstanding any verbal or written assurance that may have been received, there is no obligation on the part of DOC or DOI to cover preaward costs.

UMI
VOL
63
ISS
101
MAY
27
1998
UMI

(D) No Obligation for Future Funding—If an application is selected for funding, DOC and DOI have no obligation to provide any additional future funding in connection with that award. Renewal of an award to increase funding or extend the period of performance is at the total discretion of DOC and DOI.

(E) Delinquent Federal Debts—No award of Federal funds shall be made to an applicant who has an outstanding delinquent Federal debt until either:

(1) The delinquent account is paid in full,

(2) A negotiated repayment schedule is established and at least one payment is received, or

(3) Other arrangements satisfactory to DOC or DOI are made.

(F) Name Check Review—All non-profit and for-profit applicants are subject to a name check review process. Name checks are intended to reveal if any key individuals associated with the applicant have been convicted of or are presently facing criminal charges such as fraud, theft, perjury, or other matters which significantly reflect on the applicant's management honesty or financial integrity.

(G) False Statements—A false statement on an application is grounds for denial or termination of funds and grounds for possible punishment by a fine or imprisonment as provided in 18 U.S.C. 1001.

(H) Intergovernmental Review—Applications for support from the National Sea Grant College Program are not subject to Executive Order 12372, "Intergovernmental Review of Federal Programs. Applications for support from the U.S. Fish and Wildlife Service are subject to Executive Order 12372, "Intergovernmental Review of Federal Programs."

(I) Purchase of American-Made Equipment and Products—Applicants are hereby notified that they will be encouraged to the greatest extent practicable, to purchase American-made equipment and products with funding provided under this program.

IX. Classification

Prior notice and an opportunity for public comments are not required by the Administrative Procedure Act or any other law for this notice concerning grants, benefits, and contracts. Therefore, a regulatory flexibility analysis is not required for purposes of the Regulatory Flexibility Act.

This action has been determined to be not significant for purposes of E.O. 12866.

This notice contains collection of information requirements subject to the Paperwork Reduction Act. The Sea Grant Budget Form and Standard Forms 424, 424a, and 424b have been approved under control numbers 0648–0034, 0348–0043, 0348–0044, and 0348–0040 with average responses estimated to take 15, 45, 180, and 15 minutes, respectively. These estimates include the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments on these estimates or any other aspect of these collections to National Sea Grant College Program, R/SG, NOAA, 1315 East-West Highway, Silver Spring, MD 20910 (Attention: Leon M. Cammen) and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503 (Attention: NOAA Desk Officer). Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB Control Number.

Dated: May 20, 1998.

Alan R. Thomas,

Deputy Assistant Administrator, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration.

Dated: May 20, 1998.

Gary B. Edwards,

Assistant Director—Fisheries, U.S. Fish and Wildlife Service.

BILLING CODE 3510–12–M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 051898D]

North Pacific Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of meetings of the North Pacific Fishery Management Council (Council) and its advisory bodies.

SUMMARY: The Council and its advisory committees will meet in Dutch Harbor, AK.

DATES: The meetings will be held during the week of June 8, 1998.

ADDRESSES: The Council and Scientific and Statistical Committee (SSC) will meet at the Grand Aleutian Hotel in Dutch Harbor, AK. The Advisory Panel (AP) will meet at the UniSea Galley Conference Room in the UniSea Central Building.

Council address: North Pacific Fishery Management Council, 605 W. 4th Ave., Suite 306, Anchorage, AK 99501–2252.

FOR FURTHER INFORMATION CONTACT: Council staff, telephone: 907–271–2809.

SUPPLEMENTARY INFORMATION: All meetings are open to the public with the exception of Council executive sessions, which may be held during the noon hour during the meeting week, if necessary, to discuss personnel, international issues, or litigation.

The SSC will meet beginning at 8:00 a.m. on Monday, June 8, continuing through at least Wednesday, June 10.

The AP will begin meeting at 8:00 a.m. on Monday, June 8, and continue through a portion of Friday, June 12.

The Council's regular plenary session will begin at 8:00 a.m. on Wednesday, June 10, and continue through a portion of Monday, June 15, 1998.

Other workgroup or committee meetings may be held during the week. Notices of these meetings will be posted at the hotel.

The agenda for the Council's plenary session will include the following issues. The Council may take appropriate action on any of the issues identified.

1. Reports from the NMFS and Alaska Department of Fish and Game (ADF&G) on the current status of the fisheries off Alaska, and enforcement reports from the U.S. Coast Guard and NMFS Enforcement.

2. Final action on allocation of pollock between inshore and offshore fisheries.

3. Final action on an amendment to the fishery management plans to incorporate essential fish habitat information as required by the Magnuson-Stevens Act Fishery Conservation and Management Act (Magnuson-Stevens Act).

4. Final action on an amendment to close a 4–mile by 4–mile area off Sitka (Cape Edgecumbe Pinnacles) to protect habitat important for juvenile rockfish and lingcod.

5. Final action on an amendment to extend the existing vessel moratorium..

6. Preliminary review of proposed amendments to the license limitation program for groundfish and crab.

7. Status report on NMFS guidelines for vessel buyback programs.

8. Final action on an amendment to roll over the current pollock community

development (CDQ) program in the Bering Sea/Aleutian Islands (BSAI), and a committee and status report on the implementation of the multispecies CDQ program.

9. Status report on the development of the joint partnership agreement for the Council's observer program and final action to extend existing program.

10. Status report on Council compliance with the Sustainable Fisheries Act.

11. Groundfish amendments scheduled for action are as follows:

a. Final action on an amendment to ban bottom trawling in the BSAI pollock fishery.

b. Final action on amendments for revised overfishing definitions for the groundfish, salmon, scallop, and BSAI king and Tanner crab fisheries.

c. Final action on an amendment to separate Atka mackerel in the BSAI by season and subarea.

d. Final action on request for experimental fishing permit.

12. Committee report from the combined Vessel Bycatch Allowance/ Halibut Mortality Avoidance Program/ Individual Vessel Checklist Program and further direction to staff.

Although other issues not contained in this agenda may come before this Council for discussion, in accordance with the Magnuson-Stevens Act, those issues may not be the subject of formal Council action during the meeting. Council action will be restricted to those issues specifically identified in the agenda listed in this notice.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Helen Allen, 907–271–2809, at least 7 working days prior to the meeting date.

Dated: May 19, 1998.

Gary C. Matlock,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–F

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Adjustment of Import Limits for Certain Cotton and Man-Made Fiber Textiles and Textile Products Produced or Manufactured in Indonesia

May 20, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs adjusting limits.

EFFECTIVE DATE: May 27, 1998.

FOR FURTHER INFORMATION CONTACT: Janet Heinzen, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port or call (202) 927–5850. For information on embargoes and quota re-openings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The current limits for certain categories are being adjusted for special shift.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Also see 62 FR 67625, published on December 29, 1997.

Troy H. Cribb,

Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

May 20, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on December 19, 1997, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton, wool, man–made fiber, silk blend and other vegetable fiber textiles and textile products, produced or manufactured in Indonesia and exported during the twelve-month period which began on January 1, 1998 and extends through December 31, 1998.

Effective on May 27, 1998, you are directed to adjust the limits for the categories listed below, as provided for under the Uruguay Round Agreement on Textiles and Clothing:

Category	Adjusted twelve-month limit [1]
Levels in Group I	
219	9,195,380 square meters.
313–O [2]	14,185,416 square meters.
314–O [3]	58,831,359 square meters.
315–O [4]	28,070,013 square meters.
317–O/617/326–O [5]	25,642,902 square meters of which not more than 3,834,249 square meters shall be in 326–O.
331/631	2,011,739 dozen pairs.
338/339	1,291,007 dozen.
340/640	1,479,074 dozen.
341	912,581 dozen.
347/348	1,748,901 dozen.
350/650	118,668 dozen.
351/651	516,721 dozen.
625/626/627/628/629–O [6]	27,198,923 square meters.
638/639	1,345,321 dozen.
641	2,281,265 dozen.
647/648	3,164,825 dozen.

[1] The limit has not been adjusted to account for any imports exported after December 31, 1997.

[2] Category 313–O: all HTS numbers except 5208.52.3035, 5208.52.4035 and 5209.51.6032.

[3] Category 314–O: all HTS numbers except 5209.51.6015.

[4] Category 315–O: all HTS numbers except 5208.52.4055.

[5] Category 617; Category 317–O: all HTS numbers except 5208.59.2085; Category 326–O: all HTS numbers except 5208.59.2015, 5209.59.0015 and 5211.59.0015.

[6] Categories 625/626/627/628; Category 629–O: all HTS numbers except 5408.34.9085 and 5516.24.0085.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

Troy H. Cribb,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Adjustment of Import Limits for Certain Cotton, Wool, Man-Made Fiber, Silk Blend and Other Vegetable Fiber Textiles and Textile Products Produced or Manufactured in Thailand.

May 20, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs reducing limits.

EFFECTIVE DATE: May 27, 1998.

FOR FURTHER INFORMATION CONTACT: Ross Arnold, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212. For information on the quota status of these limits, refer to the Quota Status Reports posted on the bulletin boards of each Customs port or call (202) 927–5850. For information on embargoes and quota re-openings, call (202) 482–3715.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

The current limits for certain categories are being reduced for carryforward used.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Also see 62 FR 65246, published on December 11, 1997.

Troy H. Cribb,

Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

May 20, 1998.

Commissioner of Customs,
Department of the Treasury, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on December 5, 1997, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton, wool, man-made fiber, silk blend and other vegetable fiber textiles and textile products, produced or manufactured in Thailand and exported during the period January 1, 1998 through December 31, 1998.

Effective on May 27, 1998, you are directed to reduce the limits for the following categories, as provided for under the Uruguay Round Agreement on Textiles and Clothing:

Category	Adjusted limit [1]
Levels in Group I	
200	1,122,570 kilograms.
604	704,073 kilograms of which not more than 475,261 kilograms shall be in Category 604–A [2].
619	6,771,341 square meters.
620	6,791,544 square meters.
Sublevels in Group II	
334/634	608,167 dozen.
338/339	1,812,127 dozen.
347/348/847	785,400 dozen.
435	54,015 dozen.
638/639	2,159,202 dozen.
647/648	1,081,112 dozen.

[1] The limits have not been adjusted to account for any imports exported after December 31, 1997.

[2] Category 604–A: only HTS number 5509.32.0000.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

Troy H. Cribb,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510–DR–F

DEPARTMENT OF DEFENSE

Department of the Army

Proposed Collection; Comment Request

AGENCY: Deputy Chief of Staff for Personnel (DAPE–ZXI–RM).

ACTION: Notice.

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Department of the Army announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of a the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 21, 1998.

ADDRESSES: Written comments and recommendations on the proposed information collection should be sent to U.S. Army Corps of Engineers Water Resources Support Center Navigation Data Center, (CEWRSC–NDC), 7701 Telegraph Road, Casey Building, Fort Belvoir, Virginia 22315–3868, ATTN: (Virginia R. Pankow). Consideration will be given to all comments received within 60 days of the date of publication of this notice.

FOR FURTHER INFORMATION CONTACT:

To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the above address, or call Department of the Army Reports clearance officer at (703) 614–0454.

Title: Terminal and Transfer Facilities Description, WRSC Forms 1,2,3,4,5,6,7,8 and 9, OMB Control Number 0710–0007

Needs and Uses: The data complied into Port Series Reports are used within the Corps of Engineers for navigation and planning functions, by the Coast Guard for marine safety inspections, by the Navy for guidance in providing safe passage in time of national emergency, by the Army for mission deployment planning, and by the public for general reference, planning, and various studies.

Affected Public: Federal Government, State, Local or Tribal Government.

Annual Burden Hours: 372.

Number of Respondents: 1,489.

Responses Per Respondent: 1.

Average Burden Per Response: 15 minutes.

Frequency: On occasion.

SUPPLEMENTARY INFORMATION: Data gathered, and published as one of the 56 Port Series Reports, relate to terminal, transfer facilities, storage facilities, and intermodal transportation. This information is used in navigation, planning, safety, National security, emergency operations, and general interest studies and activities. Respondents are the terminal and transfer facility operators.

Gregory D. Showalter,

Army Federal Register Liaison Officer.

BILLING CODE 3710–08–M

DEPARTMENT OF DEFENSE

Department of the Army

Proposed Collection; Comment Request

AGENCY: Deputy Chief of Staff for Personnel (DAPE–ZXI–RM).

ACTION: Notice.

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Department of the Army announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by July 27, 1998.

ADDRESSES: Written comments and recommendations on the proposed information collection should be sent to U.S. Army Corps of Engineers Water Resources Support Center Navigation Data Center, (CEWRSC–NDC), 7701 Telegraph Road, Casey Building, Fort Belvoir, Virginia 22315–3868, ATTN: (David E. Lichy). Consideration will be given to all comments received within 60 days of the date of publication of this notice.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the above address, or call Department of the Army Reports clearance officer at (703) 614–0454.

Title: Lock Performance Monitoring System (PMS) Waterway Traffic Report, ENG Forms 3102C, and ENG Form 3102D, OMB Control Number 0710–0008.

Needs and Uses: The U.S. Army Corps of Engineers utilizes the data collected to monitor and analyze the use and operation of federally owned and operated locks. Owners, agents, and masters of vessels provide general data about vessels and estimated tonnage and commodities carried. The information is used for sizing and scheduling replacement or maintenance for locks and canals.

Affected Public: Business or other for-profit.

Annual Burden Hours: 30,398.

Number of Respondents: 3,000.

Responses Per Respondent: 251.2.

Average Burden Per Response: 2½ minutes.

Frequency: On occasion.

SUPPLEMENTARY INFORMATION: The data are used primarily by the Corps of Engineers in conducting a system-wide approach to planning and management of the waterway. The Headquarters, Division and District Offices use the information specifically to assist in making determinations on: adequate staffing for operations and maintenance of the navigation locks and dams; to justify the hours of locks operation; to provide a basis to justify the continued funding as set out in the President's Operation and Maintenance; General Budget; to schedule route maintenance and repairs; to serve as a basis for studies and plans for improvement; for lock operating procedures; to provide data to be used in analyses for major modifications or replacements to lock and dam structures; and to forecast the impact that lock delays, downtime, and proposed changes have on the diversion of waterborne commerce to other transportation modes.

Gregory D. Showalter,

Army Federal Register Liaison Officer.

BILLING CODE 3710–08–M

DEPARTMENT OF DEFENSE

Corps of Engineers; Department of the Army

Notice of Availability of Draft Supplement II Environmental Impact Statement (DSIIEIS) and Notice of Public Hearing for a Proposed Navigation Improvement Project at Ma'alaea Harbor, Maui, HI

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Notice of availability and notice of public hearing.

SUMMARY: The U.S. Army Engineer District, Honolulu, in partnership with the State of Hawaii, is planning to construct improvements to the Ma'alaea Harbor for light-draft vessels at Ma'alaea, Maui, Hawaii. The Federal portion of the proposed action consists of realigning the entrance channel and modifying the existing breakwater to protect the new entrance channel. The purposes of these improvements are to reduce the surge within the harbor basin, reduce navigation hazards in the entrance channel, and provide opportunity for addition of commercial and recreational berthing spaces and associated harbor facilities. Later, the project sponsor, the State of Hawaii Department of Land and Natural Resources, Division of Boating and Ocean Recreation (DLNR–DBOR), would provide expanded berthing facilities and improved infrastructure, including fuel, sewage treatment and pumpout facilities. Total construction costs are estimated at $5,000,000 to $10,000,000.

FOR FURTHER INFORMATION CONTACT: Please address questions regarding this notice to Mr. Benton Ching, U.S. Army Corps of Engineer District, Honolulu, Attention: CEPOH–ED–CE, Building 230, Fort Shafter, Hawaii 96858–5440, Telephone (808) 438–1157 or Fax (808) 841–1581.

SUPPLEMENTARY INFORMATION: A General Design Memorandum and Final Environmental Impact Statement (EIS) were approved by the Chief of Engineers in 1980, and a State of Hawaii Revised EIS was accepted by the Governor in 1982. The 1980 and 1982 plans of improvement were modifications of the plan originally approved by Congress in 1968. A Final Supplemental EIS was prepared and circulated in 1994 to update the environmental information regarding the proposed project and alternatives. This second supplemental EIS has been prepared to provide additional information on design modifications to avoid and minimize impacts to surfing sites, coral reefs, and other aquatic habitat; to provide further evaluation of potential effects to endangered and threatened species; to provide analysis and evaluation of Alternative plan 6; and to respond to public and agency comments received on the 1994 Final Supplemental EIS. Previous and present studies indicate that the proposed project will fully achieve the Federal and State purposes. A mitigation plan developed by a team of Federal and State agencies would provide mitigation for unavoidable adverse environmental impacts, which include elimination or alteration of 8.16 acres of marine habitat, including 4.8 acres of coral reefs, removal of a small sandy beach, and removal of one surfing site.

The proposed action is consistent with Hawaii Coastal Zone Management (CZM) Program policies and objectives. The National Marine Fisheries Service and U.S. Fish and Wildlife Service have determined that the proposed action is not likely to jeopardize the continued existence of listed endangered or

threatened species. The recommendations of the U.S. Fish and Wildlife Service and Hawaii DLNR–DBOR have been considered with respect to fish and wildlife resources. The State of Hawaii Department of Health is expected to issue a Section 401 water quality certification. A preliminary evaluation pursuant to 40 CFR 230, EPA's Guidelines for the Specification of Disposal Sites for Dredged and Fill Material, concludes that the proposed action complies with those guidelines.

Comments on this Draft Supplemental II EIS (DSIIEIS) should be provided to the address below within 45 days of the date of publication of the Notice of Availability in the **Federal Register.**

Copies of the DSIIEIS are available for review at the U.S. Army Engineer District, Honolulu office in Fort Shafter, Hawaii.

A Public Hearing will be held on Tuesday, June 23, 1998 at 6:30 p.m. at Kihei Elementary School. The hearing will provide an opportunity for individuals and groups to comment on the proposed action as presented in the DSIIEIS.

Ralph H. Graves,

Lieutenant Colonel, U.S. Army, District Engineer.

BILLING CODE 3710–NN–M

DEPARTMENT OF EDUCATION

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

SUMMARY: The Acting Deputy Chief Information Officer, Office of the Chief Information Officer, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before July 27, 1998.

ADDRESSES: Written comments and requests for copies of the proposed information collection requests should be addressed to Patrick J. Sherrill, Department of Education, 600 Independence Avenue, S.W., Room 5624, Regional Office Building 3, Washington, D.C. 20202–4651.

FOR FURTHER INFORMATION CONTACT: Patrick J. Sherrill (202) 708–8196. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Acting Deputy Chief Information Officer, Office of the Chief Information Officer, publishes this notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment at the address specified above. Copies of the requests are available from Patrick J. Sherrill at the address specified above.

The Department of Education is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner, (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected, and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology.

Dated: May 20, 1998.

Hazel Fiers,

Acting Deputy Chief Information Officer, Office of the Chief Information Officer.

Office of Postsecondary Education

Type of Review: Revision.
Title: Student Aid Report (SAR).
Frequency: Annually.
Affected Public: Individuals or households.
Reporting and Recordkeeping Hour Burden:
Responses: 9,998,997.
Burden Hours: 4,061,953.
Abstract: The Student Aid Report (SAR) is used to notify all applicants of their eligibility to receive Federal student aid for postsecondary education. The form is submitted by the applicant to the institution of their choice.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Kirtland Area Office (Sandia)

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: Pursuant to the provisions of the Federal Advisory Committee Act (Pub. L. 92–463, 86 Stat. 770) notice is hereby given of the following Advisory Committee meeting: Environmental Management Site-Specific Advisory Board, Kirtland Area Office (Sandia).

DATES: Wednesday, June 17, 1998: 6:00 p.m.–9:00 p.m. (Mountain Daylight Time).

ADDRESSES: John Marshall Community Center, 1500 Walter SE (Room 104), Albuquerque, New Mexico.

FOR FURTHER INFORMATION CONTACT: Mike Zamorski, Acting Manager, Department of Energy Kirtland Area Office, P.O. Box 5400, Albuquerque, NM 87185 (505) 845–4094.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE and its regulators in the areas of environmental restoration, waste management, and related activities.

Tentative Agenda

6:00 p.m. Call to Order/Roll Call
7:00 p.m. Public Comments
7:10 p.m. Approval of Agenda
7:12 p.m. Approval of 05/17/98 Minutes
7:17 p.m. Chairperson's Report
7:20 p.m. Sandia National Laboratory's Environmental Restoration/Waste Management Presentation/Discussion
7:45 p.m. Break
7:55 p.m. Sandia National Laboratory's Environmental Restoration/Waste Management Issues Discussion
8:42 p.m. New/Other Business
8:52 p.m. Public Comments
8:58 p.m. Announcement of Next Meeting
9:00 p.m. Adjourn

A final agenda will be available at the meeting Wednesday, June 17, 1998.

Public Participation

The meeting is open to the public. Written statements may be filed with the Committee either before or after the

meeting. Individuals who wish to make oral statements pertaining to agenda items should contact Mike Zamorski's office at the address or telephone number listed above. Requests must be received 5 days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Each individual wishing to make public comment will be provided a maximum of 5 minutes to present their comments.

Minutes

The minutes of this meeting will be available for public review and copying at the Freedom of Information Public Reading Room, 1E–190, Forrestal Building, 1000 Independence Avenue, SW, Washington, DC 20585 between 9:00 a.m. and 4 p.m., Monday–Friday, except Federal holidays. Minutes will also be available by writing to Mike Zamorski, Department of Energy Kirtland Area Office, P.O. Box 5400, Albuquerque, NM 87185, or by calling (505) 845–4094.

Issued at Washington, DC on May 20, 1998.

Rachel M. Samuel,

Deputy Advisory Committee Management Officer.

[FR Doc. 98–13960 Filed 5–26–98; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Rocky Flats

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: Pursuant to the provisions of the Federal Advisory Committee Act (Public Law 92–463, 86 Stat. 770) notice is hereby given of the following Advisory Committee meeting: Environmental Management Site-Specific Advisory Board (EM SSAB), Rocky Flats

DATES: Thursday, June 4, 1998, 6:00 p.m.–9:30 p.m.

ADDRESS: Westminster City Hall, Lower-level Multi-purpose Room, 4800 West 92nd Avenue, Westminster, CO.

FOR FURTHER INFORMATION CONTACT: Ken Korkia, Board/Staff Coordinator, EM SSAB-Rocky Flats, 9035 North Wadsworth Parkway, Suite 2250, Westminster, CO 80021, phone: (303) 420–7855, fax: (303) 420–7579.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE and its regulators in the areas of environmental restoration, waste management, and related activities.

Tentative Agenda

1. The Board will consider approving a recommendation concerning reuse at the Rocky Flats Technology Site.
2. The Board will review and consider approval of a recommendation on the Rocky Flats Natural Resources Management Policy.
3. A draft recommendation will be considered on the Decommissioning Program Plan for Rocky Flats.
4. The Board will discuss a draft recommendation on the Interim Measures/Interim Remedial Action decision document for Building 886 at Rocky Flats.

Public Participation: The meeting is open to the public. Written statements may be filed with the Committee either before or after the meeting. Individuals who wish to make oral statements pertaining to agenda items should contact Ken Korkia at the address or telephone number listed above. Requests must be received 5 days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Designated Federal Official is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Each individual wishing to make public comment will be provided a maximum of 5 minutes to present their comments at the beginning of the meeting. This notice is being published less than 15 days in advance of the meeting due to programmatic issues that needed to be resolved.

Minutes: The minutes of this meeting will be available for public review and copying at the Freedom of Information Public Reading Room, 1E–190, Forrestal Building, 1000 Independence Avenue, SW, Washington, DC 20585 between 9:00 a.m. and 4 p.m., Monday-Friday, except Federal holidays. Minutes will also be available at the Public Reading Room located at the Board's office at 9035 North Wadsworth Parkway, Suite 2250, Westminster, CO 80021; telephone (303) 420–7855. Hours of operation for the Public Reading Room are 9:00 am and 4:00 pm on Monday through Friday. Minutes will also be made available by writing or calling Deb Thompson at the Board's office address or telephone number listed above.

Issued at Washington, DC on May 21, 1998.

Rachel M. Samuel,

Deputy Advisory Committee Management Officer.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[IC98–521–000 FERC–521]

Proposed Information Collection and Request for Comments

May 20, 1998.

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of proposed information collection and request for comments.

SUMMARY: In compliance with the requirements of Section 3506(c)(2)(a) of the Paperwork Reduction Act of 1995 (Pub. L. No. 104–13), the Federal Energy Regulatory Commission (Commission) is soliciting public comment on the specific aspects of the information collection described below.

DATES: Consideration will be given to comments submitted on or before July 27, 1998.

ADDRESSES: Copies of the proposed collection of information can be obtained from and written comments may be submitted to the Federal Energy Regulatory Commission, Attn: Michael Miller, Information Services Division, CI–1, 888 First Street NE, Washington, DC 20426.

FOR FURTHER INFORMATION CONTACT: Michael Miller may be reached by telephone at (202) 208–1415, by fax at (202) 273–0873, and by e-mail at michael.miller@ferc.fed.us.

SUPPLEMENTARY INFORMATION: The information collected under the requirements of FERC–521 "Payments for Benefits from Headwater Benefits" (OMB No. 1902–0087) is used by the Commission to implement the statutory provisions of Section 10(f) of the Federal Power Act (FPA) (16 U.S.C. 803). The owners of non-federal hydropower projects that directly benefit from a headwater(s) improvement must pay an equitable portion of the annual charges for interest, maintenance, and depreciation of the headwater project to the U.S. Treasury. The regulations provide for apportionment of these costs between the headwater project and downstream projects based on downstream energy gains and proposed equitable apportionment methodology that can be applied to all river basins in which headwater improvements are built. Section 10(f) of the EPA directs the Commission to determine the benefits downstream parties receive from the operation of storage reservoirs or other headwater improvements. The purpose of determining the benefits is for

assessing the downstream beneficiaries for a part of the annual costs for the headwater project.

The date the Commission requires owners of non-federal hydropower projects to file for determining annual charges is specified in 18 Code of Federal Regulations (CFR) part 11.

Action: The Commission is requesting a three-year extension of the current expiration date, with no changes to the existing collection of data.

Burden Station: Public reporting burden for this collection is estimated as:

Number of respondents annually	Number of responses per respondent	Average burden hours per response	Total annual burden hours
(1)	(2)	(3)	(1)×(2)×(3)
15	1	40	600

The estimated total cost to respondents is $33,716 (840 hours divided by 2,088 hours per year per employee times $110,000 per year per average employee = $33,716). The cost per respondent is $2,248.

The reporting burden includes the total time, effort, or financial resources expended to generate, maintain, retain, disclose, or provide the information including: (1) reviewing instructions; (2) developing, acquiring, installing, and utilizing technology and systems for the purposes of collecting, validating, verifying, processing, maintaining, disclosing and providing information; (3) adjusting the existing ways to comply with any previously applicable instructions and requirements; (4) training personnel to respond to a collection of information; (5) searching data sources; (6) completing and reviewing the collection of information; and (7) transmitting, or otherwise disclosing the information.

The estimate of cost for respondents is based upon salaries for professional and clerical support, as well as direct and indirect overhead costs. Direct costs include all costs directly attributable to providing this information, such as administrative costs and the cost for information technology. Indirect or overhead costs are costs incurred by an organization in support of its mission. These costs apply to activities which benefit the whole organization rather than any one particular function or activity.

Comments are invited on: (1) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology *e.g.*, permitting electronic submission of responses.

David P. Boergers,

Acting Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[IC98–80–000 FERC–Form 80]

Proposed Information Collection and Request for Comments

May 20, 1998.

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of proposed information collection and request for comments.

SUMMARY: In compliance with the requirements of Section 3506(c)(2)(a) of the Paperwork Reduction Act of 1995 (Pub. L. No. 104–13), the Federal Energy Regulatory Commission (Commission) is soliciting public comment on the specific aspects of the information collection described below.

DATES: Consideration will be given to comments submitted on or before July 27, 1998.

ADDRESSES: Copies of the proposed collection of information can be obtained from and written comments may be submitted to the Federal Energy Regulatory Commission, Attn: Michael Miller, Information Services Division, CI–1, 888 First Street N.E., Washington, D.C. 20426.

FOR FURTHER INFORMATION CONTACT: Michael Miller may be reached by telephone at (202) 208–1415, by fax at (202) 273–0873, and by e-mail at michael.miller@ferc.fed.us.

SUPPLEMENTARY INFORMATION: The information collected under the requirements of FERC Form 80 "Licensed Hydropower Development Recreation Report" (OMB No. 1902–0106) is used by the Commission to implement the statutory provisions of Sections 4(a), 10(a), 301(a), 304 and 309 of the Federal Power Act (FPA) (16 U.S.C. §§ 797, 803, 825, 825(c) and 825(h)). FERC Form 80 is a report on use and development of recreational facilities at FERC-licensed hydroelectric projects filed on April 1 of every sixth year. The data submitted is compiled during the previous calendar year. Commission staff utilize FERC Form 80 data to analyze the adequacy of existing pubic recreational facilities and for predicting the need for future development at licensed projects. When there are applications for amendment to license and/or for changes in land rights that involve changes in recreational resources, Commission staff rely on current FERC Form 80 data for determining the impact of such changes. The Commission's Regional Office staff inspect licensed projects to evaluate compliance with various license conditions, including those related to recreation. The authority for the Commission to collect this information comes from Section 10(a) of the FPA that requires the Commission to ensure that any hydro project it approves be best adapted to a comprehensive plan for developing a waterway for the benefit of interstate and foreign commerce and for improving or utilizing waterpower development, including recreation and other beneficial public uses. To further these objectives, the Commission requires licensees to take reasonable efforts to inform the public of the availability of project lands and waters for recreational purposes and license conditions of interest to members of the public interested in recreational aspects of the project. The data required to be filed is specified by 18 Code of Federal Regulations (CFR) Sections 8.11 and 141.14.

Action: The Commission is requesting a three-year extension of the current expiration date, with no changes to the existing collection of data.

Burden Statement: Public reporting for the collection is estimated as:

Number of respondents annually	Number of responses per respondent	Average burden hours per response	Total annual burden hours
(1)	(2)	(3)	(1)×(2)×(3)
200	1	3	1,200

The estimated total cost to respondents is $63,218, (1,200 hours divided by 2,088 hours per year per employee times $110,000 per year per average employee=$63,218). The cost per respondent is $158.00.

The reporting burden includes the total time, effort, or financial resources expended to generate, maintain, retain, disclose, or provide the information including: (1) reviewing instructions; (2) developing, acquiring, installing, and utilizing technology and systems for the purposes of collecting, validating, verifying, processing, maintaining, disclosing and providing information; (3) adjusting the existing ways to comply with any previously applicable instructions and requirements; (4) training personnel to respond to a collection of information; (5) searching data sources; (6) completing and reviewing the collection of information; and (7) transmitting, or otherwise disclosing the information.

The estimate of cost for respondents is based upon salaries for professional and clerical support, as well as direct and indirect overhead costs. Direct costs include all costs directly attributable to providing this information, such as administrative costs and the cost for information technology. Indirect or overhead costs are costs incurred by an organization in support of its mission. These costs apply to activities which benefit the whole organization rather than any one particular function or activity.

Comments are invited on: (1) whether the proposed collection of information is necessary for the Commission to perform its functions properly, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of collecting the information on those who must respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER98–2305–000]

Edgar Electric Cooperative Association d/b/a EnerStar Power Corp.; Notice of Issuance of Order

May 20, 1998.

Edgar Electric Cooperative Association d/b/a EnerStar Power Corp. (EnerStar) filed an application for authorization to engage in the wholesale sale of capacity and energy at market-based rates, and for certain waivers and authorizations. In particular, EnerStar requested that the Commission grant blanket approval under 18 CFR Part 34 of all future issuances of securities and assumptions of liabilities by EnerStar. On May 14, 1998, the Commission issued an Order Accepting For Filing Proposed Market-Based Rates And Granting Waiver Of Notice Requirement (Order), in the above-docketed proceeding.

The Commission's May 14, 1998 Order granted the request for blanket approval under Part 34, subject to the conditions found in Ordering Paragraphs (C), (D), and (F):

(C) Within 30 days of the date of issuance of this order, any person desiring to be heard or to protest the Commission's blanket approval of issuances of securities or assumptions of liabilities by EnerStar should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure, 18 CFR 385.211 and 385.214.

(D) Absent a request to be heard within the period set forth in Ordering Paragraph (C) above, EnerStar is hereby authorized to issue securities and assume obligations and liabilities as guarantor, indorser, surety or otherwise in respect of any security of another person; provided that such issue or assumption is for some lawful object within the corporate purposes of EnerStar, compatible with the public interest, and reasonably necessary or appropriate for such purposes.

(F) The Commission reserves the right to modify this order to require a further showing that neither public nor private interests will be adversely affected by continued Commission approval of EnerStar's issuances of securities or assumptions of liabilities * * *.

Notice is hereby given that the deadline for filing motions to intervene or protests, as set forth above, is June 15, 1998.

Copies of the full text of the Order are available from the Commission's Public Reference Branch, 888 First Street, NE, Washington, DC 20426.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP98–543–000]

NorAm Gas Transmission Company; Notice of Request Under Blanket Authorization

May 20, 1998.

Take notice that on May 13, 1998, NorAm Gas Transmission Company (NGT), 1111 Louisiana, Houston, Texas 77002, filed in Docket No. CP98–543–000, a request, pursuant to Sections 157.205 and 157.211 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 157.211), for authorization to operate certain facilities in Arkansas and Oklahoma, under NGT's blanket certificate authorization issued in Docket Nos. CP82–384–000 and CP82–384–001, pursuant to Section 7 of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Specifically, NGT requests authority at the request of ARKLA, a distribution division of NorAm Energy Corp. (ARKLA) to operate ten (10) existing taps for delivery of natural gas to ARKLA for resale to consumers other than the right-of-way grantors for whom the taps were originally installed. NGT relates that the volume through these taps range from 1 MMBtu to 200 MMBtu per day. NGT has attached in Exhibit Z to its application which is an excerpt from NGT's 1997 annual report which identifies the location and size of each of the ten taps to be certificated. NGT states there will be no new construction.

NGT states that this change is not prohibited by its tariff and that it has sufficient capacity to accomplish the deliveries specified without detriment or disadvantage to its other customers.

Any person or the Commission's staff may, within 45 days after issuance of the instant notice by the Commission, file with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to Section 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest.

If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to Section 7 of the Natural Gas Act.

David P. Boergers,

Acting Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP98–537–000]

Northern Natural Gas Company; Notice of Request Under Blanket Authorization

May 20, 1998.

Take notice that on May 12, 1998, Northern Natural Gas Company (Northern), 1111 South 103rd Street, Omaha, Nebraska 68124–1000, filed in Docket No. CP98–537–000 a request pursuant to Sections 157.205 and 157.216 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 157.216) for authorization to downsize two existing small volume measurement stations located in Webster and Boone Counties, Iowa. Northern makes such request under its blanket certificate issued in Docket No. CP82–401–000 pursuant to Section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

Northern states that it currently provides natural gas deliveries to Utilicorp, Inc. (UCU) at the Dennis Amman and David Junck farm taps, located in Webster and Boone Counties, for ultimate delivery to UCU's end users. It is indicated that the taps have, for over a year, been providing natural gas for home use only as compared to dryer bin usage in the past. Northern states that because the delivered gas' end use was changed, the pressure required and the gas volumes delivered to those farm taps, have been significantly lower than when the taps were originally installed. Northern is therefore, requesting authorization to downsize the Dennis Amman and David Junck farm taps, by installing a smaller meter and regulator, in order to maintain a lower delivery pressure and increase measurement accuracy of natural gas deliveries to UCU, for ultimate delivery to its small volume customers.

Northern avers that deliveries of the estimated volumes to UCU at the downsized Dennis Amman and David Junck will be made pursuant to Northern's currently effective throughout service agreement(s) with UCU. The estimated cost to install the downsized facilities is $1,200. and Northern states that the facilities will be financed in accordance with the General Terms and Conditions of Northern's FERC Gas Tariff, Fifth Revised Volume No. 1.

Any person or the Commission's staff may, within 45 days after issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to Section 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefor, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for

authorization pursuant to Section 7 of the Natural Gas Act.

David P. Boergers,

Acting Secretary.

[FR Doc. 98–13929 Filed 5–26–98; 8:45 am]

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP98–532–000]

Tennessee Gas Pipeline Company; Notice of Request Under Blanket Authorization

May 20, 1998.

Take notice that on May 11, 1998, Tennessee Gas Pipeline Company (Tennessee), P.O. Box 2511, Houston, Texas 77252, filed in Docket No. CP98–532–000 a request pursuant to Sections 157.205 and 157.212 of the Commission's Regulations (18 CFR 157.205, 157.212) under the Natural Gas Act (NGA) for authorization to construct and operate a new delivery point in Essex County, Massachusetts, for deliveries to Wakefield Municipal Light Department (Wakefield), under Tennessee's blanket certificate issued in Docket No. CP 82–413–000, pursuant to Section 7 of the NGA, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

Tennessee proposes to construct and operate delivery point facilities consisting of a 3-inch hot tap and electronic gas measurement facilities. Tennessee states that Wakefield will construct 1,270 feet of interconnecting pipeline and a meter, and that Tennessee will inspect these facilities. Tennessee proposes to use the facilities to deliver up to 4,567 dt equivalent of natural gas per day to Wakefield under Tennessee's Rate Schedule IT. The cost of the facilities is estimated at $66,059, for which, it is stated, Tennessee will be reimbursed by Wakefield. It is asserted that the total quantities to be delivered to Wakefield will not exceed the total quantities authorized prior to this request. It is further asserted that Tennessee's tariff does not prohibit the addition of new delivery points and that Tennessee has sufficient capacity to accomplish the deliveries without detriment or disadvantage to its other customers.

Any person or the Commission's staff may, within 45 days after issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to Section 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefor, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to Section 7 of the Natural Gas Act.

David P. Boergers,

Acting Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER98–2973–000]

Williams Energy Services Company; Notice of Filing

May 20, 1998.

Take notice that on May 12, 1998, Williams Energy Services Company filed an Amendment to the Alamitos and Redondo Beach Generating Station Must Run Agreement adopting such Agreement as WESCO's Rate Schedule. Pursuant to such Agreement, sales are made to the California Independent System Operator at regulated rates now in effect subject to refund pending the outcome of a hearing in Docket No. ER98–441–000.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with the Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before June 1, 1998. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Linwood A. Watson, Jr.,

Acting Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EG98–73–000, et al.]

Orzunil I de Electricidad, Limitada, et al.; Electric Rate and Corporate Regulation Filings

May 18, 1998.

Take notice that the following filings have been made with the Commission:

1. Orzunil I de Electricidad, Limitada

[Docket No. EG98–73–000]

Take notice that on May 6, 1998, Orzunil I de Electricidad, Limitada (Orzunil), located at 8a Calle 3–14, Zona 10, Guatemala City, Guatemala 01010, filed with the Federal Energy Regulatory Commission (the Commission) an application for determination of exempt wholesale generator status pursuant to Part 365 of the Commission's Regulations.

Orzunil will directly or indirectly and exclusively develop, own and operate an electric generating facility, to be located in the province of Quetzaltenango, Guatemala, and will sell electricity at wholesale or exclusively in markets outside of the United States. The electric generating facility will be a geothermal power plant whose primary components are Ormat energy converters (consisting of a turbogenerator, heat exchanger, air-cooled condenser, organic motive fluid piping and control and power system), auxiliary equipment and appurtenant facilities necessary to interconnect the electric generating facility to the transmission facilities of the purchaser. The facility will have a nominal generating capacity of 24 MW net.

Comment date: June 8, 1998, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

2. Southwestern Public Service Company v. El Paso Electric Company

[Docket No. EL98–44–000]

Take notice that on April 29, 1998, Southwestern Public Service Company (SPS), submitted for filing, a complaint against El Paso Electric Company (EPE), seeking an order from the Commission requiring EPE to provide firm transmission service to SPS.

Comment date: June 12, 1998, in accordance with Standard Paragraph E at the end of this notice. Answers to the complaint shall be due on or before June 12, 1998.

3. Laguna Irrigation District

[Docket No. EL98–46–000]

Take notice that on May 6, 1998, Laguna Irrigation District tendered for filing an Application for an order Directing the Establishment of Physical Interconnection of Facilities Pursuant to Sections 202 and 210 of the Federal Power Act and Part 32 of the Commission's Regulation, 18 CFR 32. The application seeks an order requiring Pacific Gas and Electric Company to interconnect its transmission system with Laguna's 12 kV distribution system at points identified in Laguna's application.

Laguna also seeks an order requiring Pacific Gas and Electric Company to file an interconnection agreement or electric tariff establishing just and reasonable terms, conditions and charges under which such interconnection shall be operated and maintained.

Comment date: June 15, 1998, in accordance with Standard Paragraph E at the end of this notice.

4. Allegheny Power Service Corp., on behalf of Monongahela Power Co., The Potomac Edison Company, and West Penn Power Company (Allegheny Power)

[Docket No. ER98–1434–001]

Take notice that on May 13, 1998, Allegheny Power Service Corporation on behalf of Monongahela Power Company, The Potomac Edison Company and West Penn Power Company (Allegheny Power), submitted a revised amendment to its Standard Generation Service Rate Schedule to comply with the Commission directives in an order issued on May 5, 1998, in Docket No. ER98–1434–000.

Copies of the filing have been provided to the Public Utilities Commission of Ohio, the Pennsylvania Public Utility Commission, the Maryland Public Service Commission, the Virginia State Corporation Commission, the West Virginia Public Service Commission, and all parties of record.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

5. Conectiv Energy Supply, Inc.

[Docket No. ER98–2045–001]

Take notice that on May 13, 1998, Conectiv Energy Supply, Inc., tendered for filing its compliance filing in the above-referenced docket.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

6. Florida Power & Light Company

[Docket No. ER98–2746–000]

Take notice that on May 11, 1998, Florida Power & Light Company (FPL), submitted for filing a supplement to the filing that FPL initially had made in this docket on April 30, 1998.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

7. Northern Indiana Public Service Company

[Docket No. ER98–2849–000]

Take notice that on April 29, 1998, Northern Indiana Public Service Company tendered for filing its Transaction Report for short-term transactions for the first quarter of 1998 pursuant to the Commission's order issued January 10, 1997 in Northern Indiana Public Service Company, 78 FERC ¶ 61,015 (1997).

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

8. American Electric Power Service Corporation

[Docket No. ER98–2859–000]

Take notice that on May 1, 1998, the American Electric Power Service Corporation (AEPSC), tendered for filing a report for the first quarter of 1998 summarizing the transactions under the Wholesale Market Tariff of the AEP Operating Companies (Power Sales Tariff). The Power Sales Tariff was accepted for filing effective October 10, 1997 and has been designated AEP Operating Companies FERC Electric Tariff Original Volume No. 5.

A copy of the filing was served upon the Parties and the State Utility Regulatory Commissions of Indiana, Kentucky, Michigan, Ohio, Tennessee, Virginia and West Virginia.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

9. PP&L, Inc.

[Docket No. ER98–2869–000]

Take notice that on May 1, 1998, PP&L, Inc., filed a summary of activity conducted under its market-based rates tariff, FERC Electric Tariff, Original Volume No. 5, during the quarter ending March 31, 1998.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

10. Tucson Electric Power Company

[Docket No. ER98–2872–000]

Take notice that on April 30, 1998, Tucson Electric Power Company (Tucson), tendered for filing a Transaction Report regarding power purchases and sales under its Market-Based Power Sales Tariff for quarter ended March 31, 1998.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

11. Commonwealth Edison Company

[Docket No. ER98–2873–000]

Take notice that on April 30, 1998, Commonwealth Edison Company (Edison), submitted its quarterly market-based transaction report for the calendar quarter ending March 31, 1998.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

12. Central and South West Services, Inc.

[Docket No. ER98–2874–000]

Take notice that on April 30, 1998, Central and South West Services, Inc., as agent for Central Power and Light Company, West Texas Utilities Company, Public Service Company of Oklahoma, and Southwestern Electric Power Company (collectively, the CSW Operating Companies), submitted a quarterly report under the CSW Operating Companies' market-based sales tariff. The report is for the period January 1, 1998 through March 31, 1998.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

13. Niagara Mohawk Power Corporation

[Docket No. ER98–2924–000]

Take notice that on May 7, 1998, Niagara Mohawk Power Corporation (Niagara Mohawk), tendered for filing its Quarterly Sales and Services Summary as required by the Commission's Order dated September 25, 1996 in Docket No. ER96–2585–000. A copy of the filing has been served on the Public Service Commission of the State of New York.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

14. Williams Energy Services Company

[Docket No. ER98–2973–000]

Take notice that on May 12, 1998, Williams Energy Services Company filed an Amendment to the Huntington Beach Generating Station Must Run Agreement adopting such Agreement as WESCO's Rate Schedule. Pursuant to such Agreement, sales are made to the California Independent System Operator at regulated rates now in effect subject to refund pending the outcome of a hearing in Docket No. ER98–441–000.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

15. Ocean Vista Power Generation, L.L.C., Mountain Vista Power Generation, L.L.C., Alta Power Generation, L.L.C., Oeste Power Generation, L.L.C., Ormond Beach Power Generation, L.L.C.

[Docket No. ER98–2977–000]

Take notice that on May 13, 1998, Ocean Vista Power Generation, L.L.C. (Ocean Vista), Mountain Vista Power Generation, L.L.C. (Mountain Vista), Alta Power Generation, L.L.C. (Alta Power), Oeste Power Generation, L.L.C. (Oeste Power), and Ormond Beach Power Generation, L.L.C. (Ormond Beach) (collectively, the Applicants) filed with the Federal Energy Regulatory Commission an Application for Authority to Sell Specific Ancillary Services at Market-Based Rates and Request for Expedited Consideration. Included as part of the Application are proposed revised market-based Rate Schedules for each of these companies to provide for the sale at market-based rates of four ancillary services: Regulation, Spinning Reserve, Non-Spinning Reserve, and Replacement Reserve.

Applicants request waivers permitting market-based rates for these Ancillary Services to be made effective as of the date of filing for Ocean Vista, Mountain Vista, Alta Power, Oeste Power, and for Ormond Beach as of May 27, 1998 or such later date as coincides with the acquisition by Ormond Beach of the Ormond Beach generating facility from Southern California Edison.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

16. California Independent System Operator Corporation

[Docket No. ER98–2978–000]

Take notice that on May 13, 1998, the California Independent System Operator Corporation (ISO), tendered for filing a Meter Service Agreement for Scheduling Coordinators between the ISO and the British Columbia Power Exchange Corporation (British Columbia PX) for acceptance by the Commission.

The ISO states that this filing has been served on the British Columbia PX and the California Public Utilities Commission.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

17. Consolidated Edison Company of New York, Inc.

[Docket No. ER98–2979–000]

Take notice that on May 13, 1998, Consolidated Edison Company of New York, Inc. (Con Edison), tendered for filing a Supplement to its Rate Schedule FERC No. 78, an agreement to provide transmission service for the Power Authority of the State of New York (the Authority). The Supplement provides for an increase in the annual revenues under the Rate Schedule of $3,655.11. Con Edison has requested that the increase take effect on July 1, 1998.

Con Edison states that a copy of this filing has been served by mail upon the Authority.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

18. Consolidated Edison Company of New York, Inc.

[Docket No. ER98–2980–000]

Take notice that on May 13, 1998, Consolidated Edison Company of New York, Inc. (Con Edison), tendered for filing a Supplement to its Rate Schedule FERC No. 60, an agreement to provide transmission service for the Power Authority of the State of New York (the Authority). The Supplement provides for an increase in the annual revenues under the Rate Schedule of $24,280.86. Con Edison has requested that the increase take effect on July 1, 1998.

Con Edison states that a copy of this filing has been served by mail upon the Authority.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

19. Cinergy Services, Inc.

[Docket No. ER98–2981–000]

Take notice that on May 13, 1998, Cinergy Services, Inc. (Cinergy), tendered for filing a service agreement under Cinergy's Open Access Transmission Service Tariff (the Tariff) entered into between Cinergy and VTEC Energy (VTEC).

Cinergy and VTEC are requesting an effective date of May 12, 1998.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

20. Cinergy Services, Inc.

[Docket No. ER98–2982–000]

Take notice that on May 13, 1998, Cinergy Services, Inc. (Cinergy), tendered for filing a service agreement under Cinergy's Open Access Transmission Service Tariff (the Tariff) entered into between Cinergy and Northern States Power Company (Northern).

Cinergy and Northern are requesting an effective date of May 12, 1998.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

21. Tucson Electric Power Company

[Docket No. ER98–2983–000]

Take notice that on May 13, 1998, Tucson Electric Power Company (TEP), tendered for filing a short-term umbrella service agreement with Morenci Water and Electric for sales under TEP's Market-Based Power Sales Tariff, FERC Electric Tariff Original Volume No. 3.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

22. Tucson Electric Power Company

[Docket No. ER98–2984–000]

Take notice that on May 13, 1998, Tucson Electric Power Company (TEP), tendered for filing one (1) non-firm umbrella transmission service agreement pursuant to Part II of TEP's Open Access Transmission Tariff, which was filed in Docket No. OA96–140–000].

The details of the service agreement are as follows: Service Agreement for Non-Firm Point-to-Point Transmission Service with Western Resources dated April 27, 1998. TEP has not yet provided transmission service under this service agreement.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

23. Consolidated Edison Company of New York, Inc.

[Docket No. ER98–2985–000]

Take notice that on May 13, 1998 Consolidated Edison Company of New York, Inc. (Con Edison), tendered for filing a Supplement to its Rate Schedule FERC No. 102, an agreement to provide transmission service for the New York Power Authority (the Authority). The Supplement provides for an increase in the annual revenues under the Rate Schedule of $7,528.23. Con Edison has requested that the increase take effect on July 1, 1998.

Con Edison states that a copy of this filing has been served by mail upon the Authority.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

24. Consolidated Edison Company of New York, Inc.

[Docket No. ER98–2986–000]

Take notice that on May 13, 1998, Consolidated Edison Company of New

York, Inc. (Con Edison), tendered for filing a Supplement to its Rate Schedule FERC No. 66, an agreement to provide transmission service for the Power Authority of the State of New York (the Authority). Con Edison has requested that the increase take effect on July 1, 1998.

Con Edison states that a copy of this filing has been served by mail upon the Authority.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

25. Orange and Rockland Utilities, Inc.

[Docket No. ER98–2987–000]

Take notice that on May 13, 1998, Orange and Rockland Utilities, Inc. (O&R), tendered for filing pursuant to Part 35 of the Federal Energy Regulatory Commission's Rules of Practice and Procedure, 18 CFR 35, a service agreement under which O&R will provide capacity and/or energy to VTEC Energy, Inc. (VTEC Energy).

O&R requests waiver of the notice requirement so that the service agreement with VTEC Energy becomes effective as of May 5, 1998.

O&R has served copies of the filing on The New York State Public Service Commission and VTEC Energy.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

26. Cinergy Services, Inc.

[Docket No. ER98–2988–000]

Take notice that on May 11, 1998, Cinergy Services, Inc. (Cinergy), tendered for filing a service agreement under Cinergy's Open Access Transmission Service Tariff (the Tariff), entered into between Cinergy and Northern States Power Company (Northern).

Cinergy and Northern are requesting an effective date of May 12, 1998.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

27. Cinergy Services, Inc.

[Docket No. ER98–2989–000]

Take notice that on May 13, 1998, Cinergy Services, Inc. (Cinergy), tendered for filing a service agreement under Cinergy's Open Access Transmission Service Tariff (the Tariff), entered into between Cinergy and PP&L, Inc., (PP&L).

Cinergy and PP&L are requesting an effective date of May 12, 1998.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

28. Oklahoma Gas and Electric Company

[Docket No. ER98–2990–000]

Take notice that on May 13, 1998, Oklahoma Gas and Electric Company (OG&E), tendered for filing service agreements for parties to take service under its short-term power sales agreement.

Copies of this filing have been served on each of the affected parties, the Oklahoma Corporation Commission and the Arkansas Public Service Commission.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

29. Wisconsin Electric Power Company

[Docket No. ER98–2991–000]

Take notice that on May 13, 1998, Wisconsin Electric Power Company (Wisconsin Electric), tendered for filing an electric service agreement under its Coordination Sales Tariff (FERC Electric Tariff, Original Volume No. 2). Wisconsin Electric respectfully requests an effective date May 13, 1998. Wisconsin Electric is authorized to state that Northern/AES Energy, LLC joins in the requested effective date.

Copies of the filing have been served on Northern/AES Energy, LLC, the Michigan Public Service Commission, and the Public Service Commission of Wisconsin.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

30. Consolidated Edison Company of New York, Inc.

[Docket No. ER98–2993–000]

Take notice that on May 12, 1998, Consolidated Edison Company of New York, Inc. (Con Edison), tendered for filing a Supplement to its Rate Schedule FERC No. 117, an agreement to provide transmission and interconnection service to Long Island Lighting Company (LILCO). The Supplement provides for an increase in annual revenues under the Rate Schedule of $105,531.88. Con Edison has requested that this increase take effect on July 1, 1998.

Con Edison states that a copy of this filing has been served by mail upon LILCO.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

31. Central Vermont Public Service Corporation

[Docket No. ER98–2994–000]

Take notice that on May 12, 1998, Central Vermont Public Service Corporation tendered for filing revisions to its open access transmission tariff to include penalty provisions for failure to curtail and/or interrupt transmission service and for taking service in excess of reserved capacity.

Comment date: June 1, 1998, in accordance with Standard Paragraph E at the end of this notice.

32. Consolidated Edison Company of New York, Inc.

[Docket No. ER98–3008–000]

Take notice that on May 13, 1998 Consolidated Edison Company of New York, Inc. (Con Edison), tendered for filing a service agreement to provide non-firm transmission service pursuant to its Open Access Transmission Tariff to Scana Energy Marketing, Inc., (Scana).

Con Edison states that a copy of this filing has been served by mail upon Scana.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

33. Northern States Power Company (Minnesota) and Northern States Power Company (Wisconsin)

[Docket No. ER98–3009–000]

Take notice that on May 13, 1998, Northern States Power Company (Minnesota) and Northern States Power Company (Wisconsin) (jointly NSP), tendered for filing a Non-Firm Point-to-Point Transmission Service Agreement and a Short-Term Firm Transmission Service Agreement between NSP and Cargill-Alliant, LLC.

NSP requests that the Commission accept both the agreements effective April 15, 1998, and requests waiver of the Commission's notice requirements in order for the agreements to be accepted for filing on the date requested.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

34. Cinergy Services, Inc.

[Docket No. ER98–2976–000]

Take notice that on May 13, 1998, Cinergy Services, Inc., (Cinergy), tendered for filing an Interchange Agreement among the Cinergy Operating Companies and Southern Illinois Power Cooperative in the above-referenced docket. The Interchange Agreement provides for voluntary sales transactions between the parties.

Copies of the filing have been served upon Southern Illinois Power Cooperative.

Comment date: June 2, 1998, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraph

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection.

David P. Boergers,

Acting Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6103–2]

Agency Information Collection Activities: Proposed Collection; Comment Request; 1999 Drinking Water Infrastructure Needs Survey

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this document announces that EPA is planning to submit the following proposed Information Collection Request (ICR) to the Office of Management and Budget (OMB): 1999 Drinking Water Infrastructure Needs Survey, EPA ICR # 1708.02. Before submitting the ICR to OMB for review and approval, EPA is soliciting comments on specific aspects of the proposed information collection as described below.

DATES: Comments must be submitted on or before July 27, 1998.

ADDRESSES: To obtain a copy of the ICR without charge please contact the Safe Drinking Water Hotline, (800) 426–4791. Hours of operation are 9:00 a.m. to 5:30 p.m. (ET), Monday—Friday, excluding Federal holidays. Copies are also available from the Office of Water Resource Center (RC4100), U.S. EPA Headquarters, 401 M Street SW, Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Safe Drinking Water Hotline, (800) 426–4791, e-mail: hotline-sdwa-group@epamail.epa.gov; or Richard Naylor, (202) 260–5135, fax (202) 260–0732, e-mail: naylor.richard@epamail.epa.gov.

SUPPLEMENTARY INFORMATION: Affected entities: Entities potentially affected by this action are those which own, operate or regulate community water systems but not limited to: Owners/operators of community water systems, State Environmental Water Quality Agencies, and State Departments of Health.

Title: 1999 Drinking Water Infrastructure Needs Survey, EPA ICR # 1708.02.

Abstract: The purpose of this information collection is to identify the current and future infrastructure needs of community and nonprofit noncommunity public water systems for the 20-year period from January 1999 through December 2018. The collection will be conducted by EPA's Office of Ground Water and Drinking Water (OGWDW) in order to comply with Sections 1452(h) and 1452 (i)(4) of the Safe Drinking Water Act (SDWA) (Public Law 104–182).

The collection will involve two methods. A questionnaire will be used to collect information from large and medium community water systems. For small systems and nonprofit noncommunity water systems, data will be collected through a site visit by the EPA contractor. Questionnaires and site visit reports will be reviewed by State Needs Survey Coordinators before submission to EPA.

The data from the questionnaires and the site visits will provide EPA with a basis for estimating the drinking water infrastructure needs of community water systems for the 20-year period, January 1999 through December 2018. Furthermore, under section 1452 (a)(1)(D) of SDWA, the results of the needs survey must be used as the basis for allocating Drinking Water State Revolving Loan Fund capitalization grant funds among the States. Responses to the collection of information are voluntary.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR Chapter 15.

The EPA would like to solicit comments to:

(i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(ii) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(iii) Enhance the quality, utility, and clarity of the information to be collected; and

(iv) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Burden Statement: It is estimated that this information collection will involve a total cost burden to the Respondents of $1,533,029 and a total hour burden to the Respondents of 44,096 hours. There will be no capital, start-up or operation and maintenance costs but the collection will involve a one time response, from 4,670 respondents, of approximately 9.4 hours per respondent. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Dated: May 21, 1998.

Cynthia Dougherty,

Director, Office of Ground Water and Drinking Water.

VOL 63 ISS 101 MAY 27 1998 UMI

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), this document announces that the following Information Collection Request (ICR) has been forwarded to the Office of Management and Budget (OMB) for review and approval: Information Collection Request for the Underground Injection Control Program (OMB Control No. 2040–0042; EPA ICR No. 0370.16), expiring June 30, 1998. The ICR describes the nature of the information collection and its expected burden and cost; where appropriate, it includes the actual data collection instrument.

DATES: Comments must be submitted on or before June 26, 1998.

FOR FURTHER INFORMATION CONTACT: Contact Sandy Farmer at EPA by phone at (202) 260–2740, by E-mail at farmer.sandy@epamail.epa.gov, or download off the Internet at http://www.epa.gov/icr and refer to EPA ICR No. 370.16.

SUPPLEMENTARY INFORMATION:

Title: Information Collection Request for the Underground Injection Control Program (OMB Control No. 2040–0042; EPA ICR No. 370.16), expiring June 30, 1998. This is a request for extension of a currently approved collection.

Abstract: The Underground Injection Control (UIC) Program under the Safe Drinking Water Act established a Federal and State regulatory system to protect underground sources of drinking water from contamination by injected fluids. Owners and operators of underground injection wells must obtain permits, conduct environmental monitoring, maintain records, and report results to EPA or the State primacy Agency. States must report to EPA on permittee compliance and related information. The information is reported using standardized forms, and the regulations are codified at 40 CFR parts 144 through 148. The data is used to ensure the safety of underground sources of drinking water. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR Chapter 15. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR Chapter 15. The **Federal Register** document required under 5 CFR 1320.8(d), soliciting comments on this collection of information was published on February 19, 1998 (63 FR 8449). One comment was received by EPA.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 2.59 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Entities potentially affected by this action are owners and operators of underground injection wells and their States' Agencies including Puerto Rico, the U.S. Trust Territories, Indian Tribes, and Alaska's Native Villages.

Estimated Number of Respondents: 53,268.

Frequency of Response: Operators of Class I, III and some Class V wells must report monitoring results quarterly; Class II operators report annually.

Estimated Total Annual Hour Burden: 1,135,273 hours.

Estimated Total Annualized Cost Burden: $27,648,934.

Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the following addresses. Please refer to EPA ICR No 2040–0042 and OMB Control No. 370.16 in any correspondence.

Ms. Sandy Farmer, U.S. Environmental Protection Agency, OPPE Regulatory Information Division (2137), 401 M Street, SW, Washington, DC 20460;

and

Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for EPA, 725 17th Street, NW, Washington, DC 20503.

Dated: May 20, 1998.

Richard T. Westlund,

Acting Director, Regulatory Information Division.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6102–7]

Science Advisory Board, Environmental Health Committee; Notification of Public Meeting, June 9–10, 1998

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Pursuant to the Federal Advisory Committee Act, Pub. L. 92–463, notification is hereby given that the Environmental Health Committee (EHC) (henceforth, the "Committee") of the Science Advisory Board (SAB) will meet on Tuesday June 9 and Wednesday June 10, 1998, beginning no earlier than 8:30 am and ending no later than 5:00 pm on each day. The meeting will be held in the Main Auditorium, U.S. EPA, Environmental Research Center, Route 54 and Alexander Drive, Research Triangle Park, North Carolina 27711. The meeting is open to the public, however, due to limited space, seating will be on a first-come basis.

The purpose of the meeting is for the Committee to review: (a) Case studies on the application of the Inhalation Reference Concentrations (RfC) Methods; and (b) the Acute Reference Exposure Methodology (ARE). Both the RfC Methods and the ARE Methods were developed by the U.S. EPA Office of Research and Development (ORD), National Center for Environmental Assessment (NCEA).

Charge for the RfC Methods Case Studies Review

The Methodology document provides the general conceptual framework for evaluation of inhalation toxicity, as well as the specifics and operational procedures for this evaluation. The procedures of the methodology will continue to develop as the state-of-science changes. The general charge to the Committee is to conduct a review on the utility of the conceptual framework through examination of case studies of chemicals across various types of agents (particle versus gas category) and data base (human versus laboratory animal; incomplete or comprehensively complete). The Committee is also charged to comment on specific aspects

of this framework, notably, consistency in the conceptual approach regarding: hazard identification; designation of effect levels; choice of critical effect; choice of principal study; duration and dosimetry adjustment; response modeling; application of UF; and characterization of uncertainty (confidence statements).

The Committee has also been asked to comment on the level of documentation used to support RfC estimates. In addition, the Committee has been asked to respond to the following specific questions: (a) Overall, are the concepts and applications of the RfC methodology clearly articulated in the documentation provided for the case studies? Do the decisions and choices in these files attain the Agency's goal of being "transparent, clear, and reasonable"? If not, what are specific examples within these files that could be instituted to better attain this goal?; (b) In derivation of the RfC in the specific case studies, (1) are the study summaries presented in sufficient detail for reader evaluation?, (2) are the designations of the critical effect and effects levels (NOAEL/LOAEL/BMC) based on rationales that are clear and reasonable?, (3) of the studies presented in either the IRIS Summary or Toxicological Review of each chemical, has the Principal study/ies been selected in a consistent and rational manner? Does this choice reflect consideration on the current knowledge of potential human response?, (4) have the underlying assumptions of the duration and dosimetry adjustments been presented clearly?, (5) are the rationales presented for use of uncertainty factors clear, reasonable and consistent?, (6) do the confidence statements reflect the strengths and limitations (e.g., relevancy to humans, comprehensiveness of the data base) of the RfC assessment in a manner consistent with the Agency's goals?; and (c) In the IRIS Summaries for the specific cases, numerous studies are included under the heading "Supporting/Additional Studies" that are meant to provide further support for designation of the critical effect (e.g., mechanistic data, human data) or for the effect level chosen in the Principal study, or to establish the completeness of the data base. Is the depth of presentation in this section sufficiently comprehensive to provide information supportive of the decisions made in the assessment (such as uncertainty factors and confidence levels)?

Charge for the Acute Reference Exposure Methods Review

The Committee has been asked to respond to the following Charge questions for the Acute Reference Exposure Methodology review: (a) The ARE methodology recommends three approaches for deriving ARE values and describes the types and amount of data that should be used to support each approach. Are these approaches appropriate for deriving acute exposure values? Are the recommendations for types and amount of data appropriate?; (b) The ARE methodology recommends using dosimetric adjustments to derive human equivalent concentrations from animal exposures. The ARE methodology departs from the RfC methodology by recommending default dosimetric adjustment factors of one for all categories of gases. For particulates, the same adjustments used for developing RfCs are recommended. Does the documentation provide sufficient rationale for these recommendations? If not, please comment on the elements that are lacking. Are the recommended dosimetric adjustments applicable to acute exposure scenarios? If not, please recommend dosimetric adjustments that are more applicable to acute exposures; (c) The categorical regression option of the ARE methodology involves assigning ordinal severity categories to effect data from toxicity studies that use a variety of species, exposure concentrations and exposure durations. Regression analysis is then used to relate the severity of response to exposure concentration and duration for the entire array of data. For determining the severity category of acute health effects, the ARE methodology document recommends using toxicological judgment rather than a well-defined scheme as schemes are unlikely to be applicable to a variety of toxic endpoints. Is the expert system for categorizing severity sufficient? If not, how can it be improved?; (d) The ARE methodology recommends using severe effect data, including lethality, for the categorical regression approach, but advises against using lethality and other nonsensitive endpoints when using No-Observed-Adverse-Effect Level (NOAEL) and benchmark concentration approaches. The categorical regression model uses severe effect data to determine the slopes of the probability curves for each severity, the intercepts for the curves and the distance between the various severity curves. Is the guidance offered for including lethal and severe effect data for ARE derivation sufficient? Can the Committee suggest ways in which severe effect data could be better utilized?; (e) CatReg software allows individual data and data reported as group information to be combined in a single analysis. The *CatReg Software User Manual* offers three alternatives for placing group and individual data on "equal footing": the use of a scaling factor, g; converting individual data to group data; and estimating individual responses from group information. No alternative is described as preferred. Does the Committee have an opinion as to which alternative may be preferable?; (f) In categorical regression, the rules of probability constrain the probability curves for the various severities to be parallel. Although parallelism is a mathematical constraint, it implies the biological interpretation that similar mechanisms of action and kinetics are active in all severity categories. Does the Committee view this as a limitation to the categorical regression approach? If so, how should the use of categorical regression be constrained?; and (g) Of the approaches recommended for ARE derivation, categorical regression is the only approach for which duration extrapolation is not required. The NOAEL and benchmark dose/concentration methods (BMC) approaches can only be applied to exposure durations for which data are available. AREs for other exposure durations must be derived by duration extrapolations. AREs for other exposure durations must be derived by duration extrapolations. For extrapolation from short duration values to longer durations, a concentration x time adjustment is recommended. For extrapolations from long durations to shorter durations, use of the same concentration identified at the longer duration is recommended. These are conservative duration adjustments. Are these duration adjustments appropriate for the approaches to which they are applied? Can the Committee suggest other adjustments that may be more appropriate?

Background for RfC Methods Case Studies Review

The Clean Air Act Amendments (CAAA) of 1990 require sources to demonstrate negligible risk and lack of residual risk (after implementation of control technology) based on health risk estimates. Inhalation Reference Concentrations (RfCs) are developed as dose-response estimates for noncancer effects. The RfC is an estimate (with uncertainty spanning perhaps an order of magnitude) of a daily inhalation exposure to the human population (including sensitive subgroups) that is

likely to be without an appreciable risk of deleterious noncancer effects during a lifetime. It is anticipated that RfCs will be used for CAAA regulatory activities as a part of the determination of negligible and residual risk for noncancer health effects of air toxics. Additionally, Regional, State and local air pollution control offices utilize RfC values in risk management programs.

The inhalation RfC methodology was developed according to the oral reference dose (RfD) paradigm with an added emphasis on portal-of-entry considerations of comparative toxicity and inhalation dosimetry for particles and gases. Extrapolation modeling was added in which factors are derived for adjustment of exposure concentrations that account for dosimetric differences between experimental animal species and humans. The methodology is considered to be a "living" document. Previous versions have undergone external peer review, including an expert peer review in October 1987 and a Science Advisory Board review in 1990 (EPA-SAB-EC–91–008). The current version of the methodology *(Methods for Derivation of Inhalation Reference Concentrations and Application of Inhalation Dosimetry, EPA/600/8–90/066F, October 1994)* represents the Agency's response to comments made at the 1990 SAB review including revisions to allow flexibility in the methods employed for dosimetry adjustments that reflect the state-of-the-science such as substitution of "optimal" approaches (e.g., PB-PK) when validated models are available. The current version of the Methodology and a category scheme for gases was reviewed by two additional external workgroups in August and September 1993. Revisions are already underway in the dosimetry adjustments to allow for contemporary mechanistic data to inform the choice of alternative dose metrics across noncancer and cancer toxicities where appropriate.

At its review of the inhalation methodology, the SAB requested the opportunity to review case studies using the methods to demonstrate the application of the dosimetric adjustments and to illustrate the methodology applied to chemicals representative of the typical range of data available including those with human occupational or clinical information and those with databases considered to be insufficient for quantitative dose-response estimation ("not-verifiable"). The review requested by the SAB is not intended to be a review of the RfC methods themselves but rather one of the conceptual framework of the approach as applied to representative data. The accompanying documents and related references (Jarabek, 1994; 1995a,b) provide definitions of uncertainty factors and details on the RfC derivation procedures. Case studies will be presented in one of four groups: (1) Particle case studies, (2) category 1 gas case studies, (3) category 3 gas case studies, and (4) not-verifiable case studies.

Another concern that had been voiced in a 1990 EHC report to the Agency (EPA–SAB–EHC–90–005) regarding the RfD Methodology was the reliance on the NOAEL/LOAEL approach for designation of the effect levels used in the derivation. Since that time, the Agency has advocated the use of the benchmark dose/concentration (BMD/C) approach as preferred or at least complimentary to the NOAEL/LOAEL approach *(The Use of the Benchmark Dose Approach in Health Risk Assessment, EPA/630/R–94/007, February 1995)* when the data allow. Some of the case studies to be reviewed (MDI, phosphoric acid, antimony trioxide, carbon disulfide) present BMC analyses.

Background documentation describing the derivation of the RfC for each of the chemical files has been provided. In some cases this is embodied by the IRIS Summary (i.e., on-line IRIS file) alone. The newer files (1997 and 1998) are accompanied by a Toxicological Review from which the actual on-line IRIS assessments are derived in addition to the summary sheet. The complete IRIS file for the compounds reviewed (and any other compound on IRIS) is available at http://www.epa.gov/iris. The differences in level of documentation reflect changes made during a pilot program of the Integrated Risk Information System (IRIS) process which will be described at the meeting and is reviewed in Mills and Foureman (1998).

Background for Acute Reference Exposure Methods Review

Risk assessment for acute inhalation exposures has been hampered by the lack of acute toxicity values on which to base an evaluation of exposure. In an effort to provide toxicity values for acute noncancer risk assessment for inhalation exposures, the U.S. EPA National Center for Environmental Assessment has developed a methodology for Agency use to perform dose-response assessments for noncancer effects due to acute inhalation exposures. The methodology describes how to derive chemical-specific acute exposure benchmarks called acute reference exposures (AREs). These estimates, applicable to single continuous exposures for up to 24 hours, will have wide applicability in assessing potential health risks due to short-term exposures to airborne chemicals in the environment. As they are developed and reviewed, AREs will be available to the public in chemical-specific files found in U.S. EPA's Integrated Risk Information System (IRIS) database.

The methodology document, *Methods for Exposure-Response Analysis for Acute Inhalation Exposure to Chemicals, Development of Acute Reference Exposure*, has undergone both internal and external peer review and was revised accordingly. The supplementary documents, *CatReg Software Documentation* and *CatReg Software User Manual*, were developed subsequent to the external peer review and have undergone internal peer review and revision.

For Further Information

Copies of the review document and any background materials for the review (with the exception of the SAB reports) are not available from the SAB. Copies of SAB prepared reports mentioned in this FR Notice may be obtained from the SAB's Committee Evaluation and Support Staff at (202) 260–4126, or via fax at (202) 260–1889. Please provide the SAB report number when making a request.

Requests for individual copies of the background material for the RfC Methods Case Studies review should be directed to Ms. Annie Jarabek by telephone (919) 541–4847, by fax (919) 541–1818 or via Email at: jarabek.annie@epa.gov. Technical questions about the RfC Methods Case Studies review should also be directed to Ms. Annie Jarabek, National Center for Environmental Assessment-RTP, Mail Drop 52, U.S. EPA, Research Triangle Park, NC 27711.

Requests for individual copies of the background material for the Acute Reference Exposure review should be directed to Dr. Judy Strickland by telephone (919) 541–4930, by fax (919) 541–0245 or via Email at: strickland.judy@epa.gov. Technical questions about the Acute Reference Exposure Methods should also be directed to Dr. Judy Strickland, National Center for Environmental Assessment-RTP, Mail Drop 52, U.S. EPA, Research Triangle Park, NC 27711.

Members of the public desiring additional information about the meeting, including an agenda, should contact Ms. Mary Winston, Committee Operations Staff, Science Advisory Board (1400), U.S. EPA, 401 M Street,

SW, Washington DC 20460, by telephone (202) 260–4126; fax (202) 260–7118; or via Email at: winston.mary@epa.gov

Anyone wishing to make an oral presentation at the meeting must contact Ms. Roslyn Edson, Acting Designated Federal Officer for the EHC, in writing, no later than 5:00 p.m. Eastern Time on June 4, 1998, by fax (202) 260–7118, or via Email at: edson.roslyn@epa.gov The request should identify the name of the individual who will make the presentation and an outline of the issues to be addressed. At least 35 copies of any written comments to the Committee are to be given to Ms. Edson no later than the time of the presentation for distribution to the Committee and the interested public. For questions concerning the review, Ms. Edson can be contacted at (202) 260–3823.

Providing Oral or Written Comments at SAB Meetings

The Science Advisory Board expects that public statements presented at its meetings will not repeat previously submitted oral or written statements. In general, each individual or group making an oral presentation will be limited to a total time of ten minutes. This time may be reduced at the discretion of the SAB, depending on meeting circumstances. Oral presentations at teleconferences will normally be limited to three minutes per speaker or organization. Written comments (at least 35 copies) received in the SAB Staff Office sufficiently prior to a meeting date, may be mailed to the relevant SAB committee or subcommittee prior to its meeting; comments received too close to the meeting date will normally be provided to the committee at its meeting. Written comments, which may be of any length, may be provided to the relevant committee or subcommittee up until the time of the meeting.

Individuals requiring special accommodation, including wheelchair access, should contact Ms. Edson at least five business days prior to the meeting so that appropriate arrangements can be made.

Dated: May 15, 1998.

Donald G. Barnes,

Staff Director, Science Advisory Board.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–6102–5]

Changes to the May 8, 1998 Federal Register Notice Regarding Salt River Municipal Solid Waste Landfill Tentative Approval; Address Correction to Public Hearing Location; Date Changes to Public Hearing and Public Comment Period

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice; correction.

SUMMARY: EPA's tentative approval of an alternative liner system design and use of an alternative daily cover material for the Salt River Municipal Solid Waste Landfill was published in the May 8, 1998, **Federal Register** (63 FR 25476–25479). The following information is an update to the May 8, 1998, **Federal Register** document.

Address Correction: the address for the public hearing was incorrect and printed as 1005 E. Osborne Road. The correct address is 10005 Osborne Road.

Public Hearing Date: has been rescheduled from June 10, 1998, to July 29, 1998.

Public Comment Period: has been extended from June 10, 1998, to August 5, 1998.

Please note that public hearing is scheduled for July 29, 1998, from 5–7 pm at Salt River Pima-Maricopa Indian Reservation, Community Development Conference Room, 10005 E. Osborne Road, Scottsdale, Arizona 85256. For further information, contact Steve Parker at (602) 850–8024. At the hearing, EPA may limit oral testimony to five minutes per speaker, depending on the number of commentors. The hearing may adjourn earlier than 7:00 pm if all of the speakers deliver their comments before that hour. Representatives of the Salt River Pima-Maricopa Indian Community and the Salt River MSWLF will be present at the public hearing.

Copies of the Salt River Pima-Maricopa Indian Community's applications for site-specific flexibility are available for inspection and copying at: Salt River Pima-Maricopa Indian Reservation Administration Building, 10005 E. Osborne Road, Scottsdale, Arizona 85256. Contact: Lonita Jim, Tribal Secretary (602) 850–8000, or the US EPA Region 9 Library, 75 Hawthorne Street 13th Floor, San Francisco, California, 94105, telephone (415) 744–1510, from 9 am to 5 pm Monday through Friday.

All comments on the Salt River Pima-Maricopa Indian Community's applications for approval of site-specific flexibility must be received by August 5, 1998. Written comments should be sent to Ms. Susanna Trujillo, Mail Code WST–7, US EPA Region 9, 75 Hawthorne Street, San Francisco, California 94105.

Dated: May 15, 1998.

Lawrence J. Bowerman,

Acting Director, Waste Management Division.

[FR Doc. 98–13991 Filed 5–26–98; 8:45 am]

BILLING CODE 6560–60–P

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Reviewed by the Federal Communications Commission

May 19, 1998.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection(s), as required by the Paperwork Reduction Act of 1995, Public Law 104–13. An agency may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number. Comments are requested concerning (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

DATES: Written comments should be submitted on or before July 27, 1998. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all comments to Judy Boley, Federal Communications Commission, Room 234, 1919 M St., N.W., Washington, DC 20554 or via internet to jboley@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the

information collection(s), contact Judy Boley at 202–418–0214 or via internet at jboley@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control No.: 3060–0653.

Title: Consumer Information—Posting by Aggregators, Section 64.703(b).

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities.

Number of Respondents: 56,200 respondents.

Estimated Time Per Response: 3.57 hours per response (avg.).

Total Annual Burden: 202,566 hours.

Estimated Annual Reporting and Recordkeeping Cost Burden: $0.

Frequency of Response: On occasion reporting requirement; Third party disclosure.

Needs and Uses: As required by 47 U.S.C. Section 226(c)(1)(A), Section 64.703(b) of the Commission's rules provides that aggregators (providers of telephones to the public or transient users) must post in writing, on or near such phones, information about presubscribed operator services, rates, carrier access, and the FCC address to which consumers may direct complaints.

OMB Control No.: 3060–0149.

Title: Application and Supplemental Information Requirements—Part 63, Section 214, Sections 63.01–63.601.

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Businesses or other for profit entities.

Number of Respondents: 255 respondents.

Estimated Time Per Response: 10 hours per response (avg.).

Total Annual Burden: 2550 hours.

Estimated Annual Reporting and Recordkeeping Cost Burden: $0.

Frequency of Response: On occasion reporting requirement.

Needs and Uses: Section 214 of the Communications Act of 1934, as amended, 47 U.S.C. Section 214, requires that a carrier must first obtain FCC authorization either to (1) construct, operate, or engage in transmission over a line of communication, or (2) discontinue, reduce, or impair service over a line of communication. 47 CFR Part 63 implements Section 214. In a NPRM issued in CC Docket No. 97–11, the Commission proposed to modify 47 CFR Part 63 to eliminate information submission requirements entirely for some categories of communications carriers and to reduce the submissions requirements for other categories. The Commission proposed entirely eliminating the requirement for carriers to file applications for line "extensions" because Congress has exempted line "extensions" for the requirements of 47 U.S.C. 214, under Section 402(b)(2)(A) of the Telecommunications Act of 1996. The Commission also proposed eliminating the requirement for reports submitted by carriers identified by the Commission as domestic non-dominant carriers, small carriers, and carriers proposing small projects. For carriers identified by the Commission as domestic dominant rate-of-return carriers, the Commission proposed reducing (but not entirely eliminating) the information submission requirements in applications for "new" lines, because the information is collected elsewhere, is unnecessary, is confusing in light of the provisions of section 402(b)(2)(A), or is no longer of decisional significance to the Commission. The information received in applications from dominant carriers (not proposed to be reduced) has been used by the Commission to determine if the facilities are needed. The information contained in reports from nondominant carriers (not proposed to be eliminated) has been used to monitor the growth of the networks and the availability of common carrier services in this segment of the telecommunications market, to relieve these carriers and the Commission of a before-the-fact review of each subsequent facility addition. These collections of information were deemed necessary to enable the Commission to comply with its mandate. Because Congress has changed the Commission's mandate in the Telecommunications Act of 1996, the information proposed to be reduced or eliminated may no longer be warranted.

OMB Control No.: 3060–0815.

Title: North American Numbering Plan Funding Worksheet.

Form No.: FCC Form 496.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for profit.

Number of Respondents: 3700 respondents.

Estimated Time Per Response: .50 hours per response (avg.).

Total Annual Burden: 1850 hours.

Estimated Reporting and Recordkeeping Cost Burden: $0.

Frequency of Response: On occasion reporting requirement.

Needs and Uses: Pursuant to Congress' directive in the Telecommunications Act of 1996 that the Commission establish an independent entity to administer telecommunications numbering, the Commission determined on July 13, 1995, that the costs associated with administering numbering duties should be based on each telecommunications carrier's gross revenues less payments made to other carriers. We authorized the North American Numbering Plan Administrator's (NANPA) billing and collections agent to send FCC Form 496 requesting that telecommunications carriers provide information regarding their yearly gross revenues less payments made to other telecommunications carriers. The worksheet, FCC form 496, seeks financial data, and payment from telecommunications carriers to fund NANPA. All common carriers providing telecommunications service between U.S. and foreign points must file this worksheet. The Commission and the NANPA will use the information collected in the worksheet to determine the total revenue received from telecommunications carriers in order to arrive at an amount that each carrier must pay to fund the NANPA.

OMB Control No.: 3060–0613.

Title: Expanded Interconnection with Local Telephone Company Facilities, CC Docket No. 91–141, Transport Phase II (Third R&O).

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for profit.

Number of Respondents: 64 respondents.

Estimated Time Per Response: 13 hours per response (avg.).

Total Annual Burden: 832 hours.

Estimated Annual Reporting and Recordkeeping: $0.

Frequency of Response: On occasion reporting requirement.

Needs and Uses: Tier 1 local exchange carriers (except NECA members) are required to make tariff filings to provide certain signalling information to interested parties so that those parties can provide tandem switching services. Tandem switching providers are required to provide certain billing information to those Tier 1 local exchange carriers.

Federal Communications Commission.

Magalie Roman Salas,

Secretary.

BILLING CODE 6730–01–M

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act. Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than June 19, 1998.

A. Federal Reserve Bank of Cleveland (Paul Kaboth, Banking Supervisor) 1455 East Sixth Street, Cleveland, Ohio 44101-2566:

1. Citizens Bancshares, Inc., Salineville, Ohio; to acquire 10 percent of the voting shares of NSD Bancorp, Inc., Pittsburgh, Pennsylvania, and thereby indirectly acquire Northside Deposit Bank, Pittsburgh, Pennsylvania.

2. Premier Financial Bancorp, Inc., Georgetown, Kentucky; to acquire 100 percent of the voting shares of The Bank of Philippi, Inc., Philippi, West Virginia (in organization).

B. Federal Reserve Bank of Minneapolis (Karen L. Grandstrand, Vice President) 90 Hennepin Avenue, P.O. Box 291, Minneapolis, Minnesota 55480-0291:

1. Frandsen Financial Corporation, Forest Lake, Minnesota; to merge with Taylor Bancshares, Inc., North Mankato, Minnesota, and thereby indirectly acquire Fidelity State Bank of Fairfax, Fairfax, Minnesota; Fidelity State Bank of Hector, Hector, Minnesota; Valley Bank Minnesota, Jordan, Minnesota; Farmers Bank, Minnesota Lake, Minnesota; State Bank & Trust Company of New Ulm, New Ulm, Minnesota; and Valley Bank, North Mankato, Minnesota.

C. Federal Reserve Bank of San Francisco (Maria Villanueva, Manager of Analytical Support, Consumer Regulation Group) 101 Market Street, San Francisco, California 94105-1579:

1. United Security Bancorporation, Spokane, Washington; to acquire 100 percent of the voting shares of Grant National Bank, Ephrata, Washington.

Board of Governors of the Federal Reserve System, May 20, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

[FR Doc. 98–13914 Filed 5–26–98; 8:45 am]

BILLING CODE 6210–01–F

FEDERAL RESERVE SYSTEM

Sunshine Act Meeting

AGENCY HOLDING THE MEETING: Board of Governors of the Federal Reserve System.

TIME AND DATE: 11:00 a.m., Monday, June 1, 1998.

PLACE: Marriner S. Eccles Federal Reserve Board Building, 20th and C Streets, NW., Washington, DC 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.

2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Joseph R. Coyne, Assistant to the Board; 202–452–3204.

SUPPLEMENTARY INFORMATION: You may call 202–452–3206 beginning at approximately 5 p.m. two business days before the meeting for a recorded announcement of bank and bank holding company applications scheduled for the meeting; or you may contact the Board's Web site at http://www.bog.frb.fed.us for an electronic announcement that not only lists applications, but also indicates procedural and other information about the meeting.

Dated: May 22, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

[FR Doc. 98–14089 Filed 5–22–98; 10:25 am]

BILLING CODE 6210–01–P

GENERAL ACCOUNTING OFFICE

Advisory Council on Government Auditing Standards; Sunshine Act Meeting

The Advisory Council on Government Auditing Standards will meet on Monday, June 8, 1998, from 9:00 a.m. to 4:30 p.m., in room 7C13 of the General Accounting Office building, 441 G St., NW., Washington, DC.

The Advisory Council on Government Auditing Standards will hold a meeting to discuss issues that may impact Government Auditing Standards. Any interested person may attend the meeting as an observer. Council discussions and reviews are open to the public.

FOR FURTHER INFORMATION CONTACT: Marcia Buchanan, Assistant Director, Government Auditing Standards, AIMD, (202) 512–9321.

Dated: May 22, 1998.
Marcia B. Buchanan,
Assistant Director.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration on Aging

Public Information Collection Requirement Submitted to the Office of Management and Budget for Clearance

AGENCY: Administration on Aging.

SUMMARY: The Administration on Aging (AoA), Department of Health and Human Services, in compliance with the Paperwork Reduction Act (Pubic Law 95–511), is submitting to the Office of Management and Budget for clearance and approval an information collection instrument, namely Performance (Progress) Reports for Title IV Grantees.

Type of Request: Extension of currently approved collection.

Use: Consistent with 45 CFR Part 74, Subpart J, the AoA requires grantees funded under Title IV of the Older Americans Act to report on the performance of their projects. The report is used by the AoA to review and monitor the grantee's progress in achieving project objectives, provide advice and assistance, and to take corrective action as necessary.

Frequency: Semiannually.

Respondent: Title IV grantees.

Estimated number of respondents: 60

Estimated burden hours: 20 hours for each semiannual report.

Additional Information: Each progress report, typically 5 pages in length, is expected to cover the following subjects: recent major activities and accomplishments; problems encountered; significant findings and events; dissemination activities; and; activities planned for the next 6 months.

OMB Comment: OMB is required to make a decision concerning this collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it as soon as possible after its publication. Written comments and recommendations for the proposed information collection should be sent to the following address within 30 days of the publication of this notice: Office of Information and Regulatory Affairs, Attention: Allison Eydt, OMB Desk Officer, Office of Management and Budget, Washington, DC 20503.

Diane Justice,
Deputy Assistant Secretary for Aging.

BILLING CODE 4150–40–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[INFO–98–19]

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call the CDC Reports Clearance Officer on (404) 639–7090.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques for other forms of information technology. Send comments to Seleda Perryman, CDC Assistant Reports Clearance Officer, 1600 Clifton Road, MS–D24, Atlanta, GA 30333. Written comments should be received within 60 days of this notice.

Proposed Projects

1. Surveillance for Bloodstream and Vascular Access Infections in Outpatient Hemodialysis Centers—New—National Center for Infectious Diseases (NCID). The Hospital Infections Program, NCID is proposing a study of bloodstream infections, vascular access infections, hospitalizations, and antimicrobial starts at U.S. outpatient hemodialysis centers. Although bloodstream and vascular access infections are common in hemodialysis patients, there is no existing system to record and track these complications. Participation in the proposed project is voluntary; it is estimated that 100 of the approximately 3,000 U.S. outpatient hemodialysis centers will participate. Participating centers may collect data continuously, or may discontinue participation at any time; we estimate that the average center will participate for six months. Each month, participating centers will record the number of hemodialysis patients they treat and maintain a log of all hospitalizations and intravenous (IV) antimicrobial starts. For each hospitalization or IV antimicrobial start, further information (e.g., type of vascular access, clinical symptoms, presence of a vascular access infection, and blood culture results) will be collected. A computer program will be developed to allow dialysis center personnel to enter and analyze their own data; they will also transmit the data to CDC with all patient identifiers removed. CDC will aggregate this data and generate reports which will be sent to participating dialysis centers. Rates of bloodstream infection, vascular access infection, and antimicrobial use per 1000 patient-days will be calculated. Also, the percentage of antimicrobial starts for which a blood culture is performed will be calculated. Through use of these data, dialysis centers will be able to track rates of key infectious complications of hemodialysis. This will facilitate quality control improvements to reduce the incidence of infections, and clinical practice guidelines to improve use of antimicrobials. The total cost to the respondents is $78,000.

Form	Number of respondents	Number of responses/respondent	Average burden/response (in hours)	Total burden (in hours)
Agreement to Participate	100	1	1	100
Census Form	100	1	1	100
Log	100	[1]10	1	1,000
Incident Form	100	[1]200	0.2	4,000

Form	Number of respondents	Number of responses/respondent	Average burden/response (in hours)	Total burden (in hours)
Total				5,200

[1] Estimated mean.

2. Pulmonary Function Testing Course Approval Program, 29 CFR 1910.1043 (0920–0138)—Extension—The National Institute for Occupational Safety and Health (NIOSH) has responsibility under the Cotton Dust Standard, 29 CFR 1910.1043, for approving courses to train technicians to perform pulmonary function testing. Successful completion of a NIOSH approved course is mandatory under the Standard. To carry out its responsibility, NIOSH maintains a Pulmonary Function Testing Course Approval Program. The program consists of an application submitted by potential sponsors who seek NIOSH approval to conduct courses, and if approved, notification to NIOSH of any course or faculty changes during the period of approval. The application form and addended materials including agenda, vitae and course materials are reviewed by NIOSH to determine if the applicant has developed a program which adheres to the criteria required in the Standard. The letter seeking approval for subsequent changes is reviewed to assure that changes in faculty or course content continue to meet course requirements. Applications to be a course sponsor and carry out training are submitted voluntarily by institutions and organizations from throughout the country. If an application is not submitted for review, NIOSH is unable to evaluate a course to determine whether it meets the criteria in the Cotton Dust Standard and whether technicians will be adequately trained as mandated under the Standard. The total cost to respondents for the three year period is $1,851.00.

Respondents	Number of respondents	Number of responses/respondent	Average burden/response (in hours)	Total burden (in hours)
Sponsoring organizations	66	1	.614	40.5
Total				40.5

3. Measurement of Stress and Stressful Life Events in Black Women of Reproductive Age (0920–0356)—Reinstatement—National Center for Chronic Disease Prevention and Health Promotion. A review of studies of psycho-social factors and adverse pregnancy outcome supports the hypothesis that high levels of exposure to stressful life experiences put black women at increased risk for adverse reproductive outcome, particularly Preterm Delivery (PTD) and Very Low Birth Weight (VLBW). The purpose of this study is to evaluate the reliability and validity of existing instruments that measure stress and stressful life events in black women of reproductive age. Eligible subjects will be black women who live in the Atlanta metropolitan area. Subjects will be recruited from flyers, newspaper announcements, hospitals and clinics in the metropolitan Atlanta area. Subjects will be screened and selected based on age (18–30 or 31–45 years), years of education (12, 13–15, 16 or more), and pregnancy status (pregnant, not pregnant). A maximum of thirty women will be selected for each combination of age, education and pregnancy status. The minimum age for participation will be 18 to avoid the complications due to requirement of parental consent. Women will be excluded if they use illicit drugs, such as heroin, cocaine and marijuana because these substances may alter the metabolism of cortisol. The contact, timing and spacing of the interviews and laboratory collection are based on the methodology developed and used for conducting reliability and validity tests. Approximately one half of the women will be pregnant at the time of data collection.

Women enrolled in the study respond to a series of face-to-face and self-administered demographic and psycho-social questionnaires. Women are also asked to provide a saliva sample so that we can correlate reported levels of stress with biological measures of stress.

Participation in this study is voluntary and participants will receive compensation for their time. A written informed consent will be obtained and oversight will be provided by local institutional review board.

This project should take two years. One hundred fifteen (115) women will participate only in the validity study and thirty-nine (39) women will participate in the validity and reliability study. The validity study requires one interview and one salivary sample. The reliability study requires a second interview and a second salivary specimen, approximately two weeks after the first interview.

During the first three months of the study, the Project Director will set up the office, hire staff and student assistants and provide interviewer and data entry training. The Project Director will also make contacts and explore potential sites for recruiting women for the study. During the next nine months, all of the interviews (approximately 115 validity subjects and 39 reliability subjects remaining) will be conducted and data entry of the quantitative instruments (i.e Demographic Lifestyle Questionnaire, Cohen Perceived Stress Scale, Life Experience Survey (LES), ARIC/BAECKE Questionnaire of Habitual Physical Activity, Center for Epidemiologic Studies Depression Scale (CES–D), Profile of Mood States, Multiple Affect Adjustive Checklist, Speilberger Trait Anxiety Inventory—Self Evaluation Questionnaire) will be completed. Scoring for the qualitative instruments (i.e. Structured Event Probe and Narrative Rating Method (SEPRATE) and Life Events and Difficulties Schedule (LEDS) will be initiated during year 1, but the bulk of the qualitative scoring will be completed during Year 2. The data entry of the qualitative date will be completed during Year 2. Preliminary analyzes will be conducted during Year 2, with the technical assistance of CDC. The total estimated cost to respondents is $6,755.

Respondents	Number of respondents	Number of responses/respondent	Average burden/response (in hours)	Total burden (in hours)
Reliability Study Group	39	2	3	234
Validity Study Group	115	1	3	345
Total				579

4. The National Death Index (NDI) (0920–0215)—Extension—A service of the National Center for Health Statistics (NCHS), that assists health and medical researchers to determine the vital status of their study subjects. The NDI is a national data base containing *identifying* death record information submitted annually to NCHS by all the state vital statistics offices, beginning with deaths in 1979. Searches against the NDI file provide the states and dates of death and the death certificate numbers of deceased study subjects. With the recent implementation of the NDI Plus service, researchers now have the option of also receiving cause of death information for deceased subjects, thus reducing the need to request copies of death certificates from the states. The NDI Plus option currently provides the ICD–9 codes for the underlying and multiple causes of death for the years 1979–1996. The five administrative forms are completed by health researchers in government, universities, and private industry in order to apply for NDI services and to submit records of study subjects for computer matching against the NDI file. The total cost to respondents is estimated at $5,685.

Respondents	Number of respondents	Number of responses/respondents	Average burden/response (in hours)	Total burden (in hours)
Government researchers	48	1	1.89	90.8
University researchers	60	1	1.89	113.5
Private industry researchers	12	1	1.89	22.7
Total				227.0

Charles W. Gollmar,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control and Prevention (CDC).

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

Food Safety Research: Availability of Cooperative Agreements; Request for Applications

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA), Center for Food Safety and Applied Nutrition (CFSAN) is announcing the availability of research funds for fiscal year (FY) 1998 to conduct research to support the reduction of the incidence of foodborne illness, specifically to support: The development of sampling methods to enhance the detection, and more specifically the enumeration, of low levels of pathogens in foods; the development of intervention strategies for consumers to improve food safety in the home; and total genome sequence analyses of the pathogen *Escherichia coli* O157:H7, towards a molecular definition of microbial virulence and pathogenicity. Approximately $700,000 will be available in FY 1998. FDA anticipates making three to five awards at $100,000 to $200,000 (direct and indirect costs) per award per year. Support of these agreements may be up to 3 years. The number of agreements funded will depend on the quality of the applications received and the availability of Federal funds to support the project. After the first year, additional years of noncompetitive support are predicated upon performance and the availability of Federal FY funds. FDA is mandated by the President's Food Safety Initiatiative (FSI) to reduce the incidence of foodborne illness to the greatest extent feasible.

DATES: Submit applications by July 13, 1998. If the closing date falls on a weekend, it will be extended to Monday; if the date falls on a holiday, it will be extended to the following workday.

ADDRESSES: Application forms are available from, and completed applications should be submitted to: Robert L. Robins, Division of Contracts and Procurement Management (HFA–520), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–6170. (Applications hand-carried or commercially delivered should be addressed to 5630 Fishers Lane, rm. 2129, Rockville, MD 20852.)

FOR FURTHER INFORMATION CONTACT:

Regarding the administrative and financial management aspects of this notice: Robert L. Robins (address above).

Regarding the programmatic aspects of this notice: Robert L. Buchanan, Center for Food Safety and Applied Nutrition, Food and Drug Administration (HFS–500), 200 C St. SW., Washington DC 20204, 202–205–5053.

SUPPLEMENTARY INFORMATION: FDA will support the research studies covered by this notice under section 301 of the Public Health Service Act (the PHS Act) (42 U.S.C. 241). FDA's research program is described in the Catalog of Federal Domestic Assistance, No. 93.103.

The Public Health Service (PHS) strongly encourages all award recipients to provide a smoke-free workplace and to discourage the use of all tobacco products. This is consistent with the PHS mission to protect and advance the physical and mental health of the American people.

PHS urges applicants to submit work plans that address specific objectives of "Healthy People 2000." Potential applicants may obtain a copy of "Healthy People 2000 (Full Report, stock No. 017–00100474–0) through the Superintendent of Documents, Government Printing Office, Washington, DC 20402–9325, 202–512–1800.

I. Background

FDA is mandated by the President's Food Safety Initiative (FSI) to reduce the incidence of foodborne illness to the greatest extent feasible. Even though the American food supply is among the safest in the world, millions of Americans are stricken by illness each year caused by the food they consume, and some 9,000 a year, primarily the very young and elderly, die as a result. Research in food safety seeks to reduce the incidence of foodborne illness by improving our ability to detect and enumerate pathogens in the food supply and to find new ways to control them. The President's FSI requires that 1998 funds be used to develop rapid cost effective tests for the presence in foods of pathogens and to develop technologies for preventing foodborne illness through the control of pathogens.

FDA has continually sponsored research to improve the detection of pathogens in foods. One area that may now be addressed is the problem of detecting sporadically-occuring low-level pathogens in foods. A caveat to employing existing detection regimens is the need to develop effective sampling strategies. Therefore, one objective of this funding initiative is the development of new approaches to sampling that will allow the use of existing detection regimens for screening larger sample volumes, thereby increasing the probability of detecting the presence of low levels of a pathogen. The ideal sampling method would: (1) Be nondestructive, (2) enhance the detection of multiple target microorganisms at or below current regulatory limits, (3) provide quantitative data of the level of the target pathogen to aid microbial risk assessment, and (4) be capable of being automated.

FDA has continually sponsored research in intervention strategies to mitigate the risk of foodborne illness. The initiative provides an opportunity to expand the range of research questions addressed by FDA in intervention strategies. The development of specific intervention strategies that may be used by consumers or food service providers is a priority need. A substantial number of disease outbreaks are associated with food consumption in the home or food service facilities, and in many of these incidences faulty food handling practices are identified as contributing factors. Some of these practices may be addressed by education. However, even with the strict adherence to recommended food handling practices, there is a risk of pathogenic microorganisms entering the home kitchen. Such hazards have traditionally been controlled by cooking, but this is not an option for many foods (e.g., lettuce, fresh fruit). New methods or technologies are needed that can empower the consumer and food service providers by providing them a means to actively reduce the incidence and prevalence of pathogens on foods that are not amenable to cooking. An effective intervention is one that can consistently reduce the levels of target pathogens (i.e, *Salmonella typhimurium*, *Listeria monocytogenes*, *E. coli* O157:H7, *Cyclospora cayetenensis*, *Cryptosporidium parvum*) by at least 1,000-fold under standardized test conditions. The funding initiative seeks to develop these new methods or technologies.

FDA has continually sponsored research for characterization of microbial virulence factors and the evolution of microbial survival and growth, especially as it impacts pathogenesis. The initiative provides an opportunity to expand the range of research questions addressed by FDA in the virulence and evolution of *E. coli* O157:H7. This pathogen is of special interest because of its virulence and resistance to traditional methods of food preservation. FDA needs to better understand the mechanisms of the pathogen's survival, growth, and evolution, with respect to the factors associated with its pathogenesis. An important tool for acquiring this information is the sequence of the genome of the pathogen. It is expected that sequence information of *E. coli* O157:H7 will provide unique insights into the evolution of the pathogen, particularly in comparison with nonpathogenic *E. coli* sequences. Further insights are anticipated with respect to identifying sequences of deoxyribonucleic acid from other organisms and deducing the mechanism of transfer based upon collateral sequences. Proposed research should initiate a pathway to the eventual development of rapid and sensitive methods for detection, identification, and enumeration of this important pathogen.

II. Research Goals and Objectives

The specific objectives of this program will be: (1) The development of sampling methods or strategies to facilitate existing detection methods towards detecting, and more importantly enumerating, low-level microbial pathogens in food; (2) the development of intervention strategies for use by consumers in the home and by food service providers that will reduce the incidence of food borne illness, particularly that associated with fresh or minimally processed produce; and (3) the expansion of knowledge of the genome of *E. coli* O157:H7, towards a molecular definition of pathogen emergence and resistance to traditional food processing/preservation practices.

Projects that fulfill any one of the following specific objectives will be considered for funding. Applications may address only one project objective; however, applicants may submit more than one application for any of the following project objectives:

A. Project Objective 1

Project objective 1 is intended to develop sampling and statistical methods that facilitate existing pathogen detection regimens to allow the detection, and more importantly enumeration, of low-levels of pathogens in or on foods, particularly fresh or minimally processed produce. Projects will be considered that seek to develop new ways of sampling large volumes of foods in a nondestructive or contaminating manner and provide quantitative estimates of the level of the pathogen to aid microbial risk assessment. Proposals may include any of a variety of potential isolation, recovery, and/or concentration systems, as long as they are suitable for use in food production, processing, or preparation facilities. An ideal sampling plan should also consider not only occurrence of pathogen(s), but also dispersion or distribution of the pathogen in the food. These pathogen enumeration and distribution data would aid reconstructing the estimated ingested dose that caused illness, lending support to development of dose-response models in microbial risk assessment. A plan for demonstrating the feasibility of the developed methodology in contaminated foods collected under "field conditions" should be included.

B. Project Objective 2

Project objective 2 is intended to develop intervention methods or technologies other than cooking that can be used by consumers in the home or by operators of food service facilities. Proposed approaches should provide consumers with new tools and methods that can enhance the microbiological safety of foods, particularly fresh or minimally processed produce, that is prepared in the home or food service facilities by decreasing the level of pathogens in or on the food. The proposed intervention strategy can be at any point between the consumer's, or food service proprietor's, purchase of a

food or food ingredient and its consumption. The proposed intervention strategy must be affordable and easy enough to perform so as to be adopted by consumers. The estimated performance characteristics of the proposed strategy, with respect to added safety, must be carefully detailed in the proposal and validated during the research if the grant is awarded. Validation will include testing with a variety of fresh vegetables and fruit with at least two of the five pathogens mentioned previously.

C. Project Objective 3

Project objective 3 is intended to provide genomic sequence data on *E. coli* O157:H7. Preference will be given to applicants demonstrating documented success of other genomic sequencing projects and well-developed sequencing plans for areas of the genome that have special relevance to food safety. Applicants must demonstrate that they can apply the most recent technology cost-effectively to the production of sequence data and show that they can adequately and efficiently accumulate, store, and disseminate those data for future interpretation and application. A commitment to and a plan for making the sequence data publicly available by deposition into an accessible sequence data base (GenBank and GSDB) within 3 months of data acquisition and annotation, must be included in the project description.

D. Protection of Human Research Subjects

Some activities carried out by a recipient under this announcement may be governed by Department of Health and Human Services (DHHS) regulations for the protection of human research subjects (45 CFR 46). These regulations require recipients to establish procedures for the protection of subjects involved in any research activities. Prior to funding and upon request of the Office for Protection from Research Risks (OPRR), prospective recipients must have on file with OPRR an assurance to comply with 45 CFR 46. This assurance to comply is called an assurance document. It includes the designated Institutional Review Board (IRB) for review and approval of procedures for carrying out any research activities occurring in conjunction with this award. If an applicable assurance document for the applicant is not already on file with OPRR, a formal request for the required assurance will be issued by OPRR at an appropriate point in the review process, prior to award, and examples of required materials will be supplied at that time. No applicant or performance site, without an approved and applicable assurance on file with OPRR, may spend funds on human subject activities or accrue subjects. No performance site, even with an OPRR-approved and applicable assurance, may proceed without approval by OPRR of an applicable assurance for the recipients. Applicants may wish to contacting OPRR by facsimile (301–402–0527) to obtain preliminary guidance on human subjects issues. When contacting OPRR, applicants should provide their institutional affiliation, geographic location, and all available request for application (RFA) citation information.

III. Reporting Requirements

A Program Progress Report and a Financial Status Report (FSR) (SF–269) are required. An original FSR and two copies shall be submitted to FDA's Grants Management Officer within 90 days of the budget expiration date of the cooperative agreement. Failure to file the FSR (SF–269) on time may be grounds for suspension or termination of the agreement. Progress reports will be required quarterly within 30 days following each Federal fiscal quarter (January 31, April 30, July 30, and October 31), except that the fourth report will serve as the annual report and will be due 90 days after the budget expiration date. CFSAN program staff will advise the recipient of the suggested format for the Program Progress Report at the appropriate time. A final FSR (SF–269), Program Progress Report and Invention Statement, must be submitted within 90 days after the expiration of the project period, as noted on the Notice of Grant Award.

Program monitoring of recipients will be conducted on an ongoing basis and written reports will be reviewed and evaluated at least quarterly by the project officer and the project advisory group. Project monitoring may also be in the form of telephone conversations between the project officer/grants management specialist and the principal investigator and/or a site visit with appropriate officials of the recipient organization. The results of these monitoring activities will be duly recorded in the official file and may be available to the recipient upon request.

IV. Mechanism of Support

A. Award Instrument

Support for this program will be in the form of cooperative agreements. These cooperative agreements will be subject to all policies and requirements that govern the research grant programs of the PHS, including the provisions of 42 CFR part 52 and 45 CFR parts 74 and 92. The regulations issued under Executive Order 12372 do not apply to this program.

B. Eligibility

These cooperative agreements are available to any public or private nonprofit entity (including State and local units of government) and any for-profit entity. For-profit entities must exclude fees or profit from their request for support to receive grant awards. Organizations described in section 501(c)(4) of the Internal Revenue Code of 1968 that engage in lobbying are not eligible to receive awards.

C. Length of Support

This agreement is planned for up to 3 years. Funding beyond the first year will be noncompetitive and will depend on: (1) Satisfactory performance during the preceding year, and/or (2) the availability of Federal fiscal year funds.

V. Delineation of Substantive Involvement

Inherent in the cooperative agreement award is substantive involvement by the awarding agency. Accordingly, FDA will have a substantive involvement in the programmatic activities of all the projects funded under this RFA. Substantive involvement includes but is not limited to the following:

1. FDA will appoint project officers who will actively monitor the FDA supported program under each award.
2. FDA will establish a project advisory group which will provide guidance and direction to the project officer with regard to the scientific approaches and methodology that may be used by the investigator.
3. FDA scientists will collaborate with the recipient and have final approval on experimental protocols. This collaboration may include protocol design, data analysis, interpretation of findings, co-authorship of publications and the development and filing of patents.

VI. Review Procedure and Criteria

A. Review Method

All applications submitted in response to this RFA will first be reviewed by grants management and program staff for responsiveness. If applications are found to be nonresponsive, they will be returned to the applicant without further consideration.

Responsive applications will be reviewed and evaluated for scientific and technical merit by an ad hoc panel of experts in the subject field of the

specific application. Responsive applications will also be subject to a second level of review by a National Advisory Council for concurrence with the recommendations made by the first level reviewers. Final funding decisions will be made by the Commissioner of Food and Drugs or his designee.

B. Review Criteria

The funding priority categories are as follows:

Project Objective 1–first priority
Project Objective 2–second priority
Project Objective 3–third priority

All comments received on these funding priority categories will be taken into consideration and will receive a written response.

Applicants must clearly state in their applications which of the previously listed established funding priority categories is relevant to their proposed project. Applications will be grouped, reviewed, and ranked within each funding priority category. Funding priority will start with the highest ranked applications under each of the three objectives, then the second highest, etc., until available funds have been exhausted. All applications will be evaluated by program and grants management staff for responsiveness. Applications considered nonresponsive will be returned to the applicant, without being reviewed. Applicants are strongly encouraged to contact FDA to resolve any questions regarding criteria prior to the submission of their application. All questions of a technical or scientific nature must be directed to the CFSAN program staff and all questions of an administrative or financial nature must be directed to the grants management staff. (See **FOR FURTHER INFORMATION CONTACT** caption at the beginning of this document.) Applications will be reviewed and scored on the following criteria:

1. Research should be proposed on microbiological sampling or intervention strategies that is within one of the three objectives listed in section II of this document;

2. Whether the proposed study is within the budget and costs have been adequately justified and fully documented;

3. Soundness of the rationale for the proposed study and appropriateness of the study design to address the objectives of the RFA;

4. Availability and adequacy of laboratory facilities and equipment;

5. Availability and adequacy of support services (e.g., biostatistical computer, data bases, etc.,); and

6. Research experience, training, and competence of the principal investigator and support staff.

VII. Submission Requirements

The original and five copies of the completed Grant Application Form PHS 398 (Rev. 5/95) or the original and two copies of Form PHS 5161 (Rev. 7/92) for State and local governments, with copies of the appendices for each of the copies, should be delivered to Robert L. Robins (address above). State and local governments may choose to use Form PHS 398 in lieu of the Form PHS 5161. The application closing date is July 13, 1998. If the receipt date falls on a weekend, it will be extended to Monday; if the date falls on a holiday, it will be extended to the following work day. No supplemental or addendum material will be accepted after the closing date. The outside of the mailing package and item 2 of the application face page should be labeled, "Response to RFA FDA CFSAN–98–2, Project Objective 1 (2 or 3)."

VIII. Method of Application

A. Submission Instructions

Applications will be accepted during normal working hours, 8 a.m. to 4:30 p.m., Monday through Friday, on or before the established closing date. Applications will be considered received on time if sent or mailed on or before the closing date as evidenced by a legible U.S. Postal Service dated postmark or a legible date receipt from a commercial carrier, unless they arrive too late for orderly processing. Private metered postmarks shall not be acceptable as proof of timely mailing. Applications not received on time will not be considered for review and will be returned to the applicant. (Applicants should note that the U.S. Postal Service does not uniformly provide dated postmarks. Before relying on this method, applicants should check with their local post office.)

Do not send applications to the Center for Scientific Research (CSR), National Institutes of Health (NIH). Any application that is sent to NIH, that is then forwarded to FDA and not received in time for orderly processing, will be deemed unresponsive and returned to the applicant. Instructions for completing the application forms can be found on NIH home page on the Internet (address: "http://www.nih.gov.grants/funding/phs398/phs398.html"; the forms can be found at "http://www.nih.gov/grants/funding/phs398/forms-toc.html"). However, as noted previously, applications are not to be mailed to NIH. Applicants are advised that FDA does not adhere to the page limitations or the type size and line spacing requirements imposed by NIH on its applications. Applications must be submitted via mail delivery as stated previously. FDA is unable to receive applications via the Internet.

B. Format for Application

Submission of the application must be on Grant Application Form PHS 398 (Rev. 5/95). All "General Instructions" and "Specific Instructions" in the application kit should be followed with the exception of the closing dates and the mailing label address. Do not send applications to the CSR, NIH. Applications from State and local governments may be submitted on Form PHS 5161 (Rev. 7/92) or Form PHS 398 (Rev. 5/95).

The face page of the application should reflect the RFA number RFA–FDA–CFSAN–98–2, Project Objective 1 (2 or 3).

Data included in the application, if restricted with the legend specified below, may be entitled to confidential treatment as trade secret or confidential commercial information within the meaning of the Freedom of Information Act (FOIA) (5 U.S.C. 552(b)(4)) and FDA's implementing regulations (21 CFR 20.61).

Information collection requirements requested on Form PHS 398 and the instructions have been submitted by PHS to the Office of Management and Budget (OMB) and were approved and assigned OMB control number 0925–0001.

C. Legend

Unless disclosure is required by FOIA as amended (5 U.S.C. 552) as determined by the freedom of information officials of DHHS or by a court, data contained in the portions of this application which have been specifically identified by page number, paragraph, etc., by the applicant as containing restricted information shall not be used or disclosed except for evaluation purposes.

Dated: May 18, 1998.

William B. Schultz,

Deputy Commissioner for Policy.

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

Research Studies To Support Microbial Risk Assessment Modeling; Availability of Cooperative Agreements; Request for Applications; Correction

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; correction.

SUMMARY: The Food and Drug Administration (FDA), Center for Food Safety and Applied Nutrition (CFSAN) is correcting a document that appeared in the **Federal Register** of May 4, 1998 (63 FR 24553). The document announced the availability of approximately $800,000 for research funds for fiscal year (FY) 1998 to conduct research to support the development of risk assessment dose-response models for microbiological hazards associated with food. The document was published with an inadvertent error. This document corrects that error.

DATES: Submit applications by June 18, 1998. If the closing date falls on a weekend, it will be extended to Monday; if the date falls on a holiday, it will be extended to the following workday.

FOR FURTHER INFORMATION CONTACT: Wes R. Long, Center for Food Safety and Applied Nutrition, Food and Drug Administration (HFS–301), 200 C St. SW., Washington, DC 20204, 202–205–4064.

SUPPLEMENTARY INFORMATION: In FR Doc. 98–11743, appearing on page 24553 in the **Federal Register** of Monday, May 4, 1998, the following correction is made:

1. On page 24555, in the third column, in the first full paragraph beginning in the fourth line, "Shiga-like toxin-producing *Cryptosporidium parvum*, pathogenic *Escherichia coli*, *Listeria monocytogenes*, Norwalk virus, *Salmonella* spp., *Shigella* spp., *Vibrio* spp., and *Staphyloccocus* spp. enterotoxin. * * *" is corrected to read "*Cryptosporidium parvum*, Shiga-like toxin producing pathogenic *Escherichia coli*, *Listeria monocytogenes*, Norwalk virus, *Salmonella* spp., *Shigella* spp., *Vibrio* spp., and *Staphyloccocus* spp. enterotoxin.* * *"

Dated: May 14, 1998.

William K. Hubbard,

Deputy Commissioner for Policy Coordination.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Extension of Receipt Date for Applications

AGENCY: Substance Abuse and Mental Health Services Administration (SAMHSA).

ACTION: Notice of Extension of Receipt Date for Applications for SAMHSA's Center for Substance Abuse Treatment (CSAT) Cooperative Agreements for State Treatment Outcomes and Performance Pilot Studies Enhancement Program (Short Title: TOPPS II; GFA No. TI 98–005).

A Notice of Funding Availability for seven SAMHSA programs was published in the **Federal Register** on April 8, 1998 (Vol. 63, No. 67; pages 17197–17203). The receipt date for applications for the seven programs listed was June 8, 1998. Subsequently, a decision was made to extend the deadline for the receipt of applications from June 8, 1998 to June 19, 1998 for the Cooperative Agreements for State Treatment Outcomes and Performance Pilot Studies Enhancement (TOPPS II) program *only*. The June 8, 1998 receipt date for the other six programs remains the same.

The programmatic contact for the TOPPS II program is: Sheila Harmison, D.S.W., Division of State and Community Assistance, CSAT, SAMHSA, Rockwall II Building, Suite 880, 5600 Fishers Lane, Rockville, MD 20857; telephone (301) 443–7524.

Dated: May 19, 1998.

Richard Kopanda,

Executive Officer, SAMHSA.

INTERNATIONAL BOUNDARY AND WATER COMMISSION NOTICE

Border Environment Cooperation Commission (BECC); Public Meeting

SUMMARY: This notice announces the XVI public meeting of the BECC Board of Directors on Wednesday, June 24, 1998, from 10:00 a.m.–2:00 p.m. in Saltillo, Coahuila, Mexico, at the Universidad Autonoma de Coahuila, located on Blvd. Venustiano Carranza y Gonzalez Lobo.

FOR FURTHER INFORMATION CONTACT: M.R. Ybarra, Secretary, United States Section, International Boundary and Water Commission, telephone: (915) 832–4105; or Angeles Villarreal, Public Participation Officer, Border Environment Cooperation Commission, P.O. Box 221648, El Paso, Texas 79913, telephone: (011–52–16) 25–91–60; fax: (011–52–16) 25–26–99; e-mail: becc@cocef.org.

SUPPLEMENTARY INFORMATION: The U.S. Section, International Boundary and Water Commission, on behalf of the Border Environment Cooperation Commission (BECC), cordially invites the public to attend the XVI Public Meeting of the Board of Directors on Wednesday, June 24, 1998, from 10:00 a.m.–2:00 p.m., at the Universidad Autonoma de Coahuila, located on Blvd. Venustiano Carranza y Gonzalez Lobo in Saltillo, Coahuila, Mexico. Proposed Agenda, 10:00 a.m.–2:00 p.m.

1. Approval of Agenda (Action)
2. Approval of Minutes of Meeting of March 30, 1998 (Action)
3. General Manager's Report (Information)
4. Review of Projects for Certification (Action)
   * Calexico, CA
   * Lower Valley, TX
   * Donna, TX
   * Public Comments
5. Approval of Technical Assistance Grants (Action)
6. Update on Technical Assistance Program (Information)
7. Other Matters (Information)
   * Report on Sustainable Development Committee
8. General Public Comments

Anyone interested in submitting written comments to the Board of Directors on any agenda item should send them to the BECC 15 days prior to the public meeting. Anyone interested in making a brief statement to the Board may do so during the public meeting.

Dated: May 20, 1998.

M.R. Ybarra,

Secretary, U.S. IBWC.

[FR Doc. 98–13962 Filed 5–26–98; 8:45 am]

BILLING CODE 4710–09–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Permit Amendment for the Natomas Basin Habitat Conservation Plan, Sacramento and Sutter Counties, CA

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of permit amendment.

SUMMARY: On December 31, 1997, the Service issued an incidental take permit pursuant to section 10(a)(1)(B) of the

Endangered Species Act of 1973, as amended, to the City of Sacramento, California, for the Natomas Basin Habitat Conservation Plan (Plan). The assigned permit number is PRT–823773. Prior to issuance of the incidental take permit, the Service had agreed, in settlement of pending court litigation *Spirit of the Sage Council* v. *Babbitt* (D.D.C.), to request public comment on the appropriateness of including the Department of the Interior's and Department of Commerce's joint Habitat Conservation Plan Assurances ("No Surprises Assurances") in all incidental take permit applications noticed for public comment in the **Federal Register** after March 18, 1997, pending a final determination by the agencies regarding the policy. In the **Federal Register** notice of June 18, 1997 (62 FR 33400), the Service specifically requested public comment on the No Surprises assurances in the Plan. In a subsequent stipulation in the litigation, the Service agreed not to issue any incidental take permits after December 29, 1997, that contained No Surprises Assurances until making a final determination on the proposed No Surprises rule. Because the Plan had been completed and the permit applicant wished to proceed with activities under the Plan, the Service issued the permit on December 31, 1997, without the "No Surprises" assurances that otherwise would have accompanied the permit. This was accomplished by adding term and condition K. to the permit which rendered inoperative the No Surprises assurances contained in the Plan and Implementing Agreement. On February 23, 1998, the Department of the Interior (Fish and Wildlife Service) and Department of Commerce (National Marine Fisheries Service) published the Habitat Conservation Plan Assurances ("No Surprises") final rule (63 FR 35), thus fulfilling the final condition of the court settlement.

The purpose of the proposed permit amendment is to reinstate the "No Surprises" assurances into the City of Sacramento's incidental take permit for the Natomas Basin Plan, as described in condition K. of the permit and as outlined in sections 6.9.2–6.9.4 of the Plan's Implementing Agreement. This permit amendment would result in no substantive changes to the Natomas Basin Plan or any of its supporting documents.

DATES: Written comments on the addition of No Surprises Assurances to the incidental take permit should be received on or before June 26, 1998.

ADDRESSES: Comments should be addressed to the Fish and Wildlife Service, Sacramento Fish and Wildlife Office, 3310 El Camino, Suite 130, Sacramento, California 95821–6340. Please refer to permit number PRT–823773 when submitting comments on this provision. Individuals wishing copies of the Plan or Implementing Agreement for review should immediately contact the above office. Documents also will be available for public inspection, by appointment, during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Mr. William Lehman, Sacramento Fish and Wildlife Office, telephone (916) 979–2129.

Dated: May 18, 1998.

Thomas J. Dwyer,

Acting Regional Director, Region 1, Portland, Oregon.

[FR Doc. 98–13950 Filed 5–26–98; 8:45 am]

BILLING CODE 4310–55–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Availability of an Environmental Assessment and Receipt of an Application for an Incidental Take Permit for the Quail Hollow Quarry, Santa Cruz County, CA

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability.

SUMMARY: Graniterock Company of Watsonville, California, has applied to the Fish and Wildlife Service for an amendment to an incidental take permit pursuant to the Endangered Species Act of 1973, as amended (Act). The Service proposes to issue an amendment to Graniterock's incidental take permit (PRT–830417) for the federally listed endangered Mount Hermon June beetle (*Polyphylla barbata*), Zayante band-winged grasshopper (*Trimerotropis infantilis*), Ben Lomond wallflower (*Erysimum teretifolium*), and Ben Lomond spineflower (*Chorizanthe pungens* var. *hartwegiana*) in the future mining area at the Quail Hollow Quarry, located in Santa Cruz County, California. This notice announces the availability of the permit application and the Environmental Assessment for public review and comment. The permit application includes the Habitat Conservation Plan for the Quail Hollow Quarry and an Implementation Agreement. All comments received, including names and addresses, will become part of the administrative record and may be made available to the public.

DATES: Written comments should be received on or before June 26, 1998.

ADDRESSES: Comments should be addressed to Diane K. Noda, Field Supervisor, Fish and Wildlife Service, 2493 Portola Road, Suite B, Ventura, California 93003. Written comments may also be sent by facsimile to (805) 644–3958.

FOR FURTHER INFORMATION CONTACT: David Pereksta, Fish and Wildlife Biologist, at the above address (telephone: 805–644–1766).

SUPPLEMENTARY INFORMATION:

Availability of Documents

Individuals wishing copies of the documents should immediately contact the Service's Ventura Fish and Wildlife Office at the above referenced address or telephone. Documents will also be available for public inspection, by appointment, during normal business hours at the above address.

Background Information

Graniterock Company (Applicant) currently has authorization from the County of Santa Cruz to mine sand in areas A, B, and C of the Quail Hollow Quarry (known as the current mining area). Mining would be conducted in two phases. The Applicant has completed mining in area A and presently is mining in areas B and C of the current mining area (phase one) where populations of the endangered Mount Hermon June beetle, Zayante band-winged grasshopper, Ben Lomond wallflower, and Ben Lomond spineflower occur. The Applicant received an incidental take permit from the Service for phase one on August 1, 1997. The sand source in the current mining area is expected to last for only a few years. During phase two, the Applicant intends to expand mining into an area known as the future mining area. The Applicant has applied to the Service to amend the initial 3-year incidental take permit to a 100-year permit. For context, the Habitat Conservation Plan covers both the current and future mining areas.

The Applicant needs an incidental take permit from the Service because listed wildlife species are protected against "take" pursuant to section 9 of the Act. That is, no one may harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect listed animal species, or attempt to engage in such conduct (16 U.S.C. 1538). The Service, however, may issue permits to take listed animal species if such taking is incidental to, and not the purpose of, otherwise lawful activities. Regulations

governing permits for endangered species are at 50 CFR 17.22.

Section 9 of the Act generally does not prohibit take of federally listed plants on private lands unless the take or action resulting in take would violate State law. The Applicants have requested a permit for plants to the extent that their take would be a violation of the Act. Impacts to listed plants also must be addressed in the intra-Service consultation required pursuant to section 7(a) of the Act.

The Service proposes to issue a 100-year permit to the Applicant for incidental take of four listed species during phase two of proposed mining activities in the future mining area of Quail Hollow Quarry. The proposed action would result in the loss of habitat for, and individuals of, the Mount Hermon June beetle, Zayante band-winged grasshopper, Ben Lomond wallflower, and Ben Lomond spineflower in the future mining area as the natural vegetation communities in which they are found are removed during mining operations. This action could directly and indirectly affect the species described above (the Plan Species).

The proposed action would authorize the incidental take of all Mount Hermon June beetles and Zayante band-winged grasshoppers in the future mining area on approximately 83 acres of the 220-acre quarry site. The future mining area contains approximately 27 acres of suitable habitat for these listed wildlife species. In addition, 5 acres of habitat occupied by the Ben Lomond wallflower and 5.5 acres of habitat occupied by the Ben Lomond spineflower would be lost from the future mining area.

The Applicant developed a Habitat Conservation Plan as part of a settlement agreement for litigation it had filed seeking a vested right to mine the entire quarry. This agreement set out to resolve all of the endangered species and habitat protection issues on the property. Under this agreement, the Applicant, Santa Cruz County, Sierra Club, California Native Plant Society, and the South Ridge Watershed Association established the minimum mitigation requirements under which continued sand mining in Quail Hollow Quarry would be allowed. The agreement is in the form of a stipulation for entry of judgment (Stipulation Agreement).

Consistent with this Stipulation Agreement, the Habitat Conservation Plan proposes the following minimization and mitigation measures for phase two mining. At the time the Applicant receives authorization to commence mining in the future mining area, and prior to habitat disturbance within the future mining area, it will: (1) grant a conservation easement in perpetuity to Santa Cruz County for the 20.6-acre West Ridge Habitat Set Aside and provide for protection and long-term management of the area; (2) provide funding for and carry-out long-term management of the 32.6-acre South Ridge Habitat Set Aside which the County of Santa Cruz is legally entitled and committed to purchase at the agreed upon fair market value; (3) implement all provisions of the Habitat Conservation Plan in order to avoid disturbing Plan Species in all areas of the quarry property except for areas within the current and future mining areas, overburden and stockpile areas, and existing access road, as shown in Map 2 of the Habitat Conservation Plan; (4) provide written agreement to protect in perpetuity from any and all disturbance all areas of the project site (except for areas within the current and future mining areas, overburden and stockpile areas, and existing access road as shown in Map 2) containing the Plan Species, State listed species, and County-defined rare, endangered, or threatened species and sensitive habitats; (5) enhance 3 acres of disturbed sand parkland and 5.2 acres of disturbed maritime chaparral on the project site in a location satisfactory to the County of Santa Cruz, the Service and the California Department of Fish and Game; (6) protect and provide long term management of the on-site restoration areas, along with the 32.2-acre North and West Ridge habitat set asides; and (7) revegetate slopes within the future mining area with the goal of reestablishing habitat for the Plan Species.

Environmental Assessment

The Environmental Assessment considers the environmental consequences of the proposed action and no action alternatives. A no take alternative was not feasible due to the widespread distribution of the Plan Species on-site. Under the proposed action, the Applicant would implement phase two of their Habitat Conservation Plan consistent with the Stipulation Agreement (see Background for a description of the proposed action).

Under the no action alternative, the Service would not issue an incidental take permit to the Applicant and a Habitat Conservation Plan would not be implemented. The Applicant would continue to mine areas B and C until the sand supply was exhausted. The Applicant would then reclaim all previously disturbed areas of the quarry consistent with their reclamation plan as required by the Surface Mining and Reclamation Act. The Applicant would be prevented from legally carrying out mining in other areas of the quarry due to the presence of listed animal species in the area. The no action alternative would negate the terms of the Stipulation Agreement and could result in continued and lengthy litigation. In the meantime, the absence of the Habitat Conservation Plan would effectively preclude the sale of the South Ridge property to Santa Cruz County and the establishment of the West Ridge conservation easement.

This notice is provided pursuant to section 10 (a) of the Endangered Species Act and Service regulations for implementing the National Environmental Policy Act of 1969 (40 CFR 1506.6). The Service will evaluate the application, associated documents, and comments submitted thereon to determine whether the application meets the requirements of law. If the Service determines that the requirements are met, a permit will be issued for the incidental take of the listed species. A final decision on permit issuance will be made no sooner than 30 days from the date of this notice.

Dated: May 19, 1998.

David L. McMullen,

Acting Regional Director, Region 1, Portland, Oregon.

BILLING CODE 4310–55–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Information Collection Submitted to the Office of Management and Budget for Review Under the Paperwork Reduction Act

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: This notice announces that the Bureau of Indian Affairs (BIA) has submitted the proposed renewal of the information collection request for the Housing Assistance Application, codified at 25 CFR Part 256.5, to the Office of Management and Budget (OMB) for approval under the paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). On February 19, 1997, BIA published a notice in the **Federal Register** (62 FR 7469–7470) requesting comments on the proposed information collection. The regulations for the Housing Improvement Program (HIP)

have been modified for the purpose of simplifying administrative guidelines, presenting the regulations in a clear and unambiguous manner (plain English) and making the program more flexible and responsive to the needs of Tribes. The final rule was published in the **Federal Register** (FR 10124–10139) on March 2, 1998. One comment regarding this information collection was received after the close of the prescribed time period published in the **Federal Register**. The OMB requested that the BIA more fully demonstrate compliance with the Privacy Act and that respondents be informed of the legal significance of the displayed OMB control number. The BIA has complied with OMB's request. The BIA is requesting OMB approval of the collection of information on a regular basis, within 30 days.

FOR FURTHER INFORMATION CONTACT: Copies of the collection of information form may be obtained by contacting June Henkel, Bureau of Indian Affairs, Department of the Interior, 1849 C Street NW, MS–4603–MIB, Washington, DC 20240. Telephone: (202) 208–3667.

DATES: OMB is required to respond to this request within 60 days after publication of this notice in the **Federal Register**, but may respond after 30 days; therefore, your comments should be submitted to OMB within 30 days of publication to assure maximum consideration.

ADDRESSES: Your comments and suggestions on the requirements should be made directly to the attention: Desk Officer for the Department of the Interior, Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10102, 725 17th Street NW, Washington DC 20503. Telephone: (202) 395–7340. Please provide a copy to June Henkel, Bureau of Indian Affairs, Department of the Interior, 1849 C Street NW, MS–4603–MIB, Washington, DC 20240. Telephone: (202) 208–3667.

SUPPLEMENTARY INFORMATION:

I. Abstract

The information is needed to establish an applicant's eligibility to receive services under the Housing Improvement Program and to establish the priority order in which eligible applicants may receive services under the program. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

II. Request for Comments

We specifically request your comments be submitted to OMB at the address provided above with a copy to the Bureau of Indian Affairs within 30 days concerning the following:

1. Whether the collection of information is necessary for the proper performance of the functions of the BIA, including whether the information will have practical utility;
2. The accuracy of the BIA's estimate of the burden to collect the information, including the validity of the methodology and assumptions used;
3. The quality, utility and clarity of the information to be collected; and,
4. How to minimize the burden of the information collection on those who are to respond, including the use of appropriate automated electronic, mechanical or other forms of information technology.

III. Data

Title of the Collection of Information: Department of the Interior, Bureau of Indian Affairs, Housing Assistance Application.

OMB Number: 1076–0084.

Affected Entities: Individual members of Indian tribes who are living on or near a tribally or legally defined service area.

Frequency of Response: At least annually.

Estimated Number of Annual Responses: 3500.

Estimated Time per Application: ½ hour.

Estimated Total Annual Burden Hours: 1,750 hours.

Dated: April 23, 1998.

Kevin Gover,

Assistant Secretary—Indian Affairs.

BILLING CODE 4310–02–P

DEPARTMENT OF THE INTERIOR

Minerals Management Service

Extension of Post-Sale Evaluation Period for Central Gulf of Mexico Lease Sale 169

AGENCY: Minerals Management Service, Interior.

ACTION: Notice to extend post-sale evaluation period for Central Gulf of Mexico Lease Sale 169.

SUMMARY: This notice extends by 30 days, the post-sale evaluation period for Central Gulf of Mexico Lease Sale 169. Minerals Management Service (MMS) will complete the evaluation of all bids received in this sale by July 15, 1998. This action is necessary due to the unusually high number of bids received in response to this lease sale.

DATES: The post-sale evaluation period ends on July 15, 1998.

FOR FURTHER INFORMATION CONTACT: Gary L. Lore, Regional Supervisor, Resource Evaluation, Gulf of Mexico Region, telephone (504) 736–2710.

SUPPLEMENTARY INFORMATION: In the Central Gulf of Mexico Sale 169, held March 18, 1998, MMS received 1,188 bids on 794 tracts, 512 of which passed to a second phase required for detailed evaluations. This continued aggressive bidding activity is, in part, due to the enactment of the Outer Continental Shelf Deep Water Royalty Relief Act (Pub. L. 104–58) but is also influenced by other factors, such as the high number of quality prospects on recently expired unexplored tracts in newly established deepwater hydrocarbon plays and by the unprecedented cost-saving technological advances related to hydrocarbon development and production in the Gulf of Mexico's deepwater environment. Consequently, MMS is unable to conduct and complete a comprehensive evaluation and bid review process within the scheduled 90 days, i.e., by June 15, 1998. Under provisions of § 256.47(e)(2), MMS is extending the bid evaluation period until July 15, 1997.

Dated: May 19, 1998.

Chris C. Oynes,

Regional Director.

[FR Doc. 98–13939 Filed 5–26–98; 8:45 am]

BILLING CODE 4310–MR–M

OVERSEAS PRIVATE INVESTMENT CORPORATION

Sunshine Act Meeting

June 9, 1998.

TIME AND DATE: Tuesday, June 9, 1998, 1:00 PM (OPEN Portion), 1:30 PM (CLOSED Portion).

PLACE: Offices of the Corporation, Twelfth Floor Board Room, 1100 New York Avenue, N.W., Washington, D.C.

STATUS: Meeting OPEN to the Public from 1:00 PM to 1:30 PM. Closed portion will commence at 1:30 PM (approx.).

MATTERS TO BE CONSIDERED:

1. President's Report.
2. Approval of March 10, 1998 Minutes (Open Portion).
3. Meeting schedule through March, 1999.

FURTHER MATTERS TO BE CONSIDERED: (Closed to the Public 1:30 PM).

1. Insurance Project in Philippines.

2. Insurance Project in Turkey.
3. Approval of March 10, 1998 Minutes (Closed Portion).
4. Pending Major Projects.
5. Report on OPIC's Small Business Initiative.

CONTACT PERSON FOR INFORMATION: Information on the meeting may be obtained from Connie M. Downs at (202) 336–8438.

Connie M. Downs,
OPIC Corporate Secretary.

UNITED STATES INTERNATIONAL TRADE COMMISSION

[USITC SE–98–008]

Sunshine Act Meeting

AGENCY HOLDING THE MEETING: United States International Trade Commission.
TIME AND DATE: June 4, 1998 at 11:30 a.m.
PLACE: Room 101, 500 E Street S.W., Washington, DC 20436.
STATUS: Open to the public.
MATTERS TO BE CONSIDERED:
1. Agenda for future meeting: None.
2. Minutes.
3. Ratification List.
4. Inv. Nos. 731–TA–781–786 (Preliminary) (Stainless Steel Round Wire from Canada, India, Japan, Korea, Spain, and Taiwan)—briefing and vote.
5. Outstanding action jackets: None.

In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

By order of the Commission.
Issued: May 21, 1998.

Donna R. Koehnke,
Secretary.

FOREIGN CLAIMS SETTLEMENT COMMISSION

[F.C.S.C. Meeting Notice No. 11–98]

Sunshine Act Meeting

The Foreign Claims Settlement Commission, pursuant to its regulations (45 CFR Part 504) and the Government in the Sunshine Act (5 U.S.C. 552b), hereby gives notice in regard to the scheduling of meetings and oral hearings for the transaction of Commission business and other matters specified, as follows:

Date and Time: Monday, June 15, 1998, 10:00 a.m.

Subject Matter: A. Oral Hearings on Objections to Proposed Decisions on claims against Albania, as follows:

10:00 a.m. Claim No. ALB–247 Stephen J. Pantos
10:30 a.m. Claim No. ALB–117 James Elias
11:00 a.m. Claim No. ALB–146 Connie Zotos
11:30 a.m. Claim No. ALB–178 Hariklia Zoto, et al.

B. Hearings on the Record on Objections to Proposed Decisions on claims against Albania, as follows:

1. Claim No. ALB–042 Xhani Femera, et al.
2. Claim No. ALB–072 Thomas M. Toma
3. Claim No. ALB–092 Thanas A. Laske
4. Claim Nos. ALB–137, Klementina Sevo ALB–138 Marianthi Fili
5. Claim No. ALB–153 Bibi Xhemal Bejleri
6. Claim No. ALB–173 Marigo Vasiliades, et al.
7. Claim No. ALB–187 Helena Liolin
8. Claim No. ALB–203 Stavri G. Buri
9. Claim No. ALB–220 Gjergji Gjeli
10. Claim No. ALB–293 Jorgo Stoli

Status: Open.

All meetings are held at the Foreign claims Settlement Commission, 600 E Street, N.W., Washington, DC. Requests for information, or advance notices of intention to observe an open meeting, may be directed to: Administrative Officer, Foreign Claims Settlement Commission, 600 E Street, NW., Room 6002, Washington, DC 20579. Telephone: (202) 616–6988.

Dated at Washington, DC, May 22, 1998.

Judith H. Lock,
Administrative Officer.

DEPARTMENT OF JUSTICE

Immigration and Naturalization Service

Agency Information Collection Activities: Proposed Collection; Comment Request; New Information Collection

ACTION: Notice of information collection; new collection; public charge bond in pilot program.

The Department of Justice, Immigration and Naturalization Service has submitted the following information collection request for review and clearance in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments are encouraged and will be accepted for "sixty days" until July 27, 1998.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information collection.

(1) *Type of Information Collection: new information collection.*

(2) *Title of the Form/Collection:* Public Charge Bond in Pilot Program.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* No agency form number. Office of Examinations, Adjudications Division, Immigration and Naturalization Service.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Individuals or Households. This information collection, contained in a proposed rule, will be used by the Service to determine which districts will be selected to participate in the Bond Pilot Program, as well as what dollar amount of the bond would be for each immigrant in that State, depending on the dollar amount of means-tested benefits available.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* 20 responses at 6 hours per response.

(6) *An estimate of the total public burden (in hours) associated with the collection:* 120 annual burden hours.

If you have additional comments, suggestions, or need a copy of the proposed information collection instrument with instructions, or additional information, please contact Richard A. Sloan 202–514–3291, Director, Policy Directives and Instructions Branch, Immigration and Naturalization Service, U.S. Department of Justice, Room 5307, 425 I Street, NW., Washington, DC 20536. Additionally, comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time may also be directed to Mr. Richard A. Sloan.

If additional information is required contact: Mr. Robert B. Briggs, Clearance Officer, United States Department of Justice, Information Management and Security Staff, Justice Management Division, Suite 850, Washington Center, 1001 G Street, NW, Washington, DC 20530.

Dated: May 20, 1998.

Robert B. Briggs,

Department Clearance Officer, United States Department of Justice.

BILLING CODE 4410–10–M

DEPARTMENT OF JUSTICE

Office of Justice Programs

Bureau of Justice Statistics; National Criminal History Improvement Program (NCHIP)

[OJP(BJS)–1175]

RIN 1121–ZA95

AGENCY: Office of Justice Programs, Bureau of Justice Statistics (BJS), Justice.

ACTION: Notice of program plan.

SUMMARY: The Bureau of Justice Statistics (BJS) is publishing this notice to announce the continuation of the National Criminal History Improvement Program (NCHIP) in Fiscal Year 1998. Copies of this announcement can also be found on the Internet at http://www.ojp.usdoj.gov/bjs/.

FOR FURTHER INFORMATION CONTACT: Carol G. Kaplan at (202) 307–0759 (this is not a toll free number).

SUPPLEMENTARY INFORMATION:

The program implements the grant provisions of—

* the Brady Handgun Violence Prevention Act (Brady Act), Pub. L. No. 103159, 107 Stat. 1536 (1993), codified as amended at 18 U.S.C. Sections 921 *et seq.*;

* the National Child Protection Act of 1993 (NCPA), Pub. L. No. 103209, 107 Stat. 2490 (1993), codified as amended at 42 U.S.C. Sections 3759, 5101 note, 5119, 5119a, 5119b, 5119c;

* those provisions of the Omnibus Crime Control and Safe Streets Act of 1968 (Omnibus Act), Pub. L. No. 90–351, 82 Stat. 197 (1968), codified as amended at 42 U.S.C. Sections 3711 *et seq.*, as amended; and the Violent Crime Control and Law Enforcement Act of 1994 (Violent Crime Control Act), Pub. L. No. 103–322, 108 Stat. 1796 (1994), codified as amended at 42 U.S.C. Sections 13701 *et seq.*, which pertain to the establishment, maintenance, analysis, or use of criminal history records and criminal record systems; and,

* related laws pertaining to the identification, collection, analysis and interstate exchange of records relating to domestic violence and stalking (including protection orders) and to the establishment of sexual offender registries and exchange of data between them.

The NCHIP Program to date. The NCHIP program was initiated in 1995, under the administration of the Bureau of Justice Statistics. During Fiscal Years 1995, 1996, and 1997, from the total appropriation of $178.25 million, direct awards were made to all States and eligible territories in an amount totaling over $160 million. Six million dollars was also transferred to the FBI for implementation of the National Instant Criminal Background Check System (NICS), which will provide instant interstate access to records prohibiting the sale of a firearm. About $5 million was awarded to provide direct technical assistance to States, to evaluate the program, and to collect statistics and research data on presale firearm programs.

To date, under the NCHIP program, all States have received funds to upgrade criminal record systems (including establishing and upgrading Automated Fingerprint Identification Systems (AFIS)) and to support efforts to participate in the FBI's Interstate Identification Index (III), which permits instant exchange of criminal records among the States. Eighteen States also received additional funding under the Advanced State Award Program to initiate efforts to identify persons other than felons who are prohibited from purchasing firearms.

Beginning in FY 1996, NCHIP program funds have also been available to States to upgrade record systems to identify and flag persons convicted of abusing children, the elderly, and the disabled, or to defray costs of providing rapid and reliable background checks on individuals who wish to work with these sensitive populations.

Also since 1996, NCHIP program funds have been available to develop and implement procedures for classifying and entering data regarding stalking and domestic violence (including protection orders) into local, State, and national crime information databases consistent with the provisions of the Violence Against Women Act (VAWA).

To date, approximately $10 million has been awarded to States for purposes relating to offenses against children, the elderly and the disabled, and for collection of data on stalking and domestic abuse, including protection orders and violations thereof.

The FY 1998 program. Consistent with the FY 1998 appropriation, funds awarded under the 1998 NCHIP program may be used to improve criminal record systems, to support interstate exchange of records through the FBI, to implement procedures designed to permit participation in the NICS, and for authorized purposes consistent with the NCPA and the identified sections of the VAWA, as described above, and, more fully, in later sections of this announcement.

The FY 1998 NCHIP program also includes the National Sex Offender

1998
UMI

Registry Assistance Program (NSOR–AP) under which $25 million was appropriated for grants to assist States in upgrading sex offender registries and providing data to the FBI Sex Offender Registry. The NSOR–AP program is a component of NCHIP but is funded separately pursuant to a separate application.

Commitment to full implementation of the National Instant Criminal Background Check System (NICS). The Brady Act in Section 103(b) requires the establishment of a national system to provide instant background checks to determine if a potential firearm purchaser is a felon or otherwise prohibited from purchase of a firearm under Federal or State statute. Consistent with the statutory requirement, the National Instant Criminal Background Check System (NICS), which will be operated by the FBI, will become operational in November 1998, and Federal waiting period requirements will no longer be applicable.

The effectiveness of NICS will depend on the extent to which the most accurate and complete records of Federal and State criminal offenses and records in other prohibiting categories are instantly available in response to inquiries from firearms dealers.

Under the NICS configuration, States are encouraged to serve as a "Point of Contact" (POC) interfacing between firearm dealers and the FBI's national record system. Where the State is a POC, firearm dealers will receive instant access to (1) the most complete and up-to-date State criminal records, (2) State-held records of noncriminal factors that prohibit firearm purchase, and (3) State personnel who can best interpret records and their modifications. BJS supports States that will be facilitating background checks in this way by allowing NCHIP funds to be used to cover costs associated with the purchase of equipment, development of software, training, and other listed costs associated with the NICS (for details, see "Allowable Costs," below). Considering that the NICS is to become operational in November 1998, requests for funds in this category will receive priority consideration.

In States not opting to serve as a POC, inquiries will be made directly from the firearm dealers to the FBI.

The Brady Act also allows States to meet their presale firearm check requirements through an ATF-approved permit system. To assist States following this procedure, NCHIP funds may be used to cover costs associated with development and implementation of procedures that will meet ATF requirements for a permit system to be approved as an alternative to instant checks at the time of sale.

Commitment to participation in the Interstate Identification Index (III). Participation by all States in the Interstate Identification Index (III) is critical to ensuring that the most accurate and complete criminal records are available instantly not only for NICS presale firearm checks, but also for background check inquiries regarding persons seeking positions involving national security; persons with responsibility for children, the elderly or the disabled, and other authorized purposes. Instant interstate availability of complete records is also vital to supporting effective law enforcement strategies involving pretrial release, determinate sentencing, and correctional assignment. At present, 36 States participate in III.

The NCHIP FY 1997 program announcement emphasized the BJS commitment to full State participation in the FBI's Interstate Identification Index (III). In light of the importance of III participation, BJS has again identified III participation as a priority goal of the NCHIP program and requires States that are not currently III members to specify whether funding already committed is adequate to assure III participation and, if not, to focus 1998 NCHIP funds on activities that further this goal.

Commitment to support court efforts relating to development of record systems. Recent laws establishing requirements for background checks for firearms sales and in connection with positions of responsibility with children, the elderly and the disabled have emphasized the importance of records being complete with dispositions. Moreover, other statutes have highlighted the importance of immediate statewide and interstate access to protection orders related to domestic violence. These requirements can only be met if information initially developed by the courts is available on a complete and immediate basis. BJS is committed to recognizing the importance of the courts in all of these efforts, and applicants should ensure that in developing NCHIP operational and funding plans, adequate attention is directed at the role and needs of the courts.

Program Goals. The goal of the NCHIP grant program is to improve the Nation's public safety by—

* Facilitating the accurate and timely identification of persons who are ineligible to purchase a firearm;
* Ensuring that persons with responsibility for child care, elder care, or care of the disabled do not have disqualifying criminal records;
* Improving access to protection orders and records of people wanted for stalking and domestic violence; and
* Enhancing the quality, completeness and accessibility of the Nation's criminal history record systems and the extent to which such records can be used and analyzed for criminal justice related purposes.

More specifically, NCHIP is designed to assist States—

* To expand and enhance participation in the FBI's Interstate Identification Index (III) and the National Instant Criminal Background Check System (NICS);
*To meet timetables for criminal history record completeness and participation in the III, as established for each State by the Attorney General;
*To improve the level of criminal history record automation, accuracy, completeness, and flagging;
*To develop and implement procedures for accessing records of persons other than felons who are ineligible to purchase firearms;
*To identify (through interface with the National Incident-Based Reporting System [NIBRS] where necessary) records of crimes involving use of a handgun and/or abuse of children, the elderly, or disabled persons;
* To identify, classify, collect, and maintain (through interface with the National Crime Information Center [NCIC] and the III where necessary) protection orders, warrants, arrests, and convictions of persons violating protection orders intended to protect victims of stalking and domestic violence and to support the development of State sex offender registries and the interface with a national sex offender registry; and,
* To ensure that States develop the capability to monitor and assess State progress in meeting legislative and programmatic goals.

To ensure that all NCHIP-funded efforts support the development of the national criminal record system, the program is closely coordinated with the FBI, the Bureau of Justice Assistance, and the Bureau of Alcohol, Tobacco and Firearms (ATF).

Legislative Background. Section 106 (b) of the Brady Act provides that—

> The Attorney General, through the Bureau of Justice Statistics, shall, subject to appropriations and with preference to States that as of the date of enactment of this Act have the lowest percent currency of case dispositions in computerized criminal history files, make a grant to each State to be used (A) for the creation of a computerized criminal history record system or

improvement of an existing system; (B) to improve accessibility to the national instant criminal background system; and (C) upon establishment of the national system, to assist the State in the transmittal of criminal records to the national system.

The provisions of 18 U.S.C. Sections 922 (g) and (n), as amended by the Violent Crime Control Act and the "Lautenberg amendment," prohibit the sale of firearms to an individual who—

(1) Is under indictment for, or has been convicted in any court, of a crime punishable by imprisonment for a term exceeding 1 year;

(2) Is a fugitive from justice;

(3) Is an unlawful user of, or addicted to, any controlled substance;

(4) Has been adjudicated as a mental defective or been committed to a mental institution;

(5) Is an alien who is illegally or unlawfully in the United States;

(6) Was discharged from the Armed Forces under dishonorable conditions;

(7) Has renounced United States citizenship;

(8) Is subject to a court order restraining them from harassing, stalking, or threatening an intimate partner or child; or

(9) Has been convicted in any court of a misdemeanor crime of domestic violence.

Category 9, included as the "Lautenberg amendment" in the Omnibus Consolidated Appropriations Act of 1997, P.L. 104–208, 110 Stat 3009, became effective on October 1, 1996. See Appendix A of this announcement for text of the amendment, which includes applicable definitions.

The Brady Act, enacted in November 1993 and effective in February 1994, established interim provisions that are applicable until the NICS is operational. Under the interim provisions, licensed firearm dealers request a presale check on all potential handgun purchasers by the chief law enforcement officer in the purchaser's residence community to determine, based on available records, if the individual is legally prohibited from purchase of the firearm under the provisions of the Gun Control Act (18 U.S.C. Section 922) or State law. The sale may not be completed for 5 days unless the dealer receives an approval before that time. The interim provisions, including the Federal imposition of a 5-day waiting period, terminate when the NICS becomes operational. Section 103 of the Brady Act provides that NICS will supply information on "whether receipt of a firearm * * * would violate (18 U.S.C. Section 922) or State law." As noted above, Section 106(b) of the Brady Act establishes a grant program that not only assists States in upgrading criminal record systems, but also assists States in improving access to and interface with the NICS.

In addition, Section 106(a) of the Brady Act amended Section 509(d) of the Omnibus Crime Control and Safe Streets Act to specifically provide that funds from the 5% set-aside under the Byrne Formula grant program may be spent for "the improvement of State record systems and the sharing * * * of records * * * for the purposes of implementing * * * (the Brady Act)."

The Child Protection Act, as amended by the Violent Crime Control Act, requires that records of abuse against children be transmitted to the FBI's national record system. The Child Protection Act also encourages States to adopt laws requiring background checks on individuals prior to assuming responsibility for care of children, the elderly, or the disabled.

Section 4 of the Act establishes a grant program to assist States in upgrading records to meet the requirements of the Act. Under the definition set forth in Section 5(3) of the Act, "child abuse crimes" include crimes under any law of the State and are not limited to felonies.

Both the Brady and Child Protection Acts required the Attorney General to survey the status of State criminal history records and develop timetables for States to achieve complete and automated records. The survey was conducted during March 1994, and State governors were advised of timetables by the Attorney General in letters of May and June 1994. The letters indicated that compliance with timetable goals and the ability to join III by November 1998 was to be contingent upon availability of grant funds under each Act.

The National Stalker and Domestic Violence Reduction program (Stalker Reduction), (Section 40602 of the Violence Against Women Act (VAWA), Pub. L. No. 103–322) authorized a program to assist States in entering data on stalking and domestic violence into local, State, and national databases. The Act emphasizes the importance of ensuring that data on convictions for these crimes are included in databases being developed with Federal funds. Section 40606 of VAWA authorized technical assistance and training in furtherance of the purposes of the Stalker Reduction program. This section also allows for the evaluation of programs that receive funds under this provision.

Section 40602(b) of the Violent Crime Control Act further provides that in order to be eligible to receive funds for Domestic Violence/Stalker Reduction program activities, a State shall certify that it has or intends to establish a program that enters into the National Crime Information Center the following records:

* Warrants for the arrest of persons violating protection orders intended to protect victims from stalking or domestic violence;

* Arrests or convictions of persons violating protection or domestic violence orders; and

* Protection orders for the protection of persons from stalking or domestic violence.

The NCHIP program implements the requirements of the programs established in the Brady Act, Child Protection Act, and the Domestic Violence/Stalker Reduction provisions of VAWA.

Appropriation. Section 106 (b) of the Brady Act authorized $200 million for the grant program; the Child Protection Act authorized $20 million; Section 40603 of the Violent Crime Control Act authorized a total of $6 million over 3 years for the Domestic Violence/Stalker Reduction program included in VAWA. Pursuant to these authorizations, the Brady, Child Protection, and Domestic Violence/Stalker Reduction Acts are combined under the NCHIP program.

FY 1995: An appropriation of $100 million was made to implement Section 106 (b) of the Brady Act for FY 1995, to be available until expended. No appropriation was made for activities authorized under the Child Protection Act or the Domestic Violence/Stalker Reduction provisions of VAWA in FY 1995.

FY 1996: An appropriation of $25 million was made in FY 1996 to continue implementation of Section 106 (b) of the Brady Act and to implement Section 4 (b) of the Child Protection Act. In addition an appropriation of $1.5 million was made in FY 1996 for the Domestic Violence/Stalker Reduction component of the program.

FY 1997: In FY 1997, an appropriation of $50 million was made to further the implementation of Section 106 (b) of the Brady Act and Section 4 (b) of the Child Protection Act. $1.75 million was appropriated for Domestic Violence/Stalker Reduction activities.

FY 1998: The FY 1998 appropriation for criminal record improvement was $45 million. For purposes relating to Domestic Violence/Stalker Reduction, an appropriation of $2.75 million was also made in FY 1998.

To date, approximately $10 million has been awarded for purposes authorized under the NCPA and the Domestic Violence/Stalker Reduction

provisions of the VAWA. In recognition of the importance of these issues, up to $16 million of the 1998 appropriation will be available to be awarded for these purposes. Of this amount, the full $2.75 million appropriated to BJS for Domestic Violence/Stalker Reduction activities under VAWA in 1998 will be allocated for purposes associated with development/enhancement of protection order files, including interface with the FBI's national protection order file.

The FY 1998 NCHIP program also includes the National Sex Offender Registry Assistance Program (NSOR–AP) under which $25 million was appropriated for grants to assist States in upgrading sex offender registries and providing data to the FBI Sex Offender Registry. The NSOR–AP program is a component of NCHIP but is funded separately pursuant to a separate application.

Application and Award Process. Eligibility requirements. Only one application will be accepted from each State. The application must be submitted by the agency designated by the State Governor. A State may, however, choose to submit its application as part of a multistate consortium or other entity. In such case, the application should include a statement of commitment from each State and be signed by an individual designated by the Governor of each participating State. The application should also indicate specific responsibilities and include a separate budget for each State.

A grant will be made to each eligible applicant State with funds from the 1998 appropriation. All States, including States previously designated as "priority States," are eligible to receive funds for activities relating to criminal records improvement and NICS participation, as well as the additional purposes authorized under the Child Protection Act and the Domestic Violence/Stalker Reduction legislation, as described in this announcement.

States may submit an application even though funds remain unexpended under the previous NCHIP awards. In such a case, the application should describe the efforts undertaken to date, the specific reasons that funds remain unexpended, and the anticipated time when funds will be expended.

FY 1998 projects may overlap with FY 1997 projects or the projects may run consecutively.

Program narrative. In addition to the requirements set forth in Appendix A, the NCHIP application should include the following four parts. States may, at their option, satisfy requirements noted below by referencing or summarizing previous applications. Additionally, States in which the applicant agency is the same under the BJS NCHIP and Bureau of Justice Assistance (BJA) State Identification Systems (SIS) program may also choose to submit duplicate material to BJS and BJA under Part I (Background) and Part II (Identification of Needs), below.

Part I. Background

This section should include a short update of current efforts relating to criminal history record improvement funded under the BJS NCHIP, Advanced State Award Program (ASAP), Criminal History Record Improvements (CHRI) programs, and the BJA Byrne 5% set-aside, or with State funds during the past year. Where applicable, the section should also include a reference to projects that are, or may be, funded under the State Identification Systems (SIS) Formula Grant program administered by BJA. The discussion should also specify total funds awarded to the State under NCHIP, Byrne, and SIS programs (if SIS funding is used for criminal history record improvements) and the funds in each category remaining at the time of application.

Part II. Identification of Needs

This part should discuss any evaluative efforts undertaken to identify the key areas of weakness in the State's criminal record system since submission of the last NCHIP application. The application should also indicate those areas that must be addressed in order to enable the State to identify ineligible firearm purchasers, persons ineligible to hold positions involving children, the elderly, or the disabled, and people wanted, arrested, or convicted of stalking and/or domestic violence offenses, including violations of protection orders.

States that are not members of III at the time of application must include a section identifying the tasks remaining to permit III participation. This section must specifically state whether funding already available is adequate for the State to participate in III and the planned month and year of participation in III. If funding already available is not adequate, the State is expected to apply for NCHIP funding that will permit the State to participate in III.

Part III. NCHIP Effort

This section should describe the activities to be undertaken with NCHIP funds over the 12-month period. Specifically, each application should indicate the activities proposed, how these activities relate to efforts funded under the previous NCHIP awards, and the results that will be achieved from FY 1998 funding. In order to permit assessment of State progress in meeting grant goals, this section should also set forth measurable benchmarks or goals for each proposed activity.

States that are not members of III must include a description and timetable for activities that are specifically designed to permit such participation.

Part III of the application should also describe any efforts to be supported to monitor State compliance with legislative or programmatic goals through ongoing audits or other means such as statistical analysis or comparison between Computerized Criminal History (CCH) records and National Incident-Based Reporting System (NIBRS) or Uniform Crime Reporting (UCR) data. Studies relating to handgun use or sales approval, if proposed, should be described in this section.

In addition, to ensure program continuity and emphasize the importance of judicial efforts in meeting newly established record requirements, the application should indicate the level of funds that will be made directly available to the courts, where the courts are the appropriate source for data on dispositions or other record data.

The Bureau of Justice Statistics will coordinate the Domestic Violence/Stalker Reduction portion of NCHIP with the Violence Against Women Office (VAWA) at the Department of Justice.

Part IV. Coordination

Byrne Formula Funds: Funds under the Byrne Formula 5% set-aside program are available to support the improvement of record systems and to meet the goals of the Brady and Child Protection Acts.

The Bureau of Justice Statistics and the Bureau of Justice Assistance have jointly agreed that close and continuing coordination between the NCHIP and Byrne 5% set-aside program is critical to meeting the goals of the Brady Act and the National Child Protection Act. Such coordinated efforts are also necessary to ensure the development of an effective interstate criminal history record system to meet the needs of law enforcement, the criminal justice community, and the increasing number of noncriminal justice users of criminal history record information. To achieve this goal, BJS and BJA prepared guidelines governing use of the Byrne 5% set-aside funds. The guidelines were issued February 23, 1995 to State administrative agencies that receive and distribute Byrne formula grant funds.

To avoid overlap and maximize funding effectiveness, BJS expects that program plans for projects to be funded under NCHIP and the Byrne 5% set-aside will be coordinated by the State agencies responsible for these programs. Where costs of a proposed activity exceed NCHIP available funds or are unallowable under NCHIP, the State might, for example, use Byrne funds to fill remaining needs. This joint effort will maximize the effectiveness of these programs.

State Identification Systems (SIS) Program: In May 1997, BJA announced the State Identification Systems (SIS) Formula Grant Program, under which States are eligible to apply for funds to "establish, develop, update or upgrade—

(A) computerized identification systems that are compatible and integrated with the databases of the National Crime Information Center (NCIC) of the FBI;

(B) the capability to analyze DNA in a forensic laboratory in ways that are compatible and integrated with the combined DNA Identification System (CODIS) of the FBI; and

(C) automated fingerprint identification systems that are compatible and integrated with the Integrated Automated Fingerprint Identification System (IAFIS) of the FBI."

NCHIP applications should insure that efforts under these programs will be coordinated. Information copies of the proposed activities to be funded under the SIS program will be provided to BJS for inclusion as part of the State's NCHIP file.

Other Federal funding: To ensure coordination of Federal funding efforts, the application should include information on other current awards or pending applications for Federal funding to support activities for which funds are being requested in the current NCHIP application. Where relevant, such information should indicate the amount of the other award, the grantor agency, and the program purpose.

Award Period and Budget. Awards may be for up to 12 months. Since the FY 1998 NCHIP program builds on the long-term NCHIP activity, States will have the flexibility to begin FY 1998 funded activities immediately upon award or as late as the summer of 1999. Activities must be completed by June 1, 2000. Applicants are also encouraged to incorporate or reference pages of previously submitted materials, when appropriate.

The budget should provide details for expenses in required categories and by individual task (see Appendix A, Application content). The application should identify those agencies to receive direct funding and indicate the fiscal arrangements to accomplish fund transfer.

Application Submission and Due Dates. Applications may be submitted at any time after publication of this announcement. Applications must be received by June 30, 1998, to be eligible for funding from the FY 1998 appropriation.

To minimize administrative burdens, States may resubmit parts of previous proposals that did not receive funds under previous NCHIP awards, accompanied by a current budget.

Review Criteria. States should understand that full funding may not be possible for all proposed activities. Allocation of funds will be based on the amount requested and the following factors:

(1) The extent to which funds will support participation in NICS, State efforts to become a III participant, and meet the timetables established for the State by the Attorney General;

(2) The extent to which improvements in the State system, by virtue of record numbers, levels of technical development, or operating procedures, will have a major impact on availability of records throughout the national system;

(3) The proposed use or enhancement of innovative procedures which may be of value to other jurisdictions;

(4) The technical feasibility of the proposal and the extent to which the proposal appears reasonable in light of the State's current level of system development and statutory framework;

(5) The total amount already awarded under previous NCHIP program announcements;

(6) The extent to which the State has fulfilled goals of previous NCHIP grants, expended funds awarded in previous grants, and demonstrated a commitment to criminal history record improvement through activities under the NCHIP program;

(7) State commitment to the national record system as evidenced by membership in III, participation in the FBI's National Fingerprint File (NFF) and Felon Identification in Firearms Sales (FIFS) programs, etc., and the current status of development of its CCH;

(8) Reasonableness of the budget;

(9) Evidence of State progress in meeting record improvement and background check goals as measured in terms of audits, and meeting data collection goals relating to presale firearm checks and background checks on persons seeking positions involving children, the aged and the disabled;

(10) Appropriate focus on criminal history data improvement regarding protection orders and crimes against children, the elderly, and the disabled;

(11) Nature of the proposed expenditures;

(12) The extent to which the plan reflects constructive interface between relevant components of the State organization and/or multistate systems;

(13) The reasonableness of the relationship between the proposed activities and the current status of the State system, in terms of technical development, legislation, current fiscal demands, and future operating costs.

The program does not require either "hard" (cash) or "soft" (in-kind) match. Indications of State support, however, may be interpreted as expressions of commitment by the State to the program.

All applicants must agree to participate in evaluations sponsored by the Federal Government. Applicants must also agree to provide data relating to Brady Act activity to the Firearm Inquiry Statistics Program (FIST) in the format designated by the FIST.

Allowable Costs. Allowable expenses are detailed below. All expenses are allowable only to the extent that they directly relate to programs described in the application's program narrative.

(1) Participation in III. This is a key goal. Covered costs include, but are not limited to, costs associated with automation of the database, synchronization of records between the State and the FBI, and development of necessary software and hardware enabling electronic access on an intrastate or interstate basis.

(2) Database enhancement. Improving the quality, completeness, and accuracy of criminal history records is a key goal of the NCHIP effort. Allowable costs include the costs associated with implementing improved record capture procedures, establishing more effective accuracy controls, and ensuring that records of all criminal events that start with an arrest or indictment are included in the database.

In addition to felony records, funds may be used to capture data on domestic violence misdemeanors and to ensure that data on persons convicted of abuse of children, the elderly, and the disabled and/or stalking and domestic violence offenses (including protection orders and violations thereof) are included in the database.

States that currently participate in III may also use limited funds to identify and develop access to data on other categories of persons prohibited from

VOL 63 ISS 101 MAY 27 1998 UMI

firearm purchase under recent amendments to the Gun Control Act (18 U.S.C. Section 922), as incorporated in the Brady Act. States proposing use of funds for these purposes must demonstrate in the application that results of applicable pilot efforts supported under the NCHIP Advanced State Award Program (ASAP) have been considered and that necessary protections for individual privacy will be incorporated in the proposed procedures. Information about current NCHIP-supported efforts in these areas and relevant State contacts is available through the BJS Internet site.

(3) Improved capture of case disposition. Automated interface between the criminal history repository and the courts, prosecutors, and/or corrections agencies is encouraged. Funds provided to courts or prosecutors for these purposes are allowable only to the extent that the function to be supported is related to the capture of disposition or other data relating to the offender record (for example, full costs associated with establishment of court Management Information Systems (MIS) are not allowable under the NCHIP program).

(4) Flagging of records. Upgrading the accessibility of records through flagging for presale and preemployment checks is an important activity. Allowable costs include costs of flagging or algorithms used for flagging of felony records and records of persons with convictions for crimes involving children, the elderly, and/or the disabled, as well as records of persons convicted of crimes involving domestic violence and/or stalking. Costs may include the cost of technical record flagging and the costs associated with identification of records to be flagged (see [12] below regarding interface with NIBRS).

(5) Participation in the NICS. NCHIP funds may be used to enable the State to participate in the NICS consistent with the provisions of 18 U.S.C. Section 922 (t). Allowable expenditures include, but are not limited to costs necessary to enable the State to serve as a Point of Contact under the FBI's NICS system, and include costs of equipment, software, personnel training, and development and implementation of related operating and administrative procedures. Funds may not be used to conduct presale firearm background checks.

(6) Firearm permits. NCHIP funds may be used to comply with Brady Act provisions pursuant to an ATF-approved firearm permit system and to develop and implement procedures to review the currency of firearm permits and/or to provide appropriate notification when permits are revoked.

(7) Protection order file. Establishment of a protection order file to enhance the cross-jurisdictional enforcement of protective orders, and to support the FBI's National Protection Order File is an important goal of the NCHIP program. Costs (including equipment, software, training and procedural development) associated with development and enhancement of such files and with interface with the FBI's National Protection Order File are covered. Protection order files supported with NCHIP funds must be compatible with the FBI file, and the application must indicate that records are presently being submitted to the FBI or indicate the date upon which that submission will commence. Funds are only allowable to support development of local protection order files where data in such files is or will become directly accessible throughout the State and available to the FBI's national system.

(8) Interface between criminal history records, sex offender registry, and civil protection order files. To ensure that, consistent with State law, a complete data review is possible in connection with background checks for child care or other authorized purposes, funds may be used to develop software to establish protocols to permit interface between the criminal history record system, the State sex offender registry, and related protection order files including files of civil protection orders.

(9) Uniform RAP sheet format. The FBI has recently endorsed a format and standards for transmission of a uniform RAP sheet (text version of a person's criminal history record) among States. The format reflects efforts initiated under the BJS/SEARCH Task Force on Uniform RAP Sheet Standards. Funds are available to assist States in converting State criminal history records to the FBI standard interstate RAP sheet format or for developing electronic interchange capabilities related thereto.

(10) Record automation. These are allowable costs only with respect to records where the subject has been arrested, indicted, convicted, or released from confinement within 5 years of the date of automation. As appropriate, allowable costs also include costs associated with system design in States with nonautomated systems or in States proposing to enhance system operation to include access to non-CCH databases.

(11) AFIS/livescan. Automated Fingerprint Identification System (AFIS)/livescan equipment for local law enforcement agencies is allowable to improve the level of arrest and disposition reporting, but only where—

(a) the State repository system is automated, is participating in, or is planning to participate in III, and has in place the technical capability to accept AFIS transmissions, and

(b) sufficient traffic can be demonstrated to justify the cost, possibly through the use of regional systems.

Funding of AFIS/livescan in squad cars is not allowable, since field inquiries are not a factor in checks under either the Brady Act or the Child Protection Act. Additionally, since data are not generally input to the system by the field unit, AFIS in the squad car would not support record improvement or completeness. AFIS/livescan for use in courts is allowable, to support record completeness. The same conditions regarding repository capability and levels of traffic are also applicable to costs in this category. Costs associated with AFIS/livescan communication from the repository to the FBI national system (IAFIS) are allowable but only where the State can demonstrate adequate levels of record completeness (both arrest and disposition) and current membership in III.

States should understand that Byrne 5% set-aside funds are available for AFIS/livescan, and that, accordingly, use of NCHIP funds for AFIS or livescan will only be allowable when justified as appropriate given the overall status of the State system, its participation in the national system and its planned use of Byrne 5% set-aside funds. This is particularly relevant with respect to State proposals to use NCHIP funds to cover costs of local livescan equipment.

(12) Interface with NIBRS. Funds may be used to interface with any State data system that is compatible with NIBRS for purposes of identifying persons convicted of crimes against children, the elderly, or the disabled; crimes involving domestic violence and/or stalking; and/or identification of records involving firearm crimes for operational or research purposes. NCHIP funds are not available, however, to develop the NIBRS database.

(13) Research, evaluation, monitoring, and audits. Costs associated with research or evaluation efforts are allowable to the extent that they are directly associated with a project approved in the application. Costs associated with monitoring State compliance with legislative or programmatic goals through ongoing or periodic audits or other procedures are allowable and encouraged. The purchase of equipment such as modems and the necessary communications and

data software for storing and transmitting evaluative data between States and to BJS or other designated Federal agencies is an allowable expense.

(14) Conversion of juvenile records to the adult system. Federal regulations allow the FBI to accept juvenile records if submitted by the State or local arresting agency. Expenditures to interface juvenile and adult records are allowable if consistent with relevant State law and undertaken to further the goals of the NCHIP program.

(15) Missing dispositions backlog reduction. These costs are allowable to improve the level of disposition reporting but only where limited to records with arrests within the past 5 years. States must also propose a strategy to prevent future backlogs from developing.

(16) Equipment upgrades. Upgrade costs are allowable where related to improving availability of data and where appropriate given the level of data completeness, participation in III, etc. Replacement costs will be considered, but States are encouraged to contribute some portion of the total costs.

(17) Training, participation in seminars and meetings. Limited funds may be used to cover costs of training and participation in State, regional, or national seminars or conferences (including travel, where necessary).

(18) Reducing cost of background checks. States may use funds to develop and implement technologies that lower costs of conducting background checks. These funds may also be used to pay all or part of the State's cost of conducting background checks on persons who are employed by or volunteer with a public, not-for-profit, or other voluntary organization to reduce the amount of fees charged for such background checks, consistent with the provisions of 42 USC 5119(b).

(19) Allowable activities relating to implementation of the Child Protection Act and the Domestic Violence and Stalker Reduction provisions of the VAWA. Allowable activities include—

* capturing domestic violence and/or stalking protection orders;
* flagging of records concerning child abuse, crimes against children, the elderly and the disabled; convictions for domestic violence and/or stalking; and domestic violence protection orders;
* incorporating serious misdemeanor offenses against children, the elderly and the disabled into existing criminal history records;
* offsetting the cost of certain background checks, including development and implementation of technological and procedural advances; and
* improving processes for entering data regarding stalking and domestic violence into local, State, and national crime information databases.

Text of "Lautenberg Amendment." The "Lautenberg Amendment" amends the Federal Gun Control Act (18 U.S.C. Section 922) to prohibit the transfer of firearms to a person convicted of a "misdemeanor crime of domestic violence." The text of the amendment is set forth below.

Sec. 668. GUN BAN FOR INDIVIDUALS CONVICTED OF A MISDEMEANOR CRIME OF DOMESTIC VIOLENCE

(a) Definition—Section 921 (a) of title 18, United States Code, is amended by adding at the end of the following:

"(33)(A) Except as provided in subparagraph (C), the term 'misdemeanor crime of domestic violence' means an offense that—

"(i) is a misdemeanor under Federal or State law; and

"(ii) has, as an element, the use or attempted use of physical force, or the threatened use of a deadly weapon, committed by a current or former spouse, parent, or guardian of the victim, by a person who is cohabiting with or has cohabited with the victim as a spouse, parent, or guardian, or by a person similarly situated to a spouse, parent, or guardian of the victim.

"(B)(i) A person shall not be considered to have been convicted of such an offense for purposes of this chapter, unless—

"(I) the person was represented by counsel in the case, or knowingly and intelligently waived the right to counsel in the case; and

(II) in the case of a prosecution for an offense described in this paragraph for which a person was entitled to a jury trial in the jurisdiction in which the case was tried, either

(aa) the case was tried by a jury, or

(bb) the person knowingly and intelligently waived the right to have the case tried by a jury, by guilty plea or otherwise.

"(ii) A person shall not be considered to have been convicted of such an offense for purposes of this chapter if the conviction has been expunged or set aside, or is an offense for which the person has been pardoned or has had civil rights restored (if the law of the applicable jurisdiction provides for the loss of civil rights under such an offense) unless the pardon, expungement, or restoration of civil rights expressly provides that the person may not ship, transport, possess, or receive firearms."

(b) PROHIBITIONS—

(1) Section 922(d) of such title is amended

(A) by striking "or" at the end of paragraph (7);

(B) by striking the period at the end of paragraph (8) and inserting "; or"; and

(C) by inserting after paragraph (8) the following:

(9) has been convicted in any court of a misdemeanor crime of domestic violence".

(2) Section 922(g) of such title is amended—

(A) by striking "or" at the end of paragraph (7);

(B) by striking the period at the end of paragraph (8) and inserting "; or"; and

(C) by inserting after paragraph (8) the following:

"(9) has been convicted in any court of a misdemeanor crime of domestic violence."

(3) Section 922(s)(3)(B)(I) of such title is amended by inserting, "and has not been convicted in any court of a misdemeanor crime of domestic violence" before this semicolon.

(c) GOVERNMENT ENTITIES NOT EXCEPTED—Section 925(a)(1) of such title is amended by inserting "sections 922(d)(9) and 922(g)(9) and" after "except for".

Application and administrative requirements. Application content. All applicants must submit:

* Standard Form 424, Application for Federal Assistance.
* Budget Detail Worksheet (replaced the SF 424A, Budget Information).
* OJP Form 4000/3 (Rev. 1–93), Program Narrative and Assurances.
* OJP Form 4061/6 Certification Regarding Lobbying, Debarment, Suspension, and Other Responsibility Matters; Drug-Free Workplace Requirements.

Applicants are requested to submit an original and two copies of the application and certifications to the following address: Application Coordinator, Bureau of Justice Statistics, 810 Seventh Street, NW, Washington DC 20531, *Telephone:* (202) 616–3500.

Standard Form 424 (SF–424). The SF–424, a one-page sheet with 18 items, serves as a cover sheet for the entire application. This form is required for every application for Federal assistance. NO APPLICATION CAN BE ACCEPTED WITHOUT A COMPLETED, SIGNED ORIGINAL SF–424. Directions to complete each item are included on the back of the form.

Budget Detail Worksheet. Applications must provide a detailed justification for all costs, including the basis for computation of these costs. For example, the detailed budget would include the salaries of staff involved in the project and the portion of those salaries to be paid from the award; fringe benefits paid to each staff person; travel costs related to the project; equipment to be purchased with the award funds; and supplies required to complete the project.

Budget narrative. The budget narrative should detail costs included in each budget category for the Federal and the non-Federal (in-kind and cash) share. The purpose of the budget narrative is to relate items budgeted to project activities and to provide justification and explanation for budget items, including criteria and data used to arrive at the estimates for each budget category. The budget narrative should also indicate amounts to be made available to subrecipient agencies (under Contractual/Contracts category) other than the direct grant recipient. The following information is provided

to assist the applicant in developing the budget narrative:

a. Personnel category. List each position by title (and name of employee if available), show annual salary rate and percentage of time to be devoted to the project by the employee. Compensation paid for employees engaged in federally assisted activities must be consistent with that paid for similar work in other activities of the applicant.

b. Fringe benefits category. Indicate each type of benefit included and explain how the total cost allowable for employees assigned to the project is computed.

c. Travel category. Itemize travel expenses of project personnel by purpose (e.g., faculty to training site, field interviews, advisory group meetings, etc.) and show basis or computation (e.g., "Five trips for x purpose at $80 average cost—$50 transportation and two days per diem at $15" or "Six people to 3-day meeting at $70 transportation and $45 subsistence.") In training projects where travel and subsistence for trainees is included, this should be separately listed indicating the number of trainees and the unit costs involved.

(1) Identify the tentative location of all training sessions, meetings, and other travel.

(2) Travel costs are allowable as expenses by employees who are in travel status on official business. These costs must be in accordance with the Federal or an organizationally-approved travel policy.

(3) Recipients may follow their own established travel rates. If a recipient does not have an established travel policy, the recipient must abide by the Federal travel policy. Subrecipients of States must follow their State's established travel policy. If a State does not have an established travel policy, the subrecipient must abide by the Federal travel rates.

d. Equipment. List each type of equipment to be purchased or rented with unit or monthly costs.

e. Supplies. List items within this category by major type (office supplies, training materials, research forms, postage) and show basis for computation. Provide unit or monthly estimates.

f. Contractual category. State the selection basis for any contract, subcontract, prospective contract or prospective subcontract (including construction services and equipment). Please note, applications that include noncompetitive contracts for the provision of specific services must contain a sole source justification for any procurement in excess of $100,000.

For individuals to be reimbursed for personal services on a fee basis, list by name or type of consultant or service, the proposed fee (by day, week, or hour) and the amounts of time to be devoted to such services. For construction contracts and organization (including professional associations and education institutions performing professional services), indicate the type of service to be performed and the estimated contract cost data.

g. Construction category. Describe construction or renovation which will be accomplished using grant funds and the method used to calculate cost.

h. Other category. Include under "other" such items as rent, reproduction, telephone, and janitorial or security services. List items by major type with basis of computation shown. (Provide square footage and cost per square foot for rent. Provide local and long distance telephone charges separately.)

i. Indirect charges category. The Agency may accept an indirect cost rate previously approved for an applicant by a Federal agency. Applicants must enclose a copy of the approved rate agreement with the grant application.

j. Program income. If applicable, provide a detailed estimate of the amount of program income to be generated during the grant period and its proposed application (to reduce the cost of the project or to increase the scope of the project). Also, describe the source of program income, listing the rental rates to be obtained, sale prices of publications supported by grant funds, and registration fees charged for particular sessions. If scholarships (covering, for example, registration fees) are awarded by the organization to certain conference attendees, the application should identify the percentage of all attendees that are projected as "scholarship" cases and the precise criteria for their selection.

Program narrative. All applications must include a program narrative that fully describes the expected design and implementation of the proposed program. OJP Form 4000/3 (Rev. 1–93) provides additional detailed instructions for preparing the program narrative.

The narrative should include a time line of activities indicating, for each proposed activity, the projected duration of the activity, expected completion date, and any products expected. The application should include a description of the roles and responsibilities of key organizational and/or functional components involved in project activities; and a list of key personnel responsible for managing and implementing the major elements of the program.

Assurances. OJP Form 4000/3 (Rev. 1–93) must be included in the application submission. If submitting this form separately from the SF–424, the applicant must sign and date the form to certify compliance with the Federal statutes, regulations, and requirements as cited.

Certification Regarding Lobbying; Debarment, Suspension, and Other Responsibility Matters; and Drug-Free Workplace. Applicants should refer to the regulations cited in OJP Form, 4061/6 to determine the certification to which they are required to attest. A copy of OJP Form 4061/6 can be obtained from the BJS Application Coordinator. Applicants should also review the instructions for certification included in the regulations before completing this form. Signature of this form provides for compliance with certification requirements under 28 C.F.R. Part 69, "New Restrictions on Lobbying," and 28 C.F.R. Part 67, "Government-wide Debarment and Suspension (Nonprocurement) and Government-wide Requirements for Drug-Free Workplace (Grants)." The certifications shall be treated as a material representation of fact upon which reliance will be placed when the U.S. Department of Justice determines to award the covered transaction, grant, or cooperative agreement.

Financial and administrative requirements. Discretionary grants are governed by the provisions of OMB Circulars applicable to financial assistance. The circulars, in addition to the OJP Financial Guide, are available from the Office of Justice Programs. This guideline manual is intended to assist grantees in the administration of funds and includes information on allowable costs, methods of payment, Federal rights of access to records, audit requirements, accounting systems, and financial records.

Complete and accurate information is required relative to the application, expenditure of funds, and program performance. The consequences of failure to comply with program guidelines and requirements will be determined at the discretion of the Department.

Civil rights obligations. All applicants for Federal financial assistance must sign Certified Assurances that they are in compliance with the Federal laws and regulations which prohibit discrimination in any program or activity that receives such Federal funds. Section 809(c), Omnibus Crime

Control & Safe Streets Act of 1968, provides that:

No person in any State shall on the ground of race, color, religion, national origin, or sex be excluded from participation in, be denied the benefits of, or be subjected to discrimination under, or denied employment in connection with any program or activity funded in whole or in part with funds made available under this title.

Section 504 of the Rehabilitation Act of 1973, and Title II of the Americans With Disabilities Act prohibit discrimination on the basis of disability.

The applicant agency must discuss how it will ensure nondiscriminatory practices as they relate to:

(1) Delivery of services or benefits—to ensure that individuals will not be denied access to services or benefits under the program or activity on the basis of race, color, religion, national origin, gender, age, or disability;

(2) Employment practices—to ensure that its personnel in the program or activity are selected for employment without regard to race, color, religion, national origin, gender, age, or disability; and

(3) Program participation—to ensure members of any planning, steering or advisory board, which is an integral part of the program or activity, are not excluded from participation on the basis of race, color, religion, national origin, gender, age or disability; and to encourage the selection of such members who are reflective of the diversity in the community to be served.

Audit requirement. On June 30, 1997, the Office of Management and Budget issued Circular A–133, "Audits of States, Local Governments, and Non-Profit Organizations," which establishes regulations to implement the Single Audit Act of 1996. This Circular A–133 outlines the requirements for organizational audits which apply to BJS grantees.

Intergovernmental review of Federal programs. Federal Executive Order 12372, "Intergovernmental Review of Federal Programs," allows States to establish a process for reviewing Federal programs in the State, to choose which programs they wish to review, to conduct such reviews, and to make their views known to the funding Federal agency through a State "single point of contact."

If the State has established a "single point of contact," and if the State has selected this program to be included in its review process, the applicant must send a copy of its letter or application to the State "single point of contact" at the same time that it is submitted to BJS. The letter or application submitted to BJS must indicate that this has been done. The State must complete its review within 60 days. The review period will begin on the date that the letter or application is officially received by BJS. If BJS does not receive comments from the State's "single point of contact" by the end of the review period, this will be interpreted as a "no comment" response.

If the State has not established a "single point of contact," or if it has not selected the BJS statistics development or criminal history improvement programs in its review process, this must be stated in the letter or application.

Jan M. Chaiken,

Director, Bureau of Justice Statistics.

BILLING CODE 4410–18–P

DEPARTMENT OF LABOR

Office of the Secretary

Submission for OMB review; comment request

May 21, 1998.

The Department of Labor (DOL) has submitted the following public information collection requests (ICRs) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. Chapter 35). A copy of each individual ICR, with applicable supporting documentation, may be obtained by calling the Department of Labor, Departmental Clearance Officer, Todd R. Owen ((202) 219–5096 ext. 143) or by E-Mail to Owen-Todd@dol.gov. Individuals who use a telecommunications device for the deaf (TTY/TDD) may call (202) 219–4720 between 1:00 p.m. and 4:00 p.m. Eastern time, Monday-Friday.

Comments should be sent to Office of Information and Regulatory Affairs, *Attn:* OMB Desk Officer for BLS, DM, ESA, ETA, MSHA, OSHA, PWBA, or VETS, Office of Management and Budget, Room 10235, Washington, DC 20503 ((202) 395–7316), by June 26, 1998.

The OMB is particularly interested in comments which:

* Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

* Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

* Enhance the quality, utility, and clarity of the information to be collected; and

* Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: Occupational Safety and Health Administration.

Title: Gear Certification (29 CFR part 1919).

OMB Number: 1218–0003 (Extension).

Form Number: OSHA 70, OSHA 71, and OSHA 72.

Frequency: Quadrennially; Annually.

Affected Public: Business or other for-profit; Not-for-profit institutions; State, Local and Tribal Government.

Number of Respondents: 278.

Total Responses: 6443.

Estimated Time per Respondent: 55 minutes.

Total Burden Hours: 93.

Total annualized capital/startup costs: $0.

Total annual costs (operating/maintaining systems or purchasing services): $476,406.

Description: 29 CFR part 1919 (Gear Certification), requires the gathering of information to complete three forms, the OSHA 70, OSHA 71, and OSHA 72. The OSHA 70 Form is used by applicants seeking accreditation from OSHA to be able to test or examine certain equipment and material handling devices, as required under the maritime regulations, part 1917 (Marine Terminals), and part 1918 (Long shoring). The OSHA 70 Form application for accreditation provides an easy means for companies to apply for accreditation. The OSHA 71 Form is required to be issued by those accredited by OSHA to make known to employers in the maritime industry that certain equipment and material handling devices are safe to use or operate.

The OSHA 72 Form is required to be used by those accredited by OSHA to employers in maritime industry when the equipment or material handling device is found to be unsafe to use.

Agency: Occupational Safety and Health Administration.

Title: Course Evaluation Form.

OMB Number: 1218–0173 (Extension).

Frequency: Once (at the end of the training course).

Affected Public: Individuals.

Number of Respondents: 11,500.
Total Responses: 11,500.
Estimated Time per Respondent: 10 minutes.
Total annualized capital/startup costs: $0.
Total annual costs (operating/maintaining systems or purchasing services): $0.
Description: Information collected on the Course Evaluation Form from the students completing OSHA Training Institute and Education Center training courses is used to evaluate course usefulness, effectiveness, quality, and content and to make course improvements.

Agency: Occupational Safety and Health Administration.
Title: Voluntary Protection Program (VPP).
OMB Number: 1218–0NEW.
Frequency: On occasion.
Affected Public: Applicants to the Voluntary Protection Program.
Number of Respondents: 90 to 100 a year.
Estimated Time per Respondent: 200 hours.
Total Burden Hours: 18,000.
Total annualized capital/startup costs: $0.
Total annual costs (operating/maintaining systems or purchasing services): $0.
Description: The information collection is necessary to determine if the applicant has a safety and health program that should qualify for participation in one of OSHA's Voluntary Protection Programs.

Todd R. Owen,
Departmental Clearance Officer.

BILLING CODE 4510–26–M

DEPARTMENT OF LABOR

Mine Safety and Health Administration

Petitions for Modification

The following parties have filed petitions to modify the application of mandatory safety standards under section 101(c) of the Federal Mine Safety and Health Act of 1977.

1. Lodestar Energy

[Docket No. M–98–28–C]

Lodestar Energy, Inc., P.O. Box 448, Clay, Kentucky 42404 has filed a petition to modify the application of 30 CFR 75.503 (permissible electric face equipment; maintenance) to its Baker Mine (I.D. No. 15–14492) located in Webster County, Kentucky. The petitioner proposes to use 750 feet of No. 6 cable on Fletcher single boom roof bolters. The petitioner states that the proposed alternative method will not result in diminution of safety to the miners. In addition, the petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

2. Joliett Coal Company

[Docket No. M–98–29–C]

Joliett Coal Company, 837 East Grand Avenue, Tower City, Pennsylvania 17980 has filed a petition to modify the application of 30 CFR 75.1400 (hoisting equipment; general) to its No. 3 Vein Slope (I.D. No. 36–08702) located in Schuylkill County, Pennsylvania. The petitioner proposes to use a slope conveyance (gunboat) in transporting persons without installing safety catches or other no less effective devices but instead using an increased rope strength/safety factor and secondary safety rope connection in place of such devices. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

3. Lone Mountain Processing, Inc.

[Docket No. M–98–30–C]

Lone Mountain Processing, Inc., P.O. Box 40, Pennington Gap, Virginia 24277 has filed a petition to modify the application of 30 CFR 75.1103–4 (automatic fire sensor and warning device systems; installation; minimum requirements) to its Darby Fork Mine No. 1 (I.D. No. 15–02263), and its Huff Creek Mine No. 1 (I.D. No. 15–17234) both located in Harlan County, Kentucky. The petitioner proposes to use belt air to ventilate active working places. The petitioner proposes to install a low-level carbon monoxide detection system in belt entries as an early warning fire detection system. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

4. Freeman United Coal Mining Co.

[Docket No. M–98–31–C]

Freeman United Coal Mining Company, 1999 Wabash Avenue, Suite 200B, Springfield, Illinois 62704–5364 has filed a petition to modify the application of 30 CFR 75.1002 (location of trolley wires, trolley feeder wires, high-voltage cables and transformers) to its Crown II Mine (I.D. No. 11–02236) located in Macoupin County, Illinois. The petitioner proposes to use 2,400 volt A.C. cables and equipment inby the last open crosscut within 150 feet of gob areas so that they can be used to power continuous mining equipment. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

5. Mettiki Coal Corporation

[Docket No. M–98–32–C]

Mettiki Coal Corporation, 293 Table Rock Road, Oakland, Maryland 21550 has filed a petition to modify the application of 30 CFR 75.1002 (location of trolley wires, trolley feeder wires, high-voltage cables and transformers) to its Mettiki Mine (I.D. No. 18–00621) located in Garrett County, Maryland. The petitioner proposes to use 4,300 volt cables on high-voltage longwall electric equipment used within 150 feet from pillar workings (longwall gob). The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

6. Sea "B" Mining Company

[Docket No. M–98–33–C]

Sea "B" Mining Company, P.O. Box 7, Dante, Virginia 24237 has filed a petition to modify the application of 30 CFR 1710–1(a) (canopies or cabs; self-propelled diesel-powered and electric face equipment; installation requirements) to its Silver Creek Mine (I.D. No. 44–16895) located in Tazewell County, Virginia. The petitioner proposes to operate self-propelled electric face equipment without canopies because of the mining heights less than 46 inches at the Silver Creek Mine. The petitioner asserts that application of the standard would result in a diminution of safety to the miners.

7. Mettiki Coal Corporation

[Docket No. M–98–34–C]

Mettiki Coal Corporation, 293 Table Rock Road, Oakland, Maryland has filed a petition to modify the application of 30 CFR 75.1726(a) (performing work from a raised position; safeguards) to its Mettiki Mine (I.D. No. 18–00621) located in Garrett County, Maryland. The petitioner proposes to use a specially modified scoop as an elevated mobile work platform. The petitioner asserts that application of the standard would result in a diminution of safety to the miners. In addition, the petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

8. Lone Mountain Processing, Inc.

[Docket No. M–98–35–C]

Lone Mountain Processing, Inc., P.O. Box 40, Pennington Gap, Virginia 24277 has filed a petition to modify the application of 30 CFR 75.350 (air courses and belt haulage entries) to its Huff Creek No. 1 Mine (I.D. No. 15–17234), and its Darby Fork Mine No. 1 (I.D. No. 15–02263) both located in Harlan County, Kentucky. The petitioner proposes to use belt air to ventilate working sections. The petitioner proposes to install a low-level carbon monoxide detection system as an early warning fire detection system in belt entries. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

9. Performance Coal Company

[Docket No. M–98–36–C]

Performance Coal Company, P.O. Box 69, Naoma, West Virginia 25140 has filed a petition to modify the application of 30 CFR 75.350 (air courses and belt haulage entries) to its Upper Big Branch Mine-South (I.D. No. 46–08436) located in Raleigh County, West Virginia. The petitioner proposes to use an alternative method of ventilation that would not separate the belt haulage entry from the intake air course, nor limit the velocity of the air coursed through the belt haulage entry, nor prohibit the use of such air for ventilation of active working places. The petitioner proposes to install a low-level carbon monoxide detection system in all belt entries used as intake air courses. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

10. CONSOL of Kentucky, Inc.

[Docket No. M–98–37–C]

CONSOL of Kentucky, Inc., Consol Plaza, 1800 Washington Road, Pittsburgh, Pennsylvania 15241–1421 has filed a petition to modify the application of 30 CFR 75.1101–8 (water sprinkler systems; arrangement of sprinklers) to its Motts Branch Mine (I.D. No. 15–18012) located in Knott County, Kentucky. The petitioner proposes to use a single line of automatic sprinklers for its fire protection system on the main and secondary belt conveyors at the Motts Branch Mine. The petitioner asserts that the proposed alternative method would provide at least the same measure of protection as would the mandatory standard.

Request for Comments

Persons interested in these petitions are encouraged to submit comments via e-mail to "comments@msha.gov", or on a computer disk along with an original hard copy to the Office of Standards, Regulations, and Variances, Mine Safety and Health Administration, 4015 Wilson Boulevard, Room 627, Arlington, Virginia 22203. All comments must be postmarked or received in that office on or before June 26, 1998. Copies of these petitions are available for inspection at that address.

Dated: May 18, 1998.

Patricia W. Silvey,

Director, Office of Standards, Regulations, and Variances.

BILLING CODE 4510–43–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

Notice of Meeting

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice of a technical workshop; controlling environmental tobacco smoke exposure in the hospitality industry.

SUMMARY: The Occupational Safety and Health Administration (OSHA) is sponsoring a technical panel to discuss ventilation engineering controls for environmental tobacco smoke (ETS) in the hospitality sector. This meeting, which is in the form of a workshop, will be moderated by the American Conference of Governmental Industrial Hygienists (ACGIH). The workshop proceedings on recommended and feasible ventilation engineering controls for the reduction of occupational ETS exposures in the hospitality industry will be published by ACGIH for the public.

DATES: The workshop will be held on June 7, 8, and 9, 1998, beginning at 8:30 a.m. each day and ending at approximately 5:00 p.m.

ADDRESSES: The workshop will be held at the Drawbridge Inn, I–75 at Buttermilk Pike, Fort Mitchell, Kentucky 41017 (Phone 606–341–2800). The conference contact is Alexis Callender, American Conference of Governmental Industrial Hygienists, 1330 Kemper Meadow Dr., Suite 600, Cincinnati, Ohio 45240; Phone: 513–742–2020.

FOR FURTHER INFORMATION CONTACT: The conference contact is Alexis Callender, American Conference of Governmental Industrial Hygienists, 1330 Kemper Meadow Dr., Suite 600, Cincinnati, Ohio 45240; Phone: 513–742–2020.

SUPPLEMENTARY INFORMATION:

Background

On April 5, 1994, OSHA published a Notice of Proposed Rulemaking on Indoor Air Quality (59 FR 15968). The proposal included a comprehensive standard that would mandate the proper operation and maintenance of building systems, require control of point sources of pollutants, and require control of exposures from air pollutants generated by renovation and remodeling activities. The proposal also indicated the conditions under which smoking could be allowed in the workplace. For example, if smoking were allowed in a workplace, the employer would be required to establish designated smoking areas and permit smoking only in such areas. The areas would have to be enclosed and exhausted directly to the outside and maintained under negative pressure sufficient to contain tobacco smoke. In addition, employees could not be required to enter the designated smoking areas as part of their normal work activities [59 FR at 16037].

The ETS provisions of the proposal received a substantial number of comments. Information submitted to OSHA during the comment period and public hearing indicated that the ETS provisions were feasible for many employers. However, it became apparent to OSHA that in businesses where there is substantial contact between customers who smoke and workers (e.g., food, beverage and gaming industries), this provision was not easily applied as written. During the hearing, OSHA asked representatives of the hospitality industry for information on engineering and administrative controls that could be used to protect workers. Little information on feasible engineering and work practice controls for this industry was submitted to the Agency in response to these requests.

OSHA needs more information on this issue and is therefore sponsoring a workshop on ventilation engineering controls for reducing ETS exposure in the hospitality industry, which will be run under the auspices of the ACGIH. The ACGIH will assemble a panel of experts to identify issues and obtain information to help OSHA resolve feasibility issues raised by the application of the proposal to the hospitality industry. It is the intent of OSHA that the workshop results will be published for the use of professionals who have responsibility for reducing

occupational exposures to ETS in these sectors.

Public Attendance

Interested persons are invited to attend the ventilation workshop. The ACGIH has indicated that 50 seats will be available for observers. Because of the limited amount of seating available, space will be assigned on a first come, first served basis. However, if there are more requests to attend than space available, the ACGIH will give preference to technical experts. No organization will be permitted more than one observer unless there is space available after all admissions requests are filled. All individuals who wish to attend must contact Alexis Callender, American Conference of Governmental Industrial Hygienists, no later than May 28, 1998 to register for this workshop. Admittance to the workshop will be limited to those duly registered.

Individuals with disabilities wishing to attend should contact Alexis Callender, no later than May 28, 1998 to obtain appropriate accommodations.

The Workshop

The panel will consist of ventilation engineers experienced in various aspects of ventilation engineering controls currently used in general industry, and facility management representatives from the restaurant, bar, and gambling establishments. The panel discussions will be chaired by a member of the ACGIH's Committee on Industrial Ventilation. Panel participants were chosen for their technical expertise and experience in this area. This workshop is technical in nature. The public is invited to observe the proceedings, but participation in the discussion is limited to panel members.

Workshop Agenda

On the first day, each panelist will deliver a 15 minute presentation. These presentations will cover various topics, including historical perspectives of ACGIH's Industrial Ventilation Guide; local source capture vs. general dilution ventilation; make up air (e.g., supply air islands); ventilation performance monitoring; displacement ventilation systems; particulate and gas phase removal; and current practice for design, operations, and maintenance of Heating Ventilation, and Air-Conditioning (HVAC) systems in gaming, restaurant, and beverage (bars) facilities. On the second day of the workshop, working groups will be formed from the panel to explore the technological and economic feasibility of applying current prudent practice for the application of ventilation engineering controls to the hospitality sector. The third day will involve the summarization of the work completed by the working groups and discussion of how ACGIH plans to incorporate the information into a ventilation guide for the hospitality industry.

Authority and Signature

This document was prepared under the direction of Charles N. Jeffress, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, NW, Washington, DC, 20210. It is issued pursuant to section 6(b) of the Occupational Safety and Health Act of 1970 (84 Stat. 1594, 29 U.S.C. 655).

Signed at Washington, D.C. this 19th day of May 1998.

Charles N. Jeffress,

Assistant Secretary of Labor.

BILLING CODE 4510–26–P

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: National Archives and Records Administration (NARA).

ACTION: Notice.

SUMMARY: NARA is giving public notice that the agency proposes to request extension of currently approved information collections used by researchers for submitting requests for copies of pages of Ship Passenger Arrival Records, Federal population census schedules through the 1920 census, and Eastern Cherokee Applications of the U.S. Court of Claims, 1906–1909, that are in the National Archives of the United States. The public is invited to comment on the proposed information collections pursuant to the Paperwork Reduction Act of 1995.

DATES: Written comments must be received on or before July 27, 1998 to be assured of consideration.

ADDRESSES: Comments should be sent to: Paperwork Reduction Act Comments (NHP), Room 3200, National Archives and Records Administration, 8601 Adelphi Rd, College Park, MD 20740–6001; or faxed to 301–713–6913; or electronically mailed to tamee.fechhelm@arch2.nara.gov.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the proposed information collections and supporting statements should be directed to Tamee Fechhelm at telephone number 301–713–6730, ext. 226, or fax number 301–713–6913.

SUPPLEMENTARY INFORMATION: Pursuant to the Paperwork Reduction Act of 1995 (Public Law 104–13), NARA invites the general public and other Federal agencies to comment on proposed information collections. The comments and suggestions should address one or more of the following points: (a) whether the proposed information collections are necessary for the proper performance of the functions of NARA; (b) the accuracy of NARA's estimate of the burden of the proposed information collections; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of information technology. The comments that are submitted will be summarized and included in the NARA request for Office of Management and Budget (OMB) approval. All comments will become a matter of public record. In this notice, NARA is soliciting comments concerning the following information collections:

Title: National Archives Order for Copies of Ship Passenger Arrival Records, National Archives Order for Copies of Census Records, and National Archives Order for Copies of Eastern Cherokee Applications.

OMB number: 3095–0027.

Agency form numbers: NATF Forms 81, 82, and 83.

Type of review: Regular.

Affected public: Individuals who wish to order copies of Ship Passenger Arrival Records, Federal population census schedules through the 1920 census, and Eastern Cherokee Applications of the U.S. Court of Claims, 1906–1909, in the National Archives of the United States.

Estimated number of respondents: 12,000.

Estimated time per response: 10 minutes.

Frequency of response: On occasion (when respondent wishes to search for or order copies of Ship Passenger Arrival Records, Federal population census schedules through the 1920 census, and Eastern Cherokee Applications from the U.S. Court of Claims, 1906–1909)

Estimated total annual burden hours: 2,000.

Abstract: The NATF form 81 will be used by researchers to request that NARA search for and make copies of pages from passenger arrival lists in the custody of the National Archives. The

NATF form 82 will be used by researchers to request that NARA search for and make copies of pages of Federal population census schedules through the 1920 census. The NATF form 83 will be used by researchers to request that NARA search for and make copies of Eastern Cherokee applications of the U.S. Court of Claims, 1906–1909. Submission of requests on a form is necessary to handle in a timely fashion the volume of requests received for these records (approximately 10,000 per year for the NATF 81, approximately 1,400 per year for the NATF 82, and approximately 600 per year for the NATF 83) and the need to obtain specific information from the researcher to search for the records sought. The form will be printed on carbonless paper as a multi-part form to allow the researcher to retain a copy of his request and NARA to respond to the researcher on the results of the search or to bill for copies if the researcher wishes to order the copies. As a convenience, the form will allow researchers to provide credit card information to authorize billing and expedited mailing of the copies. NARA is not able at present to accept electronic submission of requests; however, we intend to address security of financial information and other issues as we continue our efforts to increase electronic access to NARA and its holdings.

Dated: May 21, 1998.

L. Reynolds Cahoon,

Assistant Archivist for Human Resources and Information Services.

NATIONAL CREDIT UNION ADMINISTRATION

Sunshine Act Meeting; Notice of Meetings

TIME AND DATE: 10:00 a.m., Thursday, May 28, 1998.

PLACE: Board Room, 7th Floor, Room 7047, 1775 Duke Street, Alexandria, VA 22314–3428.

STATUS: Open.

MATTERS TO BE CONSIDERED:

1. Requests from Two (2) Federal Credit Unions to Convert to Community Charters.
2. Request for a Corporate Federal Credit Union for a Field of Membership Amendment.

RECESS: 11:00 a.m.

TIME AND DATE: 11:30 a.m., Thursday, May 28, 1998.

PLACE: Board Room, 7th Floor, Room 7047, 1775 Duke Street, Alexandria, VA 22314–3428.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Administrative Action under Part 704 of NCUA's Rules and Regulations. Closed pursuant to exemption (8).
2. Corporate Credit Union Risk Rating system (CCURRS). Closed pursuant to exemption (8).
3. Administrative Action under Section 206 of the Federal Credit Union Act. Closed pursuant to exemptions (4), (5), (6), (7) and (8).
4. Six (6) Personnel Actions. Closed pursuant to exemptions (2) and (6).
5. Human Resources Delegations of Authority. Closed pursuant to exemptions (2) and (6).

FOR FURTHER INFORMATION CONTACT: Becky Baker, Secretary of the Board, Telephone (703) 518–6304.

Becky Baker,

Secretary of the Board.

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–220]

Niagara Mohawk Power Corporation; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing; Correction

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice; correction.

SUMMARY: This document corrects a notice appearing in the **Federal Register** on May 19, 1998 (63 FR 27601), that would change Technical Specifications 3/4.6.2, "Protective Instrumentation," to reflect modifications to the initiation instrumentation for the Control Room Air Treatment System. This action is necessary to correct an erroneous date.

FOR FURTHER INFORMATION CONTACT: David L. Meyer, Chief, Rules and Directives Branch, Division of Administrative Services, Office of Administration, telephone (301) 415–7162.

SUPPLEMENTARY INFORMATION: On page 27604, in the first column, in the third complete paragraph, on the first line, the date "June 1, 1998," should be corrected to read "June 18, 1998."

Dated at Rockville, Maryland, this 20th day of May 1998.

For the Nuclear Regulatory Commission.

David L. Meyer,

Chief, Rules and Directives Branch, Division of Administrative Services, Office of Administration.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–277 and 50–278]

PECO Energy Company, Peach Bottom Atomic Power Station (Units 2 & 3); Confirmatory Order Modifying Licenses; Effective Immediately

I

PECO Energy Company, (PECO or the Licensee) is the holder of Facility Operating Licenses Nos. DPR–44 and DPR–56, which authorize operation of Peach Bottom Atomic Power Station, Units 2 and 3, located in York County, Pennsylvania.

II

The staff of the U.S. Nuclear Regulatory Commission (NRC) has been concerned that Thermo-Lag 330–1 fire barrier systems installed by licensees may not provide the level of fire endurance intended and that licensees that use Thermo-Lag 330–1 fire barriers may not be meeting regulatory requirements. During the 1992 to 1994 time frame, the NRC staff issued Generic Letter (GL) 92–08, "Thermo-Lag 330–1 Fire Barriers" and subsequent requests for additional information that requested licensees to submit plans and schedules for resolving the Thermo-Lag issue. The NRC staff has obtained and reviewed all licensees' corrective plans and implementation schedules. The staff is concerned that some licensees may not be making adequate progress toward resolving the plant-specific issues, and that some implementation schedules may be either too tenuous or too protracted. For example, several licensees informed the NRC staff that their completion dates had slipped by 6 months to as much as 3 years. For plants that have completion action scheduled beyond 1997, the NRC staff has met with the licensees to discuss the progress of the licensees' corrective actions and the extent of licensee management attention regarding completion of Thermo-Lag corrective actions.

PECO Energy Company was one of the licensees with which the NRC staff held meetings. At these meetings, the NRC staff reviewed with PECO Energy Company the schedule of Thermo-Lag

corrective actions described in the PECO Energy Company's submittals to the NRC dated April 16 and December 29, 1993; February 4 and December 19, 1994; March 29 and August 2, 1995; May 2, 1996; March 24, 1997; and January 14, 1998. Based on the information submitted by PECO Energy Company, the NRC staff has concluded that the schedules presented by PECO Energy Company are reasonable. This conclusion is based on the (1) amount of installed Thermo-Lag, (2) the complexity of the plant-specific fire barrier configurations and issues, and (3) the need to perform certain plant modifications during outages as opposed to those that can be performed while the plant is at power. In order to remove compensatory measures such as fire watches, it has been determined that resolution of the Thermo-Lag corrective actions by PECO Energy Company must be completed in accordance with current PECO Energy Company's schedules. By letter dated April 16, 1998, the NRC staff notified PECO Energy Company of its plan to incorporate PECO Energy Company's schedule commitment into a requirement by issuance of an Order and requested consent from the Licensee. By letter dated April 27, 1998, the Licensee provided its consent to issuance of a Confirmatory Order.

III

The Licensee's commitment as set forth in its letter of April 27, 1998, is acceptable and is necessary for the NRC to conclude that public health and safety are reasonably assured. To preclude any schedule slippage and to assure public health and safety, the NRC staff has determined that the Licensee's commitment in its April 27, 1998, letter be confirmed by this Order. The Licensee has agreed to this action. Based on the above, and the Licensee's consent, this Order is immediately effective upon issuance.

IV

Accordingly, pursuant to sections 103, 161b, 161i, 161o, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202 and 10 CFR Part 50, IT IS HEREBY ORDERED, effective immediately, that:

PECO Energy Company shall complete final implementation of Thermo-Lag 330–1 fire barrier corrective actions at Peach Bottom Atomic Power Station, Units 2 and 3, described in the PECO Energy Company's submittals to the NRC dated April 16 and December 29, 1993; February 4 and December 19, 1994; March 29 and August 2, 1995; May 2, 1996; March 24, 1997; and January 14, 1998, prior to restart from 3R12 refueling outage of Peach Bottom Atomic Power Station, Unit 3, scheduled for October 1999.

The Director, Office of Nuclear Reactor Regulation, may relax or rescind, in writing, any provisions of this Confirmatory Order upon a showing by the Licensee of good cause.

V

Any person adversely affected by this Confirmatory Order, other than the Licensee, may request a hearing within 20 days of its issuance. Where good cause is shown, consideration will be given to extending the time to request a hearing. A request for extension of time must be made in writing to the Director, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, and include a statement of good cause for the extension. Any request for a hearing shall be submitted to the Secretary, U.S. Nuclear Regulatory Commission, Attention: Chief, Rulemaking and Adjudications Staff, Washington, D.C. 20555. Copies of the hearing request shall also be sent to the Director, Office of Nuclear Reactor Regulation, U. S. Nuclear Regulatory Commission, Washington, DC 20555, to the Deputy Assistant General Counsel for Enforcement at the same address, to the Regional Administrator, NRC Region I, 475 Allendale Road, King of Prussia, Pennsylvania 19406–1415 and to the Licensee. If such a person requests a hearing, that person shall set forth with particularity the manner in which his/her interest is adversely affected by this Order and shall address criteria set forth in 10 CFR 2.714(d).

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an Order designating the time and place of any such hearing. If a hearing is held, the issue to be considered at such hearing shall be whether this Confirmatory Order should be sustained.

In the absence of any request for hearing, or written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this Order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received. An answer or a request for hearing shall not stay the immediate effectiveness of this Order.

Dated at Rockville, Maryland this 19th day of May 1998.

For the Nuclear Regulatory Commission.

Samuel J. Collins,

Director, Office of Nuclear Reactor Regulation.

[FR Doc. 98–13973 Filed 5–26–98; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–352 and 50–353]

Philadelphia Electric Company, Limerick Generating Station, (Units 1 and 2); Confirmatory Order Modifying Licenses; Effective Immediately

I

Philadelphia Electric Company (the Licensee) is the holder of Facility Operating Licenses Nos. NPF–39 and NPF–85, which authorize operation of Limerick Generating Station (LGS), Units 1 and 2, located in Montgomery and Chester Counties, Pennsylvania.

II

The staff of the U.S. Nuclear Regulatory Commission (NRC) has been concerned that Thermo-Lag 330–1 fire barrier systems installed by licensees may not provide the level of fire endurance intended and that licensees that use Thermo-Lag 330–1 fire barriers may not be meeting regulatory requirements. During the 1992 to 1994 timeframe, the NRC staff issued Generic Letter (GL) 92–08, "Thermo-Lag 330–1 Fire Barriers" and subsequent requests for additional information that requested licensees to submit plans and schedules for resolving the Thermo-Lag issue. The NRC staff has obtained and reviewed all licensees' corrective plans and schedules. The staff is concerned that some licensees may not be making adequate progress toward resolving the plant-specific issues, and that some implementation schedules may be either too tenuous or too protracted. For example, several licensees informed the NRC staff that their completion dates had slipped by 6 months to as much as 3 years. For plants that have completion action scheduled beyond 1997, the NRC staff has met with these licensees to discuss the progress of the licensees' corrective actions and the extent of licensee management attention regarding completion of Thermo-Lag corrective actions. In addition, the NRC staff discussed with licensees the possibility of accelerating their completion schedules.

Philadelphia Electric Company was one of the licensees with which the NRC staff held meetings. At these meetings, the NRC staff reviewed with

Philadelphia Electric Company the schedule of Thermo-Lag corrective actions described in the Philadelphia Electric Company submittals to the NRC dated April 16 and December 29, 1993, February 4 and December 19, 1994, March 29 and August 2, 1995, May 2, 1996, and March 24, 1997. Based on the information submitted by Philadelphia Electric Company and provided during the meetings, the NRC staff has concluded that the schedules presented by Philadelphia Electric Company are reasonable. This conclusion is based on the (1) amount of installed Thermo-Lag, (2) the complexity of the plant-specific fire barrier configurations and issues, (3) the need to perform certain plant modifications during outages as opposed to those that can be performed while the plant is at power, and (4) integration with other significant, but unrelated issues that Philadelphia Electric Company is addressing at its plant. In order to remove compensatory measures such as fire watches, it has been determined that resolution of the Thermo-Lag corrective actions by Philadelphia Electric Company must be completed in accordance with current Philadelphia Electric Company schedules. By letter dated April 16, 1998, the NRC staff notified Philadelphia Electric Company of its plan to incorporate Philadelphia Electric Company's schedule commitment into a requirement by issuance of an order and requested consent from the Licensee. By letter dated April 27, 1998, the Licensee provided its consent to issuance of a Confirmatory Order.

III

The Licensee's commitment as set forth in its letter of April 27, 1998, is acceptable and is necessary for the NRC to conclude that public health and safety are reasonably assured. To preclude any schedule slippage and to assure public health and safety, the NRC staff has determined that the Licensee's commitment in its April 27, 1998, letter be confirmed by this Order. The Licensee has agreed to this action. Based on the above, and the Licensee's consent, this Order is immediately effective upon issuance.

IV

Accordingly, pursuant to sections 103, 161b, 161i, 161o, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202 and 10 CFR Part 50, IT IS HEREBY ORDERED, effective immediately, that:

Philadelphia Electric Company shall complete final implementation of Thermo-Lag 330–1 fire barrier corrective actions at LGS, Units 1 and 2, described in the Philadelphia Electric Company's submittals to the NRC dated April 16 and December 29, 1993, February 4 and December 19, 1994, March 29 and August 2, 1995, May 2, 1996, March 24, 1997, and January 14, 1998, by completion of the April 1999 refueling outage for LGS, Unit 2.

The Director, Office of Nuclear Reactor Regulation, may relax or rescind, in writing, any provisions of this Confirmatory Order upon a showing by the Licensee of good cause.

V

Any person adversely affected by this Confirmatory Order, other than the Licensee, may request a hearing within 20 days of its issuance. Where good cause is shown, consideration will be given to extending the time to request a hearing. A request for extension of time must be made in writing to the Director, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, and include a statement of good cause for the extension. Any request for a hearing shall be submitted to the Secretary, U.S. Nuclear Regulatory Commission, Attention: Chief, Rulemakings and Adjudications Staff, Washington, D.C. 20555. Copies of the hearing request shall also be sent to the Director, Office of Nuclear Reactor Regulation, U. S. Nuclear Regulatory Commission, Washington, D.C. 20555, to the Deputy Assistant General Counsel for Enforcement at the same address, to the Regional Administrator, NRC Region I, 475 Allendale Road, King of Prussia, Pennsylvania 19406–1415, and to the Licensee. If such a person requests a hearing, that person shall set forth with particularity the manner in which his/her interest is adversely affected by this Order and shall address criteria set forth in 10 CFR 2.714(d).

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an Order designating the time and place of any such hearing. If a hearing is held, the issue to be considered at such hearing shall be whether this Confirmatory Order should be sustained.

In the absence of any request for hearing, or written approval of an extension of time in which to request a hearing, the provisions specified in Section IV above shall be final 20 days from the date of this Order without further order or proceedings. If an extension of time for requesting a hearing has been approved, the provisions specified in Section IV shall be final when the extension expires if a hearing request has not been received. An answer or a request for hearing shall not stay the immediate effectiveness of this Order.

Dated at Rockville, Maryland this 19 day of May 1998.

For the Nuclear Regulatory Commission.

Samuel J. Collins,

Director, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–325 and 50–324]

Carolina Power & Light Company; Brunswick Steam Electric Plant, Units No. 1 and 2 Environmental Assessment and Finding of No Significant Impact

Introduction

The U. S. Nuclear Regulatory Commission (the Commission) is considering issuance of amendments to Facility Operating License Nos. DPR–71 and DPR–62 issued to the Carolina Power & Light Company (CP&L or the licensee) for operation of the Brunswick Steam Electric Plant, Units No. 1 and 2 (BSEP 1 & 2), respectively, located at the licensee's site in Brunswick County, North Carolina.

Environmental Assessment

Identification of the Proposed Action

This Environmental Assessment has been prepared to address potential environmental issues related to the licensee's application dated November 1, 1996, as supplemented by letters dated October 13, 1997, February 26, 1998, March 13, 1998, April 24, 1998, and May 22, 1998. The proposed amendments will replace the current BSEP 1 & 2 Technical Specifications (CTS) in their entirety with Improved Technical Specifications (ITS) based on Revison 1 to NUREG–1433, "Standard Technical Specifications General Electric Plants BWR/4" dated April 1995, and the CTS for BSEP 1 & 2.

The Need for the Proposed Action

It has been recognized that nuclear safety in all plants would benefit from improvement and standardization of TS. The Commission's "NRC Interim Policy Statement on Technical Specification Improvements for Nuclear Power Reactors," (52 Fed. Reg. 3788, February 6, 1987), and later the Commission's "Final Policy Statement on Technical Specification Improvements for Nuclear Power Reactors," 58 FR 39132 (July 22, 1993), formalized this need. To facilitate

the development of individual improved TS, each reactor vendor owners group (OG) and the NRC staff developed standard TS (STS). For General Electric plants, the STS are published as NUREG–1433, and this document was the basis for the new BSEP 1 & 2 TS. The NRC Committee to Review Generic Requirements (CRGR) reviewed the STS and made note of the safety merits of the STS and indicated its support of conversion to the STS by operating plants.

Description of the Proposed Change

The proposed revision to the TS is based on NUREG–1433 and on guidance provided in the Final Policy Statement. Its objective is to completely rewrite, reformat, and streamline the existing TS. Emphasis is placed on human factors principles to improve clarity and understanding. The Bases section has been significantly expanded to clarify and better explain the purpose and foundation of each specification. In addition to NUREG–1433, portions of the existing TS were also used as the basis for the ITS. Plant-specific issues (unique design features, requirements, and operating practices) were discussed at length with the licensee, and generic matters with the OG.

The proposed changes from the existing TS can be grouped into four general categories, as follows:

1. Non-technical (administrative) changes, which were intended to make the ITS easier to use for plant operations personnel. They are purely editorial in nature or involve the movement or reformatting of requirements without affecting technical content. Every section of the BSEP 1 & 2 TS has undergone these types of changes. In order to ensure consistency, the NRC staff and the licensee have used NUREG–1433 as guidance to reformat and make other administrative changes.

2. Relocation of requirements, which includes items that were in the existing BSEP 1 & 2 TS. The TS that are being relocated to licensee-controlled documents are not required to be in the TS under 10 CFR 50.36 and do not meet any of the four criteria in the Commission's Final Policy Statement for inclusion in the TS. They are not needed to obviate the possibility that an abnormal situation or event will give rise to an immediate threat to the public health and safety. The NRC staff has concluded that appropriate controls have been established for all of the current specifications, information, and requirements that are being moved to licensee-controlled documents. In general, the proposed relocation of items in the BSEP 1 & 2 TS to the Final Safety Analysis Report (FSAR), appropriate plant-specific programs, procedures and ITS Bases follows the guidance of the General Electric STS (NUREG–1433). Once these items have been relocated by removing them from the TS to licensee-controlled documents, the licensee may revise them under the provisions of 10 CFR 50.59 or other NRC staff-approved control mechanisms, which provide appropriate procedural means to control changes.

3. More restrictive requirements, which consist of proposed BSEP 1 & 2 ITS items that are either more conservative than corresponding requirements in the existing BSEP 1 & 2 TS, or are additional restrictions that are not in the existing BSEP 1 & 2 TS but are contained in NUREG–1433. Examples of more restrictive requirements include: placing a Limiting Condition of Operation (LCO) on plant equipment that is not required by the present TS to be operable; more restrictive requirements to restore inoperable equipment; and more restrictive surveillance requirements.

4. Less restrictive requirements are relaxations of corresponding requirements in the existing BSEP 1 & 2 TS that provide little or no safety benefit and place unnecessary burdens on the licensee. These relaxations were the result of generic NRC actions or other analyses. They have been justified on a case-by-case basis for BSEP 1 & 2, as will be described in the staff's Safety Evaluation to be issued with the license amendment, which will be noticed in the **Federal Register**.

In addition to the changes described above, the licensee proposed certain changes to the existing TS that deviated from the STS in NUREG–1433. These additional proposed changes are described in the licensee's application and in the staff's Notice of Consideration of Issuance of Amendment to Facility Operating License and Opportunity for a Hearing (62 FR 3719). Where these changes represent a change to the current licensing basis for BSEP 1 & 2, they have been justified on a case-by-case basis and will be described in the staff's Safety Evaluation to be issued with the license amendment.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed action and concludes that the proposed TS conversion would not increase the probability or consequences of accidents previously analyzed and would not affect facility radiation levels or facility radiological effluents.

Changes that are adminstrative in nature would have no effect on the technical content of the TS, and are acceptable. The increased clarity and understanding these changes bring to the TS are expected to improve the operator's control of the plant in normal and accident conditions.

Relocation of requirements to licensee-controlled documents would not change the requirements themselves. Future changes to these requirements may be made by the licensee under 10 CFR 50.59 or other NRC-approved control mechanisms, which ensures continued maintenance of adequate requirements. All such relocations have been found to be in conformance with the guidelines of NUREG–1433 and the Final Policy Statement, and, therefore, are acceptable.

Changes involving more restrictive requirements would be likely to enhance the safety of plant operations and are acceptable.

Changes involving less restrictive requirements have been reviewed individually. When requirements have been shown to provide little or no safety benefit or to place unnecessary burdens on the licensee, their removal from the TS is justified. In most cases, relaxations previously granted to individual plants on a plant-specific basis were the result of a generic NRC action, or of agreements reached during discussions with the OG and are acceptable for BSEP 1 & 2. Generic relaxations contained in NUREG–1433 as well as proposed deviations from NUREG–1433 have also been reviewed by the NRC staff and are acceptable for BSEP 1 & 2.

In summary, the proposed revisions to the TS were found to provide control of plant operations such that reasonable assurance will be provided so that the health and safety of the public will be adequately protected.

These TS changes will not increase the probability or consequences of accidents, no changes are being made in the types of any effluent that may be released offsite, and there is no significant increase in the allowable public or occupational radiation exposure.

With regard to potential nonradiological impacts, the proposed action does not affect nonradiological plant effluents and has no other environmental impact.

Accordingly, the Commission concludes that there are no significant environmental impacts associated with the proposed action.

Alternatives to the Proposed Action

Since the Commission has concluded there is no significant environmental impact associated with the proposed amendments, any alternatives with equal or greater environmental impact need not be evaluated. The principal alternative to this action would be to deny the request for the amendment. Such action would not reduce the environmental impacts of plant operations.

Alternative Use of Resources

This action did not involve the use of any resources not previously considered in the Final Environmental Statement related to the operation of the BSEP 1 & 2 Electric Generating Plants.

Agencies and Persons Consulted

In accordance with its stated policy, on May 22, 1998, the staff consulted with the North Carolina State official, Mr. M. Fry, of the North Carolina Department of Environment and Natural Resources, Division of Radiation Protection. The State official had no comments.

Finding of No Significant Impact

Based upon the environmental assessment, the Commission concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the Commission has determined not to prepare an environmental impact statement for the proposed amendment.

For further details with respect to this action, see the licensee's letter dated November 1, 1996, as supplemented on October 13, 1997, February 26, 1998, March 13, 1998, April 24, 1998, and May 22, 1998, which are available for public inspection at the Commission's Public Document Room, The Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room located at the University of North Carolina at Wilmington, William Madison Randall Library, 601 College Road, Wilmington, North Carolina 28403–3297.

Dated at Rockville, Maryland this 22nd day of May 1998.

For the Nuclear Regulatory Commission.

Gordon E. Edison,

Acting Director, Project Directorate II–1, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

OFFICE OF PERSONNEL MANAGEMENT

Proposed Collection; Comment Request for 1998 Presidential Management Intern Program Application

AGENCY: Office of Personnel Management.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, May 22, 1995), this notice announces that OPM intends to submit a request to the Office of Management and Budget (OMB) for renewal of authority to publish the 1998 Presidential Management Intern Program Application. The information contained in the PMI application is used by OPM's Employment Service to obtain nominations, and to screen and establish a nationwide competitive selection process. Applications are mailed to educational institutions at the beginning of each academic year. Students are nominated by their deans and chairpersons to compete in the PMI Program. The application is completed by the student (nominee) and submitted to the school official for review and nomination. After the initial review process, nominees are invited to participate in a structured assessment center process. Selection as a PMI Finalist is based on a review of the nominee's application, and participation in a structured assessment center process.

It is anticipated that 2000 applications will be received and processed in 1998. Number of hours required for completing PMI application forms by graduate programs deans or chairpersons is 1 hour per application=2000. Number of hours required per graduate student for completing application form is 1 hour=2000.

Comments are particularly invited on:

—Whether this collection of information is necessary for the proper performance of functions of the Office of Personnel Management, and whether it will have practical utility;

—Whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; and

—Ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

For copies of the clearance package, call James M. Farron, Reports and Forms Manager, on (202) 418–3208, or by e-mail to jmfarron@opm.gov.

DATES: Comments on this proposal should be received on or before July 27, 1998.

ADDRESSES: Send or deliver comments to: Kathleen A. Keeney, Presidential Management Intern Program, William J. Green Jr., Federal Building, Room 3400, 600 Arch Street, Philadelphia, PA 19106.

FOR FURTHER INFORMATION CONTACT: Kathleen A. Keeney (215) 597–1920.

Janice R. Lachance,

Director, U.S. Office of Personnel Management.

BILLING CODE 6325–01–M

OFFICE OF PERSONNEL MANAGEMENT

Federal Prevailing Rate Advisory Committee; Open Committee Meeting

According to the provisions of section 10 of the Federal Advisory Committee Act (Pub. L. 92–463), notice is hereby given that a meeting of the Federal Prevailing Rate Advisory Committee will be held on Thursday, June 11, 1998.

The meeting will start at 10:00 a.m. and will be held in Room 5A06A, Office of Personnel Management Building, 1900 E Street, NW., Washington, DC.

The Federal Prevailing Rate Advisory Committee is composed of a Chair, five representatives from labor unions holding exclusive bargaining rights for Federal blue-collar employees, and five representatives from Federal agencies. Entitlement to membership on the Committee is provided for in 5 U.S.C. 5347.

The Committee's primary responsibility is to review the Prevailing Rate System and other matters pertinent to establishing prevailing rates under subchapter IV, chapter 53, 5 U.S.C., as amended, and from time to time advise the Office of Personnel Management.

This scheduled meeting will start in open session with both labor and management representatives attending. During the meeting either the labor members or the management members may caucus separately with the Chair to devise strategy and formulate positions. Premature disclosure of the matters discussed in these caucuses would unacceptably impair the ability of the Committee to reach a consensus on the matters being considered and would disrupt substantially the disposition of its business. Therefore, these caucuses will be closed to the public because of

a determination made by the Director of the Office of Personnel Management under the provisions of section 10(d) of the Federal Advisory Committee Act (Pub. L. 92–463) and 5 U.S.C. 552b(c)(9)(B). These caucuses may, depending on the issues involved, constitute a substantial portion of a meeting.

Annually, the Chair compiles a report of pay issues discussed and concluded recommendations. These reports are available to the public, upon written request to the Committee's Secretary.

The public is invited to submit material in writing to the Chair on Federal Wage System pay matters felt to be deserving of the Committee's attention. Additional information on this meeting may be obtained by contacting the Committee's Secretary, Office of Personnel Management, Federal Prevailing Rate Advisory Committee, Room 5559, 1900 E Street, NW., Washington, DC 20415 (202) 606–1500.

Dated: May 13, 1998.

Phyllis G. Heuerman,

Acting Chair, Federal Prevailing Rate Advisory Committee.

BILLING CODE 6325–01–P

RAILROAD RETIREMENT BOARD

Agency Forms Submitted for OMB Review

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Railroad Retirement Board (RRB) has submitted the following proposal(s) for the collection of information to the Office of Management and Budget for review and approval.

Summary of Proposal(s).

(1) *Collection title:* Application for Search of Census Records.
(2) *Form(s) submitted:* G–256.
(3) *OMB Number:* 3220–0106.
(4) *Expiration date of current OMB clearance:* 7/31/1998.
(5) *Type of request:* Revision of a currently approved collection.
(6) *Respondents:* Individuals or households.
(7) *Estimated annual number of respondents:* 75.
(8) *Total annual responses:* 75.
(9) *Total annual reporting hours:* 13.
(10) *Collection description:* Under the Railroad Retirement Act, an applicant for benefits based on age must be supported by proof of age claimed. The application obtains proof of an applicant's age from the Bureau of the Census when other evidence is unavailable.

Additional Information or Comments

Copies of the form and supporting documents can be obtained from Chuck Mierzwa, the agency clearance officer (312–751–3363). Comments regarding the information collection should be addressed to Ronald J. Hodapp, Railroad Retirement Board, 844 North Rush Street, Chicago, Illinois 60611–2092 and the OMB reviewer, Laura Oliven (202–395–7316), Office of Management and Budget, Room 10230, New Executive Office Building, Washington, D.C. 20503.

Chuck Mierzwa,

Clearance Officer.

BILLING CODE 7905–01–M

RAILROAD RETIREMENT BOARD

Agency Forms Submitted for OMB Review

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the Railroad Retirement Board (RRB) has submitted the following proposal(s) for the collection of information to the Office of Management and Budget for review and approval.

Summary of Proposal(s)

(1) *Collection title:* Representative Payee Monitoring.
(2) *Form(s) submitted:* G–99a, G–99c.
(3) *OMB Number:* 3220–0151.
(4) *Expiration date of current OMB clearance:* 7/31/1998.
(5) *Type of request:* Extension of a currently approved collection.
(6) *Respondents:* Individuals or households.
(7) *Estimated annual number of respondents:* 6,000.
(8) *Total annual responses:* 6,535.
(9) *Total annual reporting hours:* 2,032.
(10) *Collection description.* Under Section 12(a) of the Railroad Retirement Act, the RRB is authorized to select, make payments to, and conduct transactions with an annuitant's relative or some other person willing to act on behalf of the annuitant as a representative payee. The collection obtains information needed to determine if a representative payee is handling benefit payments in the best interest of the annuitant.

Additional Information or Comments

Copies of the form and supporting documents can be obtained from Chuck Mierzwa, the agency clearance officer (312–751–3363). Comments regarding the information collection should be addressed to Ronald J. Hodapp, Railroad Retirement Board, 844 North Rush Street, Chicago, Illinois 60611–2092 and the OMB reviewer, Laura Oliven (202–395–7316), Office of Management and Budget, Room 10230, New Executive Office Building, Washington, D.C. 20503.

Chuck Mierzwa,

Clearance Officer.

BILLING CODE 7905–01–M

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 23193; 812–11088]

Cowen & Co., et al.; Notice of Application

May 19, 1998.

AGENCY: Securities and Exchange Commission ("Commission").

ACTION: Notice of application under section 6(c) of the Investment Company Act of 1940 ("Act") for an exemption from section 15(a) of the Act.

SUMMARY OF THE APPLICATION: Applicants seek an order to permit the implementation, without prior shareholder approval, of new investment advisory agreements ("New Advisory Agreements") following the acquisition by Societe Generale ("SG") of certain assets, including current investment advisory agreements ("Existing Advisory Agreements"), from Cowen & Co. ("Current Adviser") and Cowen Incorporated (together with the Current Adviser, "Cowen"). The order would cover a period beginning at the later of the date the acquisition is completed ("Closing Date") or the date on which the requested order is issued, and continue for a period of up to 150 days (but in no event later than December 31, 1998) ("Interim Period"). If shareholders approve the New Advisory Agreements, the order also would permit the payment of fees earned under the New Advisory Agreements during the Interim Period.

APPLICANTS: The Current Adviser and Societe Generale Securities Corporation ("SGSC").

FILING DATES: The application was filed on March 24, 1998, and amended on May 8, 1998.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request

a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on June 15, 1998, and should be accompanied by proof of service on applicants in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

ADDRESSES: Secretary, Commission, 450 Fifth Street, N.W., Washington, D.C. 20549. Current Adviser, Financial Square, New York, New York 10005; SGSC, 1221 Avenue of The Americas, New York, New York 10020.

FOR FURTHER INFORMATION CONTACT: Michael W. Mundt, Staff Attorney, at (202) 942–0578, or George J. Zornada, Branch Chief, at (202) 942–0564 (Office of Investment Company Regulation, Division of Investment Management).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the Commission's Public Reference Branch, 450 Fifth St., NW., Washington, DC 20549, (202) 942–8090.

Applicants' Representations

1. The Current Adviser is a New York limited partnership registered under the Investment Advisers Act of 1940 ("Advisers Act") whose general partner is Cowen Incorporated. Pursuant to separate investment advisory agreements, the Current Adviser serves as investment adviser to Cowen Income + Growth Fund, Inc., Cowen Standby Reserve Fund, Inc., Cowen Standby Tax-Exempt Reserve Fund, Inc., Cowen Large Cap Value Fund (a series of Cowen Series Funds, Inc.), Cowen Intermediate Fixed Income Fund, Cowen Government Securities Fund and Cowen Opportunity Fund (the latter three funds, each a series of Cowen Funds, Inc.) (each a "Fund," and collectively, the "Funds").

2. On February 22, 1998, Cowen entered into an agreement with SG, a banking corporation organized under the laws of France, under which SG will acquire certain assets and assume certain liabilities of Cowen (the "Acquisition"). In the Acquisition, the Current Adviser's advisory business will be transferred to SGSC, a subsidiary of SG. SGSC will be renamed SG Cowen Securities Corporation ("SG Cowen") after the Acquisition, and a division or affiliate of SG Cowen will serve as the new investment adviser to each of the Funds (the "New Adviser"). Applicants represent that the New Adviser either will have filed a form ADV with the Commission that becomes effective on or before the Closing Date or, as successor to the business of the Current Adviser, will have filed a form ADV with the Commission in reliance on section 203(g) of the Advisers Act. Applicants anticipate that the Closing Date will occur within the next three months and could occur as early as June 1, 1998.[1]

3. Applicants state that the Acquisition will result in an assignment and thus automatic termination of the Existing Advisory Agreements between the Funds and the Current Adviser under the Act and the Existing Advisory Agreements. Applicants request an exemption (i) to permit the implementation of New Advisory Agreements during the Interim Period without prior shareholder approval, and (ii) to permit the New Adviser to receive all fees earned under the New Advisory Agreements during the Interim Period upon approval of the New Advisory Agreements by shareholders of the Funds. Applicants assert that the New Advisory Agreements will contain substantially the same terms and conditions as the Existing Advisory Agreements, except for the identification of the New Adviser and the effective and termination dates.

4. Prior to the Closing Date, the board of directors of each Fund (each a "Board," and collectively, the "Boards"), including a majority of directors who are not interested persons of the Funds under section 2(a)(19) of the Act ("Disinterested Directors"), will meet in person, in accordance with section 15(c) of the Act, to evaluate whether the terms of the New Advisory Agreements are in the best interests of the Funds and their respective shareholders.[2] The Boards currently intend to meet on or around May 21, 1998.

5. The New Adviser and the Funds propose to enter into an escrow arrangement with an unaffiliated financial institution ("Escrow Agent"). The portion of the investment advisory fees earned by the New Adviser during the Interim Period under the New Advisory Agreements would be paid into an interest-bearing escrow account maintained by the Escrow Agent. The amounts in the escrow account (including interest earned on such paid fees) would be paid to the New Adviser only upon approval of each New Advisory Agreement by the applicable Fund's shareholders. In the absence of such approval, the amounts will be paid to the applicable Fund. The Board of the applicable Fund will be notified before any amounts are released from the escrow account.

Applicant's Legal Analysis

1. Section 15(a) of the Act provides, in pertinent part, that it shall be unlawful for any person to serve or act as an investment adviser of a registered investment company, except pursuant to a written contract that has been approved by the vote of a majority of the outstanding voting securities of such registered investment company. Section 15(a) of the Act further requires that such written contract provide for automatic termination in the event of its "assignment." Section 2(a)(4) of the Act defines "assignment" to include any direct or indirect transfer of a contract by the assignor.

2. Applicants state that the acquisition by SG of certain assets including the Existing Advisory Agreements from Cowen will result in an "assignment" of the Existing Advisory Agreements, terminating such agreements according to the Act and their respective terms.

3. Rule 15a–4 under the Act provides, in pertinent part, that if an investment advisory contract with a registered investment company is terminated by assignment, the adviser may continue to serve for 120 days under a written contract that has not been approved by the company's shareholders, provided that: (i) the new contract is approved by that company's board of directors (including a majority of non-interested directors); (ii) the compensation to be paid under the new contract does not exceed the compensation that would have been paid under the contract most recently approved by the company's shareholders: and (iii) neither the adviser nor any controlling person of the adviser "directly or indirectly receives money or other benefit" in

[1] Applicants state that if the Closing Date precedes the issuance of an order, the New Adviser will serve as investment adviser after the Closing Date and prior to the issuance of the order in a manner consistent with its fiduciary duty to provide investment advisory services to the Funds, even though approval of the New Advisory Agreements has not yet been secured from the Funds' respective shareholders. Applicants also submit that in such event, the New Adviser will be entitled to receive from the Funds, with respect to the period from the Closing Date until the receipt of the order, no more than the actual out-of-pocket cost to the New Adviser for providing investment advisory services to the Funds.

[2] To the extent that the Boards cannot meet prior to the Closing Date, applicants acknowledge that the Funds may not rely on the exemptive relief requested in the application.

connection with the assignment. Applicants state that they may not be entitled to rely on rule 15a–4 because of the benefits that Cowen will receive as a result of the Acquisition.

4. Section 6(c) of the Act provides that the Commission may exempt any person, security, or transaction from any provision of the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Applicants believe that the requested relief meets this standard.

5. Applicants submit that the terms and timing of the Acquisition were determined in response to a number of factors substantially unrelated to the Funds and that the Existing Advisory Agreements constitute a relatively small part of the Acquisition. Applicants state that the Closing Data does not allow a sufficient time to secure prior shareholder approval of the New Advisory Agreements. Applicants state that the requested relief will permit continuity of investment management of the Funds during the period following the Acquisition so that advisory services will not be disrupted. Applicants represent that the Funds will receive the same scope and quality of investment advisory services provided by essentially the same investment management personnel under the New Advisory Agreements as they receive under the Existing Advisory Agreements. If the investment management personnel changes materially, the New Adviser will apprise and consult with the Boards to ensure that the Boards, including a majority of the Disinterested Directors, are satisfied that the services provided by the New Adviser will not be diminished in scope and quality.

6. Applicants contend that to deprive the New Adviser of investment advisory fees during the Interim Period would be an unduly harsh and unreasonable penalty to attach to the Acquisition and would serve no useful purpose. Applicants note that the fees will not be released to the New Adviser by the Escrow Agent without an appropriate certification that the New Advisory Agreements have been approved by the Funds' respective shareholders.

Applicants' Conditions

Applicants agree as conditions to the issuance of the exemptive order requested by the application that:

1. The New Advisory Agreements will contain substantially the same terms and conditions as the Existing Advisory Agreements, except for the identification of the New Adviser and the dates of execution and termination.

2. The portion of the investment advisory fee earned by the New Adviser during the Interim Period will be maintained in an interest-bearing escrow account, and amounts in the account (including interest earned on such amounts) will be paid to the New Adviser only upon approval of each New Advisory Agreement by the applicable Fund's shareholders or in the absence of such approval, to the Fund.

3. Each Fund will promptly schedule a meeting of shareholders to vote on the approval of the New Agreements to be held within 150 days following the commencement of the Interim Period (but in no event later than December 31, 1998).

4. The Current Adviser will pay the costs of preparing and filing the application and the costs relating to the solicitation and approval of Fund shareholders of the New Advisory Agreements necessitated by the Acquisition.

5. Cowen and SG will take all appropriate actions to ensure that the scope and quality of investment advisory and other services to be provided to the Funds by the New Adviser during the Interim Period will be at least equivalent, in the judgment of the Boards, including a majority of the Disinterested Directors, to the scope and quality of services provided by the Current Adviser. In the event of any material change in investment management personnel providing advisory services pursuant to the New Advisory Agreements, the New Adviser will apprise and consult with the Boards to ensure that the Boards, including a majority of the Disinterested Directors, are satisfied that the services provided will not be diminished in scope or quality.

For the Commission, by the Division of Investment Management, under delegated authority.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 23197; File No. 812–10974]

Mitchell Hutchins Portfolios, et al.; Notice of Application

May 20, 1998.

AGENCY: Securities and Exchange Commission ("Commission").

ACTION: Notice of application for an order under section 17(d) of the Investment Company Act of 1940 (the "Act") and rule 17d–1 under the Act.

SUMMARY OF APPLICATION: Applicants request an order that would permit certain registered open-end management investment companies relying on section 12(d)(1)(G) of the Act to enter into a special servicing agreement.

APPLICANTS: Mitchell Hutchins Portfolios (the "Trust"); PaineWebber America Fund, PaineWebber Cashfund, Inc. ("Cashfund"), PaineWebber Investment Series, PaineWebber Investment Trust, PaineWebber Managed Investments Trust, PaineWebber Olympus Fund, PaineWebber Securities Trust, (the "PaineWebber Investment Companies," and together with the Trust, the "PaineWebber Mutual Funds"), Mitchell Hutchins Asset Management Inc. ("Mitchell Hutchins"), and PaineWebber Incorporated ("PaineWebber"). Applicant also request relief for each existing or future registered open-end management investment company and series thereof that is part of the same group of investment companies as the PaineWebber Mutual Funds under section 12(d)(1)(G)(ii) of the Act, and which is, or will be, advised by Mitchell Hutchins or PaineWebber or any entity controlling, controlled by, or under common control with Mitchell Hutchins or PaineWebber, or for which Mitchell Hutchins or PaineWebber or any entity controlling, controlled by, or under common control with Mitchell Hutchins or PaineWebber serves, or will serve as principal underwriter (collectively, the "PaineWebber Family of Funds").

FILING DATES: The application was filed on January 26, 1998. Applicants have agreed to file an amendment during the notice period, the substance of which is reflected in this notice.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on June 15, 1998, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request

notification by writing to the Commission's Secretary.

ADDRESSES: Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, D.C. 20549. Applicants, 1285 Avenue of the Americas, New York, NY 10019.

FOR FURTHER INFORMATION CONTACT: Kathleen L. Knisely, Staff Attorney, at (202) 942–0517, or Nadya B. Roytblat, Assistant Director, at (202) 942–0564 (Division of Investment Management, Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the Commission's Public Reference Branch, 450 Fifth Street, NW, Washington, DC 20549 (tel. 202–942–8090).

Applicants' Representations

1. The Trust, a Delaware business trust, is an open-end management investment company registered under the Act. The Trust currently offers three portfolios (the "Portfolios") which will invest all, or substantially all, of their assets in shares of other investment companies in the PaineWebber Family of Funds ("Underlying Funds"),[1] in reliance on section 12(d)(1)(G) of the Act and thereby operate as a fund of funds. The Portfolios will allocate their assets among the following Underlying Funds: PaineWebber Global Equity Fund, PaineWebber Global Income Fund, PaineWebber Growth Fund, PaineWebber Growth and Income Fund, PaineWebber Small Cap Fund, PaineWebber High Income Fund, PaineWebber Investment Grade Income Fund, PaineWebber Low Duration U.S. Government Income Fund, PaineWebber U.S. Government Income Fund, and Cashfund. In the future, other registered open-end management investment companies in the PaineWebber Family of Funds may be added as Underlying Funds. Each Portfolio and each Underlying Fund is authorized to issue multiple classes of shares in accordance with rule 18f–3 under the Act.

2. Mitchell Hutchins and PaineWebber (collectively, the "Advisers") are registered as investment advisers under the Investment Advisers Act of 1940. Mitchell Hutchins is a subsidiary of PaineWebber, which is wholly owned by Paine Webber Group, Inc., a publicly owned financial services holding company. Mitchell Hutchins serves as investment adviser and administrator to the Portfolios. Mitchell Hutchins also serves as the principal underwriter of each Portfolios's shares and each Underlying Fund's shares (other than Cashfund, for which PaineWebber serves as principal underwriter). Mitchell Hutchins or PaineWebber serves as investment adviser to the Underlying Funds.

3. Applicants propose to enter into a special servicing agreement ("Servicing Agreement") among each Portfolio, the Underlying Funds and the Adviser. Under the Servicing Agreement, the Underlying Funds would bear the expenses of the Portfolio (other than advisory fees and rule 12b–1 fees) in proportion to the average daily value of the Underlying Fund's shares owned by the Portfolio. Payments by an Underlying Fund under the Servicing Agreement would be a fund-wide expense of the Underlying Fund.

4. Applicants believe that each Portfolio creates savings to the Underlying Funds primarily due to a reduction in the administrative expenses incurred by the Underlying Funds as a result of the avoidance of numerous shareholder accounts which would have been established if investors in the Portfolios had invested directly in the Underlying Funds. No Underlying Fund would bear any expenses of a Portfolio that exceed Net Benefits as defined in the condition below, to the Underlying Fund from the arrangement.

Applicants' Legal Analysis

1. Section 17(d) of the Act and rule 17d–1 under the Act provide that an affiliated person of, or a principal underwriter for, a registered investment company, or an affiliate of such person or principal underwriter, acting as principal, shall not participate in, or effect any transaction in connection with, any joint enterprise or other joint arrangement in which the registered investment company is a participant unless the Commission has issued an order approving the arrangement. Because the Adviser is an affiliated person of each Portfolio and each Underlying Fund and because the Portfolios and Underlying Funds share a common board of directors/trustees ("Board"), each of the Portfolios and Underlying Funds advised by the Adviser could be deemed to be under common control with all the other Portfolios and Underlying Funds, and therefore, an affiliated person of those Funds. Consequently, the Servicing Agreement could be deemed to be a joint transaction.

2. Rule 17d–1 under the Act provides that, in passing upon exemptive requests under the rule, the Commission considers whether the investment company's participation in the joint enterprise is consistent with the provision, policies and purposes of the Act, and the extent to which such participation is on a basis different from, or less advantageous than that of other participants.

3. Applicants request relief under section 17(d) and rule 17d–1 to permit them to enter into the Service Agreement. Applicants contend that each Underlying Fund will pay a Portfolio's expenses only in direct proportion to the average daily value of each Underlying Fund's shares held by each Portfolio to ensure that expenses of the Portfolios will be borne proportionately and fairly. Applicants also state that prior to an Underlying Fund's entering into a Service Agreement, and at least annually thereafter, the Board of the Underlying Fund, including a majority of directors who are not interested persons under section 2(a)(19) of the Act ("Disinterested Directors"), must determine that the Servicing Agreement will result in Net Benefit, as defined in the condition below, to the Underlying Fund. In making the annual determination, one of the factors the Board must consider is the amount of Net Benefits actually experienced by each class of shareholders of the Underlying Fund and the Underlying Fund as a whole during the preceding year. For these reasons, the applicants believe the requested relief meets the standards of section 17(d) of the Act and rule 17d–1 under the Act.

Applicants' Condition

Applicants agree that any order granting the requested relief will be subject to the following condition:

Prior to the Underlying Fund's entering into a Servicing Agreement, and at least annually thereafter, the Board of the Underlying Fund, including a majority of Disinterested Directors of the Underlying Fund, must determine that the Servicing Agreement will result in quantifiable benefits to each class of shareholders of the Underlying Fund and to the Underlying Fund as a whole that will exceed the costs of the Servicing Agreement borne by each class of shareholders of the Underlying Fund and by the Underlying Fund as a whole ("Net Benefits"). In making the annual determination, one of the factors the Board must consider is the amount of Net Benefits actually experienced by each class of shareholders of the Underlying Fund and the Underlying Fund as a whole during the preceding year. The Underlying Fund will preserve for a period of not less than six years from

[1] The Portfolios may not be Underlying Funds and no Portfolio will invest in another Portfolio.

the date of a determination of the Board, the first two years in an easily accessible place, a record of the determination and the basis and information upon which the determination was made. This record will be subject at all times to examination by the Commission and its staff.

For the Commission, by the Division of Investment Management, under delegated authority.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 23192; 812–10596]

Stein Roe Income Trust, et al.; Notice of Application

May 19, 1998.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for an order under section 17(d) of the Investment Company Act of 1940 (the "Act") and rule 17d–1.

SUMMARY OF THE APPLICATION: Applicants request an order to permit certain registered investment companies to deposit uninvested cash balances in a joint account to be used to enter into short-term investments.

APPLICANTS: Stein Roe Income Trust, Stein Roe Investment Trust, Stein Roe Municipal Trust, Stein Roe Institutional Trust, Stein Roe Advisor Trust, Stein Roe Trust, SR&F Base Trust (each a "Trust," and collectively, the "Trusts"), and Stein Roe & Farnham Incorporated (the "Adviser").

FILING DATES: The application was filed on March 26, 1997 and amended on August 5, 1997 and April 17, 1998.

HEARING OR NOTIFICATION OF HEARING. An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on June 15, 1998, and should be accompanied by proof of service on applicants in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street, N.W., Washington, D.C. 20549. Applicants, c/o Cameron S. Avery, Bell, Boyd & Lloyd, Three First National Plaza, Suite 3300, Chicago, IL 60602.

FOR FURTHER INFORMATION CONTACT: Michael W. Mundt, Staff Attorney, at (202) 942–0578, or Nadya B. Roytblat, Assistant Director, at (202) 942–0564 (Office of Investment Company Regulation, Division of Investment Management).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the SEC's Public Reference Branch, 450 Fifth Street, NW., Washington, DC 20549 (tel. 202–942–8090).

Applicant's Representations

1. Each Trust, other than SR&F Base Trust ("Base Trust"), is organized as a business trust under the laws of Massachusetts. Base Trust is organized as a common law trust under the laws of Massachusetts. Each Trust is registered under the Act as an open-end management investment company and has, or intends to have, multiple series ("Funds"). Base Trust was organized so that its various series could serve as master funds in a master-feeder structure. Currently, each series of Stein Roe Advisor Trust, Stein Roe Institutional Trust, Stein Roe Trust, Stein Roe Investment Trust (other than Stein Roe Emerging Markets Fund and Stein Roe Capital Opportunities Fund), Stein Roe Municipal Money Market Fund (a series of Stein Roe Municipal Trust), and Stein Roe High Yield Fund (a series of Stein Roe Income Trust) operate as feeder funds.

2. The Adviser, a wholly-owned indirect subsidiary of Liberty Financial Companies, Inc., is registered as an investment adviser under the Investment Advisers Act of 1940 and provides investment advisory services to the respective series of the Base Trust and to each of the Funds that are not feeder funds. The Adviser also provides administrative, accounting and bookkeeping services to certain of the Funds. The Adviser has discretion to purchase and sell securities for each Fund in accordance with that Fund's investment objectives, policies and restrictions.

3. Applicants request that any relief granted pursuant to the application also apply to any other registered open-end management investment company and series thereof for which the Adviser may serve as investment adviser in the future ("Future Funds"). Any Future Fund relying on the requested relief will do so only in compliance with the terms and conditions of the application.

4. The assets of the Funds are held by State Street Bank and Trust Company ("State Street"). On each trading day, some or all of the Funds generally have uninvested cash balances in their accounts. Each Fund is authorized to invest its uninvested cash assets in repurchase agreements and certain short-term money market instruments. Currently, such cash balance of each Fund is used on an individual basis to invest in short-term instruments, including individual issues of commercial paper or United States Government agency paper. Applicants assert that these separate purchases result in certain inefficiencies that limit a Fund's return on its cash balances. In addition, the assets of some Funds are too small or become available too late on a given day to be invested effectively on an individual basis.

5. Applicants propose to deposit all or a portion of their uninvested cash balances into a single joint account ("Joint Account") to enter into one or more short-term investment transactions, including repurchase agreements "collateralized fully" as defined in rule 2a–7 under the Act and other short-term money market instruments that constitute "eligible securities" as defined in rule 2a–7 under the Act. All counterparties to repurchase agreements entered into through the Joint Account are expected to be banks and broker-dealers. Repurchase agreements will be entered into on a "hold-in-custody" basis (i.e., repurchase agreements where the counterparty or one of its affiliated persons may have possession of, or control over, the collateral subject of the agreement) only where cash is received very late in the business day and otherwise would be unavailable for investment. Purchases of short-term money market instruments will be made from dealers in the open market or directly from issuers and will include investments in various taxable and tax-exempt short-term money market instruments with overnight, over-the-weekend or over-the-holiday maturities.

6. Any repurchase agreements entered into through the Joint Accounts will comply with the terms of Investment Company Act Release No. 13005 (February 2, 1983) and interpretations of the staff of the SEC. Applicants acknowledge that they have a continuing obligation to monitor the SEC's published statements on repurchase agreements and represent that the repurchase agreement transactions entered into through a Joint Account will comply with future

positions of the SEC to the extent that such positions set forth different or additional requirements regarding repurchase agreements. In the event that the SEC sets forth guidelines with respect to other short-term investments, all such investments made through any Joint Account will comply with those guidelines.

7. The proposed Joint Account would not be distinguishable from any other account maintained by State Street or a Fund, except that monies from multiple Funds would be deposited on a commingled basis. The sole function of the Joint Account would be to provide a convenient means of aggregating what otherwise would be two or more daily transactions for each Fund necessary to manage its respective daily uninvested cash balance. Each Fund will participate in the Joint Account and in any given investment made by the Joint Account on the same voluntary basis as every other participant in the Joint Account and in conformity with that Fund's investment objectives, policies and restrictions. If a tax-exempt money market fund contributes cash to the Joint Account, the cash will only be invested in securities that qualify for purchase by a tax-exempt money market fund under rule 2a–7 as it may be amended from time to time. Participants will not be required either to invest a minimum amount or to maintain a minimum balance in the Joint Account. Each participant will retain the sole ownership rights to any of its assets invested in the Joint Account, including income payable on the invested assets.

8. The applicants anticipate that, under certain circumstances, the Joint Account may invest in more than one repurchase agreement or short-term money market instrument on a given day and that, under such circumstances, each participant in the Joint Account would not necessarily have its cash invested in every repurchase agreement entered into and/or short-term money market instrument purchased through the Joint Account. Such a situation could occur for a variety of reasons, including a Fund's investment restrictions, the unavailability of a Fund's cash until after repurchase agreements have been negotiated on a given day, or a Fund's determination to invest its cash individually. The Adviser believes that no conflict of interest or potential for favoring one Fund over another arises merely as a result of the fact that the participating Funds may not always be allocated a pro rata portion of every investment made through the Joint Account.

9. The Adviser will have no monetary participation in the Joint Account, but will be responsible for investing assets in the Joint Account, establishing accounting and control procedures, and fairly allocating investment opportunities among the Funds. The recordkeeping system for the proposed Joint Account will be substantively identical to that which would be used if several joint accounts were established, with each investing in only a specific type of instrument. Among other recordkeeping and accounting control mechanisms, the Adviser will document each participant's pro rata portion of each joint investment, including investment amounts and the proportionate income to be received by each participant.

Applicant's Legal Analysis

1. Section 17(d) of the Act and rule 17d–1 under the Act prohibit an affiliated person of a registered investment company, or an affiliated person of such person, from participating in any joint enterprise or other joint arrangement in which such investment company is a participant, without an SEC order. Rule 17d–1 provides that in passing upon such applications, the SEC may consider the extent to which an entity's participation in a joint arrangement or enterprise is on a basis different or less advantageous than that of other participants.

2. The Funds, by participating in the Joint Account, and the Adviser, by managing the Joint Account, could be deemed to be "joint participants" in a "transaction" within the meaning of section 17(d) of the Act. In addition, the proposed Joint Account could be deemed to be a "joint enterprise or other joint arrangement" within the meaning of rule 17d–1 under the Act.

3. Applicants assert that participants in the Joint Account could save significant amounts in yearly transaction fees by reducing the total number of transactions, thereby increasing the rate of return on investments. Because the Joint Account could invest larger amounts than the individual Funds, the rate of return for investments in the Joint Account may also be higher than could be negotiated by the Funds individually. The existence of a Joint Account could increase the number of dealers willing to enter into investment transactions with the participants, enhancing flexibility in the management of cash balances and reducing the possibility that any participant would have an uninvested cash balance overnight. The use of a single Joint Account could result in savings of the costs of establishing and maintaining several different accounts. By reducing the number of trade tickets that each repurchase agreement and/or short-term money market instrument counterparty has to write, the Joint Account also could simplify transactions and reduce opportunity for errors.

4. Applicants submit that the participation by the respective Funds in the Joint Account would be consistent with the provisions, policies and purposes of the Act, and would be on a basis that is no different from or less advantageous than that of other participating Funds. Although the Adviser might gain some benefit through administrative convenience and possible reduction in clerical costs, the participating Funds and their shareholders will be the primary beneficiaries of the Joint Account because the Joint Account is likely to permit a greater return on short-term investments.

Applicants' Conditions

Applicants will comply with the following as conditions to any order granted by the SEC:

1. A separate Joint Account will be established with State Street. Each Fund will be permitted to deposit its uninvested net cash balances into the Joint Account on a daily basis. The Joint Account will not be distinguishable from any other accounts maintained by the participants except that monies will be deposited in the Joint Account on a commingled basis. The Joint Account will not have a separate existence and will not have any indicia of a separate legal entity. The sole function of the Joint Account will be to provide a convenient way of aggregating individual transactions which would otherwise require daily management by the Adviser of uninvested cash balances.

2. Cash in the Joint Account will be invested by the Adviser in one or more (a) repurchase agreements "Collateralized Fully" as defined in rule 2a–7 under the Act, and/or (b) short-term money market instruments that constitute "Eligible Securities" (as defined in rule 2a–7 under the Act) with overnight, over-the-weekend or over-the-holiday maturities. Any repurchase agreements will have a remaining maturity of 60 days or less and other short-term investments will have a remaining maturity of 90 days or less, each as calculated in accordance with rule 2a–7 under the Act.

3. All investments held by the Joint Account will be valued on an amortized cost basis to the extent permitted by applicable SEC releases, rules or orders.

4. Each participating Fund valuing its net assets in reliance upon rule 2a–7

under the Act will use the average maturity of the instrument(s) in the Joint Account in which such Fund has an interest (determined on a dollar weighted basis) for the purpose of computing the Fund's average portfolio maturity with respect to the portion of its assets held in the Joint Account for that day.

5. In order to ensure that there will be no opportunity for one participant to use any part of a balance of the Joint Account credited to another participant, no participant will be allowed to create a negative balance in the Joint Account for any reason, although each Fund will be permitted to draw down its entire balance at any time. Each Fund's decision to invest in the Joint Account will be solely at its option, and no Fund will be obligated either to invest in the Joint Account or to maintain any minimum balance in the Joint Account. In addition, each Fund will retain the sole rights of ownership to any of its assets invested in the Joint Account, including interest payable on such assets in the Joint Account.

6. Not every participant in the Joint Account will necessarily have its cash invested in every short-term investment entered into through the Joint Account. However, to the extent that a participant's cash is applied to a particular short-term investment made through the Joint Account, the participant will participate in and own a proportionate share of such short-term investment, and any income earned or accrued thereon, based upon the percentage of such investment purchased with monies contributed by the participant.

7. The Adviser will administer the investment of cash balances in and operations of the Joint Account as part of its general duties under its existing or any future investment advisory contracts will the Funds and the Adviser will not collect any additional or separate fees from any Fund for advising the Joint Account.

8. The administration of the Joint Account will be within the fidelity bond coverage required by section 17(g) of the Act and rule 17g–1 thereunder.

9. The Board of Trustees of each Trust that has Funds and/or Future Funds participating in the Joint Account will adopt procedures pursuant to which the Joint Account will operate, which will be reasonably designed to provide that the requirements of this application will be met. The Board of Trustees of each Trust that has Funds and/or Future Funds participating in the Joint Account will make and approve such changes as each deems necessary to ensure that such procedures are followed. In addition, each of such Board of Trustees will determine, no less frequently than annually, that the Joint Account has been operated in accordance with the proposed procedures and will permit continued participation by those Funds in the Joint Account only if it determines that there is a reasonable likelihood that the Fund and its shareholders will benefit from the Joint Account.

10. Any short-term investments made through the Joint Account will satisfy the investment criteria of all participants in that investment.

11. The Adviser and State Street will maintain records documenting, for any given day, each participant's aggregate investment in the Joint Account and its pro rata share of each investment made through the Joint Account. The records will be maintained in conformity with section 31 of the Act and the rules and regulations thereunder.

12. Short-term investments held in the Joint Account generally will not be sold prior to maturity unless: (a) The Adviser believes the investment no longer presents minimal credit risks; (b) the investment no longer satisfies the investment criteria of all participants in the investment because of downgrading or otherwise; or (c) in the case of a repurchase agreement, the counterparty defaults. The Adviser may, however, sell any short-term investment (or any fractional portion thereof) on behalf of some or all participants prior to the maturity of the investment if the cost of such transactions will be borne solely by the selling participants and the transactions will not adversely affect other participants participating in the Joint Account. In no case would an early termination by less than all participants be permitted if it would reduce the principal amount or yield received by other participants in the Joint Account or otherwise adversely affect the other participants. Each participant in the Joint Account will be deemed to have consented to such sale and partition of the investments in the Joint Account.

13. Short-term investments held through the Joint Account with a remaining maturity of more than seven days, as calculated pursuant to rule 2a–7 under the Act, would be considered illiquid and would be subject to the restriction that a Fund may not invest more than 15% or, in the case of a money market fund, more than 10% (or, in either such case, such other percentage as set forth by the SEC from time to time) of its net assets in illiquid securities, if the Adviser cannot sell the instruments, or the Fund's fractional interest in such instrument, pursuant to the preceding condition.

14. Future Funds will be permitted to participate in the Joint Account arrangement only on the same terms and conditions as the Funds have set forth herein.

For the SEC, by the Division of Investment Management, pursuant to delegated authority.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Rel No. IC–23194; 812–11114]

UBS Investor Portfolios Trust, et al.; Notice of Application

May 20, 1998.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application under section 6(c) of the Investment Company Act of 1940 (the "Act") for an exemption from section 15(a) of the Act.

SUMMARY OF APPLICATION: Applicants seek an order to permit the implementation, without prior shareholder approval, of new investment advisory and sub-advisory agreements ("New Advisory Agreements") in connection with the merger of Union Bank of Switzerland ("UBS") and Swiss Bank Corporation ("SBC"). The order would cover a period of up to 150 days following the later of: (i) date on which the transactions contemplated by the merger agreement are consummated (the "Closing Date"), or (ii) the date upon which the requested order is issued (but in no event later than December 31, 1998) (the "Interim Period"). The order also would permit UBS-New York Branch ("UBS–NY Branch"), UBS Asset Management (New York) Inc. ("UBSAM–NY"), and UBS International Investment London Limited (UBSII) (collectively, the "Advisers"), following shareholder approval, to receive all fees earned under the New Advisory Agreements during the Interim Period.

Applicants: UBS Investor Portfolios Trust ("UBS Investor Portfolios"), UBS, UBSAM–NY, and UBSIL.

Filing Dates: The application was filed on April 20, 1998. Applicants have agreed to file an amendment during the notice period, the substance of which is included in this notice.

Hearing or Notification of Hearing: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a

hearing by writing to the SEC's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on June 15, 1998, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons may request notification of a hearing by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street, NW, Washington, DC 20549. Applicants, c/o Naomi Friedland-Wechsler, Esq., Union Bank of Switzerland, 1345 Avenue of the Americas, New York, New York 10105.

FOR FURTHER INFORMATION CONTACT:

J. Amanda Machen, Senior Counsel, at (202) 942–7120, or Mary Kay Frech, Branch Chief, at (202) 942–0564 (Division of Investment Management, Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the SEC's Public Reference Branch, 450 Fifth Street, NW, Washington, DC 20549 (tel. 202–942–8090).

Applicants' Representations

1. UBS, directly and through its subsidiaries, offers a wide range of financial services worldwide, including asset management and investment advisory services. UBS conducts its asset management business in the United States through its branch located in New York, UBS–NY Branch, and through its wholly-owned indirect subsidiaries, UBSAM–NY and UBSII. UBSAM–NY and UBSII are both registered under the Investment Advisers Act of 1940 ("Advisers Act"). UBS–NY Branch is not so registered, in reliance on section 202(a)(11)(A) of the Advisers Act. UBS–NY Branch serves as investment adviser to UBS Investor Portfolios, and open-end management investment company registered under the Act, which organized in a master-feeder structure with six active portfolios and one in registration (each portfolio, a "Fund," and collectively, the "Funds").[1] UBSAM–NY and UBSII serve as investment sub-advisers to certain of the Funds.[2]

2. UBS and SBC have agreed to merge into a newly created entity ("New UBS") under the terms of a merger agreement dated December 5/6, 1997 ("Merger Agreement"). Upon consummation of the transactions contemplated by the Merger Agreement ("Merger"), New UBS will be owned approximately 60% by former UBS stockholders and 40% by former SBC stockholders. Upon completion of the Merger, UBS and SBC will both cease to exist and all of their assets, including the stock of the Adviser subsidiaries, will become assets of New UBS.

3. Applicants state that the Merger may result in an assignment and termination of the existing advisory and sub-advisory agreements of UBS–NY Branch and UBSAM–NY. Because the existing advisory agreement of UBSII with UBS Investor Portfolios terminates by its terms when the related UBS–NY Branch advisory agreement terminates, applicants state that Merger also may result in termination of this agreement (together with the existing advisory agreements of UBS–NY Branch and UBSAM–NY, the "Existing Advisory Agreements"). Applicants request an exemption to permit the implementation, without prior shareholder approval, of the New Advisory Agreements. The requested exemption will cover the Interim Period of not more than 150 days, beginning on the later of (i) the Closing Date or (ii) the date on which the order requested by this application is issued and continuing with respect to each Fund through the date on which each New Advisory Agreement is approved or disapproved by the Fund's shareholders, but in no event after December 31, 1998. Applicants state that the terms and conditions of the corresponding Existing and New Advisory Agreements will be the same in all material respects, except for the dates of execution and termination. The Closing Date may occur as early as June 1, 1998.[3]

4. The board of directors of each Fund (the "Boards") met on May 12, 1998, in accordance with section 15(c) of the Act, to consider and evaluate the New Advisory Agreements and determined that the New Advisory Agreements were in the best interests of the Funds and their respective shareholders. The Boards also voted to recommend that the Funds' respective shareholders approve the New Advisory Agreements.

5. Applicants propose to enter into an escrow arrangement with an unaffiliated financial institution ("Escrow Agent"). The fees earned by the Advisers under the New Advisory Agreements during the Interim Period will be paid into an account maintained by the Escrow Agent. The Escrow Agent will release the amounts held in the escrow account (including any interest earned): (a) to the Advisers only upon receipt of certification that the New Advisory Agreements have been approved by the shareholders of the relevant Fund; or (b) to the relevant Fund in the absence of approval by its shareholders. Before any certification is released, the relevant Board will be notified.

Applicants' Legal Analysis

1. Section 15(a) of the Act provides, in pertinent part, that it shall be unlawful for any person to serve or act as an investment adviser of a registered investment company, except pursuant to a written contract that has been approved by the vote of a majority of the outstanding voting securities of the registered investment company. Section 15(a) of the Act further requires that the written contract provide for automatic termination in the event of its "assignment." Section 2(a)(4) of the Act defines "assignment" to include any direct or indirect transfer of a contract by the assignor, or of a controlling block of the assignor's outstanding voting securities by a security holder of the assignor.

2. Applicants believe that the Merger will not result in a transfer of a controlling block of UBS under section 2(a)(4) of the Act. Applicants state, however, that under the terms of the Merger and the current business plan of New UBS, certain changes in portfolio management personnel, structure and process are expected at UBS–NY Branch and UBSAM–NY. Applicants assert that these changes could result in a change of the actual control or management of UBS–NY Branch and UBSAM–NY. Applicants state that there may therefore be an assignment, and thus

[1] The six portfolios include: UBS Bond Portfolio, UBS High Yield Bond Portfolio, UBS Value Equity Portfolio, UBS Large Cap Growth Portfolio, UBS Small Cap Portfolio, and UBS International Equity Portfolio.

[2] UBSAM–NY serves as sub-adviser to UBS High Yield Bond Portfolio, UBS Large Cap Growth Portfolio, and UBS Small Cap Portfolio; UBSII serves as sub-adviser to UBS International Equity Portfolio.

[3] Applicants state that if the Closing Date precedes the issuance of the requested order, the Advisers will serve as investment advisers after the Closing Date and prior to the issuance of the order in a manner consistent with their fiduciary duty to provide investment advisory services to the Funds even though appoval of the New Advisory Agreements has not yet been secured from the Funds' respective shareholders. Applicants also state that in such event the Advisers will be entitled to receive from the Funds, from the Closing Date until receipt of the requested order, no more than the actual out-of-pocket costs to the Advisers for providing investment advisory services to the Funds.

automatic termination, of their Existing Advisory Agreements. In addition, applicants state that the Existing Advisory Agreement of UBSII with UBS Investor Portfolios will terminate in accordance with its terms.

3. Rule 15a–4 under the Act provides, in pertinent part, that if an investment advisory contract with an investment company is terminated by an assignment in which the adviser does not directly receive a benefit, the adviser may continue to serve for 120 days under a written contract that has not been approved by the company's shareholders, provided that: (a) the new contract is approved by the company's board of directors (including a majority of the non-interested directors); (b) the compensation to be paid under the new contract does not exceed the compensation that would have been paid under the contract most recently approved by the company's shareholders; and (c) neither the adviser nor any controlling person of the adviser "directly or indirectly receives money or other benefit" in connection with the assignment. Applicants state that they cannot rely on rule 15a–4 because UBS–NY Branch, UBSAM–NY or UBSII, or UBS as their controlling person, may be deemed to receive a benefit in connection with consummation of the Merger.

4. Section 6(c) provides that the SEC may exempt any person, security, or transaction from any provision of the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Applicants assert that the requested relief meets this standard.

5. Applicants submit that the terms and timing of the Merger were determined by UBS and SBC in response to a number of factors beyond the scope of the Act and substantially unrelated to the Funds. Applicants state that there is insufficient time to obtain shareholder approval of the New Advisory Agreements before the Closing Date. Applicants assert that the requested relief would permit continuity of investment management of the Funds, without interruption, during the period following consummation of the Merger.

6. UBS represents that the Funds will receive the same scope and quality of investment advisory services during the Interim Period. The relevant Adviser will render investment advisory services to the Funds under the New Advisory Agreements, which will be the same as the Existing Advisory Agreements, except for the dates of execution and termination. Applicants assert that during the Interim Period, investment advisory services will be provided by investment management personnel with the same or comparable skills, experience and responsibilities, in the same manner and at the same fee levels. Applicants state that, in the event of any material change in personnel, the relevant Adviser will apprise and consult the Boards to assure that the Boards, including a majority of the non-interested directors, are satisfied that the services provided by the Adviser will not be diminished in scope or quality.

7. Applicants note that the fees payable to the Advisers during the Interim Period under the New Advisory Agreements will be at the same rate as the fees currently payable by each Fund under the Existing Advisory Agreements and have been approved by the appropriate Fund's Board and respective shareholders. Applicants also state that the fees will not be released to the Adviser by the Escrow Agent without an appropriate certification that the New Advisory Agreements have been approved by the Fund's respective shareholders.

Applicants' Conditions

Applicants agree that any order of the SEC granting the requested relief will be subject to the following conditions:

1. The New Advisory Agreements will contain the same terms and conditions as the Existing Advisory Agreements, except for the dates of execution and termination.

2. The portion of the investment advisory fees earned by an Adviser during the Interim Period will be maintained in an interest-bearing escrow account, and amounts in the account (including interest earned on such amounts) will be paid (a) to the Adviser only upon approval of each New Advisory Agreement by the applicable Fund's shareholders, or (b) in the absence of shareholder approval prior to the expiration of the Interim Period, to the Fund.

3. Each Fund will promptly schedule a meeting of shareholders to vote on approval of the New Advisory Agreements to be held within 150 days following the commencement of the Interim Period (but in no event after December 31, 1998).

4. UBS, UBSAM–NY and UBSII will pay the costs of preparing and filing the application, and the costs relating to the solicitation of approval of Fund shareholders of the New Advisory Agreements necessitated by the Merger.

5. UBS will take all appropriate actions to ensure that the scope and quality of investment advisory and other services provided to the Funds by the Advisers during the Interim Period will be at least equivalent, in the judgment of the Boards, including a majority of the non-interested Board members, to the scope and quality of services currently provided by the Adviser. In the event of any material change in the personnel providing services pursuant to the New Advisory Agreements, the Adviser will apprise and consult with the Boards to ensure that the Boards, including a majority of the non-interested Board members, are satisfied that the services provided will not be diminished in scope or quality.

For the SEC, by the Division of Investment Management, under delegated authority.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–40005; File No. SR–NASD–98–18]

Self-Regulatory Organizations; National Association of Securities Dealers, Inc.; Notice of Extension of Comment Period for Proposal Relating to Qualified Immunity in Arbitration Proceedings for Statements Made on Forms U–4 and U–5

May 19, 1998.

On April 21, 1998, the NASD Regulations, Inc. ("NASD Regulation") filed a proposed rule change with the Securities and Exchange Commission ("SEC" or "Commission") pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934.[1] NASD Regulation proposes to provide members of the NASD with qualified immunity in arbitration proceedings for statements made in good faith in certain disclosures filed with the NASD on Forms U–4 and U–5, the uniform registration and termination notices for registered persons.

Notice of the proposed rule change was provided by the issuance of Securities Exchange Act Release No. 39892 (April 21, 1998) and by publication in the **Federal Register** on April 28, 1998 (63 FR 23321). The Commission has received requests for an extension of time for public comment

[1] 15 U.S.C. 78s(b)(1).

on the proposed rule change.[2] The Commission hereby extends the period for public comment on the proposed rule change until June 19, 1998.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[3]

[FR Doc. 98–13955 Filed 5–26–98; 8:45 am]

BILLING CODE 8010–01–M

UNITED STATES SENTENCING COMMISSION

Sentencing Guidelines for the United States Courts

AGENCY: United States Sentencing Commission.

ACTION: Notice of preliminary priority areas for Commission study. Request for public comment.

SUMMARY: As part of its statutory authority and responsibility to analyze sentencing issues, including operation of the federal sentencing guidelines, and in accordance with Rules 3.5 and 5.2 of its Rules of Practice and Procedure, the Commission has preliminarily identified certain priorities as the principal focus of its policy development work in the coming year. The Commission invites comment on these tentatively identified priority areas and on any other sentencing issues that it should address during the coming year. The Commission has tentatively scheduled a hearing to receive public comment on these matters.

DATES: A hearing to receive public comment on future policy development priorities has been set for June 17, 1998, in the Commission's offices. Public comment and written testimony for the public hearing should be received on or before June 11, 1998.

ADDRESSES: Send comments to: United States Sentencing Commission, One Columbus Circle, NE, Suite 2–500 South, Washington, DC 20002–8002, Attention: Public Information-Priorities Comment. For Further Information Contact: Michael Courlander, Public Affairs Officer, at (202) 273–7731.

SUPPLEMENTARY INFORMATION: Policy development priorities preliminarily identified by the Commission for continuing work during the 1998–1999 amendment cycle are:

1. Revisions of the fraud, theft, and tax guidelines (including the monetary tables used in these guidelines and other guidelines that reference those tables, consolidation of the theft, fraud, and property destruction guidelines, and the definition of "loss" in the theft and fraud guidelines).

2. Review and assessment of the criminal history guidelines.

3. Review and assessment of the guidelines and sentences imposed for homicide offenses.

In addition, the Commission expects to address recent legislative enactments, such as: (1) the Wireless Telephone Protection Act, relating to cloning cellular telephones; (2) the No Electronic Theft Act; (3) and any other legislation affecting sentencing policy that may be enacted in the remainder of this congressional session.

Obviously, the subject matter, scope, and duration of the Commission's policy development work during the coming year will be influenced considerably by the appointment of new commissioners and the timing of those appointments. Thus, at this time, the Commission has tentatively identified only a few areas in which its work is ongoing.

The Commission invites comment on whether and how it should further investigate these tentative priorities. Additionally, the Commission invites comment on any other sentencing issues that persons believe should be addressed in the coming year, including research issues that the Commission should address. To the extent practicable, comments submitted on additional issues should include the following: (1) a statement of the issue, including the scope and manner of study, particular problem areas and possible solutions, and any other matters relevant to an identified or proposed priority; (2) citations to applicable sentencing guidelines, statutes, case law, and constitutional provisions; and (3) a direct and concise statement of why the Commission should make the issue a priority.

Authority: 28 U.S.C. 994(a), (o).

Richard P. Conaboy,

Chairman.

BILLING CODE 2211–01–P

SOCIAL SECURITY ADMINISTRATION

Information Collection Activities: Proposed Collection Requests and Comment Requests

This notice lists information collection packages that will require submission to the Office of Management and Budget (OMB), as well as information collection packages submitted to OMB for clearance, in compliance with Pub. L. 104–13 effective October 1, 1995, The Paperwork Reduction Act of 1995.

I. The information collection(s) listed below require(s) extension(s) of the current OMB approval(s) or are proposed new collection(s):

1. Medical Report (General)—0960–0052. The information on Form SSA–3826 is used by the Social Security Administration (SSA) to determine the claimant's physical status prior to making a disability determination and to document disability claims folders with the medical evidence. The respondents are physicians, hospitals, directors and medical records librarians.

Number of Respondents: 750,000.

Frequency of Response: 1.

Average Burden Per Response: 30 minutes.

Estimated Annual Burden: 375,000 hours.

2. Payment of Certain Travel Expenses—0960–0434. SSA uses the information required by 20 CFR, sections 404.999(d) and 416.1499 to reimburse a claimant who has been required to travel over 75 miles to appear at a medical examination or a disability hearing. The respondents are claimants who travel more than 75 miles in order to attend a medical examination or a disability hearing.

Number of Respondents: 50,000.

Frequency of Response: 1.

Average Burden Per Response: 10 minutes.

Estimated Annual Burden: 8,333 hours.

3. Social Security Request for Information—0960–0531. The information on Form SSA–6231 is used by SSA to complete or to clarify data on Forms SSA–623 or SSA–6230, previously provided by representative payees. The respondents are representative payees who furnished incomplete or unclear information.

Number of Respondents: 100,000.

Frequency of Response: 1.

Average Burden Per Response: 15 minutes.

Estimated Annual Burden: 25,000 hours.

4. Statement Regarding Student's Attendance—0960–0113. The information on Form SSA–2434 is used to determine student entitlement status for the children of coal miners, the children of their widows or the brothers of deceased coal miners eligible for black lung benefits. The respondents are dependents of deceased coal miners as cited above, who are attending school and about to attain age 18.

[2] By letter dated May 15, 1998 NASD Regulation has consented to an extension of the comment period. *See* letter from Jean I. Feeney, NASD Regulation, Inc., to Katherine A. England, Assistant Director, Division of Market Regulation, Commission.

[3] 17 CFR 200.30–3(a)(12).

Number of Respondents: 50.
Frequency of Response: 1.
Average Burden Per Response: 10 minutes.
Estimated Annual Burden: 8 hours.

5. Request for the Correction of Earning Records— 0960–0029. Form SSA–7008 is used by individual wage earners to request SSA for review, and if necessary, correction of the Agency's master record of their earnings. The respondents are individuals who question SSA's record of their earnings.

Number of Respondents: 375,000.
Frequency of Response: 1.
Average Burden Per Response: 10 minutes.
Estimated Annual Burden: 62,500 hours.

6. Plan for Achieving Self Support—0960–0559. The information on form SSA–545 is collected by SSA when a Supplemental Security Income (SSI) applicant/recipient desires to use available income and resources to obtain education and/or training in order to become self-supportive. The information is used to evaluate the recipient's plan for achieving self-support to determine whether the plan may be approved under the provisions of the SSI program. The respondents are SSI applicants/recipients who are blind or disabled.

Number of Responses: 7,000.
Frequency of Response: Varies per individual.
Average Burden Per Response: 2 hours.
Estimated Annual Burden: 14,000 hours.

Written comments and recommendations regarding the information collection(s) should be sent within 60 days from the date of this publication, directly to the SSA Reports Clearance Officer at the following address: Social Security Administration, DCFAM, *Attn:* Nicholas E. Tagliareni, 6401 Security Blvd., 1–A–21 Operations Bldg., Baltimore, MD 21235.

In addition to your comments on the accuracy of the agency's burden estimate, we are soliciting comments on the need for the information; its practical utility; ways to enhance its quality, utility and clarity; and on ways to minimize burden on respondents, including the use of automated collection techniques or other forms of information technology.

II. The information collection(s) listed below have been submitted to OMB:

1. Statement of Agricultural Employer (Years prior to 1988); Statement of Agricultural Employer (1988 and Later)—0960–0036. The information on Forms SSA–1002 and SSA–1003 is used by the Social Security Administration (SSA) to resolve discrepancies when farm workers have alleged that their employers did not report their wages or reported them incorrectly. The respondents are agricultural employers.

	SSA–1002	SSA–1003
Number of Respondents	75,000	50,000.
Frequency of Response	1	1.
Average Burden Per Response	10 minutes	30 minutes.
Estimated Annual Burden	12,500 hrs	25,000 hrs.

2. Beneficiary Recontact Report—0960–0502. The information on Form SSA–1588–OCR–SM is used by SSA to recontact mothers, fathers or children ages 15–17, who receive their benefits directly, to determine if they are still entitled to benefits. The respondents are beneficiaries who are in the "high risk" area and, therefore, are most prone to overpayments.

Number of Respondents: 163,000.
Frequency of Response: 1.
Average Burden Per Response: 5 minutes.
Estimated Annual Burden: 13,583 hours.

3. Information About Joint Checking/Savings Account—0960–0461. The information collected on Form SSA–2574 is used by SSA to determine whether a joint bank account should be counted as a resource of a Supplemental Security Income (SSI) claimant or applicant in determining eligibility for SSI. The respondents are applicants for and recipients of SSI payments and individuals who are joint owners of financial accounts with SSI applicants/recipients.

Number of Respondents: 200,000.
Frequency of Response: 1.
Average Burden Per Response: 7 minutes.
Estimated Annual Burden: 23,333 hours.

4. Agency/Employer GPO Questionnaire—0960–0470. The information on Form SSA–4163 is used by SSA to determine the need for and the amount of any offset of benefits for certain individuals receiving Government pensions and receiving or applying for Social Security benefits. The respondents are State governments or their political subdivisions.

Number of Respondents: 1,000.
Frequency of Response: 1.
Average Burden Per Response: 3 minutes.
Estimated Annual Burden: 50 hours.

5. Authorization for the Social Security Administration to Obtain Records from a Financial Institution and Request for Records—0960–0293. The information on Form SSA–4641 is used by SSA to determine whether an applicant meets the resource eligibility requirements for SSI and Aid to Families with Dependent Children (AFDC). This information is only used as part of the quality review of the AFDC program. The respondents are financial institutions.

Number of Respondents: 500,000.
Frequency of Response: 1.
Average Burden Per Response: 6 minutes.
Estimated Annual Burden: 50,000 hours.

6. Statement of Household Expenses and Contributions—0960–0456. The information on Form SSA–8011–F3 is used by SSA to obtain or corroborate contributions made by the claimant/recipient toward household expenses. SSA uses the information to correctly determine the amount of unearned income received by the claimant/recipient in order to determine the individual's eligibility and payment amount under the SSI program. The respondents are household members of SSI claimants/recipients.

Number of Respondents: 400,000.
Frequency of Response: 1.
Average Burden Per Response: 15 minutes.
Estimated Annual Burden: 100,000 hours.

Written comments and recommendations regarding the information collection(s) should be directed within 30 days to the OMB Desk Officer and SSA Reports Clearance Officer at the following addresses:

(OMB) Office of Management and Budget, OIRA, Attn: Laura Oliven, New Executive Office Building, Room 10230, 725 17th St., NW, Washington, D.C. 20503.

(SSA) Social Security Administration, DCFAM, Attn: Nicholas E. Tagliareni, 1–A–21 Operations Bldg., 6401 Security Blvd., Baltimore, MD 21235.

To receive a copy of any of the forms or clearance packages, call the SSA Reports Clearance Officer on (410) 965–4125 or write to him at the address listed above.

Dated: May 19, 1998.

Nicholas E. Tagliareni,

Reports Clearance Officer, Social Security Administration.

BILLING CODE 4190–29–P

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

[Docket No. 301–106]

Determination Under Section 304 of the Trade Act of 1974: Practices of the Government of India Regarding Patent Protection for Pharmaceuticals and Agricultural Chemicals

AGENCY: Office of the United States Trade Representative.

ACTION: Notice of determination, termination and monitoring.

SUMMARY: The United States Trade Representative (USTR) has determined that certain acts, policies and practices of India violate, or otherwise deny benefits to which the United States is entitled under, the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS Agreement). This determination is based on the report of a dispute settlement panel convened under the auspices of the World Trade Organization (WTO) at the request of the United States, and the report of the WTO Appellate Body reviewing the panel report. The Appellate Body report and the panel report (as modified by the Appellate Body report) were adopted by the WTO Dispute Settlement Body (DSB) on January 16, 1998 ("the WTO reports"). On February 13, 1998, India stated its intention to comply with its WTO obligations with respect to this matter and, on April 22, 1998, stated that it would amend its law no later than April 19, 1999. In light of he foregoing, the USTR will not take action under section 301 of the Trade Act of 1974 ("the Trade Act") at this time and has terminated this investigation. However, the USTR will monitor India's implementation of the WTO reports, and will take action under section 301(a) of the Trade Act if India does not come into compliance.

EFFECTIVE DATE: May 8, 1998.

ADDRESSES: 600 17th Street, N.W., Washington, D.C. 20508.

FOR FURTHER INFORMATION CONTACT: Claude Burcky, Director of Intellectual Property (202) 395–6864; Geralyn S. Ritter, Assistant General Counsel (202) 395–6800.

SUPPLEMENTARY INFORMATION: On July 2, 1996, the USTR initiated an investigation under section 302(b) of the Trade Act (19 U.S.C. 2412(b)) regarding India's provision of patent protection for pharmaceutical and agricultural chemical products, and requested public comment on the issues raised in the investigation and the determinations to be made under section 304 of the Trade Act. (61 FR 35857 of July 8, 1996). This investigation specifically concerned India's failure to comply with its obligations under Articles 70.8 and 70.9 of the TRIPS Agreement to establish a "mailbox" mechanism for filing product patent applications for pharmaceuticals and agricultural chemicals, and to provide a system of exclusive marketing rights for these products. As required under section 303(a) of the Trade Act, the United States held consultations with India under the procedures of the WTO Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU) on July 27, 1996. A dispute settlement panel was established on November 20, 1996.

Pursuant to Section 304(a)(1)(A) of the Trade Act (19 U.S.C. 2414(a)(1)(A)), the USTR must determine in this case whether any act, policy or practice of India violates, or otherwise denies benefits to which the United States is entitled under any trade agreement. If that determination is affirmative, the USTR must take action under section 301 of the Trade Act (19 U.S.C. 2411), subject to the specific direction of the President, if any. However, pursuant to section 301(a)(2)(B), the USTR is not required to take action under section 301 if the USTR finds, *inter alia*, that the foreign country is taking satisfactory measures to grant the rights of the United States under the trade agreement.

Reasons for Determinations

(1) India's Acts, Policies and Practices

The WTO panel in this case released its report on September 5, 1997, and found that India had failed to comply with its obligations under Articles 70.8 and 70.9 of the TRIPS Agreement. India appealed all of the panel's adverse findings. On December 19, 1997, the Appellate Body issued its report confirming all the major panel findings against India, and reversing the panel report on a procedural issue regarding the panel's jurisdiction to consider claims outside its terms of reference. On January 16, 1998, the DSB adopted the Appellate Body and the panel report (as modified by the Appellate Body report). The WTO reports include findings that India has failed to comply with Article 70.8 of the TRIPS Agreement because it has failed to establish a legally secure mailbox system for filing patent applications for pharmaceutical and agricultural chemical products that preserves the novelty and priority of those applications. The WTO reports also include findings that India was obligated as of January 1, 1995, to have established a system for granting exclusive marketing rights for certain products that are the subject of mailbox application, and that India had failed to establish such a system in violation of Article 70.9 of the TRIPS Agreement.

Thus, based on the results of the WTO dispute settlement proceedings, the public comments received and appropriate consultations, the USTR has determined that certain acts, policies and practices of India violate, or otherwise deny benefits to which the United States is entitled under, the TRIPS Agreement.

(2) U.S. Action

At a meeting of the DSB on February 13, 1998, India stated its intention to "meet it obligations under the WTO with respect to this matter" and "to comply with the recommendations and rulings of the DSB." At the DSB meeting on April 22, 1998, India committed to amend its law to meet its TRIPS obligations "as early as possible," and no later than April 19, 1999. In light of India's commitment to implement its WTO obligations, pursuant to section 301(a)(2)(B)(i) of the Trade Act, the USTR will not take action at this time under section 301(a) of the Trade Act and has terminated this investigation. However, pursuant to section 306 of the Trade Act, the USTR will monitor India's implementation of the WTO reports and will take action under section 301(a) of the Trade Act if India does not come into compliance.

Irving A. Williamson,

Chairman, Section 301 Committee.

BILLING CODE 3190–01–M

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

Reports, Forms and Recordkeeping Requirements; Agency Information Collection Activity Under OMB Review

AGENCY: Office of the Secretary, DOT.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), this notice announces that the Information Collection Requests (ICRs) abstracted below have been forwarded to the Office of Management and Budget (OMB) for review and approval. The ICRs describe the nature of the information collections and their expected burden. The **Federal Register** Notice with a 60-day comment period soliciting comments on (1) Fatal Accident Reporting System (FARS) was published on February 19, 1998 [63 FR 8519–8520] and(2) 49 CFR Part 583, . Motor Vehicle Content Labeling was published on February 26, 1998 [63 FR 9897] and (3) A Survey of Drivers Experiences and Expectations of Light Vehicle Brake System Performance: ABS vs Non-ABS was published in the **Federal Register** on February 23, 1998 [63 FR 9042].

DATES: Comments must be submitted on or before June 26, 1998.

FOR FURTHER INFORMATION CONTACT: Michael Robinson, NHTSA Information Collection Clearance Officer at (202) 366–9456.

SUPPLEMENTARY INFORMATION:

National Highway Traffic Safety Administration (NHTSA).

(1) Title: Fatal Accident Reporting System (FARS)

OMB Control Number: 2127–0006.

Type of Request: Extension of a currently approved collection.

Affected Public: State, Local or Tribal Government.

Abstract: Under both the Highway Safety Act of 1966 and the National Traffic and Motor Vehicle Safety Act of 1966, Traffic Safety Administration (NHTSA) has the responsibility to collect accident data that support the establishment and enforcement of motor vehicle regulations and highway safety programs. These regulations and programs are developed to reduce the severity of injury and the property damage associated with motor vehicle accidents. The Fatal Accident Reporting System (FARS) is in its twenty-third year of operation as a major system that acquires national fatality information directly from existing State files and documents. Since FARS is an on-going data acquisition system, reviews are conducted yearly to determine whether the data acquired are responsive to the total user population needs. The total user population includes Federal and State agencies and the private sector. Two data items, Death Certificate Number and Fatal Injury At Work, are not recorded on any FARS form but are electronically transmitted to the central FARS file.

Estimated Annual Burden: 77,400 hours.

(2) Title: 49 CFR 583 Automobile Parts Content Labeling

OMB Control Number: 2127–0573.

Type of Request: Extension of currently approved collection.

Affected Public: Individuals or households.

Abstract: The American Automobile Labeling Act (AALA) or Section 210 of the Motor Vehicle Information and Cost Savings Act mandates this information collection. The Act requires all new passenger motor vehicles (including passenger cars, certain small buses, all trucks and multipurpose passenger vehicles with a gross vehicle weight rating of 8,500 pounds or Less), beginning on October 1, 1994, to bear labels providing information about the domestic and foreign content of their equipment. The following information must appear on the label:

(a) The percentage (by Value) of the equipment in the vehicles that originated in the United States and Canada;

(b) Names of the countries, other than the U.S. or Canada, if any, that contributed the two highest Percentages (15 percent or more) to the total value of the equipment that comprises the vehicle and the percentage those countries contributed;

(c) The city, state and country of final assembly of the vehicle;

(d) The country of origin for the transmission of the vehicle (i.e., the country that contributed the greatest percentage to the total value of the equipment in that engine); and

(e) The country of origin for the transmission of the vehicle (i.e., the country that contributed.the greatest percentage to the total value of the equipment in the transmission).

The information submitted under this collection provides the justifying rational for labeling content affixation to each new passenger motor.

Estimated Annual Burden: 7080 hours.

(3) Title: A Survey of Drivers Experiences and Expectations of Light Vehicle Brake System Performance: ABS vs Non-ABS

OMB Clearance Number: 2127–0594.

Type of Request: New collection.

Affected Public: Individuals, households.

Abstract: Data collection will be accomplished through the use of Computer Assisted Telephone Interviewing (CATI). The CATI system allows a computer to perform a number of functions prone to error when done manually by interviewers, including:

A. Providing correct question sequence;

B. Automatically executing skip patterns based on responses to prior questions (which decreases overall interview time and consequentially the burden on respondents);

C. Recalling answers to prior questions and displaying the information in the test of later questions;

D. Providing random rotation of specified questions or response categories (to avoid bias);

E. Ensuring that questions cannot be skipped; and

F. Rejecting invalid responses or data entries.

The CATI system lists questions and corresponding response categories automatically on the screen, eliminating the need for interviewers to track slip patterns and flip pages. Moreover, the interviewers enter responses directly from their keyboards, and the information is automatically recorded in the computer's memory.

The CATI system includes safeguards to reduce interviewer error in direct key-entry of survey responses. It has a double check method to eliminate the problem of key entry error as a result of accidentally hitting the wrong key. Unlike some systems, when the interviewer enters the code for the respondent reply, the code is not immediately accepted and the interview moved to the next screen. Rather, the screen remains on the question and response categories for the item, and the code and category entered by the interviewer are displayed at the bottom of the screen. The interviewer must confirm the initial entry before it is accepted by the computer as final. If, despite these safeguards, the wrong answer is entered or a respondent changes his/her reply, the interviewer can correct the entry before moving on to the next question.

Description of the need for the information and proposed use of the information: Antilock brake systems (ABS) have been increasingly prevalent on passenger car and light trucks in recent years. Brake experts anticipated that the introduction of ABS on these vehicles would reduce the number and severity of crashes. A number of statistical analyses of crash databases have been performed over the past three years, and suggest that the introduction of ABS does not appear to have reduced the number of automobile crashes where they were expected to be effective. Included in these analyses is a

significant increase of single-vehicle, run-off-road crashes for vehicles equipped with ABS as compared to cars without ABS. It is unknown to what extent, if any, this increase is due to incorrect driver usage of ABS, incorrect driver responses to their ABS, or unrealistic driver expectations of an ABS braking ability.

Estimate of Total Annual Burden: 1375 hours.

Address: Send comments, within 30 days, to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725–17th Street, NW., Washington, DC 20503, Attention DOT Desk Officer. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department's estimate of the burden of the proposed information collection; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

A comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

Issued in Washington, DC, on May 21, 1998.

Vanester M. Williams,

Clearance Officer, United States Department of Transportation.

[FR Doc. 98–13982 Filed 5–26–98; 8:45 am]

BILLING CODE 4910–62–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Opportunity To Participate, Criteria Requirements and Change of Application Procedure for Participation in the Fiscal Year 1998 Military Airport Program (MAP)

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice of criteria for application and designation, redesignation, or continued participation, in the Fiscal Year 1998 Military Airport Program (MAP).

SUMMARY: This notice announces the criteria, application procedures and schedule to be applied by the Secretary of Transportation in designating, redesignating, and funding capital development for up to 12 airports in the 1998 MAP.

The 1998 MAP allows the Secretary to consider current or former military airports: (1) that were realigned or closed under Base Realignment and Closure (BRAC) procedures or 10 USC 2687 (property normally reported to the General Services Administration for disposal); or (2) current or former military airports at which grants would reduce delays at airports that have 20,000 hours of annual delay in passenger aircraft takeoffs and landings; or (3) at current or former military airports which grants would enhance airport and air traffic control system capacity in a metropolitan area.

DATES: Airport sponsors should address written applications for designation, redesignation, or continued participation, in the fiscal year 1998 Military Airport Program to the Federal Aviation Administration Regional Airports Division or Airports District Office that serves the airport. Applications must be received by that office of the FAA on or before June 26, 1998.

ADDRESSES: Send an original and two copies of Standard Form 424, "Application for Federal Assistance," and supporting and justifying documentation, specifically requesting to be considered for designation, redesignation to participate, or continue, in the fiscal year 1998 Military Airport Program, to the Regional FAA Airports Division or Airports District Office that serves the airport.

FOR FURTHER INFORMATION CONTACT: Mr. James V. Mottley or Leonard C. Sandelli, Military Airport Program Branch (APP–420), Office of Airport Planning and Programming, Federal Aviation Administration (FAA), 800 Independence Avenue, SW, Washington, DC 20591, (202) 267–8780, or (202) 267–8785, respectively.

SUPPLEMENTARY INFORMATION:

General Description of the Program

The Military Airport Program provides assistance to current or former military airports in converting them to civil use, thereby contributing to the capacity of the national air transportation system and/or reducing congestion. Airports designated under the program may obtain funds from a set-aside of four percent of Airport Improvement Program (AIP) discretionary funds to undertake eligible airport development, including certain types of projects not otherwise eligible for AIP assistance.

Number of Airports

A maximum of 12 airports can participate in the 1998 MAP. There are eight airports currently designated and the Secretary can designate up to four more. The current participating airports are: Millington Municipal Airport, Millington, Tennessee; Myrtle Beach International Airport, Myrtle Beach, South Carolina; Williams Gateway Airport, Chandler, Arizona; Austin Bergstrom International Airport, Austin, Texas; Homestead Regional Airport, Homestead, Florida; Rickenbacker Airport, Columbus, Ohio; San Bernardino International Airport, San Bernardino, California; Saywer Airport, Marquette, Michigan; and Alexandria International Airport, Alexandria, Louisana.

Amount of MAP funds

The Secretary of Transportation shall allocate at least 4.0 percent of the Discretionary Airport Improvement Program grant funds available to airports designated under the 1998 MAP. However, for FY 1998 the amount is limited to $26,000,000.

Term of Designation

Five years is the maximum period of eligibility for any airport to participate in the MAP unless an airport sponsor reapplies and is redesignated for another five year period.

Reapplication

Section 124 of the Federal Aviation Reauthorization Act of 1996 permits previously designated airports to apply for an additional five-year period. The airport must have satisfactory MAP eligible projects and must continue to satisfy the designation criteria for the MAP.

Eligible Projects

In addition to other eligible AIP projects, terminals, fuel farms and utility systems and surface parking lots and hangars are eligible to be funded from the MAP.

New Designation and Redesignation Considerations

In making designations of new candidate airports, the Secretary of Transportation will consider the following general requirements:

1. The airport is a Base Realignment and Closure Commission (BRAC) or 10 USC 2687 closure or realignment, classified as a commercial service or reliever airport in the National Plan of Integrated Airport Systems (NPIAS); or
2. The airport and grants issued for projects at the airport would reduce delays at an airport with more than

20,000 hours of annual delays in commercial passenger aircraft takeoffs and landings. Airports with 20,000 or more hours of delay and their associated metropolitan areas are identified in the FAA's Aviation Capacity Enhancement Plan DOT/FAA, Office of System Capacity, 1997 Aviation Capacity Enhancement Plan; or

3. The airport would enhance airport and air traffic control system capacity in a metropolitan area or reduce current or projected flight delays.

The application will be evaluated on how the proposed airport and associated projects would make these contributions to conversion and congestion relief and/or how the airport would enhance air traffic or airport system capacity.

Project Evaluation

The FAA will evaluate the need for the projects in the candidate airport's five year Capital Improvement Plan (CIP), and whether these projects are related to conversion or capacity of that airport or the airport and/or air traffic system. It is the intent of the Secretary of Transportation to fund those airports that have the greatest conversion needs and/or where the benefits to the capacity of the air traffic control or airport system can be maximized, and/or the contribution to reducing congestion can be maximized. Generally, the recently approved BRAC or Title 10 Section 2678 closing or realigned bases or active bases with new joint use agreements will be the locations with the greatest conversion needs.

1. The FAA will evaluate the candidate airports and/or the airports such candidates would relieve based on the following factors:

- Compatibility of airport roles;
- The capability of the candidate airport and its airside and landside complex to serve aircraft that otherwise must use the relieved airport;
- Landside surface access;
- Airport operational capability, including peak hour and annual throughput capacities of the candidate airport;
- Potential of other metropolitan area airports to relieve the congested airport;
- Ability to satisfy or meet air cargo demand within the metropolitan area;
- Forecasted aircraft and passenger levels, type of air carrier service anticipated, i.e., scheduled and/or charter air carrier service;
- Type of aircraft projected to serve the airport and level of operation at the relieved airport and the candidate airport;
- The potential for the candidate airport to be served by aircraft or users, including the airlines, serving the congested airport;
- Ability to replace an existing commercial service or reliever airport serving the area; and
- Any other documentation to support the FAA designation of the candidate airport.

2. The FAA will evaluate the conversion and capacity related needs which, if funded would make the airport a more viable civil airport.

This procedure conforms with FAA procedures for administering the Airport Improvement Program (AIP), the requirements of 49 U.S.C. 47118, as amended by Section 116 of Public Law 103–305 (August 23, 1994), and the Federal Aviation Reauthorization Act of 1996.

Application Procedures

Airport sponsors applying for consideration for inclusion ("candidate airports" or "Redesignation") or continuation in the MAP ("current airports applying for continuation") must complete a Standard Form 424, "Application for Federal Assistance," and submit documentation to the appropriate FAA office as outlined below. Each sponsor must specifically state in the Standard Form 424, or in its transmittal, that the airport is: (1) applying in response to this notice for consideration as a new candidate for the MAP; (2) if designated in 1994 or thereafter, that the airport is applying as a continuing participant in the MAP; or (3) applying for redesignation. The additional information and data required to support the MAP criteria must be attached to the Application.

Application Procedures and Required Documentation

New Candidate Airports and Airports Applying for Redesignation for Another Five-Year Term

Submit an Application for Federal Assistance, Standard Form 424, along with the documentation and justification indicated below to request designation by the Secretary of Transportation to participate in the Military Airport Program. This should identify the airport as either a current or former military airport and identify whether it was closed or realigned under Public Law 100–526, Public Law 101–510 (Installations Approved for Closure by the Defense Base Realignment and Closure Commissions), 10 U.S.C. 2687 (bases closed by DOD and reported to the General Services Administration) or a joint use of an active military airfield.

A. Qualifications for Additional Candidates

For (1) through (6) below the applicant does not need to resubmit any documentation that has been previously submitted to the regional Airports division or Airports district office. There is no need to submit duplicate information in response to this notice.

(1) Documentation that the airport meets the definition of a "public airport" as defined in 49 U.S.C. Section 47102(16).

(2) Documentation that the required environmental review process for civil reuse or joint-use of the military airfield has been completed. (This is not the environmental review for the projects under this program, but the environmental review necessary for title transfer, a long term lease, or a joint use agreement). The environmental reviews and approvals must indicate that the airport would be able to receive grants during the five years in the program.

(3) In the case of a former military airport, documentation that the local or State airport sponsor holds or will hold satisfactory title, a long term lease in furtherance of conveyance of property for airport purposes, or a long term interim lease for 22 years or more, to the property on which the civil airport is being located. The capital development project needs to be in place for 20 years. In the case of a current military airport, documentation that the airport sponsor has an existing joint-use agreement with the military department having jurisdiction over the airport. This is necessary so the FAA can legally issue grants to the sponsor.

(4) Documentation that the service level the airport is expected to provide is a "commercial service airport" or a "reliever airport" as defined in 49 U.S.C. 47102(7) and 47102(18), respectively, and is included in the current National Plan of Integrated Airport Systems.

(5) Documentation that the airport has an eligible airport "sponsor" as defined in 49 U.S.C. 47102(19).

(6) Documentation that the airport has an approved airport layout plan (ALP) and a five year capital improvement plan indicating all eligible grant projects either seeking to be funded from the MAP or other portions of the Airport Improvement Program. The five year plan must also specifically identify the capacity and conversion related projects, associated costs and projected five year schedule of project construction, including those requested for consideration for 1998 MAP funding.

(7) Information identifying the existing and potential levels of visual or

instrument operations and aeronautical activity at the current or former military airport and, if applicable, the relieved airport. Also, if applicable, information on how the airport contributes to air traffic system or airport system capacity. If served by commercial air carriers, the revenue passenger and cargo levels should be provided.

(8) A description of the projected civil role and development needs for transitioning from use as a military airfield to a civil airport, as appropriate, and how development projects would serve to convert the airport to civil use and/or reduce delays at an airport with more than 20,000 hours of annual delay in commercial passenger aircraft takeoffs and landings and/or how the projects would contribute to the airport and air traffic control system capacity in a metropolitan area or reduce current or projected flight delays.

(9) A description of the existing airspace capacity. Describe how anticipated new operations would affect the surrounding airspace and air traffic flow patterns in the metropolitan area in or near which a current or former military airport is located. Include a discussion of the level to which operations at this airport create airspace conflicts that may cause congestion or whether air traffic works into the flow of other air traffic in the area.

(10) A description of the five year capital improvement plan (CIP), including a discussion of major projects, their priorities, projected schedule for project accomplishment, and estimated costs. Capacity related and/or conversion related projects should be specifically identified, especially those that the airport sponsor proposes to fund under the MAP. A copy of the CIP should also be submitted.

(11) A description of projects that are consistent with the role of the airport and effectively contribute to converting the airfield to a civil airport. Projects can be related to various improvement categories depending on the need to convert from military to civil airport use, to meet required civil airport standards, and/or required to provide capacity to the airport and/or airport system. The projects selected, i.e., safety related, conversion-related, and capacity-related, must be identified and fully explained based on the airport's planned use. The sponsor needs to submit the airport layout plan (ALP) and other maps or charts that clearly identify and help clarify the eligible projects and designate them as conversion-related, or capacity-related. It should be cross referenced with the project costs and project descriptions. Projects that could be eligible under MAP if needed for conversion-related or capacity-related purposes include:

Airside

- Modification of airport or military airfield for safety purposes or airport pavements (including widths), marking, lighting or strengthening, and of structures or other features in the airport environs to meet civil standards for airport imaginary surfaces.
- Facilities or support facilities such as passenger terminal gates, aprons for passenger terminals, taxiways to new terminal facilities, aircraft parking, and cargo facilities to accommodate civil use.
- Modification of airport or military utilities (electrical distribution systems, communications lines, water, sewer, drainage) to meet civil standards. Also, modifications that allow civil airport utilities to operate independently if other portions of the base are to parties other than the airport. (This is important where portions of the base are being transferred to an entity different from the airport sponsor.)
- Purchase, rehabilitation, or modification of airport and support facilities, including aircraft rescue and fire fighting buildings and equipment, airport security requirements, lighting vaults, and reconfiguration or relocation of buildings for more efficient civil airport operations, and snow removal equipment.
- Modification of airport or military airfield fuel systems and fuel farms to accommodate civil aviation activities.
- Acquisition of additional land for runway protection zones, other approach protection, or airport development.

Landside

- Construction of surface parking areas and access roads to accommodate automobiles in the airport terminal area and provide an adequate level of access to the airport.
- Construction or relocation of access roads to provide efficient and convenient movement of vehicular traffic to, on and from the airport, including access to passenger, air cargo, fixed base operations, and aircraft maintenance areas.
- Modification or construction of facilities such as passenger terminals, surface automobile parking, hangars, and access to cargo facilities to accommodate civil use.

(12) An evaluation of the ability of surface transportation facilities (road, rail, high speed rail, maritime) to provide intermodal connections.

(13) A description of the type and level of aviation and community interest in the civil use of a current or former military airport.

(14) One copy of the FAA approved ALP for each copy of the application. The ALP or supporting information should clearly show capacity and conversion related projects. Also, other information such as project costs, schedule, project justification, other maps and drawings showing the project locations, and any other supporting documentation that would make the application easier to understand should be included.

Current Airports Applying for Continuation

B. Airports with less than five years in the MAP need to submit the following in order to respond to this notice and remain in the program.

(1) An Application for Federal Assistance, Standard Form 424, along with the documentation and justification indicated below to request participation in the Military Airport Program. Identify the airport as one with less than five years in the MAP applying for continuation.

(2) Identify the existing and potential levels of visual or instrument operations and aeronautical activity at the current or former military airport and the relieved airport if there is any change from the previous information submitted.

(3) Provide a detailed discussion of the projected civil role and continuing development needs for converting a military airfield to a civil airport, and/or how development projects would reduce delays at an airport with more than 20,000 hours of annual delay in commercial passenger aircraft takeoffs and landings, if applicable.

(4) Describe the five year CIP, including a discussion of major projects, their priorities, projected schedule for project accomplishment, and estimated costs, annotated and identified as capacity related, and/or conversion related purposes.

(5) Submit one copy of the FAA approved ALP for each copy of the application. The ALP should clearly show the CIP projects. Also include any other information or drawings that would show and/or clarify the five year plan identifying capacity, and conversion related projects, associated costs, schedule, and project justification.

Airports that have already submitted this information for the 1997 Military Airport Program and have been continued only need to submit updated information and changes in order to continue receiving grants under this program.

Redesignation of Airports Previously Designated and Applying for Another Five-Year Term in the Program

C. Airports applying for another five years in the Military Airport Program need to submit the information required by new candidate airports applying for a new designation. They need to explain in their application why another five-year term is needed to accomplish the conversion to the civil role of the airport.

This notice is issued pursuant to section 49 U.S.C. 47118.

Issued at Washington, DC, on May 20, 1998.

Paul L. Galis,

Director, Office of Airport Planning and Programming.

Federal Aviation Administration

RTCA; Special Committee 189/Eurocae Working Group 53; Air Traffic Services (ATS) Safety and Interoperability Requirements

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (P.L. 92–463, 5 U.S.C., Appendix 2), notice is hereby given for a joint Special Committee (SC)–189/EUROCAE Working Group (WG)–53 meeting to be held June 15–19, 1998, starting at 9:00 a.m. on June 15. The meeting will be held at Eurocontrol, 96 Rue de la Fusee, Brussels, Belgium (phone +32 2 729 90 11, fax +32 2 729 90 44).

The agenda will be as follows: Monday, June 15: Opening Plenary Session Convenes at 9:00 a.m.: (1) Introductory Remarks; (2) Review and Approval of the Agenda (Monday); (3) Review and Approval of Summary of the Previous Meeting; (4) Sub-Group and Related Reports; (5) Position Papers Planned for Plenary Agreement; (6) SC–189/WG–53 Co-chair Progress Report. Tuesday, June 16–Thursday, June 18: (7) Sub-group Meetings. Friday, June 19: Closing Plenary Session: (8) Introductory Remarks; (9) Review and Approval of Agenda (Friday); (10) Review of Preliminary Meeting Minutes; (11) Sub-group and Related Reports; (12) Position Papers Planned for Plenary Agreement; (13) SC–189/WG–53 Co-chair Progress Report and Wrap-up.

Attendance is open to the interested public but limited to space availability. With the approval of the chairman, members of the public may present oral statements at the meeting.

Persons wishing to present statements or obtain information should contact the RTCA Secretariat, 1140 Connecticut Avenue, NW., Suite 1020, Washington, DC 20036; (202) 833–9339 (phone); (202) 833–9434 (fax); or http://www.rtca.org (web site). Members of the public may present a written statement to the committee at any time.

Issued in Washington, DC, on May 19, 1998.

Janice L. Peters,

Designated Official.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent To Rule on Application To Impose and Use the Revenue From a Passenger Facility Charge (PFC) at Manchester Airport

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent to rule on application.

SUMMARY: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a Passenger Facility Charge at Manchester Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

DATES: Comments must be received on or before June 26, 1998.

ADDRESSES: Comments on this application may be mailed or delivered in triplicate to the FAA at the following address: Federal Aviation Administration, Airport Division, 12 New England Executive Park, Burlington, Massachusetts 01803.

In addition, one copy of any comments submitted to the FAA must be mailed or delivered to Mr. Alfred Testa, Jr., Airport Director for Manchester Airport at the following address: Manchester Airport, One Airport Road, Suite 300, Manchester, New Hampshire, 03103.

Air carriers and foreign air carriers may submit copies of written comments previously provided to the City of Manchester under section 158.23 of Part 158 of the Federal Aviation Regulations.

FOR FURTHER INFORMATION CONTACT: Priscilla A. Scott, PFC Program Manager, Federal Aviation Administration, Airports Division, 12 New England Executive Park, Burlington, Massachusetts 01803, (781) 238–7614. The application may be reviewed in person at 16 New England Executive Park, Burlington, Massachusetts.

SUPPLEMENTARY INFORMATION: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a Passenger Facility Charge (PFC) at Manchester Airport under the provisions of the Aviation Safety and Capacity Expansion act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

On May 5, 1998, the FAA determined that the application to impose and use the revenue from a PFC submitted by the City of Manchester was substantially complete within the requirements of section 158.25 of Part 158 of the Federal Aviation Regulations. The FAA will approve or disapprove the application, in whole or in part, no later than August 3, 1998.

The following is a brief overview of the use application.

PFC Project#: 98–07–C–00–MHT.

Level of the proposed PFC: $3.00.

Charge effective date: October 1, 1998.

Estimated charge expiration date: October 1, 2016.

Estimated total net PFC revenue: $84,643,00.

Brief description of project: Runway 6/24 System, Construct Two Remote Parking Aprons, Acquire Stead Aviation.

Class or classes of air carriers which the public agency has requested not be required to collect PFCs: Air Taxi/Commercial Operators (ATCO).

Any person may inspect the application in person at the FAA office listed above under **FOR FURTHER INFORMATION CONTACT.**

In addition, any person may, upon request, inspect the application, notice and other documents germane to the application in person at the Manchester Airport, One Airport Road, Suite 300, Manchester, New Hampshire 03103.

Issued in Burlington, Massachusetts on May 13, 1998.

Vincent A. Scarano,

Manager, Airports Division, New England Region.

[FR Doc. 98–13996 Filed 5–26–98; 8:45 am]

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Gasconade and Montgomery Counties, MO

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an Environmental Impact Statement (EIS) will be prepared for proposed replacement of the Missouri Route 19 bridge and appurtenant roadways/ structures over the Missouri River at Hermann in Gasconade and Montgomery Counties, Missouri.

FOR FURTHER INFORMATION CONTACT: Donald Neumann, Programs Engineer, FHWA Division Office, 209 Adams St., Jefferson City, MO 65101, Telephone: (573) 636–7104 or Phil Broyles, District Engineer, Missouri Department of Transportation, P.O. Box 1067, Hannibal, MO 63401, Telephone: (573) 248–2490.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the Missouri Department of Transportation (MoDOT), will prepare an EIS on a proposal to reconstruct the Missouri Route 19 bridge and appurtenant roadways/structures over the Missouri River at Hermann in Gasconade and Montgomery Counties, Missouri. The United States Army Corps of Engineers and the United States Coast Guard are expected to be cooperating agencies on this project.

The study area is roughly bounded by Missouri Route 94 one mile north of the existing bridge, a point two miles south of the bridge, and 1.5 miles east and west of the bridge.

Reconstructing the Missouri Route 19 bridge is being considered to provide a safe and efficient crossing of the Missouri River. The existing bridge, which was constructed in 1922, is considered structurally deficient. It has a sufficiency rating of 18 on a scale of 100. MoDOT considers bridges with sufficiency ratings below 50 as candidates for replacement. Alternatives under consideration include (1) no build; (2) build adjacent to the existing bridge; (3) build a new bridge east or west of the existing structure.

Information describing the proposed action and solicitation for comments will be sent to appropriate federal, state, and local agencies, and to private organizations and citizens who have previously expressed or are known to have interest in this proposal. As part of the scoping process, an interagency coordination meeting will be held. Agencies having an interest in, or jurisdiction regarding the proposed action will be contacted regarding the date and location of the meeting. Public meetings, information centers and advisory committee meetings will be held to solicit public and agency input on the reasonable range of alternatives. In addition, a public hearing will be held to present the findings of the draft EIS (DEIS). Public notice will be given announcing the time and place of the public meetings and hearing. The DEIS will be available for public and agency review and comment prior to the public hearing.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA or MoDot at the addresses provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12373 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Issued: May 15, 1998.

Donald L. Neumann,

Programs Engineer, Jefferson City.

BILLING CODE 4910–22–M

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–97–3154]

Cooper Tire & Rubber Company; Grant of Application for Decision of Inconsequential Noncompliance

Cooper Tire & Rubber Company (Cooper) of Findlay, Ohio has determined that some of its tires fail to comply with the labeling requirements of 49 CFR Part 574 "Tire Identification and Recordkeeping," and has filed an appropriate report pursuant to 49 CFR Part 573, "Defect and Noncompliance Reports." Cooper has also applied to be exempted from the notification and remedy requirements of 49 U.S.C. Chapter 301—"Motor Vehicle Safety" on the basis that the noncompliance is inconsequential to motor vehicle safety.

Although the applicant expresses noncompliance with Part 574, NHTSA considers this to be a noncompliance with Federal Motor Vehicle Safety Standard (FMVSS) No. 119, New pneumatic tires for vehicles other than passenger cars. Paragraph S6.5(b) of FMVSS No. 119 requires each tire to be marked with a "tire identification number" required by Part 574 of this chapter. If a tire lacks this number, it fails to comply with FMVSS No. 119 and is subject to notification and remedy.

Notice of receipt of the application was published, with a 30-day comment period, on December 17, 1997, in the **Federal Register** (62 FR 66176). NHTSA received no comments on this application during the 30-day comment period.

In § 574.5(d) Fourth Grouping, the manufacturer is required to identify the week and year of manufacture of tires using three symbols. The first two symbols identify the week of the year using "01" for the first full calendar week in each year. The third symbol identifies the year. The purpose of this information is to facilitate the notification of dealers, distributors, and purchasers regarding defective or non-conforming tires, pursuant to Sections 30118 and 30119 of Title 49, United States Code, so that the appropriate remedial action can be taken in the interest of public safety.

During the thirty-second week of 1997, Cooper produced and inadvertently shipped twenty-eight (28) tires without the date code. This occurred after the tires originally were labeled with the correct date code upside-down; Cooper removed the improperly oriented date code by buffing. The tires were then inadvertently shipped with only the identification of "DOT UPOP"—where "UP" is the identification code for Cooper's Findlay plant and "OP" is the identification of the tire size. The subject tires are Cooper SRM Radial LT 215/85R16, Load Range D.

Cooper supports its application for inconsequential noncompliance with the following:

> "The incomplete DOT identification code on each tire does not present a safety-related defect."
>
> "The involved tires are capable of being registered with UPOP. They have a unique DOT identification which would permit Cooper to notify the purchasers of these tires, if properly registered, should they be recalled for other reasons."
>
> "The involved tires produced from this mold during the aforementioned production period comply with all other requirements of 49 CFR 571.119 and 574.5."

The agency has reviewed Cooper's application and believes this labeling noncompliance is inconsequential to motor vehicle safety. This mislabeling

involves an inadvertently omitted date code containing the week and year of manufacture designation.

The agency believes that in the case of a tire mislabeling noncompliance, such as this, the true measure of its inconsequentiality to motor vehicle safety is, if the tires were to be recalled for a performance-related noncompliance, that was consequential to safety, whether the mislabeling would affect the manufacturers's ability to locate them. Cooper states that in the event of recall, the non-complying tires have a unique DOT identification (i.e., the lack of a date code) that would allow Cooper to notify the purchasers, if the tires have been properly registered by the retailer or the purchaser. Therefore, if the need arises, identifying the subject tires for any future recalls should not present a problem.

In consideration of the foregoing, NHTSA has decided that the applicant has met its burden of persuasion that the noncompliance it describes is inconsequential to safety. Accordingly, its application is granted, and the applicant is exempted from providing the notification of the noncompliance that is required by 49 U.S.C. 30118, and from remedying the noncompliance, as required by 49 U.S.C. 30120.

(49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.50 and 501.8)

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[STB Finance Docket No. 33596]

Capital Metropolitan Transportation Authority—Acquisition Exemption—City of Austin, TX

Capital Metropolitan Transportation Authority (Capital Metro),[1] a noncarrier, has filed a notice of exemption under 49 CFR 1150.31 to acquire the City of Austin's Giddings-Llano line, a 162 mile continuous railroad right-of-way (including spurs), extending from SPTC milepost 57.00/AUNW milepost 0, near Giddings, TX, to SPTC milepost 99.04/AUNW milepost 154.07, near Llano, TX, including the Marble Falls Branch from milepost 6.2/AUNW milepost 61.2, near Marble Falls, TX, to SPTC milepost 0.0/AUNW milepost 124.7, near Fairland, TX.[2]

The transaction is expected to be consummated on May 22, 1998.

If the verified notice contains false or misleading information, the exemption is void *ab initio*. Petitions to reopen the proceeding to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the transaction.

An original and 10 copies of all pleadings, referring to STB Finance Docket No. 33596, must be filed with the Surface Transportation Board, Office of the Secretary, Case Control Unit, 1925 K Street, N.W., Washington, DC 20423–0001. In addition, a copy of each pleading must be served on Monica J. Palko, Esq., Bracewell & Patterson, L.L.P., 2000 K Street, N.W., Suite 500, Washington, D.C. 20006.

Board decisions and notices are available on our website at "WWW.STB.DOT.GOV."

Decided: May 20, 1998.

By the Board, Joseph H. Dettmar, Acting Director, Office of Proceedings.

Vernon A. Williams,

Secretary.

Department of Education

Applications Invitation for New Awards for Fiscal Year 1998; Notices

VOL 63 ISS 101 MAY 27 1998 UMI

DEPARTMENT OF EDUCATION

Notice Inviting Applications for New Awards for Fiscal Year 1998

SUMMARY: On June 4, 1997, the President signed into law Pub. L. 105–17, the Individuals with Disabilities Education Act Amendments of 1997, amending the Individuals with Disabilities Education Act (IDEA).

This notice provides closing dates and other information regarding the transmittal of applications for fiscal year 1998 competitions under two programs authorized by IDEA, as amended. The two programs are: (1) Special Education—Personnel Preparation to Improve Services and Results for Children with Disabilities (two priorities); and (2) Special Education—Training and Information for Parents of Children with Disabilities (one priority).

This notice supports the National Education Goals by helping to improve results for children with disabilities.

Waiver of Rulemaking

It is generally the practice of the Secretary to offer interested parties the opportunity to comment on proposed priorities. However, section 661(e)(2) of IDEA makes the Administrative Procedure Act (5 U.S.C. 553) inapplicable to the priorities in this notice. In order to make awards on a timely basis, the Secretary has decided to publish these priorities in final under the authority of section 661(e)(2).

General Requirements

(a) Projects funded under this notice must make positive efforts to employ and advance in employment qualified individuals with disabilities in project activities (see Section 606 of IDEA);

(b) Applicants and grant recipients funded under this notice must involve individuals with disabilities or parents of individuals with disabilities in planning, implementing, and evaluating the projects (see Section 661(f)(1)(A) of IDEA); and

(c) Projects funded under these priorities must budget for a two-day Project Directors' meeting in Washington, D.C. during each year of the project.

Note: The Department of Education is not bound by any estimates in this notice.

Special Education—Personnel Preparation To Improve Services and Results for Children With Disabilities [CFDA 84.325]

Purpose of Program: The purposes of this program are to (1) help address State-identified needs for qualified personnel in special education, related services, early intervention, and regular education, to work with children with disabilities; and (2) to ensure that those personnel have the skills and knowledge, derived from practices that have been determined through research and experience to be successful, that are needed to serve those children.

Eligible Applicants: State and local educational agencies; institutions of higher education; other public agencies; private nonprofit organizations; outlying areas; freely associated States; and Indian tribes or tribal organizations.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 80, 81, 82, 85, and 86; (b) The selection criteria included in regulations in 34 CFR 318.23; and (c) 34 CFR 318.31–318.33.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education only.

Priority: Under section 673 and 34 CFR 75.105(c)(3), the Secretary gives an absolute preference to applications that meet the following priorities. The Secretary funds under this competition only those applications that meet these absolute priorities:

Absolute Priority 1—Projects of National Significance (84.325N)

The Secretary establishes an absolute priority to support projects that address issues of national significance and have broad applicability. Projects supported under this priority must develop, implement, and evaluate innovative models that will serve as blueprints for improving the preparation and ongoing development of early intervention personnel, general and special education teachers, administrators, related service personnel, and paraprofessionals who have responsibility for ensuring that children with disabilities achieve to high standards and become independent, productive citizens.

Priority: A project of national significance must:

(a) Include a detailed description of a personnel preparation model, including descriptions of: the population(s) that the model is designed to serve; the content and expected outcomes of the model; the processes for, and costs involved with, implementation and ongoing evaluation; and the organizational and contextual factors that may either facilitate or impede implementation of the model. The model must—

(1) Be guided by a conceptual framework that integrates all proposed model components; and

(2) Incorporate relevant, research-based curricular content and pedagogical practice;

(b) Provide substantial evidence that the proposed model will serve a broad-based need;

(c) Establish an advisory panel of relevant stakeholders and potential users to provide guidance that will help to assure that the model developed has broad applicability;

(d) Conduct ongoing formative evaluations of project activities, and a final evaluation to assess the success of the model in enhancing the skills, knowledge, and practices of professional personnel that will lead to improved results for children with disabilities;

(e) Produce a model "blueprint" or case study that would permit others to replicate the model and includes comprehensive information related to paragraphs (a) and (b), and comprehensive outcomes of the final evaluation required under paragraph (d); and

(f) In addition to the annual two day Project Directors' meeting in Washington, D.C. mentioned in the General Requirements section of this notice, budget for another annual two-day trip to Washington, D.C. to collaborate with the Federal project officer and other projects funded under this priority by sharing information and discussing model development, implementation, evaluation and dissemination issues, including the carrying out of cross-project dissemination activities.

Invitational Priorities

Within this absolute priority, the Secretary is particularly interested in applications that meet one of the following invitational priorities. However, under 34 CFR 75.105(c)(1) an application that meets one or more of these invitational priorities does not receive competitive or absolute preference over other applications:

(a) Projects that improve the ability of school principals and other local educational agency administrators to provide leadership in meeting the needs of children with disabilities through:

(1) Model preservice programs for the training and certification of school administrators (including principals and other instructional leaders) that incorporate relevant special education content and provide for trainees to apply special education knowledge in field-based practice opportunities; or,

(2) Model projects that provide ongoing training for practicing school principals, LEA administrators, local school board members, and other local

decision makers in order to improve the ability of such individuals to make informed instructional and policy-related decisions regarding the provision of appropriate, beneficial services and supports for children with disabilities.

(b) Projects that improve the training of paraprofessionals to meet the needs of children, K through age 21, with high- or low-incidence disabilities, in general education classrooms through:

(1) Model preservice programs for the training and certification of paraprofessionals that incorporate relevant special and regular education content and provide opportunities for trainees to apply their knowledge and skills in field-based practice;

(2) Model inservice programs for current paraprofessionals to improve their knowledge, skills, and practices; or,

(3) Model pre- or inservice programs that incorporate content for teachers to supervise and work more effectively with paraprofessionals.

Project Period: Up to 36 months.

Maximum Award: The Secretary rejects and does not consider an application that proposes a budget exceeding $200,000 for any single budget period of 12 months. The Secretary may change the maximum amount through a notice published in the **Federal Register**.

Page Limits: Part III of the application, the application narrative, is where an applicant addresses the selection criteria that are used by reviewers in evaluating an application. An applicant must limit Part III to the equivalent of no more than 40 double-spaced pages, using the following standards: (1) A "page" is 8½" x 11" (on one side only) with one-inch margins (top, bottom, and sides). (2) All text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs, must be double-spaced (no more than 3 lines per vertical inch). If using a proportional computer font, use no smaller than a 12-point font, and an average character density no greater than 18 characters per inch. If using a nonproportional font or a typewriter, do not use more than 12 characters to the inch.

The page limit does not apply to Part I—the cover sheet; Part II—the budget section (including the narrative budget justification); Part IV—the assurances and certifications; or the one-page abstract, resumes, bibliography, and letters of support. However, all of the application narrative must be included in Part III. If an application narrative uses a smaller print size, spacing, or margin that would make the narrative exceed the equivalent of the page limit, the application will not be considered for funding.

Program Authority: Section 673 of the Act.

Absolute Priority 2—Partnerships to Link Personnel Training and School Practice [84.325P].

Background

Teachers need to be prepared to provide effective instruction across the full range of student abilities. More than 90 percent of all students with disabilities spend at least a portion of their school day in a general education classroom. The movement toward inclusive education in today's schools requires that general and special education teachers work together to meet the needs of students with disabilities. However, extensive data indicate that general education teachers do not feel that they have the knowledge and skills necessary to meet the educational needs of these students in their classrooms and that special education teachers are required to assume roles (e.g., consulting with general education teachers, co-teaching in general education classrooms, and supervising paraprofessional staff) for which they are insufficiently prepared.

In order to meet the challenge of preparing general and special education teachers to be effective in addressing the needs, and improving the results, of students with disabilities in inclusive schools, teacher preparation programs must be grounded in the structural, organizational, and instructional realities of schools, while schools must facilitate continuous improvement of teacher knowledge and skills. Institutions that prepare teachers and the schools in which teachers work both have a responsibility to ensure that teachers (special and regular education) can effectively fulfill their roles in working with children with disabilities. Too often the sole relationship between preparation programs and local schools is limited to setting up practicum settings for trainees. Faculty members at Institutions of Higher Education (IHEs) are often minimally involved in practicum supervision. Universities and schools can no longer afford to work in isolation. Similarly, training regular and special education teachers can no longer be viewed as separate functions. The following priority is intended to develop models for building and enhancing partnerships between training institutions and local schools in order to strengthen the quality and effectiveness of preservice preparation programs and ongoing professional development activities for teachers and instructional leaders (both special and regular education) who serve children with disabilities.

The power of the partnerships supported through this priority should not be underestimated. The Secretary expects projects to develop models that intersect between preservice and inservice development for professional personnel and will have a significant impact on the improvement of educational practices that will lead to better results for children. It is intended that these models will provide a means by which local schools and IHEs can simultaneously improve their work and effectiveness.

Priority: The Secretary establishes an absolute priority to support projects that develop, implement, and evaluate innovative models for engaging general education and special education faculty in IHEs and general education and special education teachers and instructional leaders in local schools and districts in a dynamic and enduring partnership to enhance and simultaneously improve the quality of preservice preparation and ongoing professional development of teachers and instructional leaders. Partnership activities must be designed to ensure that both special education and regular education professionals have the knowledge and skills necessary to improve results for children with disabilities.

Projects funded under this priority must:

(a) Develop a partnership model for linking IHE personnel training programs with local school practice that is guided by a conceptual framework incorporating relevant, research-based knowledge and practice. The partnership model must include the following features:

(1) A systematic approach to professional development at all stages of the training continuum by focusing on continuous learning by teachers, instructional leaders, and faculties of IHE education programs;

(2) The integration of theory and practice to produce more practical, contextualized theory and more theoretically grounded, broadly informed practice;

(3) A strong commitment to research-based change that is continually responsive to personnel needs and to advances in the knowledge base; and

(4) A description of the benefits that will accrue to all stakeholders, including, but not limited to, IHE faculty, teachers in training, practicing professionals in local schools, and students with disabilities, as a result of

the implementation of the proposed partnership model.

(b) Provide substantial evidence that the proposed model will serve a broad-based need.

(c) Establish an advisory panel of relevant stakeholders and potential users to provide guidance that will help to assure the model developed has broad applicability.

(d) Include the following partnerships activities:

(1) Identification of a common core of knowledge and skills that are appropriate for all prospective general and special education teachers, are aligned with critical teaching standards and with high student content and performance standards, and for which there is broad based support among all stakeholders;

(2) Clarification of the current and emerging roles and responsibilities of special educators in inclusive schools, including identification of the specialized knowledge and skill competencies that these educators must perform effectively, and for which there is broad based support among all stakeholders;

(3) Modification of curricula and materials used for preservice preparation of general and special education teachers that is consistent with the requirements under paragraph (a) and is conducted through collaboration between IHEs and schools or districts; and

(4) Development of an approach for providing intensive, ongoing professional development that will advance the career-long learning of school and IHE personnel and ensure that children with disabilities achieve to high standards.

(e) Conduct ongoing formative evaluations of project activities, and a final evaluation to assess the success of the partnership model in enhancing the skills, knowledge, and practices of professional personnel that will lead to improved results for children with disabilities.

(f) Develop a plan for sustaining implementation of the model beyond the period of Federal funding for this project.

(g) Produce a model "blueprint" or case study that would permit others to replicate or implement the model and includes comprehensive information related to paragraphs (a) through (d) and comprehensive outcomes of the final evaluation required under paragraph (e).

(h) In addition to the annual two day Project Directors' meeting in Washington, DC, mentioned in the General Requirements section of this notice, budget for another annual two-day trip to Washington, DC, to collaborate with the Federal project officer and other projects funded under this priority by sharing information and discussing model development, implementation, and dissemination issues, including the carrying out of cross-project dissemination activities.

Under this priority, the project period is up to 60 months subject to the requirements of 34 CFR 75.253(a) for continuation awards. In determining whether to continue the project for the fourth and fifth years of the project period, the Secretary, in addition to the requirements of 34 CFR 75.253(a), will consider—

(a) The recommendation of a review team consisting of three experts selected by the Secretary. The services of the review team, including a two-day site visit to the project, are to be performed during the last half of the project's second year and may be included in that year's evaluation required under 34 CFR 75.590. Costs associated with the services to be performed by the review team must also be included in the project's budget for year two. These costs are estimated to be approximately $4,000;

(b) The timeliness and effectiveness with which all requirements of the grant have been or are being met by the project; and

(c) The degree to which the project's design and methodology demonstrates the potential for advancing significant new knowledge.

Project Period: Up to 60 months.

Maximum Award: The Secretary rejects and does not consider an application that proposes a budget exceeding $300,000 for any single budget period of 12 months. The Secretary may change the maximum amount through a notice published in the **Federal Register**.

Page Limits: Part III of the application, the application narrative, is where an applicant addresses the selection criteria that are used by reviewers in evaluating an application. An applicant must limit Part III to the equivalent of no more than 50 double-spaced pages, using the following standards: (1) A "page" is 8" x 11" (on one side only) with one-inch margins (top, bottom, and sides). (2) All text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs, must be double-spaced (no more than 3 lines per vertical inch). If using a proportional computer font, use no smaller than a 12-point font, and an average character density no greater than 18 characters per inch. If using a nonproportional font or a typewriter, do not use more than 12 characters to the inch.

The page limit does not apply to Part I—the cover sheet; Part II—the budget section (including the narrative budget justification); Part IV—the assurances and certifications; or the one-page abstract, resumes, bibliography, and letters of support. However, all of the application narrative must be included in Part III. If an application narrative uses a smaller print size, spacing, or margin that would make the narrative exceed the equivalent of the page limit, the application will not be considered for funding.

Program Authority: Section 673 of IDEA.

Special Education—Training and Information for Parents of Children With Disabilities [CFDA 84.328C]

Purpose of Program: The purpose of this program is to support local parent organizations to help ensure that underserved parents of children with disabilities, including low-income parents, parents of children with limited English proficiency, and parents with disabilities, have the training and information they need to enable them to participate effectively in helping their children with disabilities.

Eligible Applicants: Local parent organizations must meet the criteria in section 682(g) of the Act, and also must meet one of the following criteria—

(a) Have a board of directors the majority of whom are from the community to be served; or

(b) Have as part of its mission, serving the interests of individuals with disabilities from such community; and have a special governing committee to administer the project, a majority of the members of which are individuals from such community; examples of administrative responsibilities include controlling the use of the project funds, and hiring and managing project personnel.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 80, 81, 82, and 85; and (b) the selection criteria included in 34 CFR 316.22.

Priority: Under sections 661(e)(2) and 683 of the Act, and 34 CFR 75.105(c)(3), the Secretary gives an absolute preference to applications that meet the following priority. The Secretary funds under this competition only those applications that meet this absolute priority:

Absolute Priority—Community Parent Resource Centers (84.029C)

The purpose of this statutory priority is to support local parent training and

information centers that will help ensure that underserved parents of children with disabilities, including low-income parents, parents of children with limited English proficiency, and parents with disabilities, have the training and information they need to enable them to participate effectively in helping their children with disabilities to—

(a) Meet developmental goals and, to the maximum extent possible, those challenging standards that have been established for all children; and

(b) Be prepared to lead productive independent adult lives, to the maximum extent possible.

Each community parent training and information center supported under this priority must—

(a) Provide training and information that meets the training and information needs of parents of children with disabilities proposed to be served by the project;

(b) Assist parents to understand the availability of, and how to effectively use, procedural safeguards under Section 615 of the Act, including encouraging the use, and explaining the benefits, of alternative methods of dispute resolution, such as the mediation process described in the Act;

(c) Serve the parents of infants, toddlers, and children with the full range of disabilities by assisting parents to—

(1) Better understand the nature of their children's disabilities and their educational and developmental needs;

(2) Communicate effectively with personnel responsible for providing special education, early intervention, and related services;

(3) Participate in decision making processes and the development of individualized education programs and individualized family service plans;

(4) Obtain appropriate information about the range of options, programs, services, and resources available to assist children with disabilities and their families;

(5) Understand the provisions of the Act for the education of, and the provision of early intervention services to, children with disabilities; and

(6) Participate in school reform activities;

(d) Contract with the State education agencies, if the State elects to contract with the community parent resource centers, for the purpose of meeting with parents who choose not to use the mediation process, to encourage the use and explain the benefits of mediation, consistent with Sections 615(e)(2)(B) and (D) of the Act;

(e) In order to serve parents and families of children with the full range of disabilities, network with appropriate clearinghouses, including organizations conducting national dissemination activities under section 685(d) of the Act, and with other national, State, and local organizations and agencies, such as protection and advocacy agencies;

(f) Establish cooperative partnerships with the parent training and information centers funded under Section 682 of the Act;

(g) Be designed to meet the specific needs of families who experience significant isolation from available sources of information and support; and

(h) Annually report to the Secretary on—

(1) The number of parents to whom it provided information and training in the most recently concluded fiscal year, and

(2) The effectiveness of strategies used to reach and serve parents, including underserved parents of children with disabilities.

Competitive Priorities: Within this Absolute Priority, the Secretary, under 34 CFR 75.105(c)(2)(i), gives preference to applications that meet one or both of the following competitive priorities:

The Secretary awards 20 points to an application submitted by a local parent organization that has a board of directors, the majority of whom are parents of children with disabilities, from the community to be served. These points are in addition to any points the application earns under the selection criteria for the program.

The Secretary awards 10 points to an application that provides parent training and information in one or more Empowerment Zones or Enterprise Communities in a manner that meets the competitive priority relating to Empowerment Zones or Enterprise Communities published in the **Federal Register** on November 7, 1994 (59 FR 55534). A list of areas that have been selected as Empowerment Zones or Enterprise Communities is included in the application package. These points are in addition to any points the application earns under the selection criteria for the program.

Project Period: Up to 36 months.

Project Award: Projects will not be funded in excess of $100,000 for any single budget period of 12 months.

Program Authority: Section 683 of the Act.

For Applications and General Information Contact: Requests for applications and general information should be addressed to the Grants and Contracts Services Team, 600 Independence Avenue, S.W., room 3317, Switzer Building, Washington, D.C. 20202–2641. The preferred method for requesting information is to FAX your request to: (202) 205–8717. Telephone: (202) 260–9182.

Individuals who use a telecommunications device for the deaf (TDD) may call the TDD number: (202) 205–8953.

Individuals with disabilities may obtain a copy of this notice or the application packages referred to in this notice in an alternate format (e.g. Braille, large print, audiotape, or computer diskette) by contacting the Department as listed above. However, the Department is not able to reproduce in an alternate format the standard forms included in the application package.

Intergovernmental Review

These programs are subject to the requirements of Executive Order 12372 and the regulations in 34 CFR Part 79. The objective of the Executive order is to foster an inter-governmental partnership and a strengthened federalism by relying on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

In accordance with the order, this document is intended to provide early notification of the Department's specific plans and actions for those program.

14 CFR Part 25

[Docket No. 28643; Amdt. No. 25–97]

RIN 2120–AF83

Braked Roll Conditions

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment to the airworthiness standards for transport category airplanes adds a new design standard that requires that the airplane be designed to withstand main landing gear maximum braking forces during ground operations. This amendment will ensure that the landing gear and fuselage are capable of withstanding the dynamic loads associated with the maximum dynamic braking condition. It also relieves a burden on industry by eliminating differences between the Federal Aviation Regulations (FAR) and European Joint Aviation Requirements (JAR), while maintaining a level of safety provided by the current regulations and industry practices.

EFFECTIVE DATE: June 26, 1998.

FOR FURTHER INFORMATION CONTACT: Jim Haynes, FAA, Airframe and Airworthiness Branch (ANM–115), Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington 98055–4056; telephone (425) 227–2131; facsimile (425) 227–1320.

SUPPLEMENTARY INFORMATION:

Availability of Final Rule

An electronic copy of this document may be downloaded using a modem and suitable communications software from the FAA regulations section of the FedWorld electronic bulletin board service (telephone: 202–512–1661) or the FAA's Aviation Rulemaking Advisory Committee Bulletin Board service (telephone: 800–FAA–ARAC).

Internet users may reach the FAA's web page at http://www.faa.gov or the **Federal Register**'s webpage at http://www.access.gpo.gov/su—docs for access to recently published rulemaking documents.

Any person may obtain a copy of this final rule by submitting a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue, SW., Washington, DC 20591, or by calling (202) 267–9680. Communications must identify the amendment number or document number of this final rule.

Persons interested in being placed on the mailing list for future notices of proposed rulemaking and final rules should request from the above office a copy of Advisory Circular (AC) No. 11–2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

Small Entity Inquiries

The Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA) requires the FAA to report inquiries from small entities concerning information on, and advice about, compliance with statutes and regulations within the FAA's jurisdiction, including interpretation and application of the law to specific sets of facts supplied by a small entity.

The FAA's definitions of small entities may be accessed through the FAA's web page (http://www.faa.gov.avr/arm/sbrefa.htm), by contacting a local FAA official, or by contacting the FAA's Small Entity Contact listed below.

If you are a small entity and have a question, contact your local FAA official. If you do not know how to contact your local FAA official, you may contact Charlene Brown, Program Analyst Staff, Office of Rulemaking, ARM–27, Federal Aviation Administration, 800 Independence Avenue, SW, Washington, DC 20591, 1–888–551–1594. Internet users can find additional information on SBREFA in the "Quick Jump" section of the FAA's web page at http://www.faa.gov and may send electronic inquiries to the following internet address: 9–AWA–SBREFA@faa.dot.gov.

Background

This amendment is based on Notice of Proposed Rulemaking (NPRM) 96–10, which was published in the **Federal Register** on August 5, 1996 (61 FR 40710). The notice was based on a need to protect the airframe structure from damage during hard application of the brakes.

The current 14 CFR part 25 airworthiness standards, § 25.493, and its predecessor rule, § 4b.235(b) of the Civil Air Regulations (CAR), prescribe braked roll conditions that the airplane structure and landing gear must be designed to withstand during airplane taxiing with a constant (steady) application of brakes ("braked roll" condition). The taxi condition is generally the most critical condition regarding nose gear and forward fuselage loading during the braking event, due to the increased braking coefficient of friction at low speeds and the lack of lift on the wings and lack of aerodynamic damping. Both rules treat the braked roll condition as a static equilibrium condition. Neither rule accounts for the dynamic loads on the nose gear and fuselage associated with pitch inertia of the airplane due to rapid application of main landing gear brakes. Adequate strength has been achieved on existing airplanes by application of other part 25 design requirements and by the manufacturers' need to comply with the more stringent British Civil Airworthiness Requirements (BCAR).

For many years the BCAR have included a dynamic braking condition that requires that consideration be given to the maximum likely combination of dynamic vertical reaction and sudden increase in drag load that could occur on the nose gear as a result of sudden main gear braking while encountering obstacles. The BCAR address obstacles such as overruns onto semi-prepared surfaces during rejected takeoffs, running off the edge then back on to the runway during avoidance maneuvers, running over displaced or lowered edges of runway paving, and inadvertent use of runways under repair. In application of the BCAR requirement, it was found that U.S. designed airplanes generally have had adequate strength to meet this condition without requiring any modifications. However, this may not always be the case, especially if new airplane designs are significantly different from past conventional configurations in vertical and longitudinal mass distributions of fuel, payload, engine location, etc. As the takeoff weight increases with respect to landing weight, the dynamic braked roll condition can become more critical for the nose gear and fuselage. This amendment will ensure that all future airplanes will be provided with adequate strength in the fuselage and nose landing gear to carry these loads.

In 1988, the FAA, in cooperation with the JAA and other organizations representing the American and European aerospace industries, began a process to harmonize the airworthiness requirements of the United States and the airworthiness requirements of Europe. The objective was to achieve common requirements for the certification of transport airplanes without a substantive change in the level of safety provided by the regulations. Other airworthiness authorities such as Transport Canada also participated in this process.

In 1992, the harmonization effort was undertaken by the Aviation Rulemaking Advisory Committee (ARAC). A working group of industry and government structural loads specialists of Europe, the United States, and

Canada was chartered by notice in the **Federal Register** (58 FR 13819, March 15, 1993) to harmonize the design loads sections of Subpart C of part 25. The harmonization effort on the braked roll rule was accomplished and a specific proposal was recommended to the FAA by letter dated November 6, 1995. The FAA concurred with the recommendation, and published Notice 96–10 in the **Federal Register** on August 5, 1996, for public comment.

Interested persons have been given an opportunity to participate in this rulemaking and due consideration has been given to all matters presented. Comments received in response to Notice 96–10 are discussed below.

Discussion of Comments

The FAA received three comments in response to Notice 96–10. Two of these commenters support the proposal, one with comment, while the third commenter objects to the proposal.

One commenter, representing the aviation industry, supports the proposal but expresses concern about possible interpretation of the rule. This commenter states that it is industry's belief that the proposed rule represented a harmonized position on both the rule and the interpretative advisory material; specifically, the commenter supports JAA interpretation and advisory material which allows use of a coefficient of friction less than 0.80, when substantiated, in the formula of § 25.493(c). The commenter requests that this interpretation be clarified. The coefficient of friction of 0.80 between the tire and ground surface has been used for structural design of the landing gear and structure since it was codified in the Civil Air Regulations (CAR Part 4b). The FAA has allowed a lower drag reaction in those cases where it can be substantiated that an effective drag force of 0.80 times the vertical reaction cannot be attained under any likely loading condition. This has generally been interpreted to mean that a lower drag force may be used where maximum brake torque is the limiting factor. This allowance is provided in the current regulation and is unchanged by this amendment. A value of 0.80 remains as the value of the coefficient of friction in the regulatory formula of § 25.493(e).

One commenter, an aircraft manufacturer, believes the proposed regulation is unnecessary because the braked roll condition is not the loading condition that determines the design of the nose gear and fuselage. The commenter states that a three point landing is typically the load condition which determines the design of the landing gear structure, which is far more severe than the braked roll conditions addressed in the notice. The FAA agrees that this may be true for most airplane designs; however, it is not always the case. The FAA considers the rule necessary to ensure proper landing gear designs for those airplanes that are affected by the braked roll condition.

In view of the above, part 25 is amended as proposed in Notice 96–10.

Regulatory Evaluation, Regulatory Flexibility Determination, International Trade Impact Assessment, and Unfunded Mandates Assessment

Changes to Federal regulations must undergo several economic analyses. First, Executive Order 12866 directs that each Federal agency shall propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs. Second, the Regulatory Flexibility Act of 1980 requires agencies to analyze the economic effects of regulatory changes on small entities. Third, the Office of Management and Budget directs agencies to assess the effects of regulatory changes on international trade. Fourth, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the costs, benefits and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local or tribal governments, in the aggregate, or by the private sector, of $100 million or more annually (adjusted for inflation). In conducting these analyses, which are summarized below (and available in the docket), the FAA has determined that this rule is not "a significant regulatory action" under section 3(f) of Executive Order 12866 and therefore was not reviewed by the Office of Management and Budget. The rule is not considered significant under Department of Transportation Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). In addition, for the reasons stated under the "Regulatory Flexibility Determination," the "International Trade Impact Assessment," and the "Unfunded Mandates Assessment," the FAA certifies that this rule will not have a significant economic impact on a substantial number of small entities, will not constitute a barrier to international trade, and will not result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of $100 million or more annually.

Regulatory Evaluation Summary

As stated in the preamble to the notice, the rule change will codify current industry practice (thus maintaining at least the current level of safety) and will not impose additional costs on manufacturers of transport category airplanes. Adequate strength has been achieved on existing airplanes by application of other part 25 design requirements and by manufacturers' needs to comply with the more stringent BCAR in order to sell airplanes overseas. Moreover, by conforming § 25.493 of the FAR with § 25.493 of the JAR, the new amendment will increase harmonization between American and European airworthiness standards and potentially reduce duplicate certification costs.

Regulatory Flexibility Determination

The Regulatory Flexibility Act of 1980 (RFA) was enacted by Congress to ensure that small entities are not unnecessarily or disproportionately burdened by Government regulations. The RFA requires a Regulatory Flexibility Analysis, in which alternatives are identified and evaluated, if a rule is expected to have "a significant economic impact on a substantial number of small entities." The Small Business Administration (SBA) has established standards for complying with RFA review requirements in Federal rulemaking actions; the standards specify small entity size by Standard Industrial Classification (SIC). The rule change will affect manufacturers of transport category airplanes produced under new type certificates. The SBA specifies a size threshold for classification as a small entity as 1,500 or fewer employees. Since the rule will impose no incremental costs on airplane manufacturers (and, additionally, no part 25 airplane manufacturer has 1,500 or fewer employees), the rule change will not have a significant economic impact on a substantial number of small entities.

International Trade Impact Assessment

Consistent with the Administration's belief in the general superiority, desirability, and efficacy of free trade, it is the policy of the Administrator to remove or diminish, to the extent feasible, barriers to international trade, including barriers affecting the export of American goods and services to foreign countries and barriers affecting the import of foreign goods and services into the United States.

In accordance with that policy, the FAA is committed to develop as much as possible its aviation standards and practices in harmony with its trading partners. Significant cost savings can result from this, both to United States

companies doing business in foreign markets, and foreign companies doing business in the United States.

This rule is a direct action to respond to this policy by increasing the harmonization of the U.S. Federal Aviation Regulations with the European Joint Aviation Requirements. The result will be a positive step toward removing impediments to international trade.

Unfunded Mandates Assessment

Title II of the Unfunded Mandates Reform Act of 1995 (the Act), enacted as Pub. L. 104–4 on March 22, 1995, requires each Federal agency, to the extent permitted by law, to prepare a written assessment of the effects of any Federal mandate in a proposed or final agency rule that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more (adjusted annually for inflation) in any one year. Section 204(a) of the Act, 2 U.S.C. 1534(a), requires the Federal agency to develop an effective process to permit timely input by elected officers (or their designees) of State, local, and tribal governments on a proposed "significant intergovernmental mandate." A "significant intergovernmental mandate" under the Act is any provision in a Federal agency regulation that will impose an enforceable duty upon State, local, and tribal governments, in the aggregate, of $100 million (adjusted annually for inflation) in any one year. Section 203 of the Act, 2 U.S.C. 1533, which supplements section 204(a), provides that before establishing any regulatory requirements that might significantly or uniquely affect small governments, the agency shall have developed a plan that, among other things, provides for notice to potentially affected small governments, if any, and for a meaningful and timely opportunity to provide input in the development of regulatory proposals.

The FAA has determined that this rule does not contain a significant intergovernmental or private sector mandate as defined by the Act.

Federalism Implications

The regulation amended herein will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this regulation will not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

International Civil Aviation Organization (ICAO) and Joint Aviation Regulations

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to comply with ICAO Standards and Recommended Practices to the maximum extent practicable. The FAA has determined that this rule does not conflict with any international agreement of the United States.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)), there are no reporting or recordkeeping requirements associated with this rule.

Regulations Affecting Intrastate Aviation in Alaska

Section 1205 of the FAA Reauthorization Act of 1996 (110 Stat. 3213) requires the Administrator, when modifying regulations in Title 14 of the CFR in a manner affecting intrastate aviation in Alaska, to consider the extent to which Alaska is not served by transportation modes other than aviation, and to establish such regulatory distinctions as he or she considers appropriate. Because this final rule applies to the certification of future designs of transport category airplanes and their subsequent operation, it could affect intrastate aviation in Alaska. The Administrator has considered the extent to which Alaska is not served by transportation modes other than aviation, and how the final rule could have been applied differently to intrastate operations in Alaska. However, the Administrator has determined that airplanes operated solely in Alaska would present the same safety concerns as all other affected airplanes; therefore, it would be inappropriate to establish a regulatory distinction for the intrastate operation of affected airplanes in Alaska.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration (FAA) amends 14 CFR part 25 of the Federal Aviation Regulations (FAR) as follows:

PART 25—AIRWORTHINESS STANDARDS: TRANSPORT CATEGORY AIRPLANES

1. The authority citation for part 25 continues to read:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, and 44704.

2. Section 25.493 is amended by revising paragraph (c) and by adding new paragraphs (d) and (e) to read as follows:

§ 25.493 Braked roll conditions.

* * * * *

(c) A drag reaction lower than that prescribed in this section may be used if it is substantiated that an effective drag force of 0.8 times the vertical reaction cannot be attained under any likely loading condition.

(d) An airplane equipped with a nose gear must be designed to withstand the loads arising from the dynamic pitching motion of the airplane due to sudden application of maximum braking force. The airplane is considered to be at design takeoff weight with the nose and main gears in contact with the ground, and with a steady-state vertical load factor of 1.0. The steady-state nose gear reaction must be combined with the maximum incremental nose gear vertical reaction caused by the sudden application of maximum braking force as described in paragraphs (b) and (c) of this section.

(e) In the absence of a more rational analysis, the nose gear vertical reaction prescribed in paragraph (d) of this section must be calculated according to the following formula:

$$V_N = \frac{W_T}{A+B}\left[B + \frac{f\mu AE}{A+B+\mu E}\right]$$

Where:

V_N=Nose gear vertical reaction.

W_T=Design takeoff weight.

A=Horizontal distance between the c.g. of the airplane and the nose wheel.

B=Horizontal distance between the c.g. of the airplane and the line joining the centers of the main wheels.

E=Vertical height of the c.g. of the airplane above the ground in the 1.0 g static condition.

μ=Coefficient of friction of 0.80.

f=Dynamic response factor; 2.0 is to be used unless a lower factor is substantiated. In the absence of other information, the dynamic response factor f may be defined by the equation:

$$f = 1 + \exp\left(\frac{-\pi\xi}{\sqrt{1-\xi^2}}\right)$$

Where:

ξ is the effective critical damping ratio of the rigid body pitching mode about the main landing gear effective ground contact point.

Issued in Washington, DC, on May 18, 1998.

Jane F. Garvey,

Administrator.

RIN 0660–ZA01

Public Telecommunications Facilities Program (PTFP) and PEACESAT Program

AGENCY: National Telecommunications and Information Administration, Commerce.

ACTION: Notice of applications received.

SUMMARY: The National Telecommunications and Information Administration (NTIA) previously announced the solicitation of grant applications for two programs funded from the Public Broadcasting, Facilities, Planning and Construction Funds account. This notice announces the list of applications received and notifies any interested party that it may file comments with the Agency supporting or opposing an application.

FOR FURTHER INFORMATION CONTACT: Dennis Connors, Director, Public Telecommunications Facilities Program, telephone: (202) 482–5802; fax: (202) 482–2156. Information about the PTFP can also be obtained electronically via Internet (send inquiries to http://www.ntia.doc.gov).

SUPPLEMENTARY INFORMATION:

By **Federal Register** notice dated January 5, 1998, the NTIA, within the Department of Commerce, announced that it was soliciting grant applications for the Public Telecommunications Facilities Program (PTFP). NTIA announced that the closing date for receipt of PTFP applications was 8 p.m. EST, February 12, 1998.

In all, the PTFP received 245 applications from 45 states. The total amount of funds requested by the applicants is $66.4 million.

By **Federal Register** notice dated March 19, 1998, the NTIA also announced that it was soliciting grant applications for the Pan-Pacific Education and Communications by Satellite (PEACESAT) Program. NTIA announced that the closing date for receipt of PEACESAT applications was close of business, April 20, 1998.

In all, the PEACESAT Program received one application. The total amount of funds requested is $445,745.

Notice is hereby given that the PTFP received applications from the following organizations. The list includes all applications received. Identification of any application only indicates its receipt. It does not indicate that it has been accepted for review, has been determined to be eligible for funding, or that an application will receive an award.

Any interested party may file comments with the Agency supporting or opposing an application and setting forth the grounds for support or opposition. PTFP will forward a copy of any opposing comments to the applicant. Comments must be sent to PTFP at the following address: NTIA/PTFP, Room 4625, 1401 Constitution Ave., N.W., Washington, D.C. 20230.

The Agency will incorporate all comments from the public and any replies from the applicant in the applicant's official file.

Public Telecommunications Facilities Program Applications

Alaska

File No. 98023CRB Alaska Public Radio Network, 810 East 9th Ave Anchorage, AK 99501. Contact: Ms. Tammy Gilstrap, Business Manager. Funds Requested: $32,250. Total Project Cost: $ 43,300. To replace satellite upconverter equipment for the Alaska Public Radio Network (APRN), Anchorage.

File No. 98010CTB Bethel Broadcasting, Inc., KYUK–TV 640 Radio Street Pouch 468 Bethel, AK 99559. Contact: Ms. Jude Andrews, General Manager. Funds Requested: $254,349. Total Project Cost: $339,133. To purchase a video server and master control support equipment.

File No. 98028PTB Capital Community Broadcasting, Inc., Station KTOO–TV 360 Egan Drive Juneau, AK 998011748. Contact: Mr. Bill Legere, President & General Manager. Funds Requested: $594,830. Total Project Cost: $594,830. To plan for the conversion of public television translators to digital technologies.

File No. 98027CRB CoastAlaska, Inc., 360 Egan Drive, Suite 216 Juneau, AK 99801. Contact: Mr. Jon Newstrom, System Coordinator. Funds Requested: $126,129. Total Project Cost: $168,172. To place digital storage equipment and standardize the air chains at five public radio stations, KTOO–FM, Juneau; KCAW–FM, Sitka; KSFK–FM, Petersburg; KSTK–FM, Wrangell; and KRBD–FM, Ketchikan which cooperate as CoastAlaska, Inc. The project would also replace KRBD's Black Mountain translator with two translators.

The authentic text behind the news . . .

The Weekly Compilation of **Presidential Documents**

This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue includes a Table of Contents, lists of acts approved by the President, nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements. Indexes are published quarterly.

Published by the Office of the Federal Register, National Archives and Records Administration.

The **FEDERAL REGISTER** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see http://www.nara.gov/fedreg.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

GPO Access users can choose to retrieve online **Federal Register** documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the **Federal Register** at http://www.access.gpo.gov/nara. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov, or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512–1262; or call (202) 512–1530 or 1–888–293–6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $8.00 for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 63 FR 12345.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WASHINGTON, DC

WHEN: June 16, 1998 at 9:00 am.

WHERE: Office of the Federal Register

Rules and Regulations

Federal Register
Vol. 63, No. 102
Thursday, May 28, 1998

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 956

[Docket No. FV98–956–2 FR]

Sweet Onions Grown in the Walla Walla Valley of Southeast Washington and Northeast Oregon; Increased Assessment Rate

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This rule increases the assessment rate established for the Walla Walla Sweet Onion Committee (Committee) under Marketing Order No. 956 for the 1998–99 and subsequent fiscal periods from $0.19 to $0.21 per 50-pound bag or equivalent of onions handled. The Committee is responsible for local administration of the marketing order which regulates the handling of sweet onions grown in portions of Walla Walla County, Washington, and Umatilla County, Oregon. Authorization to assess Walla Walla sweet onion handlers enables the Committee to incur expenses that are reasonable and necessary to administer the program. The fiscal period begins June 1 and ends May 31. The assessment rate will remain in effect indefinitely unless modified, suspended, or terminated.

EFFECTIVE DATE: May 29, 1998.

FOR FURTHER INFORMATION CONTACT: Robert J. Curry, Northwest Marketing Field Office, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1220 SW Third Avenue, room 369, Portland, Oregon 97204–2807; telephone: (503) 326–2724, Fax: (503) 326–7440; or George Kelhart, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 205–6632. Small businesses may request information on compliance with this regulation by contacting Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 205–6632.

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement and Order No. 956 (7 CFR part 956), regulating the handling of sweet onions grown in the Walla Walla Valley of southeast Washington and northeast Oregon, hereinafter referred to as the "order." The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the "Act."

The Department of Agriculture (Department) is issuing this rule in conformance with Executive Order 12866.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. Under the order now in effect, Walla Walla sweet onion handlers are subject to assessments. Funds to administer the order are derived from such assessments. It is intended that the assessment rate as issued herein would be applicable to all assessable sweet onions beginning on June 1, 1998, and continue until amended, suspended, or terminated. This rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review the Secretary's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This rule increases the assessment rate established for the Committee for the 1998–99 and subsequent fiscal periods from $0.19 to $0.21 per 50-pound bag or equivalent of Walla Walla sweet onions handled.

The order provides authority for the Committee, with the approval of the Department, to formulate an annual budget of expenses and collect assessments from handlers to administer the program. The Committee consists of six producer members, three handler members and one public member, each of whom is familiar with the Committee's needs and with the costs for goods and services in their local area and are thus in a position to formulate an appropriate budget and assessment rate. The budget and assessment rate were discussed at a public meeting and all directly affected persons had an opportunity to participate and provide input.

For the 1996–97 and subsequent fiscal periods, the Committee recommended, and the Department approved, an assessment rate that would continue in effect from fiscal period to fiscal period unless modified, suspended, or terminated by the Secretary upon recommendation and information submitted by the Committee or other information available to the Secretary.

The Committee met on February 17, 1998, and unanimously recommended 1998–99 expenditures of $97,272. In a vote with six favoring, three opposing, and one abstaining, the Committee recommended an assessment rate of $0.21 per 50-pound bag or equivalent of Walla Walla sweet onions handled during the 1998–99 and subsequent fiscal periods. The members opposed believed that the assessment rate should be increased more than $0.02 per 50-pound bag or equivalent, so more funds could be earmarked for promotion and paid advertising. The public member abstained because of his desire to remain neutral on these issues. The Committee estimated that the 1998 sweet onion crop will approximate 463,200 50-pound bags or equivalents of onions. In comparison, the 1997–98 fiscal period budget was established at $126,682 with an estimated assessable sweet onion crop of 667,750 50-pound bags or equivalents. In an effort to partially offset the loss of assessment income due to the more conservative

1998 crop estimate, the Committee recommended the $0.02 increase.

In both the 1996 and 1997 seasons, the actual quantity of assessable sweet onions produced for the fresh market was less than the Committee had estimated for the purpose of establishing the respective budgets. Actual assessment income earned during the 1997–98 fiscal period was approximately $30,000 less than was estimated for the 1997–98 budget, and for the 1996–97 fiscal period, actual assessment income was approximately $26,000 less than was budgeted. For the 1998–99 fiscal period, the Committee made its 1998 assessable crop estimate based on a lower average yield per acre than was used during the past two seasons. Based on a reported 772 acres planted, the Committee is anticipating a 1998 harvest averaging 600 50-pound bags or equivalents per acre. Thus, the 1998–99 fiscal period budget is based on a crop estimate of 463,200 50-pound bags or equivalents of Walla Walla sweet onions.

After much discussion, the major expenditures recommended by the Committee for the 1998–99 fiscal period include $43,890 for administration, $10,000 for production research, $35,890 for market promotion including paid advertising, and $4,500 for marketing order compliance. Budgeted expenses for these items in the 1997–98 fiscal period were $41,700, $15,000, $51,000, and $9,000, respectively.

The Committee based its recommended assessment rate increase on the 1998 crop estimate and its estimate of 1998–99 fiscal period expenditures, including administrative costs and desired research and promotion projects. The Committee also took into consideration the impact an increase in the assessment rate would have on producers and handlers. The increased assessment rate should provide $97,272 in income which would be adequate to cover budgeted expenses. In the event the 1998 assessable sweet onion crop falls short of anticipated yields, the Committee estimates it will have approximately $25,000 in its operating reserve at the beginning of the 1998–99 fiscal period (June 1, 1998), which should be adequate to cover any assessment shortages. This amount is within the maximum permitted by the order of approximately two fiscal period's budgeted expenses (§ 956.44).

The assessment rate established in this rule will continue in effect indefinitely unless modified, suspended, or terminated by the Secretary upon recommendation and information submitted by the Committee or other available information.

Although this assessment rate will be in effect for an indefinite period, the Committee will continue to meet prior to or during each fiscal period to recommend a budget of expenses and consider recommendations for modification of the assessment rate. The dates and times of Committee meetings are available from the Committee or the Department and are locally published. Committee meetings are open to the public and interested persons may express their views at these meetings. The Department will evaluate Committee recommendations and other available information to determine whether modification of the assessment rate is needed. Further rulemaking will be undertaken as necessary.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, the AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and the rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 60 producers of Walla Walla sweet onions in the production area and approximately 35 handlers subject to regulation under the order. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts less than $500,000, and small agricultural service firms are defined as those whose annual receipts are less than $5,000,000. The majority of Walla Walla sweet onion producers and handlers may be classified as small entities.

This rule increases the assessment rate established for the Committee and collected from handlers for the 1998–99 and subsequent fiscal periods from $0.19 to $0.21 per 50-pound bag or equivalent of Walla Walla sweet onions handled. The Committee unanimously recommended 1998–99 expenditures of $97,272, and, with 6 members favoring, 3 members opposing and 1 member abstaining, recommended the $0.21 per 50-pound bag or equivalent assessment rate. This assessment rate is $0.02 higher than the 1997–98 rate. The Committee recommended an increased assessment rate to help offset the smaller projected crop of assessable sweet onions in 1998. The anticipated crop of 463,200 50-pound bags or equivalents is approximately 30 percent less than each of the 1996 and 1997 crops. The $0.21 rate should provide $97,272 in assessment income and be adequate to meet 1998–99 fiscal period expenses.

The Committee discussed alternatives to this rule, including alternative expenditure and assessment levels. The Committee discussed various alternative expenditure levels for promotion, production research, and marketing order compliance. Further, the Committee discussed various levels of assessment from the 1997–98 rate of $0.19 to as much as $0.25 per 50-pound bag or equivalent of sweet onions. Action was taken by the Committee on a motion to increase the assessment rate by $0.01. The vote failed to carry a majority, however, since a $0.01 increase would not have adequately funded desired expenditures. The members opposed believed that the assessment rate should be increased more than $0.02 per 50-pound bag or equivalent, so more funds could be dedicated to promotion and paid advertising. The public member abstained because of his desire to remain neutral on these issues.

The major expenditures recommended by the Committee for the 1998–99 fiscal period include $43,000 for administration, $10,000 for production research, $35,890 for market promotion including paid advertising, and $4,500 for marketing order compliance. Budgeted expenses for these items in the 1997–98 fiscal period were $41,700, $15,000, $51,000, and $9,000, respectively.

Recent price information indicates that producer prices for all sizes and grades of Walla Walla sweet onions for the 1998 shipping season may range between $4.50 and $12.00 per 50-pound bag or equivalent. Thus, the estimated assessment revenue for the 1998–99 fiscal period as a percentage of total producer revenue could range between 0.017 and 0.046 percent.

This action increases the assessment obligation imposed on handlers. While assessments impose some additional costs on handlers, the costs are minimal and uniform on all handlers. Some of the additional costs may be passed on to producers. However, these costs will be offset by the benefits derived by the operation of the order. In addition, the Committee's meeting was widely publicized throughout the Walla Walla sweet onion industry and all interested persons were invited to attend the

meeting and participate in Committee deliberations on all issues. Like all Committee meetings, the February 17, 1998, meeting was a public meeting and all entities, both large and small, were able to express views on this issue.

This rule imposes no additional reporting or recordkeeping requirements on either small or large Walla Walla sweet onion handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

The Department has not identified any relevant Federal rules that duplicate, overlap, or conflict with this rule.

A proposed rule concerning this action was published in the **Federal Register** on April 8, 1998 (63 FR 17125). A copy of the proposed rule was also sent via facsimile to the administrative office of the Committee, which in turn notified Committee members and industry members. The proposal was also made available through the Internet by the Government Printing Office.

A 30-day comment period ending May 8, 1998, was provided to allow interested persons the opportunity to respond to the request for information and comments. No comments were received in response to the proposal.

After consideration of all relevant material presented, including the information and recommendation submitted by the Committee and other available information, it is hereby found that this rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it also found and determined that good cause exists for not postponing the effective date of this rule until 30 days after publication in the **Federal Register** because: (1) The Committee needs to have sufficient funds to pay its expenses which are incurred on a continuous basis; (2) the Committee's 1998–99 fiscal period begins June 1, 1998, and the order requires that the assessment rate apply to all assessable sweet onions handled during that fiscal period; (3) the 1998 sweet onion harvest is expected to begin in early June due to unseasonably warm temperatures experienced in early Spring; (4) handlers are aware of this action which was recommended by the Committee at a public meeting; and (5) a 30-day comment period was provided for in the proposed rule, and no comments were received.

List of Subjects in 7 CFR Part 956

Sweet onions, Marketing agreements, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 956 is amended as follows:

PART 956—SWEET ONIONS GROWN IN THE WALLA WALLA VALLEY OF SOUTHEAST WASHINGTON AND NORTHEAST OREGON

1. The authority citation for 7 CFR part 956 continues to read as follows:

Authority: 7 U.S.C. 601–674.

2. Section 956.202 is revised to read as follows:

§ 956.202 Assessment rate.

On and after June 1, 1998, an assessment rate of $0.21 per 50-pound bag or equivalent is established for Walla Walla Sweet Onions.

Dated: May 21, 1998.

Robert C. Keeney,

Deputy Administrator, Fruit and Vegetable Programs.

Reengineering and Reinvention of the Direct Section 502 and 504 Single Family Housing (SFH) Programs; Reopening of Comment Period

AGENCIES: Rural Housing Service, Rural Business-Cooperative Service, Rural Utilities Service, and Farm Service Agency, USDA.

ACTION: Reopening of comment period on interim final rule.

SUMMARY: The Rural Housing Service (RHS) is reopening the comment period on proposed revisions to the Agency's standards for modest housing in the direct Single Family Housing (SFH) program. The Agency published proposed changes to these standards in the **Federal Register** on April 8, 1996 (61 FR 15395), and subsequently published an interim final rule on November 22, 1996 (61 FR 59762). This current action is being taken to solicit additional comments from the public. The intended effect is to ensure that the Agency has regulations in effect which best define modest housing, and provide homeownership opportunities to the maximum number of families within allocated resources.

DATES: Written comments must be received June 29, 1998.

ADDRESSES: Written comments may be submitted, in duplicate, to the Chief, Regulations and Paperwork Management Branch, U.S. Department of Agriculture, Stop 0742, 1400 Independence Avenue, SW, Washington, D.C. 20250–0742. Comments may be submitted via the Internet by addressing them to "comments@rus.usda.gov" and must contain the word "modest" in the subject. All written comments will be available for public inspection at 300 E Street, SW, Third Floor, Washington, D.C. 20546 during normal working hours.

FOR FURTHER INFORMATION CONTACT: David J. Villano, Special Assistant to the Administrator, RHS, U.S. Department of Agriculture, Room 5017–S, Stop 0701, 1400 Independence Avenue, SW, Washington, D.C. 20250–0701, telephone (202) 720–1628.

SUPPLEMENTARY INFORMATION:

Background

On April 8, 1996, the Agency published a proposed rule in the **Federal Register** (61 FR 15395) to reinvent and reengineer the direct SFH programs. An interim final rule was subsequently published in the **Federal Register** (61 FR 59762) on November 22, 1996. The interim final rule requested additional comments on four sections of the rule. One of these sections [7 CFR 3550.57(a)] dealt with the Agency's standards for modest housing in the direct SFH program. In brief, the primary factor for determining whether a house is modest is whether the cost is below the section 203(b) maximum loan limits established by the Department of Housing and Urban Development. Use of the section 203(b) limits are not required by statute in the direct SFH program; however, they were adopted by the Agency in 1995 as the primary factor for determining whether a house was modest. Prior to 1995, the Agency used square footage and amenity standards to make such a determination. Different square footage requirements existed for different family sizes, and the regulations contained an extensive list of amenities which were not permitted in houses to be financed by the Agency. These standards were overly cumbersome, especially for

families seeking to purchase an existing home, and did not provide sufficient flexibility. The Agency received tremendous support when the previous standards were eliminated.

As mentioned, the new standards for modest housing became effective in 1995. As the Agency began the process of reinventing and reengineering the program in 1996, we became aware of concerns which impacted our ability to provide financing on modest homes for very-low and low-income families in rural America. For example, in some rural areas, the section 203(b) loan limit is higher than the cost of housing the Agency financed under previous standards. This is evidenced by an increase in the average cost of a house financed by the Agency under the previous standards and the average cost of a house financed under the section 203(b) standards, even when the rise in construction costs is taken into account. This limits our ability to provide the maximum number of homeownership opportunities in rural America within allocated funds. Concomitantly, in other areas of rural America, the section 203(b) limits are too low for the Agency to finance the cost of constructing a modest home. The percentage of newly constructed homes financed by the Agency has dropped significantly since the Agency began utilizing the section 203(b) limits. This severely limits our ability to provide homeownership opportunities for families in many growing rural communities which are in dire need of new housing.

For these reasons, when the Agency published the aforementioned interim final rule comments were solicited on alternative methods the Agency could utilize to ensure that only modest housing was financed. Seven comments were received. None of the commentors wanted the Agency to return to its previous standards and most supported continuing with the section 203(b) limits. No additional criteria were provided by the commentors. In retrospect, the Agency believes that at the time of publication of the interim final rule, most of the commentors were not fully aware of the impact of the use of the 203(b) loan limits in the direct SFH program. The Agency is again seeking recommendations on alternative methods for establishing a standard for modest housing. The Agency is currently considering two options.

The first option being considered is to utilize a multiple of the median income for the area to establish the maximum loan amount. In this manner, the income of the area would assist in determining a typical modest home for the area. RHS is considering establishing a maximum loan amount of 2.5 times the median income for a family of four. For example, if the median income for a family of four was $30,000 in a given county, the maximum loan would be $75,000 ($30,000 times 2.5). For families in excess of four, the loan limit would be 2.5 times the median income for that family size.

The second option being considered is a square footage limitation. The Agency has no intention of reconsidering the previous standards in which amenities were considered and square footage maximums were set by specific family size. The proposed standard is simple and straightforward. The maximum square footage allowable would be 1300 square feet of finished living area. This standard would apply to existing homes and new construction. For family sizes in excess of four, the square footage standard may be increased by 150 square feet for each family member over four. The Agency also proposes to allow the State Director the authority to provide exceptions on a case-by-case basis provided the proposed housing is modest and alternative homes within the square footage standards are not readily available in the market. There would be no amenity standards except for the existing requirements that the property may not have an in-ground pool or be used for income producing purposes.

Under this option, the Agency is particularly interested in comments on how to further satisfy our statutory mandate to finance only modest housing, without the need to establish specific amenity standards. In addition, the Agency is proposing only one square footage standard; whereas in the past, different square footage standards for existing homes and new construction existed. The Agency wants comments on whether a single standard is appropriate, or whether and why separate standards should be established. Also, if two standards are recommended, what square footage standards should be established for existing homes and new construction? And finally, how should the Agency define "finished" living area?

The Agency would appreciate comments on these two options, together with any recommended enhancements or changes. In addition, the Agency is also interested in other potential standards by which to determine that housing is modest provided such standards are simple, straightforward and not overly burdensome to our customers.

The Agency generally provides a 60-day comment period for proposed changes. However, since the Agency is only requesting comments on one standard, a 30-day comment period is provided. It is the Agency's objective to publish a final rule with the proposed change by September 1, 1998, with an effective date of October 1, 1998. The rule would be effective for any current applicant who had not submitted a sales contract for the purchase of a home to the Agency.

Dated: May 21, 1998.

Jan E. Shadburn,

Administrator, Rural Housing Service.

BILLING CODE 3410–XV–U

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

12 CFR Part 10

[Docket No. 98–08]

RIN 1557–AB62

Municipal Securities Dealers

AGENCY: Office of the Comptroller of the Currency, Treasury.

ACTION: Final rule.

SUMMARY: The Office of the Comptroller of the Currency (OCC) is issuing a final rule to revise its Municipal Securities Dealers regulation to remove unnecessary provisions. This change would not have any substantive effect on the operations of national banks, but would simplify the OCC's rule regarding bank municipal securities dealers (MSDs) by removing a redundant restatement of rules found elsewhere.

DATES: The final rule is effective June 29, 1998.

FOR FURTHER INFORMATION CONTACT: Joseph W. Malott, National Bank Examiner, Treasury and Market Risk (202) 874–5670; Donald Lamson, Assistant Director, Securities and Corporate Practices (202) 874–5210; or Ursula Pfeil, Attorney, Legislative and Regulatory Activities (202) 874–5090.

SUPPLEMENTARY INFORMATION:

Background and Discussion of Final Rule

The OCC is issuing a final rule to revise its Municipal Securities Dealers regulation to remove unnecessary provisions. The OCC had previously published a notice of proposed rulemaking on January 16, 1998, and at that time requested comment on the

changes. 63 FR 2640. The OCC received no comments and, therefore, is now issuing a final rule unchanged from its proposed rule.

Section 15B(b) of the Securities Exchange Act of 1934 (Exchange Act) (15 U.S.C. 78o–4(b)) created the Municipal Securities Rulemaking Board (MSRB) and mandated that the MSRB adopt rules that establish qualification criteria for municipal securities brokers or dealers and associated persons. To implement section 15B(b), the MSRB adopted Rule G–7 (Information Concerning Associated Persons) (Rule G–7).[1] Rule G–7 requires, among other things, that municipal securities principals and representatives associated with a bank MSD file with the bank either (a) Form MSD–4 (Uniform Application for Municipal Securities Principal or Municipal Securities Representative Associated with a Bank Municipal Securities Dealer) or (b) a similar form prescribed by the bank's primary regulator. A national bank MSD is in turn required by Rule G–7 to submit to the OCC the form that the bank's associated municipal securities principals and representatives file with it. Rule G–7 also requires bank MSDs to update information as necessary, to retain records for specified periods of time, and to file with the appropriate banking agency "such of the information prescribed by [Rule G–7] as such * * * agency * * * shall by rule or regulation require." Rule G–7(g).

Shortly after the MSRB adopted Rule G–7, the OCC adopted part 10 in order to prescribe the information and forms that national bank MSDs are to submit. (42 FR 16813 (March 30, 1977)). Part 10 currently sets out the scope of the rule (§ 10.1); definitions used therein (§ 10.2); information about where and how to file the appropriate forms (§ 10.3); and requirements governing the submission and retention of Form MSD–4 and Form MSD–5 (Uniform Termination Notice for Municipal Securities Principal or Municipal Securities Representative Associated with a Bank Municipal Securities Dealer) (§ 10.4).

As explained in the following section-by-section analysis, much of current part 10 either is substantively identical to the requirements contained in Rule G–7 or is otherwise unnecessary.

[1] The MSRB rules may be obtained by contacting the Municipal Securities Rulemaking Board by telephone at (202) 223–9347 or by mail at 1150 18th Street, NW, Suite 400, Washington, DC 20036–3816.

Section-by-Section Analysis

Section 10.1 of Current and Final Rules

This section identifies the entities and individuals covered by part 10. Section 10.1 of the final rule clarifies that subsidiaries of national banks are not covered by the rule. This clarification is consistent with MSRB Rule G–7, which states that "bank dealers" are to comply with the rules and requirements adopted by the appropriate bank regulatory agency. The term "bank dealer" is defined in Rule D–8 of the MSRB's rules to include "a municipal securities dealer which is a bank or a separately identifiable department or division of a bank as defined in rule G–1 of the [Municipal Securities Rulemaking] Board." Subsidiaries of banks are not included in the definition of "bank dealer," and are, therefore, governed directly by the MSRB's filing requirements. The change to § 10.1 reflects this fact. It does not, however, affect the content of what these subsidiaries are to file or who regulates their municipal securities activities.[2]

Section 10.2 of Current Rule

The terms defined in current § 10.2 are not used in part 10. Accordingly, this section is removed.

Section 10.3 of Current Rule

Section 10.3 provides information about the mechanics of filing the MSD–4 and MSD–5 forms with the OCC. This information is unnecessary in light of the filing instructions that accompany these forms. Therefore, the final rule removes this section.

Section 10.4 of Current Rule/§ 10.2 of Final Rule

Section 10.4(a)(1) of the current rule states that Form MSD–4 is an appropriate means of carrying out the purposes of Rule G–7(b). Two provisions in Rule G–7 make it appropriate for the final rule to retain a provision identifying which form national bank MSDs are to use and what information is to be submitted in order to comply with Rule G–7. First, paragraph (b) of Rule G–7 states that "in the case of a bank dealer a completed Form MSD–4 or similar form prescribed by the appropriate regulatory agency for such bank dealer, containing the foregoing information [i.e., the information listed in Rule G–7(b)(i)–(x)], shall satisfy the requirements of this paragraph [(b)]." Given that Rule G–7(b) provides bank regulators the option of using a form other than Form MSD–4, there remains a need for the OCC to clarify which form national banks should use. Second, as previously noted, paragraph (g) of Rule G–7 states that bank MSDs are to file with their appropriate regulatory agency "such of the information prescribed by this rule [i.e., Rule G–7] as such * * * agency * * * shall by rule or regulation require." Repealing all of part 10 arguably would create an unintended gap in the filing requirements for bank MSDs, because there would be no rule or regulation requiring national banks to file.

In light of paragraphs (b) and (g) of Rule G–7, the final rule retains a requirement, at § 10.2(a), stating that a national bank is to use Form MSD–4 to submit the information required by Rule G–7(b)(i)–(x) to be obtained from a person identified in § 10.1(b). Section 10.2(a) also states that a national bank receiving completed MSD–4 forms must submit these forms to the OCC before permitting any person to be associated with it as a municipal securities principal or a municipal securities representative. Should the MSRB amend Rule G–7 to remove the reference to rules or regulations issued by the banking agencies, the OCC will revisit the need for a continued reference to the MSRB rules in part 10.[3]

Section 10.4(a)(2) of the current rule repeats filing requirements found in Rule G–7 and, therefore, is removed.

Section 10.4(b) of the current rule instructs national bank MSDs regarding how they should proceed if a Form MSD–4 contains materially inaccurate or incomplete information. This section is unnecessary, given that paragraph (c) of Rule G–7 requires that the information required to be submitted must remain accurate and complete. A national bank MSD receiving updated information from an associated municipal securities representative or

[2] Subsidiaries of national banks that engage in municipal securities activities must register with the NASD and are regulated by NASD Regulation, Inc., the subsidiary of NASD charged with regulating the securities industry and the Nasdaq Stock Market.

[3] The Board of Governors of the Federal Reserve System (Board) and Federal Deposit Insurance Corporation (FDIC) each have published proposed amendments to each agency's MSD regulation. See 62 FR 15272 (March 31, 1997) (Board) and 62 FR 26994 (May 16, 1997) (FDIC). Both the Board and the FDIC propose to repeal their MSD rules altogether. However, both agencies intend for banks within their respective jurisdictions to continue filing the MSD–4 and MSD–5 forms with those agencies. Accordingly, the OCC, Board, and FDIC intend to impose substantively identical requirements on bank MSDs. The stylistic differences between the OCC's final rule and those of the Board and FDIC reflect the OCC's view that it is necessary and helpful to national bank MSDs for the OCC's rule to address those areas identified in Rule G–7 where bank dealers are to look to the rules of their primary regulator.

municipal securities principal is obligated pursuant to Rule G–7 to submit the amended information to the OCC in order to ensure that the individuals are properly registered. Accordingly, the final rule removes current § 10.4(b).

Current § 10.4(c) requires national bank MSDs to file Form MSD–5 within 30 days of terminating a person's association with the bank as a municipal securities representative or principal. This requirement does not appear in Rule G–7. In order to facilitate the effective supervision of MSD activity by national banks, the final rule retains the requirement, at § 10.2(b), that a termination notice be submitted.

Finally, current § 10.4(d)(1) restates record retention requirements found in Rule G–7(e), while § 10.4(d)(2) states that the MSD–4 and MSD–5 forms are covered by section 32(a) of the Exchange Act (15 U.S.C. 78ff). These provisions in current § 10.4 are unnecessary and are, therefore, removed.

Regulatory Flexibility Act

The OCC hereby certifies that this rule will not have a significant economic impact on a substantial number of small entities. Accordingly, a regulatory flexibility analysis is not required.

As noted earlier, the OCC has only eliminated unnecessary provisions that appear in the current rule. This rule will, therefore, reduce the regulatory burden on national banks, regardless of size. No new burden is added by the changes.

Executive Order 12866

The OCC has determined that this final rule is not a significant regulatory action under Executive Order 12866.

Unfunded Mandates Act of 1995

The OCC has determined that the final rule will not result in expenditures by State, local, and tribal governments, or by the private sector, of more than $100 million in any one year. Accordingly, the OCC has not prepared a budgetary impact statement or specifically addressed the regulatory alternatives considered as would otherwise be required by the Unfunded Mandates Act of 1995.

List of Subjects in 12 CFR Part 10

National banks, Reporting and recordkeeping requirements, Securities.

Authority and Issuance

For the reasons set out in the preamble, the OCC revises part 10 of chapter I of title 12 of the Code of Federal Regulations as set forth below:

PART 10—MUNICIPAL SECURITIES DEALERS

Sec.
10.1 Scope.
10.2 Filing requirements.

Authority: 5 U.S.C. 93a, 481, and 1818; 15 U.S.C. 78o–4(c)(5) and 78q–78w.

§ 10.1 Scope.

This part applies to:

(a) Any national bank, District bank, and separately identifiable department or division of either (collectively, a national bank) that acts as a municipal securities dealer, as that term is defined in section 3(a)(30) of the Securities Exchange Act of 1934 (15 U.S.C. 78c(a)(30)); and

(b) Any person who is associated or to be associated with a national bank in the capacity of a municipal securities principal or a municipal securities representative, as those terms are defined in Rule G–3 of the Municipal Securities Rulemaking Board (MSRB).[1]

§ 10.2 Filing requirements.

(a) A national bank shall use Form MSD–4 (Uniform Application for Municipal Securities Principal or Municipal Securities Representative Associated with a Bank Municipal Securities Dealer) for obtaining the information required by MSRB Rule G–7(b)(i)–(x) from a person identified in § 10.1(b). A national bank receiving a completed MSD–4 form from a person identified in § 10.1(b). A national bank receiving a completed MSD–4 form from a person identified in § 10.1(b) must submit this form to the OCC before permitting the person to be associated with it as a municipal securities principal or a municipal securities representative.

(b) A national bank must submit Form MSD–5 (Uniform Termination Notice for Municipal Securities Principal or Municipal Securities Representative Associated with a Bank Municipal Securities Dealer) to the OCC within 30 days of terminating a person's association with the bank as a municipal securities principal or municipal securities representative.

(c) Forms MSD–4 and MSD–5, with instructions, may be obtained by contacting the OCC at 250 E Street, SW., Washington, DC 20219, Attention: Bank Dealer Activities.

[1] The MSRB rules may be obtained by contacting the Municipal Securities Rulemaking Board at 1150 18th Street, NW, Suite 400, Washington, DC 20036–3816.

Dated: May 9, 1998.

Julie L. Williams,

Acting Comptroller of the Currency.

BILLING CODE 4810–33–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 96–NM–211–AD; Amendment 39–10532; AD 98–11–05]

RIN 2120–AA64

Airworthiness Directives; Saab Model SAAB 2000 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Saab Model SAAB 2000 series airplanes, that requires performing a one-time inspection of the dropout boxes of the passenger oxygen system to detect discrepancies and determine whether the system operates properly; correcting any discrepancy found; and reworking or installing new components, if necessary. This amendment is prompted by a report indicating that the oxygen system failed to operate correctly after activation at a low cabin pressure due to the incorrect installation of the oxygen masks or oxygen generators during manufacturing. The actions specified by this AD are intended to ensure that a sufficient supply of oxygen is provided to airplane passengers in the event of rapid decompression of the airplane.

DATES: Effective July 2, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of July 2, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from Saab Aircraft AB, SAAB Aircraft Product Support, S–581.88, Linkping, Sweden. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the **Federal Register**, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington

98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Saab Model SAAB 2000 series airplanes was published in the **Federal Register** on May 22, 1997 (62 FR 27986). That action proposed to require performing a one-time inspection of the dropout boxes of the passenger oxygen system to detect discrepancies and determine whether the system operates properly; correcting any discrepancy found; and reworking or installing new components, if necessary.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

One commenter supports the proposed AD; however, it notes that many different types of failures were discovered upon review by the Luftfartsverket (LFV), which is the airworthiness authority for Sweden. Additionally, the commenter states that the repair work performed to correct the errors also could be performed incorrectly. The commenter requests that because of these two factors, the FAA should require repetitive inspections in lieu of the proposed one-time inspection.

The FAA does not concur with the commenter's request to include repetitive inspections in this rulemaking action at this point. According to Saab, the problem was found to originate from the interior supplier's repacking of the oxygen equipment after installing the dropout boxes in the passenger service units. This finding led to several improvements and related instructions by Saab and the interior and systems suppliers regarding the packing method. These improvements also included hands-on training. Saab is not aware of any further problems occurring with the dropout boxes after implementation of these improvements. Therefore, the FAA has determined that repetitive inspections to ensure the continued proper functioning of the system are not necessary.

The same commenter states that it is unacceptable to operate aircraft with emergency equipment that would not work when needed, and suggests that it would be prudent to periodically perform functional tests of all the emergency equipment to ensure that it will work when needed.

The FAA acknowledges the concerns of the commenter. The FAA has determined that an unsafe condition exists, and that the actions required by this AD are adequate in order to ensure the continued safety of the affected fleet. While there may be merit to the commenter's suggestions, this AD is not the appropriate context in which to evaluate those suggestions. Since the suggested changes would alter the actions currently required by this AD, additional rulemaking would be required. The FAA finds that to delay this action would be inappropriate in light of the identified unsafe condition. No change to this final rule is necessary.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

The FAA estimates that 3 Saab Model SAAB 2000 series airplanes of U.S. registry will be affected by this AD, that it will take approximately 3 work hours per airplane to accomplish the required actions, and that the average labor rate is $60 per work hour. Based on these figures, the cost impact of the AD on U.S. operators is estimated to be $540, or $180 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–11–05 SAAB Aircraft AB: Amendment 39–10532. Docket 96–NM–211–AD.

Applicability: Model SAAB 2000 series airplanes, having serial numbers –003 through –039 inclusive; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent an insufficient supply of oxygen being provided to airplane passengers in the event of rapid decompression of the airplane, accomplish the following:

(a) Within 30 days after the effective date of this AD, perform a one-time inspection of the dropout boxes of the passenger oxygen system to detect discrepancies and determine whether the system operates properly, in accordance with the Accomplishment Instructions of Saab Service Bulletin 2000–35–001, dated February 20, 1996.

(1) If the passenger oxygen system operates properly and no discrepancy is found in this system, no further action is required by this AD.

(2) If any discrepancy is found in the passenger oxygen system, prior to further

flight, perform rework or install new components, as applicable, in accordance with the service bulletin.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(d) The actions shall be done in accordance with Saab Service Bulletin 2000–35–001, dated February 20, 1996. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Saab Aircraft AB, SAAB Aircraft Product Support, S–581.88, Linkping, Sweden. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in Swedish airworthiness directive (SAD) 1–091, dated February 20, 1996.

(e) This amendment becomes effective on July 2, 1998.

Issued in Renton, Washington, on May 18, 1998.

John J. Hickey,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 98–13822 Filed 5–27–98; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 96–NM–172–AD; Amendment 39–10544; AD 98–11–19]

RIN 2120–AA64

Airworthiness Directives; Airbus Model A310 and A300–600 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Airbus Model A310 and A300–600 series airplanes, that requires a visual inspection to detect cracks in the aft mount beam assembly of the engine; and replacement of any cracked beam with a new beam or beam assembly. This amendment also requires a fluorescent penetrant inspection to detect cracks in the aft mount beam assembly of the engine, and various follow-on actions. This amendment is prompted by reports indicating that, apparently due to manufacturing defects during the forging process, cracking was found in two engine aft mount beams. The actions specified by this AD are intended to detect and correct such cracking, which could result in reduced structural integrity of the aft mount beam assembly of the engine.

DATES: Effective July 2, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of July 2, 1998.

ADDRESSES: The service information referenced in this AD may be obtained from Pratt & Whitney, 400 Main Street, East Hartford, Connecticut 06108. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Airbus Model A310 and A300–600 series airplanes was published in the **Federal Register** on April 1, 1997 (62 FR 15439). That action proposed to require a visual inspection to detect cracks in the aft mount beam assembly of the engine; and replacement of any cracked beam with a new beam or beam assembly. That action also proposed to require a fluorescent penetrant inspection to detect cracks in the aft mount beam assembly of the engine, and various follow-on actions.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

One commenter supports the proposed rule.

One commenter requests that the proposed AD be revised to cite accomplishment of Pratt & Whitney Service Bulletin PW4MD11 A71–102, Revision 3, dated August 30, 1995, as an equivalent alternative to accomplishment of Pratt & Whitney Alert Service Bulletins PW4NAC A71–149, Revision 1, dated August 30, 1995, and PW7R4 A71–129, Revision 1, dated August 30, 1995, as referenced in the proposed AD.

The FAA concurs with the commenter's request to cite accomplishment of Pratt & Whitney Service Bulletin PW4MD11 A71–102, Revision 3, dated August 30, 1995, as an equivalent alternative to accomplishment of Pratt & Whitney Alert Service Bulletins PW4NAC A71–149, Revision 1, dated August 30, 1995 or PW7R4 A71–129, Revision 1, dated August 30, 1995. Pratt & Whitney Alert Service Bulletins PW4NAC A71–149, Revision 1, dated August 30, 1995, and PW7R4 A71–129, Revision 1, dated August 30, 1995, contain a Note that states: "Service Bulletins PW4NAC A71–149 (PW4000/AI), PW7R4 A71–129 (JT9D–7R4/AI), and PW4MD11 A71–102 (PW4000/DAC) have been issued to cover all aircraft. Accomplishment of any one of these Service Bulletins satisfies the same intent of the other two." The FAA has revised this final rule to reflect this change by adding a new Note to the AD.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the change previously described. The FAA has determined that this change will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

The FAA estimates that 8 Airbus Model A310 and A300–600 series airplanes of U.S. registry will be affected by this AD.

It will take approximately 2 work hours per airplane to accomplish the required visual inspection, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the visual inspection required by this AD on U.S. operators is estimated to be $960, or $120 per airplane.

It will take approximately 34 work hours per airplane to accomplish the required fluorescent penetrant inspection, at an average labor rate of

$60 per work hour. Based on these figures, the cost impact of the fluorescent penetrant inspection required by this AD on U.S. operators is estimated to be $16,320, or $2,040 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–11–19 Airbus Industrie: Amendment 39–10544. Docket 96–NM–172–AD.

Applicability: Model A310 and A300–600 series airplanes, equipped with Pratt & Whitney Model JT9D–7R4D1, JT9D–7R4E1, JT9D–7R4H1, PW4151, PW4156A, or PW4158 engines; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To detect and correct cracking in the aft mount beam assembly of the engine, which could result in reduced structural integrity of the aft mount beam assembly, accomplish the following:

(a) Within 500 flight hours after the effective date of this AD, perform a visual inspection to detect cracks in the aft mount beam assembly of the engine, in accordance with Part 1 of the Accomplishment Instructions of Pratt & Whitney Alert Service Bulletin PW7R4 A71–129, Revision 1, dated August 30, 1995, or Pratt & Whitney Alert Service Bulletin PW4NAC A71–149, Revision 1, dated August 30, 1995; as applicable.

(1) If no crack is detected, no further action is required by this paragraph.

(2) If any crack is detected, prior to further flight, replace the cracked beam with a new beam or beam assembly, in accordance with the applicable service bulletin.

(b) Within 4,000 flight cycles after the effective date of this AD, perform a fluorescent penetrant inspection to detect cracks in the aft mount beam assembly of the engine, in accordance with Part 2 of the Accomplishment Instructions of Pratt & Whitney Alert Service Bulletin PW7R4 A71–129, Revision 1, dated August 30, 1995, or Pratt & Whitney Alert Service Bulletin PW4NAC A71–149, Revision 1, dated August 30, 1995; as applicable.

(1) If no crack is detected, prior to further flight, perform an eddy current inspection to detect cracks in the aft mount beam assembly of the engine, in accordance with the applicable service bulletin.

(i) If no crack is detected, prior to further flight, reidentify the beam in accordance with the applicable service bulletin.

(ii) If any crack is detected, prior to further flight, replace the cracked beam with a new beam or beam assembly, in accordance with the applicable service bulletin.

(2) If any crack is detected, prior to further flight, replace the cracked beam with a new beam or beam assembly, in accordance with the applicable service bulletin.

Note 2: Accomplishment of the actions required by paragraphs (a) and (b) of this AD in accordance with Pratt & Whitney Service Bulletin PW4MD11 A71–102, Revision 3, dated August 30, 1995, is considered to be acceptable for compliance with those paragraphs.

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

(d) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(e) The actions shall be done in accordance with the following Pratt & Whitney Alert Service Bulletins, which contain the following list of effective pages:

Service bulletin referenced and date	Page number shown on page	Revision level shown on page	Date shown on page
PW7R4 A71–129, Revision 1, August 30, 1995.	1, 4, 12, 17–21, 23, 25–32	1	August 30, 1995.
	2, 3, 5–11, 13–16, 22, 24	Original	May 30, 1995.
PW4NAC A71–149, Revision 1, August 30, 1995.	1, 2, 4, 12, 17–21 25–32	1	August 30, 1995.
	3, 5–11, 13–16 22–24	Original	May 30, 1995.

This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Pratt & Whitney, 400 Main Street, East Hartford, Connecticut 06108. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 4: The subject of this AD is addressed in French airworthiness directive 96–020–195(B), dated January 31, 1996.

(f) This amendment becomes effective on July 2, 1998.

Issued in Renton, Washington, on May 18, 1998.

John J. Hickey,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 98–13821 Filed 5–27–98; 8:45 am]

BILLING CODE 4910–13–U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 97–CE–121–AD; Amendment 39–10541; AD 98–11–16]

RIN 2120–AA64

Airworthiness Directives; Dornier Luftfahrt GmbH Models 228–100, 228–101, 228–200, 228–201, 228–202, and 228–212 Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that applies to certain Dornier Luftfahrt GmbH (Dornier) Models 228–100, 228–101, 228–200, 228–201, 228–202, and 228–212 airplanes. This AD requires modifying the logic in the failure detection circuits of the landing gear uplock switches. This AD is the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Germany. The actions specified by this AD are intended to prevent a false warning indication of landing gear failure because of the design of the landing gear warning system, which could result in incorrect actions from the pilot based on the warning indications.

DATES: Effective July 11, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of July 11, 1998.

ADDRESSES: Service information that applies to this AD may be obtained from Daimler-Benz Aerospace, Dornier, Product Support, P.O. Box 1103, D–82230 Wessling, Federal Republic of Germany; telephone: (08153) 300; facsimile: (08153) 302985. This information may also be examined at the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 97–CE–121–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Karl Schletzbaum, Aerospace Engineer, FAA, Small Airplane Directorate, 1201 Walnut, suite 900, Kansas City, Missouri 64106; telephone: (816) 426–6934; facsimile: (816) 426–2169.

SUPPLEMENTARY INFORMATION:

Events Leading to the Issuance of This AD

A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an AD that would apply to certain Dornier Models 228–100, 228–101, 228–200, 228–201, 228–202, and 228–212 airplanes was published in the **Federal Register** as a notice of proposed rulemaking (NPRM) on March 26, 1998 (63 FR 14658). The NPRM proposed to require modifying the logic in the failure detection circuits of the landing gear uplock switches. Accomplishment of the proposed action as specified in the NPRM would be in accordance with Dornier Service Bulletin No. SB–228–215, Revision No. 1, dated January 31, 1995.

The NPRM was the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Germany.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposed rule or the FAA's determination of the cost to the public.

The FAA's Determination

After careful review of all available information related to the subject presented above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed except for minor editorial corrections. The FAA has determined that these minor corrections will not change the meaning of the AD and will not add any additional burden upon the public than was already proposed.

Cost Impact

The FAA estimates that 26 airplanes in the U.S. registry will be affected by this AD, that it will take approximately 32 workhours per airplane to accomplish this action, and that the average labor rate is approximately $60 an hour. Based on these figures, the total cost impact of this AD on U.S. operators is estimated to be $49,920, or $1,920 per airplane.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the final evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

98–11–16 Dornier Luftfahrt GMBH: Amendment 39–10541; Docket No. 97–CE–121–AD.

Applicability: Models 228–100, 228–101, 228–200, 228–201, 228–202, and 228–212

airplanes, serial numbers 0001 through 8235, certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required within the next 100 hours time-in-service (TIS) after the effective date of this AD, unless already accomplished.

To prevent a false warning indication of landing gear failure because of the design of the landing gear warning system, which could result in incorrect actions from the pilot based on the warning indications, accomplish the following:

(a) Modify the logic in the failure detection circuits of the landing gear uplock switches in accordance with the ACCOMPLISHMENT INSTRUCTIONS section of Dornier Service Bulletin No. SB–228–215, Revision No. 1, dated January 31, 1995.

(b) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(c) An alternative method of compliance or adjustment of the compliance time that provides an equivalent level of safety may be approved by the Manager, Small Airplane Directorate, 1201 Walnut, suite 900, Kansas City, Missouri 64016. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Small Airplane Directorate.

(d) Questions or technical information related to Dornier Service Bulletin No. SB–228–215, Revision No. 1, dated January 31, 1995, should be directed to Daimler-Benz Aerospace, Dornier, Product Support, P.O. Box 1103, D–82230 Wessling, Federal Republic of Germany; telephone: (08153) 300; facsimile: (08153) 302985. This service information may be examined at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

(e) The modification required by this AD shall be done in accordance with Dornier Service Bulletin No. SB–228–215, Revision No. 1, dated January 31, 1995. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Daimler-Benz Aerospace, Dornier, Product Support, P.O. Box 1103, D–82230 Wessling, Federal Republic of Germany. Copies may be inspected at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in German AD 95–246, dated August 23, 1995.

(f) This amendment becomes effective on July 11, 1998.

Issued in Kansas City, Missouri, on May 15, 1998.

Michael Gallagher,

Manager, Small Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Glaser-Dirks Flugzeugbau GmbH Model DG–400 Gliders

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that applies to all Glaser-Dirks Flugzeugbau GmbH (Glaser-Dirks) Model DG–400 gliders. This AD requires replacing the Bosch electrical system regulator, part number (P/N) 0212920001, with a type 4 E 26 regulator. This AD is the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Germany. The actions specified by this AD are intended to prevent failure of the electrical system regulator, which could result in smoke entering the cockpit with consequent passenger injury.

DATES: Effective July 10, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of July 10, 1998.

ADDRESSES: Service information that applies to this AD may be obtained from DG Flugzeugbau GmbH, Postfach 4120, D–76625 Bruchsal 4, Germany; telephone: +49 7257–89–0; facsimile: +49 7257–8922. This information may also be examined at the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 98–CE–11–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Mike Kiesov, Aerospace Engineer, Small Airplane Directorate, Aircraft Certification Service, FAA, 1201 Walnut, suite 900, Kansas City, Missouri 64106; telephone: (816) 426–6934; facsimile: (816) 426–2169.

SUPPLEMENTARY INFORMATION:

Events Leading to the Issuance of This AD

A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an AD that would apply to all Glaser-Dirks Model DG–400 gliders was published in the **Federal Register** as a notice of proposed rulemaking (NPRM) on March 19, 1998 (63 FR 13381). The NPRM proposed to require replacing the Bosch electrical system regulator, part number (P/N) 0212920001, with a type 4 E 26 regulator. Accomplishment of the proposed action as specified in the NPRM would be in accordance with DG Flugzeubau GmbH Technical Note No. 826/33, dated July 19, 1996.

The NPRM was the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Germany.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposed rule or the FAA's determination of the cost to the public.

The FAA's Determination

After careful review of all available information related to the subject presented above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed except for minor editorial corrections. The FAA has determined that these minor corrections will not change the meaning of the AD and will not add any additional burden upon the public than was already proposed.

Compliance Time of This AD

Although failure of the electrical system regulator will only be unsafe while the glider is in flight, this unsafe condition is not a result of the number of times the glider is operated. The chance of this situation occurring is the same for a glider with 10 hours time-in-service (TIS) as it is for a glider with 500

hours TIS. For this reason, the FAA has determined that a compliance based on calendar time should be utilized in this AD in order to assure that the unsafe condition is addressed on all gliders in a reasonable time period.

Cost Impact

The FAA estimates that 35 gliders in the U.S. registry will be affected by this AD, that it will take approximately 2 workhours per glider to accomplish this action, and that the average labor rate is approximately $60 an hour. Parts cost approximately $200 per glider. Based on these figures, the total cost impact of this AD on U.S. operators is estimated to be $11,200, or $320 per glider.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the final evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

98–11–17 Glaser-Dirks Flugzeugbau GMBH: Amendment 39–10542; Docket No. 98–CE–11–AD.

Applicability: Model DG–400 gliders, all serial numbers, certificated in any category.

Note 1: This AD applies to each glider identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For gliders that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required within the next 4 calendar months after the effective date of this AD, unless already accomplished.

To prevent failure of the electrical system regulator, which could result in smoke entering the cockpit with consequent passenger injury, accomplish the following:

(a) Replace the Bosch electrical system regulator, part number (P/N) 0212920001, with a type 4 E 26 regulator in accordance with DG Flugzeugbau GmbH Z 33 Conversion Kit Saprisa regulator Installation Instructions, dated July 4, 1996, and Glaser-Dirks Drawing 4 E 26. These documents are referenced in DG Flugzeugbau GmbH Technical Note No. 826/33, dated July 19, 1996.

(b) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the glider to a location where the requirements of this AD can be accomplished.

(c) An alternative method of compliance or adjustment of the compliance time that provides an equivalent level of safety may be approved by the Manager, Small Airplane Directorate, FAA, 1201 Walnut, suite 900, Kansas City, Missouri 64106. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Small Airplane Directorate.

(d) Questions or technical information related to the service information referenced in this AD should be directed to DG Flugzeugbau GmbH, Postfach 4120, D–76625 Bruchsal 4, Germany; telephone: +49 7257–89–0; facsimile: +49 7257–8922. This service information may be examined at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

(e) The replacement required by this AD shall be done in accordance with DG Flugzeugbau GmbH Z 33 Conversion Kit Saprisa regulator Installation Instructions, dated July 4, 1996, and Glaser-Dirks Drawing 4 E 26, as referenced in DG Flugzeugbau GmbH Technical Note No. 826/33, dated July 19, 1996. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from DG Flugzeugbau GmbH, Postfach 4120, D–76625 Bruchsal 4, Germany. Copies may be inspected at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in German AD 96–242, dated August 29, 1996.

(f) This amendment becomes effective on July 10, 1998.

Issued in Kansas City, Missouri, on May 15, 1998.

Michael Gallagher,

Manager, Small Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Glaser-Dirks Flugzeugbau GmbH Model DG–400 Gliders

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that applies to all Glaser-Dirks Flugzeugbau GmbH (Glaser-Dirks) Model DG–400 gliders. This AD requires replacing the upper rubber shock mounts with mounts made of stainless steel. This AD will also require inspecting the rear plate of the propeller mount for cracks and proper mounting, and replacing or modifying as necessary. This AD is the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Germany. The actions specified by this AD are intended to prevent failure of the propeller suspension system caused by cracks in the propeller mounts, which could result in loss of the propeller with consequent reduced glider controllability.

DATES: Effective July 10, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of July 10, 1998.

ADDRESSES: Service information that applies to this AD may be obtained from DG Flugzeugbau GmbH, Postfach 4120, D–76625 Bruchsal 4, Germany; telephone: +49 7257–89–0; facsimile: +49 7257–8922. This information may also be examined at the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 98–CE–14–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Mike Kiesov, Aerospace Engineer, Small Airplane Directorate, Aircraft Certification Service, FAA, 1201 Walnut, suite 900, Kansas City, Missouri 64106; telephone: (816) 426–6934; facsimile: (816) 426–2169.

SUPPLEMENTARY INFORMATION:

Events Leading to the Issuance of This AD

A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an AD that would apply to all Glaser-Dirks Model DG–400 gliders was published in the **Federal Register** as a notice of proposed rulemaking (NPRM) on March 18, 1998 (63 FR 13151). The NPRM proposed to require the following:

—Replacing the upper rubber shock mounts with mounts made of stainless steel;
—Inspecting the rear plate of the propeller mount for cracks and an excessive gap between the aluminum blocks and the plate (more than 1 mm or .04 inches);
—Replacing the rear plate of the propeller mount if cracks are found; and
—Installing washers if an excessive gap exists between the aluminum blocks and the plate.

Accomplishment of the proposed shock mounts replacement, the proposed inspections, and the proposed installation, as specified in the NPRM would be in accordance with Glaser-Dirks Technical Note No. 826/11, dated August 29, 1984. Accomplishment of the proposed propeller mount replacement, as required, as specified in the NPRM, would be required in accordance with the applicable maintenance manual.

The NPRM was the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Germany.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposed rule or the FAA's determination of the cost to the public.

The FAA's Determination

After careful review of all available information related to the subject presented above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed except for minor editorial corrections. The FAA has determined that these minor corrections will not change the meaning of the AD and will not add any additional burden upon the public than was already proposed.

Difference Between the Technical Note, German AD, and This AD

Both Glaser-Dirks Technical Note No. 826/11, dated August 29, 1984, and German AD 84–157, dated September 24, 1984, specify accomplishing the actions in this AD prior to further flight. The FAA does not have justification for requiring the action prior to further flight. Instead, the FAA has determined that 3 calendar months is a reasonable time period for accomplishing the actions in this AD.

Compliance Time of This AD

The compliance time of this AD is presented in calendar time instead of hours time-in-service (TIS) because of the typical usage of the affected gliders. For example, an operator of an affected glider may only utilize the glider 50 hours TIS in a year, while another operator may utilize an affected glider 50 hours TIS in one month. The FAA has determined that a compliance based on calendar time should be utilized in this AD in order to assure that the unsafe condition is addressed on all gliders in a reasonable time period.

Cost Impact

The FAA estimates that 35 gliders in the U.S. registry will be affected by this AD, that it will take approximately 6 workhours per glider to accomplish this action, and that the average labor rate is approximately $60 an hour. Parts cost approximately $100 per glider. Based on these figures, the total cost impact of this AD on U.S. operators is estimated to be $16,100, or $460 per glider.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the final evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

98–11–18 Glaser-Dirks Flugzeugbau GMBH: Amendment 39–10543; Docket No. 98–CE–14–AD.

Applicability: Model DG–400 gliders, all serial numbers, certificated in any category.

Note 1: This AD applies to each glider identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For gliders that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (d) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by

this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated in the body of this AD, unless already accomplished.

To prevent failure of the propeller suspension system caused by cracks in the propeller mounts, which could result in loss of the propeller with consequent reduced glider controllability, accomplish the following:

(a) Within the next 3 calendar months after the effective date of this AD, replace the upper rubber shock mounts with mounts made of stainless steel in accordance with the Instructions section of Glaser-Dirks Technical Note TN 826/11, dated August 29, 1984.

(b) Within the next 3 calendar months after the effective date of this AD, inspect (using 2× or greater lens) the rear plate of the propeller mount for cracks and an excessive gap between the aluminum blocks and the plate (more than 1 mm or .04 inches). Accomplish these inspections in accordance with the Instructions section of Glaser-Dirks Technical Note TN 826/11, dated August 29, 1984.

(1) If any cracks are found in the propeller mount, prior to further flight, replace the propeller mount with an uncracked mount in accordance with the applicable maintenance manual.

(2) If an excessive gap exists between the aluminum blocks and the plate, prior to further flight, install washers in accordance with the Instructions section of Glaser-Dirks Technical Note TN 826/11, dated August 29, 1984.

(c) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the glider to a location where the requirements of this AD can be accomplished.

(d) An alternative method of compliance or adjustment of the compliance times that provides an equivalent level of safety may be approved by the Manager, Small Airplane Directorate, FAA, 1201 Walnut, suite 900, Kansas City, Missouri 64106. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Small Airplane Directorate.

(e) Questions or technical information related to Glaser-Dirks Technical Note No. 826/11, dated August 29, 1984, should be directed to DG Flugzeugbau GmbH, Postfach 4120, D–76625 Bruchsal 4, Germany; telephone: +49 7257–89–0; facsimile: +49 7257–8922. This service information may be examined at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

(f) The replacement, inspection, and installation required by this AD shall be done in accordance with Glaser-Dirks Technical Note No. 826/11, dated August 29, 1984. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from DG Flugzeugbau GmbH, Postfach 4120, D–76625 Bruchsal 4, Germany. Copies may be inspected at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in German AD 84–157, dated September 24, 1984.

(g) This amendment becomes effective on July 10, 1998.

Issued in Kansas City, Missouri, on May 15, 1998.

Michael Gallagher,

Manager, Small Airplane Directorate, Aircraft Certification Service.

Airworthiness Directives; Pilatus Aircraft Ltd. Models PC–12 and PC–12/45 Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that applies to certain Pilatus Aircraft Ltd. (Pilatus) Models PC–12 and PC–12/45 airplanes that incorporate an executive cabin layout. This AD requires modifying the lavatory wall and passenger seat configuration. This AD is the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Switzerland. The actions specified by this AD are intended to prevent head injuries during an airplane crash because the lavatory wall and passenger seat configuration do not meet current head injury criteria regulations.

DATES: Effective July 13, 1998.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of July 13, 1998.

ADDRESSES: Service information that applies to this AD may be obtained from Pilatus Aircraft Ltd., Marketing Support Department, CH–6370 Stans, Switzerland; telephone: +41 41–6196 233; facsimile: +41 41–6103 351. This information may also be examined at the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 97–CE–38–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Roman T. Gabrys, Aerospace Engineer, Small Airplane Directorate, Airplane Certification Service, FAA, 1201 Walnut, suite 900, Kansas City, Missouri 64106; telephone: (816) 426–6934; facsimile: (816) 426–2169.

SUPPLEMENTARY INFORMATION:

Events Leading to the Issuance of This AD

A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an AD that would apply to certain Pilatus Models PC–12 and PC–12/45 airplanes that incorporate an executive cabin layout was published in the **Federal Register** as a notice of proposed rulemaking (NPRM) on March 24, 1998 (63 FR 14043). The NPRM proposed to require modifying the lavatory wall and passenger seat configuration. Accomplishment of the proposed action as specified in the NPRM would be in accordance with Pilatus Service Bulletin No. 25–003, dated May 7, 1997.

The NPRM was the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Switzerland.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposed rule or the FAA's determination of the cost to the public.

Since the issuance of the NPRM, Pilatus has revised Service Bulletin No. 25–003 (Rev. 1, dated April 7, 1998) to incorporate minor changes to clarify the situation. There are no technical changes involved.

The FAA's Determination

After careful review of all available information related to the subject presented above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed except for the addition of the revised service information and minor editorial corrections. The FAA has determined that this addition and these minor corrections will not change the meaning of the AD and will not add any

additional burden upon the public than was already proposed.

Cost Impact

The FAA estimates that 40 airplanes in the U.S. registry will be affected by this AD, that it will take approximately 15 workhours to accomplish these actions, and that the average labor rate is approximately $60 an hour. Parts will be provided by the manufacturer at no cost to the owners/operators of the affected airplanes. Based on these figures, the total cost impact of this AD on U.S. operators is estimated to be $36,000, or $900 per airplane. These figures are based on the presumption that no affected airplanes have these modifications incorporated.

Pilatus has informed the FAA that all 40 airplanes in the U.S. registry have these modifications incorporated. With this in mind, this AD imposes no cost impact upon the public.

Regulatory Impact

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the final evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

98–11–20 Pilatus Aircraft Ltd.: Amendment 39–10545; Docket No. 97–CE–38–AD.

Applicability: Models PC–12 and PC–12/45 airplanes, serial numbers MSN 101 through 180, certificated in any category, that incorporate an executive cabin layout.

Note 1: Models PC–12 and PC–12/45 airplanes that incorporate a corporate-utility cabin layout are not affected by this AD.

Note 2: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required within the next 100 hours time-in-service (TIS) after the effective date of this AD, unless already accomplished.

To prevent head injuries during an airplane crash because the lavatory wall and passenger seat configuration do not meet current head injury criteria regulations, accomplish the following:

(a) Modify the lavatory wall and passenger seat configuration in accordance with Pilatus Service Bulletin No. 25–003, dated May 7, 1997, or Pilatus Service Bulletin No. 25–003, Rev. 1, dated April 7, 1998.

(b) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(c) An alternative method of compliance or adjustment of the compliance time that provides an equivalent level of safety may be approved by the Manager, Small Airplane Directorate, 1201 Walnut, suite 900, Kansas City, Missouri 64106. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Small Airplane Directorate.

(d) Questions or technical information related to Pilatus Service Bulletin No. 25–003, dated May 7, 1997, or Pilatus Service Bulletin No. 25–003, Rev. 1, dated April 7, 1998, should be directed to Pilatus Aircraft Ltd., Marketing Support Department, CH–6370 Stans, Switzerland; telephone: +41 41–6196 233; facsimile: +41 41–6103 351. This service information may be examined at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

(e) The modification required by this AD shall be done in accordance with Pilatus Service Bulletin No. 25–003, dated May 7, 1997, or Pilatus Service Bulletin No. 25–003, Rev. 1, dated April 7, 1998. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Pilatus Aircraft Ltd., Marketing Support Department, CH–6370 Stans, Switzerland. Copies may be inspected at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

Note 4: The subject of this AD is addressed in Swiss AD HB 97–249, dated May 31, 1997.

(f) This amendment becomes effective on July 13, 1998.

Issued in Kansas City, Missouri, on May 18, 1998.

Michael Gallagher,

Manager, Small Airplane Directorate, Aircraft Certification Service.

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 97–ANM–20]

Amendment of Class E Airspace; Livingston, MT, and Butte, MT, and Removal of Class E Airspace; Coppertown, MT

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action combines the Coppertown, MT, Class E airspace area with the existing Butte, MT, Class E airspace area. This combined airspace is now designated the Butte, MT, Class E airspace area. This action also amends the adjacent Class E airspace at Livingston, MT, by providing additional controlled airspace to accommodate the development of new Standard Instrument Approach Procedures (SIAP) utilizing the Global Positioning System (GPS) at the Livingston Airport.

EFFECTIVE DATE: 0901 UTC, August 13, 1998.

FOR FURTHER INFORMATION CONTACT: Dennis Ripley, ANM–520.6, Federal

Aviation Administration, Docket No. 97–ANM–20, 1601 Lind Avenue S.W., Renton, Washington, 98055–4056; telephone number: (425) 227–2527.

SUPPLEMENTARY INFORMATION

History

On February 25, 1998, the FAA proposed to amend Title 14, Code of Federal Regulation, part 71 (14 CFR part 71) by removing the Coppertown, MT, airspace area and revising the Livingston, MT, and Butte, MT, Class E airspace areas (63 FR 9462). This revision provides the additional airspace necessary to encompass a GPS SIAP for the Mission Field Airport, Livingston, MT. This action also corrects two errors discovered in the proposal. A spelling error and an incorrect airport name listed in the legal description are corrected herein. Interested parties were invited to participate in the rulemaking proceeding by submitting written comments on the proposal. No comments were received.

The coordinates for this airspace docket are based on North American Datum 83. Class E airspace areas extending upward from 700 feet or more above the surface of the earth are published in Paragraph 6005 of FAA Order 7400.9E, dated September 10, 1997, and effective September 16, 1997, which is incorporated by reference in 14 CFR 71.1. The Class airspace designation listed in this document will be published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 modifies Class E airspace at Livingston, MT, and Butte, MT, while also removing Class E airspace at Coppertown, MT. This action combines the Coppertown, MT, Class E airspace area with the existing Butte, MT, Class E airspace area. This combined airspace is now designated the Butte, MT, Class E airspace area. The incorrectly named Coppertown, MT, airspace does not serve an airport, has no associated town, and is solely a navigational aid located close to Butte, MT. This amendment also provides the additional airspace necessary to fully encompass the GPS–A SIAP to the Mission Field Airport, Livingston, MT. Additionally, this rule revises the common airspace boundaries where Livingston, MT, and Butte, MT, airspace areas meet in order to better distribute the airspace serving the respective airports and to provide for easier cartography. The intended effect of this rule is designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under Instrument Flight Rule (IFR) at the Mission Field Airport and between the terminal and en route transition stages.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9E, Airspace Designations and Reporting Points, dated September 10, 1997, and effective September 16, 1997, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

Adoption of Updated EDGAR Filer Manual

AGENCY: Securities and Exchange Commission.

ACTION: Final Rules.

SUMMARY: The Commission is adopting an updated edition of the EDGAR Filer Manual and is providing for its

incorporation by reference into the Code of Federal Regulations.

EFFECTIVE DATE: The amendment to 17 CFR part 232 (Regulation S–T) will be effective on June 1, 1998. The new edition of the EDGAR Filer Manual (Release 5.50) will be effective on June 1, 1998. The incorporation by reference of the EDGAR Filer Manual is approved by the Director of the Federal Register as of June 1, 1998.

FOR FURTHER INFORMATION CONTACT:

In the Office of Information Technology, Michael E. Bartell; at (202) 942–8800; for questions concerning investment company filings, Ruth Armfield Sanders, Senior Counsel, Division of Investment Management, at (202) 942–0633; and for questions concerning Corporation Finance company filings, Margaret R. Black at (202) 942–2933.

SUPPLEMENTARY INFORMATION: The Commission today announces the adoption of an updated EDGAR Filer Manual ("Filer Manual"), which sets forth the technical formatting requirements governing the preparation and submission of electronic filings through the Electronic Data Gathering, Analysis, and Retrieval ("EDGAR") system.[1] Compliance with the provisions of the Filer Manual is required in order to assure the timely acceptance and processing of filings made in electronic format.[2] Filers should consult the Filer Manual in conjunction with the Commission's rules governing mandated electronic filing when preparing documents for electronic submission.[3]

In this edition of the EDGAR System and the Filer Manual (Release 5.50), the following four EDGAR submission form types have been added for filing of profiles for certain open-end management investment companies[4] pursuant to Rule 497 under the Securities Act.[5] 497K1, 497K2, 497K3A and 497K3B. Also, form type N–14MEF has been added for the filing of Forms N–14 pursuant to the Securities Act Rule 462(b).

In addition, Release 5.50 of EDGARLink no longer supports 1200 baud filing transmission rates, a transmission speed that was not being used by filers. Also, the number of exhibits allowed in one submission has been increased from 99 to 500; if more than 500 exhibits are attached to a single submission, the submission will not be accepted. The readme.doc file has been updated with the description of all 5.50 changes.

Rule 301 of Regulation S–T also is being amended to provide for the incorporation by reference of the Filer Manual into the Code of Federal Regulations, which incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51. The revised Filer Manual and the amendment to Rule 301 will be effective on June 1, 1998.

Paper copies of the updated Filer Manual may be obtained at the following address: Public Reference Room, U.S. Securities and Exchange Commission, Mail Stop 1–2, 450 Fifth Street, NW., Washington, DC 20549. Electronic format copies will be available on the EDGAR electronic bulletin board and posted to the SEC's Web Site. The SEC's Web Site address for the Manual is http://www.sec.gov/asec/ofis/filerman.htm. Copies also may be obtained from Disclosure Incorporated, the paper and microfiche contractor for the Commission, at (800) 638–8241.

Since the Filer Manual relates solely to agency procedure or practice, publication for notice and comment is not required under the Administrative Procedure Act.[6] It follows that the requirements of the Regulatory Flexibility Act[7] do not apply.

The effective date for the updated Filer Manual and the rule amendments is June 1, 1998. In accordance with the Administrative Procedure Act 5 U.S.C. 553(d)(3), the Commission finds that there is good cause to establish an effective date less than 30 days after publication of these rules. The EDGAR system is scheduled to be upgraded to Release 5.50 on May 30, 1998. The Commission believes that it is necessary to coordinate the effectiveness of the updated Filer Manual with the scheduled system upgrade in order to avoid confusion to EDGAR filers.

Statutory Basis

The amendment to Regulation S–T is being adopted under Sections 6, 7, 8, 10, and 19(a) of the Securities Act,[8] Sections 3, 12, 13, 14, 15, 23, and 35A of the Securities Exchange Act of 1934,[9] Section 20 of the Public Utility Holding Company Act of 1935,[10] Section 319 of the Trust Indenture Act of 1939,[11] and Sections 8, 30, 31, and 38 of the Investment Company Act.[12]

List of Subjects in 17 CFR Part 232

Incorporation by reference, Investment companies, Registration requirements, Reporting and recordkeeping requirements, Securities.

Text of the Amendment

In accordance with the foregoing, Title 17, Chapter II of the Code of Federal Regulations is amended as follows:

PART 232—REGULATION S–T—GENERAL RULES AND REGULATIONS FOR ELECTRONIC FILINGS

1. The authority citation for part 232 continues to read as follows:

Authority: 15 U.S.C. 77f, 77g, 77h, 77j, 77s(a), 77sss(a), 78c(b), 78*l*, 78m, 78n, 78o(d), 78w(a), 78*ll*(d), 79t(a)m, 80a–8, 80a–29, 80a–30 and 80a–37.

2. Section 232.301 is revised to read as follows:

§ 232.301 EDGAR Filer Manual.

Electronic filings shall be prepared in the manner prescribed by the EDGAR Filer Manual, promulgated by the Commission, which sets out the technical formatting requirements for electronic submissions. The June 1998 edition of the EDGAR Filer Manual: Guide for Electronic Filing with the U.S. Securities and Exchange Commission (Release 5.50) is incorporated into the Code of Federal Regulations by reference, which action was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51. Compliance with the requirements found therein is essential to the timely receipt and acceptance of documents filed with or otherwise submitted to the Commission in

Amendments To Rules On Shareholder Proposals

AGENCY: Securities and Exchange Commission.

ACTION: Final Rule.

SUMMARY: The Securities and Exchange Commission ("we" or "Commission") is adopting amendments to its rules on shareholder proposals. The amendments recast rule 14a–8 into a Question & Answer Format that both shareholders and companies should find easier to follow, and make other modifications to existing interpretations of the rule. We are also amending rule 14a–4 to provide clearer ground rules for companies' exercise of discretionary voting authority, and making related amendments to rule 14a–5.

EFFECTIVE DATE: The amendments are effective June 29, 1998.

FOR FURTHER INFORMATION CONTACT: Frank G. Zarb, Jr., of Sanjay M. Shirodkar, Division of Corporation Finance, (202) 942–2900, or Doretha M. VanSlyke, Division of Investment Management, at (202) 942–0721, Securities and Exchange Commission, 450 Fifth Street, N.W., Washington, D.C. 20549.

SUPPLEMENTARY INFORMATION: The Commission is adopting amendments to rules 14a–8,[1] 14a–4,[2] and 14a–5[3] under the Securities Exchange Act of 1934 (the "Exchange Act").[4]

I. Executive Summary

With modifications, we are adopting some of the amendments to our rules on shareholder proposals that we initially proposed on September 18, 1997.[5] As explained more fully in this release, we modified our original proposals based on our consideration of the more than 2,000 comment letters we received from the public.[6]

Our proposed changes evoked considerable public controversy, as have our earlier efforts to reform these rules. Some shareholders and companies expressed overall support for our proposals.[7] Certain of our proposals, however, were viewed as especially controversial, and generated strong comments in favor, as well as heavy opposition.[8]

The amendments adopted today:

- Recast rule 14a–8 into a Question & Answer format that is easier to read;
- Reverse the *Cracker Barrel* no-action letter on employment-related proposals raising social policy issues;
- Adopt other less significant amendments to rule 14a–8; and
- Amend rule 14a–4 to provide shareholders and companies with clearer guidance on companies' exercise of discretionary voting authority.

These reforms, in our view, will help to improve the operation of the rules governing shareholder proposals and will address some of he concerns raised by shareholders and companies over the last several years on the operation of the proxy process.

We have decided not to adopt other elements of our original proposals, due in part to strong concerns expressed by commenters. We are not adopting our original proposals to increase the percentage of the vote a proposal needs before it can be resubmitted in future years;[9] to streamline the exclusion for matters considered irrelevant to corporate business;[10] or to modify our administration of the rule that permits companies to exclude proposals that further personal grievances or special interests.[11] We are also not adopting the proposed "override" mechanism that would have permitted 3% of the shareownership to override a company's decision to exclude proposals under certain of the bases for exclusion set forth under Question 9 of amended rule 14a–8.[12]

Some of the proposals we are not adopting share a common theme: to reduce the Commission's and its staff's role in the process and to provide shareholders and companies with a greater opportunity to decide for themselves which proposals are sufficiently important and relevant to the company's business to justify inclusion in its proxy materials. However, a number of commenters resisted the idea of significantly decreasing the role of the Commission and its staff as informal arbiters through the administration of the no-action letter process. Consistent with these views, commenters were equally unsupportive of fundamental alternatives to the existing rule and process that, in different degrees, would have decreased the Commission's overall participation.

While we have tried to provide the most fair, predictable, and efficient system possible, these rules, even as amended, will continue to require us to make difficult judgments about interpretations of proposals, the motives of those submitting them, and the policies to which they relate. We will continue to explore ways to improve the process as opportunities present themselves.

II. Plain-English Question & Answer Format

We had proposed to recast rule 14a–8 into a more plain-English Question & Answer format.[13] We are adopting that proposal, and the amended rule will be

[13] Unless specifically indicated otherwise, none of these revisions are intended to signal a change in our current interpretations.

the Commission's first in question and answer format. Most commenters who addressed this proposal expressed favorable views, believing that it would make the rule easier for shareholders and companies to understand and follow.[14]

In addition to the other amendments described in this release, we have made some minor revisions to the language we had proposed to conform with the new plain English format. For example, on the proposed revisions to paragraph (1) under Question 9, which is former rule 14a–8(c)(1),[15] commenters stated, and we agree, that the reference to "the state of the company's incorporation" may appear narrower than the actual scope of the rule because some entities that may be subject to the rule, such as partnerships, are not "incorporated."[16] Accordingly, the rule as adopted refers to "the laws of the jurisdiction of the company's organization."

We are adopting minor plain—English revisions to paragraphs (2), (3), and (4) under Question 9, former rules 14a–8(c)(2),[17] (c)(3),[18] and (c)(4). Because we are not adopting the proposed substantive amendments to paragraph (5), former rule 14a–8(c)(5), we are making only minor, non-substantive modifications to the language of that rule so that it conforms to the new plain-English approach.

We are adopting the revisions to former rule 14a–8(c)(6),[19] now paragraph (6) under Question 9, as proposed.[20]

While we are making minor conforming changes to the language of paragraph (7) under Question 9, formerly rule 14a–8(c)(7),[21] we have decided not to adopt the proposed language changes to this rule, or the list of illustrative examples, other than to replace the reference to "registrant" with "company."[22] We had proposed to revise the rule's language because we thought that the legal term-of-art "ordinary business" might be confusing to some shareholders and companies. The term refers to matters that are not necessarily "ordinary" in the common meaning of the word, and is rooted in the corporate law concept providing management with flexibility in directing certain core matters involving the company's business and operations. Several companies and shareholders nonetheless objected to the proposed revisions, particularly the elimination of the "ordinary business" language, on the ground that most participants in the shareholder proposal process are now so familiar with the "ordinary business" language that they might misconstrue the revisions as signaling an interpretive change.[23] Indeed, since the meaning of the phrase "ordinary business" has been developed by the courts over the years through costly litigation and essentially has become a term-0f-art in the proxy area, we recognize the possibility that the adoption of a new term could inject needless costs and other inefficiencies into the shareholder proposal process.

We are adopting with one modification the proposed language changes to paragraph (8) under Question 9, formerly rule 14a–8(c)(8).[24] The rule as proposed would have permitted companies to exclude a proposal that "relates to an election for membership on the company's board of directors." Based on a suggestion from one commenter, in order to account for non-corporate entities with principal governing bodies bearing names other than the "board of directors," the rule as adopted refers explicitly to elections to an "analogous governing body."[25]

We are adopting as proposed our revisions to paragraph (9) under Question 9, formerly rule 14a–8(c)(9).[26] As amended, the rule permits a company to exclude a proposal that "directly conflicts with one of the company's own proposals to be submitted to shareholders at the same meeting."[27]

We are adopting as proposed the revisions to paragraphs (10) and (11) under Question 9, formerly rules 14a–8(c)(10)[28] and 14a–8(c)(11).[29] The revisions to paragraph (10) reflect an interpretation that we adopted in 1983.[30]

Although we are not adopting proposed substantive revisions to paragraph (12), formerly rule 14a–8(c)(12),[31] we are adopting non-substantive revisions to conform the rule to the new plain-English approach.

The Commission, through the Division of Corporation Finance (the "Division"), anticipates establishing a special electronic mailbox only for rule 14a–8 correspondence through which both shareholders and companies will be permitted to make electronic submissions under this rule, including follow-up correspondence.

III. The Interpretation of Rule 14a–8(c)(7): The "Ordinary Business" Exclusion

We proposed to reverse the position announced in the 1992 *Cracker Barrel* no-action letter concerning the Division's approach to employment-related shareholder proposals raising social policy issues.[32] In that letter, the Division announced that

The fact that a shareholder proposal concerning a company's employment

---

[14] *See, e.g.*, CALPERS Letter; State Teachers' Retirement Sys. (California), Jan. 12, 1998; Ethics in Investment Committee of the Sisters of Charity of Saint Elizabeth Station, Nov. 19, 1997; Mr. H. Carl McCall, Comptroller of the State of New York, Dec. 24, 1997; American Corporate Counsel Assoc., Dec. 31, 1997 ("ACCA Letter"); ASCS Letter; Eastman Kodak Co., Nov. 25, 1997; Banc One Corp., Dec. 9, 1998. Some commenters, however, did not believe that the new format would significantly improve the rule's operation. *See, e.g.*, ABA Letter; New York State Bar Assoc., Dec. 10, 1997 ("New York State Bar Letter").

[15] Rule 14–8(c)(1) [17 CFR 240.14a–8(c)(1)].

[16] *See* ABA Letter; ICCR Letter; Investment Company Institute, Dec. 30, 1997 ("ICI Letter").

[17] Rule 14a–8(c)(2) [17 CFR 240.14a–8(c)(2)].

[18] Rule 14a–8(c)(3) [17 CFR 240.14a–8(c)(3)].

[19] Rule 14a–8(c)(6) [17 CFR 240.14a–8(c)(6)].

[20] One commenter thought the proposed language could be read as precluding companies from excluding proposals that companies lack power to implement. *See* ABA Letter. To the contrary, the revised rule continues to refer to situations where a company lacks "power" to implement the proposal. Thus, for example, exclusion may be justified where implementing the proposal would require intervening actions by independent third parties. *See*, e.g., SCEcorp (Dec. 20, 1995) (proposal that unaffiliated fiduciary trustees amend voting agreements). Under current staff interpretations, however, exclusion would not normally be justified if the proposal merely requires the company to *ask* for cooperation from a third party. *See, e.g., Northeast Utilities System* (Nov. 7, 1996) (proposal that the company ask a third party to coordinate annual meetings held by public companies).

[21] Rule 14a–8(c)(7) [17 CFR 240.14a–8(c)(7)].

[22] Two commenters suggested that we include a non-exclusive list of examples of matters particular to investment companies that would be excludable per se under the ordinary business exception. *See* ICI Letter; Gordon Altman Butowsky Weitzen Shalov & Wein, Dec. 16, 1997. We have not followed the suggestion. We believe that investment companies are not sufficiently different from other types of issuers to make it appropriate for us to designate a predefined set of topics that would be excepted from the shareholder proposal process established under Rule 14a–8.

[23] *See, e.g.*, ICCR Letter; Jessie Smith Noyes Foundation, Nov. 14, 1997 ("Jessie Smith Noyes Letter"); Long View Collective Investment Fund, Jan. 5, 1998 ("Long View Letter"); ABA Letter; The Chase Manhattan Corp., Jan. 14, 1998 ("Chase Manhattan Letter").

[24] Rule 14a–8(c)(8) [17 CFR 240.14a–8(c)(8)].

[25] *See* ABA Letter.

[26] Rule 14a–8(c)(9) [17 CFR 240.14a–8(c)(9)].

[27] One commenter thought that the word "directly" may appear to signal a narrowing of the exclusion. *See* ABA Letter. We believe that the revisions accurately convey our current interpretations of the rule; of course, by revising the rule we do not intend to imply that proposals must be identical in scope or focus for the exclusion to be available. *See, e.g., SBC Communications* (Feb. 2, 1996) (shareholder proposal on calculation of non-cash compensation directly conflicted with company's proposal on a stock and incentive plan).

[28] Rule 14a–8(c)(10) [17 CFR 240.14a–8(c)(10)].

[29] Rule 14a–8(c)(11) [17 CFR 240.14a–8(c)(11)].

[30] In Exchange Act Release No. 20091 (Aug. 16, 1983) [48 FR 38218], we stated that a proposal may be excluded under the rule if it has been "substantially implemented."

[31] As explained in Section VI below, we have decided not to modify the percentage of the shareholder vote that a proposal must receive in order to be entitled to re-submission in future years.

[32] *See Cracker Barrel Old Country Stores, Inc.* (Oct. 13, 1992).

policies and practices for the general workforce is tied to a social issue will no longer be viewed as removing the proposal from the realm of ordinary business operations of the registrant. Rather, determinations with respect to any such proposals are properly governed by the employment-based nature of the proposal.

We are adopting our proposal to reverse the *Cracker Barrel* position, which provided that all employment-related shareholder proposals raising social policy issues would be excludable under the "ordinary business" exclusion.[33] The Division will return to its case-by-case approach that prevailed prior to the *Cracker Barrel* no-action letter.

In applying the "ordinary business" exclusion to proposals that raise social policy issues, the Division seeks to use the most well-reasoned and consistent standards possible, given the inherent complexity of the task. From time to time, in light of experience dealing with proposals in specific subject areas, and reflecting changing societal views, the Division adjusts its view with respect to "social policy" proposals involving ordinary business. Over the years, the Division has reversed its position on the excludability of a number of types of proposals, including plant closings,[34] the manufacture of tobacco products,[35] executive compensation,[36] and golden parachutes.[37]

We believe that reversal of the Division's *Cracker Barrel* no-action letter, which the Commission had subsequently affirmed,[38] is warranted. Since 1992, the relative importance of certain social issues relating to employment matters has reemerged as a consistent topic of widespread public debate.[39] In addition, as a result of the extensive policy discussions that the *Cracker Barrel* position engendered, and through the rulemaking notice and comment process, we have gained a better understanding of the depth of interest among shareholders in having an opportunity to express their views to company management on employment-related proposals that raise sufficiently significant social policy issues.

Reversal of the *Cracker Barrel* no-action position will result in a return to a case-by-case analytical approach. In making distinctions in this area, the Division and the Commission will continue to apply the applicable standard for determining when a proposal relates to "ordinary business." The standard, originally articulated in the Commission's 1976 release, provided an exception for certain proposals that raise significant social policy issues.[40]

While we acknowledge that there is no bright-line test to determine when employment-related shareholder proposals raising social issues fall within the scope of the "ordinary business" exclusion, the staff will make reasoned distinctions in deciding whether to furnish "no-action" relief. Although a few of the distinctions made in those cases may be somewhat tenuous, we believe that on the whole the benefit to shareholders and companies in providing guidance and informal resolutions will outweigh the problematic aspects of the few decisions in the middle ground.

Nearly all commenters from the shareholder community who addressed the matter supported the reversal of this position.[41] Most commenters from the corporate community did not favor the proposal to reverse *Cracker Barrel*, though many indicated that the change would be acceptable as part of a broader set of reforms.[42]

Going forward, companies and shareholders should bear in mind that the *Cracker Barrel* position related only to employment-related proposals raising certain social policy issues. Reversal of the position does not affect the Division's analysis of any other category of proposals under the exclusion, such as proposals on general business operations.

Finally, we believe that it would be useful to summarize the principal considerations in the Division's application, under the Commission's oversight, of the "ordinary business" exclusion. The general underlying policy of this exclusion is consistent with the policy of most state corporate laws: to confine the resolution of ordinary business problems to management and the board of directors, since it is impracticable for shareholders to decide how to solve such problems at an annual shareholders meeting.

The policy underlying the ordinary business exclusion rests on two central considerations. The first relates to the subject matter of the proposal. Certain tasks are so fundamental to management's ability to run a company on a day-to-day basis that they could not, as a practical matter, be subject to direct shareholder oversight. Examples include the management of the workforce, such as the hiring, promotion, and termination of employees, decisions on production quality and quantity, and the retention of suppliers. However, proposals relating to such matters but focusing on sufficiently significant social policy issues (e.g., significant discrimination matters) generally would not be considered to be excludable, because the proposals would transcend the day-to-day business matters and raise policy issues so significant that it would be appropriate for a shareholder vote.[43]

The second consideration relates to the degree to which the proposal seeks to "micro-manage" the company by probing too deeply into matters of a complex nature upon which shareholders, as a group, would not be in a position to make an informed judgment.[44] This consideration may come into play in a number of circumstances, such as where the proposal involves intricate detail, or seeks to impose specific time-frames or methods for implementing complex policies.

A similar discussion in the Proposing Release of the primary considerations underlying our interpretation of the "ordinary business" exclusion as applied to such proposals raised some questions and concerns among some of the commenters. Because of that concern, we are providing clarification of that position.[45] One aspect of that

---

[33] The reversal is effective as of May 21, 1998, and will apply to future Division no-action responses. It will apply to any rule 14a–8 no-action submission that the Division has received before May 21, 1998 if the Division has not issued a corresponding no-action response by the close of business on May 20, 1998.

[44] Exchange Act Release No. 12999 (Nov. 22, 1976).

[45] The exclusion has been interpreted previously by the Commission. *See, e.g.*, Exchange Act Release No. 20091 (Aug. 16, 1983) [48 FR 38218]; Exchange Act Release No. 12999 (Nov. 22, 1976) [41 FR 52994]; Exchange Act Release No. 4950 (Oct. 9, 1953) [18 FR 6646]. It has also been interpreted by the courts. *See, e.g., Grimes* v. *Ohio Edison Co.*, 992 F.2d 455 (2d Cir. 1993); *Roosevelt* v. *E.I. Du Pont De Nemours & Co.*, 958 F.2d 416 (D.C. Cir. 1992);

discussion was the basis for some commenters' concern that the reversal of *Cracker Barrel* might be only a partial one. More specifically, in the Proposing Release we explained that one of the considerations in making the ordinary business determination was the degree to which the proposal seeks to micro-manage the company. We cited examples such as where the proposal seeks intricate detail, or seeks to impose specific time-frames or to impose specific methods for implementing complex policies. Some commenters thought that the examples cited seemed to imply that all proposals seeking detail, or seeking to promote time-frames or methods, necessarily amount to "ordinary business."[46] We did not intend such an implication. Timing questions, for instance, could involve significant policy where large differences are at stake, and proposals may seek a reasonable level of detail without running afoul of these considerations.[47]

Further, in a footnote to the same sentence citing examples of "micromanagement," we included a citation to *Capital Cities/ABC, Inc.*, (Apr. 4, 1991) involving a proposal on the company's affirmative action policies and practices.[48] Some commenters were concerned that the citation might imply that proposals similar to the *Capital Cities* proposal today would automatically be excludable under "ordinary business" on grounds that they seek excessive detail. Such a position, in their view, might offset the impact of reversing the *Cracker Barrel* position. However, we cited *Capital Cities/ABC, Inc.* only to support the general proposition that some proposals may intrude unduly on a company's "ordinary business" operations by virtue of the level of detail that they seek. We did not intend to imply that the proposal addressed in *Capital Cities*, or similar proposals, would automatically amount to "ordinary business." Those determinations will be made on a case-by-case basis, taking into account factors such as the nature of the proposal and the circumstances of the company to which it is directed.

IV. Rule 14a–4: Discretionary Voting Authority

We had proposed amendments to rule 14a–4, and related amendments to rule 14a–5, to provide clearer guidelines for companies' exercise of discretionary voting authority in connection with annual shareholder meetings.[49] We are adopting our proposals with some modifications.

As we explained in the Proposing Release, rule 14a–4 did not clearly address the exercise of discretionary voting authority if a shareholder proponent chooses not to use rule 14a–8's procedures for placing his or her proposal in the company's proxy materials. This may occur if the proponent notifies the company in advance of the meeting of his or her intention to present the proposal from the floor of the meeting, and commences his or her own proxy solicitation, without ever invoking rule 14a–8's procedures. Our amendments to rule 14a–4(c)(1), and new paragraphs 14a–4(c)(2) and (c)(3), are designed to provide companies with clearer guidance on the scope of permissible discretionary voting power in the context of a non-14a–8 proposal.

A. Rule 14a–4(c)(1)

We are adopting essentially as proposed new rule 14a–4(c)(1), which replaces a "reasonable time" standard with a clear date after which notice to the company of a possible shareholder proposal would not jeopardize a company's ability to exercise discretionary voting authority on that new matter when and if raised at the annual meeting. Most commenters who addressed this proposal expressed favorable views.[50] Amended paragraph 14a–4(c)(1) allows a company voting discretionary authority where the company did not have notice of the matter by a date more than 45 days before the month and day in the current year corresponding to the date on which the company first mailed its proxy materials for the prior year's annual meeting of the shareholders, or by a date established by an overriding advance notice provision.[51]

As an example, assume a company mailed this year's proxy materials on March 31, 1998 for an annual meeting on May 1, 1998. Next year, the company also schedules an early May annual meeting. The notice date established by new rule 14a–4(c)(1) for non-14a–8 proposals is 45 days before March 31, or February 14. Thus February 14, 1999 would represent the notice date for the purposes of amended rule 14a–4(c)(1) unless a different date is established by an overriding advance notice provision in the company's charter or bylaws.[52]

A few commenters thought that advance notice of 45 days might provide an insufficient amount of time for some companies with longer printing and mailing schedules.[53] However, we do not believe that it is necessary to extend the 45-day advance notice period, since most companies should have some flexibility under state law to prolong the period through advance notice provisions. We stated in the Proposing Release that we did not intend to interfere with the operations of state law authorized definitions of advance notice set forth in corporate bylaws and/or articles of incorporation, and a number of commenters supported this approach.[54] Accordingly, an advance notice provision would override the 45-day period under rule 14a–4, resulting

---

Medical Committee for Human Rights v. *SEC*, 432 F.2d 659 (D.C. Cir. 1970); *New York City Employee's Retirement Sys.* v. *SEC*, 843 F. Supp. 858, *rev'd* 45 F.3d 7 (2d Cir. 1995); *Amalgamated Clothing and Textile Workers Union* v. *Wal-Mart Stores, Inc.*, 821 F. Supp. 877, 891 (S.D.N.Y. 1993).

[46] *See, e.g.*, ICCR Letter; LongView Letter; Letter from Professor Harvey J. Goldschmid of Columbia University School of Law, and Ira M. Millstein, Senior Partner, Weil, Gotshal & Manges LLP, Dec. 23, 1997 ("Goldschmid and Millstein Letter"). *Compare* Chase Manhattan Letter.

[47] *See, e.g., Roosevelt* v. *E.I. Du Pont De Nemours & Co.*, 958 F.2d at 424–427 (one-year difference in timing of CFC production phase-out does not implicate significant policy, but longer period might implicate significant policy). In *Amalgamated Clothing and Textile Workers Union*, 821 F. Supp. at 891, the court required Wal-Mart to include a proposal in its proxy materials that sought information on the company's affirmative action policies and practices, although it also required the proponents to make certain revisions designed to ensure that the proposal did not seek excessive detail.

[48] *See* Proposing Release, Footnote 79.

[49] Discretionary voting authority is the ability to vote proxies that shareholders have executed and returned to the company, on matters not specifically reflected on the proxy card, and on which shareholders have not had an opportunity to vote by proxy. While not necessarily limited to annual meetings involving the election of directors, this has been the context in which companies have expressed concerns about proponents' attempts to "end run" around the rule 14a–8 process.

[50] *See, e.g.*, ICCR Letter; TIAA–CREF Letter; LongView Letter, BRT Letter; ACCA Letter; Barclays Global Investors, Dec. 4, 1997; United Brotherhood of Carpenters and Joiners of America ("Carpenters Letter"); International Union of Operating Engineers, Dec. 29, 1997 ("Engineers Letter"); International Brotherhood of Teamsters, Dec. 23, 1997 ("Teamsters Letter"). A few commenters did not favor the proposal. *See e.g.*, Gannett Corp., Nov. 20, 1997; CALPERS Letter; Union of Needletrades, Industrial and Textile Employees, Jan. 2, 1998 ("UNITE Letter").

[51] An advance notice provision is a requirement in a company's charter or bylaws that a shareholder proponent notify the company of his/her intention to present a proposal a certain number of days or weeks prior to the shareholders' meeting or the mailing of proxies.

[52] As amended, rule 14a–5(e) requires companies to disclose this date in each annual meeting proxy statement or its equivalent. *See* Section V below.

[53] *See, e.g.*, ACCA Letter; Citicorp, Dec. 23, 1997 ("Citicorp Letter").

[54] *See, e.g.*, Air Products and Chemicals, Inc., Dec. 22, 1997; NationsBank, Nov. 21, 1997; BRT Letter; Sullivan & Cromwell Letter. Other commenters who generally supported proposed new paragraph 14a–4(c)(1) did not note an objection to this aspect of the rules operation. *See e.g.*, Carpenters Letter, Longview Letter; Engineers Letter; ICCR Letter; TIAA–CREF Letter.

in a shorter [55] or longer period.[56] The rule continues to require inclusion of a specific statement, in either the proxy statement or proxy card, of an intent to exercise discretionary voting authority in these circumstances.

Paragraph 14a–4(c)(1) as adopted continues to incorporate a "reasonable time" standard if the company did not hold an annual meeting of shareholders during the prior year, or if the date of the annual meeting has changed by more than 30 days from the prior year. While one commenter suggested an alternative mechanism designed to provide a more specific "default" date, we were concerned that such an alternative approach might make the rule unjustifiable complex.[57]

B. Rule 14a–4(c)(2)

Proposed new paragraph 14a–4(c)(2) addressed a company's ability to exercise discretionary voting authority for an annual shareholders' meeting notwithstanding its receipt of "timely" advance notice of a non-14a–8 shareholder proposal as defined by paragraph 14a–4(c)(1).[58] We are adopting new paragraph (c)(2), but with some modifications of the original proposal.

As originally proposed, paragraph 14a–4(c)(2) would have permitted the exercise of discretionary voting authority by company management if the company's proxy materials were to include: (i) in the proxy statement, a discussion of the nature of the matters as to which adequate advance notice has been received, and how the company intends to exercise its discretion to vote on each such matter should it be presented to shareholders at the meeting, and (ii) on the proxy card, a cross-reference to the discussion in the proxy statement and a box allowing shareholders to withhold discretionary authority from management to vote on the designated matter(s). The pre-conditions to reliance on the rule are discussed below.

1. Proxy Statement Disclosure

On the first pre-condition of the proposed rule, requiring disclosure of the nature of potential non-14a–8 shareholder proposals, a number of commenters objected to our use of the word "discussion." [59] In their view, the word "discussion" appears to signal a departure from the Division's current position expressed in its *Idaho Power* and *Borg-Warner* no action letter responses.[60] Under those no-action responses, companies must only "advise" shareholders of, rather than "discuss," the nature of proposals that may be raised. Because we intended no departure from the disclosure element of the Division's no-action position, paragraph (c)(2) as adopted replaces the word "discussion" with "advice." We remind you that the disclosure prescribed by amended rule 14a–4(c)(2), as with any disclosure item, must take into account the disclosure requirements of the proxy anti-fraud rule.[61]

2. No Separate Voting Box

On the second pre-condition of proposed paragraph 14a–4(c)(2), a number of commenters objected to the inclusion of a separate voting "box" permitting shareholders to withhold discretionary authority from management on a non-14a–8 shareholder proposal as to which adequate advance notice had been received in the context of an annual meeting or its equivalent. Some stated that a voting box permitting shareholders to withhold discretionary voting authority in some circumstances may be confusing if shareholders are also independently solicited by the proponent in support of the same proposal.[62] We agree that inclusion of the proposed box on companies' proxy cares may be confusing in some circumstances.[63]

Other commenters objected to the separate voting box because they believe that the potential availability of the box would in effect create a new system for submitting shareholder proposals without having to comply with the restrictions under rule 14a–8.[64] In their view, the prospect of obtaining a voting box with a cross-reference to disclosure of the nature of the potential proposal in the proxy statement would encourage the submission of more shareholder proposals outside rule 14a–8's mechanisms.

Accordingly, we have decided not to include the new voting box as part of new rule 14a–4(c)(2). A shareholder's execution of a proxy card will confer discretionary voting authority if the requirements of the rule are satisfied.

3. Percentage of Shareholders to be Solicited

Several commenters also objected to proposed new paragraph 14a–4(c)(2) on grounds that it would permit a company to exercise discretionary voting authority at an annual shareholders meeting even if the shareholder proponent had independently solicited the percentage of shareholders required to carry the proposal.[65] These commenters believe that a company should not be permitted to vote uninstructed proxies if the proponent has put the proposal "in play" by providing a proxy statement and form of proxy to a significant percentage of the company's sharehownership. On this point, proposed paragraph 14a–4(c)(2) represented a departure from the

---

[55] A company that mails its proxy materials before the expiration of the period established by an advance notice bylaw would continue to be subject to the notice even though it has already mailed its proxies.

[56] One commenter suggested that we move the parenthetical referring to the effect of advance notice provisions from the middle of the first sentence of paragraph 14a–4(c)(1) as proposed to the end of that sentence in order to clarify that an advance notice provision would override the 45-day period established by the rule whether the provision runs from the meeting date or from the mailing date. *See* Sullivan & Cromwell Letter. We agree and have made the revision.

[57] *See* Sullivan & Cromwell Letter.

[58] A few commenters also thought that we should further clarify that new paragraph 14a–4(c)(2) comes into play only if the company receives timely notice of a non-14a–8 proposal for the purposes of paragraph (c)(1). We added clarifying language to the end of paragraph (c)(1) and the beginning of paragraph (c)(2) in response to these comments.

[59] *See e.g.*, Chevron Corp, Nov. 25, 1997; USX Corp., Dec. 18, 1997.

[60] *Idaho Power Co.* (Mar 13, 1996); *Borg-Warner Security Corp.* (Mar. 14, 1996).

[61] *See* rule 14a–9 [17 CFR 240.14a–9].

[62] *See, e.g.*, Georgeson Letter; ICCR Letter; UNITE Letter; Davis, Cowell & Bowe, LLP, Jan. 2, 1998. One commenter gave the following example. An insurgent sends out a proxy card seeking shareholder votes on its shareholder resolution. A shareholder who receives the insurgent's card votes in favor of the proposal, and executes and returns the insurgent's card. But then the company either solicits, or resolicits, the same shareholder, and includes a "withhold" box on management's proxy card relating to the same non-14a–8 proposal. Since the shareholder does not wish to grant management discretionary voting authority on the proposal, it checks the box. But then, in the commenter's view, it may be unclear whether the shareholder has executed a subsequent proxy that revokes the shareholder's execution of the insurgent's card under applicable state law. *See* ICCR Letter at 32–33.

[63] A few commenters from the shareholder community suggested that we overcome possible confusion by requiring companies to permit shareholders to vote "for" or "against" non-14a–8 proposals. Commenters from the corporate community that addressed the matter opposed such an approach, and we believe that the amendments adopted today adequately accomplish our goal of providing clearer guidelines in this area. Contrary to the statements by some commenters, it is not necessarily a precondition for the exercise of discretionary voting authority under the Division's current no-action letters that companies include an extra item on their proxy cards permitting shareholders to vote "for" or "against" non-14a–8 proposals. *See Idaho Power* and *Borg-Warner*.

[64] *See, eg.*, BRT Letter; ASCS Letter; J.C. Penny Company, Dec. 19, 1997; Champion Int'l Corp., Dec. 18, 1997; International Paper, Nov. 19, 1997.

[65] *See, e.g.*, Mr. Jack Sheinkman, Vice-Chair Amalgamated Bank of New York, and President Emeritus Amalgamated Clothing and Textile Workers Union AFL–CIO, CLC, Nov. 7, 1997; Service Employees Int'l Union, Dec. 31, 1997; Engineers Letter; Carpenters Letter; National Electrical Benefit Fund, Dec. 22, 1997 ("NEBF Letter").

"percentage of shares solicited" standard articulated in the Division's *Idaho Power* and *Borg-Warner* no-action positions.

In response to these comments, and in light of our decision not to adopt the proposal to require that the Company include an additional box on its proxy cards for withholding discretionary voting authority, we have decided to codify the "percentage of shares solicited" standard of the Division's current no-action positions. The final rule therefore precludes a company from exercising discretionary voting authority on matters as to which it has received adequate advance notice if the proponent provides the company as part of that notice with a statement that it intends to solicit the percentage of shareholder votes required to carry the proposal, followed with specified evidence that the stated percentage had actually been solicited.

As we explained in the Proposing Release, this aspect of the Division's no-action position had been the source of uncertainty for companies. A company may not know whether a shareholder intends to begin to solicit proxies independently, or how many shareholders will be solicited if a solicitation is actually commenced. We understand that in a number of instances companies were forced to guess whether its ability to exercise discretionary authority had been restricted. A number of commenters from both the corporate and shareholder communities suggested that we overcome the potential for uncertainty by requiring proponents to provide advance written notice if they intend to deliver a proxy statement and form of proxy to holders of at least the minimum number of the company's voting shares that is required to carry the proposal, including measures to help ensure that such notice is bona fide.[66]

We have revised new paragraph (c)(2) to reflect these comments, and the rule as adopted requires a shareholder proponent to provide the company with written notice within the timeframe established by paragraph 14a–4(c)(1), that is, earlier than 45 days or in compliance with advance notice provisions. In order to help ensure that the notice has been provided in good faith, paragraph 14a–4(c)(2) as adopted also requires the proponent to repeat the statement (that it intends to solicit proxies to prevail) in its proxy materials to underscore the applicability of rule 14a–9, the anti-fraud rule. To further emphasize this point, and to provide interested parties with the ability to proceed against a proponent that does not fulfill its good faith promise to solicit the required number of shareholders, the rule requires the proponent to provide the company with a statement from the solicitor or other person with knowledge indicating that the proponent has taken the steps necessary to solicit the percentage of the company's shareownership required to approve the proposal. A statement executed by the shareholder insurgent will satisfy this requirement only to the extent that it was actually involved in carrying out the solicitation.

C. Rule 14a–4(c)(3)

We are also adopting a new paragraph 14a–4(c)(3) to further clarify the rule's operation in connection with special shareholders' meetings and other solicitations. Rules 14a–4(c)(1) and 14a–4(c)(2) as proposed to be amended, and as adopted, establish a clearer framework for companies' exercise of discretionary voting authority for annual shareholder meetings or their functional equivalents. We did not intend for that framework to apply to other solicitations, or to solicitations by persons other than management, such as special meetings or consent solicitations unrelated to the election of directors, which would continue to be governed by the "reasonable time" standard that had applied to all solicitations under former rule 14a–4(c)(1). Although there does not appear to have been confusion among commenters on this point, new paragraph (c)(3), and new introductory language to new paragraphs (c)(1) and (c)(2), should help clarify the point.

Tracking much of the language of former paragraph 14a–4(c)(1), new paragraph (c)(3) provides for the exercise of discretionary voting authority "[f]or solicitations other than for annual meetings or for solicitations by persons other than the registrant, [on] matters which the persons making the solicitation do not know, a reasonable time before the solicitation, are to be presented at the meeting, if a specific statement to that effect is made in the proxy statement or form of proxy."[67]

D. Filing in Preliminary Form

Finally, in the Proposing Release, we stated that during the 1996 proxy season the Division permitted several companies to avoid filing proxy materials in preliminary form despite receipt of adequate advance notification of a non-14a–8 shareholder proposal, so long as these companies disclosed in their proxy statements the nature of the proposal and how management intended to exercise discretionary voting authority if the proposal were actually to be presented to a vote at the meeting. We also stated that, in light of the proposed amendments to rule 14a–4, we might reverse that informal position, so that companies receiving notice of a non-14a–8 proposal before the filing of their proxy materials would be required to file their materials in preliminary form to preserve discretionary voting authority under rule 14a–4(c)(2). A number of commenters opposed reversal of the position, stating that in ordinary circumstances little would be gained by staff review of this material, and that potential delays resulting from preliminary filings could unjustifiably interfere with companies' mailing schedules.[68] The Division has decided not to reverse its position at this time, but may evaluate the position again in the future after monitoring proxy filings under the amended rules.

V. Other Amendments

We are adopting other modifications to rules 14a–8 and 14a–5.

We are adopting as proposed the answer to Question 1 of the amended rule defining a proposal as a request or requirement that the board of directors take an action.[69] One commenter objected to the proposal on grounds that the definition appeared to preclude all shareholder proposals seeking information.[70] In formulating the definition, it was not our intention to preclude proposals merely because they seek information, and the fact that a proposal seeks only information will not alone justify exclusion under the definition.

Also as proposed, we are increasing the dollar value of a company's voting shares that a shareholder must own in order to be eligible to submit a shareholder proposal—from $1,000 to $2,000—to adjust for the effects of inflation since the rule was last revised.[71] There was little opposition to

[68] *See, e.g.*, ABA Letter; BRT Letter; ASCS Letter; Goldschmid and Millstein Letter. A few commenters within the shareholder community supported reversal of the position. *See, e.g.*, Engineers Letter; Carpenters Letter.

[69] For favorable comments, see, *e.g.*, TIAA–CREF Letter; ABA Letter; GE Stockholders' Alliance, Oct. 16, 1997. But see, *e.g.*, ICCR Letter.

[70] *See* Calvert Letter.

[71] *See* The answer to Question 2.

the proposed increase among commenters, although several do not believe the increase is great enough to be meaningful, especially in light of the overall increase in stock prices over the last few years.[72] Nonetheless, we have decided to limit the increase to $2,000 for now, in light of rule 14a–8's goal of providing an avenue of communication for small investors. There was no significant support for any modifications to the rule's other eligibility criteria, such as the one-year continuous ownership requirement.

A number of commenters supported, and few opposed, our proposal to establish a uniform 14-day period in which shareholders would be required to respond to a company's notification that the shareholder has failed to comply with one or more procedures under rule 14a–8, such as the submission deadlines and the rule's for establishing proponent eligibility.[73] We are adopting the 14-day period as proposed. In response to one commenter's suggestion, we have added a sentence to the rule clarifying that a company need not provide notice of a deficiency that cannot be remedied. If the company intends to exclude the proposal, it nonetheless would later have to make a submission under rule 14a–8, and provide a copy to the proponent.[74]

We are also adopting amendments to rule 14a–5(e), with a few modifications from our proposals. As proposed to be amended, that rule would require companies to disclose the date after which proposals submitted outside the framework of rule 14a–8 are considered untimely for the purposes of amended rule 14a–4(c)(1).[75]

Two commenters objected to our proposal to amend rule 14a–5(e) to require disclosure of the date by which shareholders must notify the company of any non-14a–8 proposals under amended rule 14a–4(c)(1).[76] They were concerned that disclosure of the date would appear to formalize a new system for submitting shareholder proposals in competition with the mechanisms of rule 14a–8, and would encourage the submission of proposals outside of that process. We do not agree that mere disclosure of the date would likely have that effect, and we believe that disclosure is necessary because shareholders often would not have enough information to deduce the date reliably on their own. We are also adopting the other proposed modifications to rule 14a–5(e) designed to streamline the rule's operation.

One commenter pointed out that it is unclear from the rule as drafted whether the new disclosure in the company's proxy statement should reflect the "default" date under amended rule 14a–4(c)(1), or instead the date established by an overriding advance notice provision, if any.[77] We have revised the rule to clarify that companies should disclose the date established by an overriding advance notice provision, and in the absence of such a provision, the "default" date for submitting non-14a–8 proposals, which normally would be 45 days before the date the company mailed its proxy materials for the prior year. Because the rule also requires companies to disclose the deadline for submitting rule 14a–8 proposals, companies' disclosure should clearly distinguish between the two dates.

Finally, in the answer to Question 8 of amended rule 14a–8, we proposed to include an advisory that the proponent or the proponent's representative make sure that he/she follows applicable procedures proper under state law for appearing at the meeting and/or presenting the proposal. Most commenters who addressed the proposal viewed the advisory as a helpful aid.[78] We have included the advisory as proposed.

VI. Proposals Not Adopted

We have decided not to adopt some of our original proposals, due in part to concerns expressed by some commenters. These proposals generally received support from some commenters, but equally strong opposition from others.

Personal Grievance Exclusion

Paragraph (4) under Question 9, formerly rule 14a–8(c)(4), permits companies to exclude proposals furthering personal grievances or special interests. We had proposed to modify the way the Division administers the rule so that the staff would concur in the exclusion of a proposal on this ground only if the proposal on its face were to relate to a personal grievance or special interest. In other circumstances, under our proposal, the Division would express "no view" in its no-action response. The proposal reflected our view that the Division's ability to make the necessary factual findings is limited in the context of evaluating an otherwise "facially neutral" proposal, and that companies and shareholders themselves possess much of the factual information relevant to the applicability of the "personal grievance" exclusion.

Shareholders expressed serious concerns about this proposal.[79] A number of commenters from the shareholder community were concerned that companies might use the increased flexibility provided by a "no view" no-action response to exclude proposals that do not in actuality further personal grievances of special interests. In their view, a shareholder, in these circumstances, might be forced to incur the expense of litigation to prevent exclusion of the proposal. Some shareholders, for instance, were concerned that companies might rely on the rule to exclude proposals focusing on social policy matters.[80] We agree that the proposal might increase the likelihood of disputes between shareholders and companies. We have therefore decided not to implement the proposal, and will continue to administer the rule consistently with our current practice of making case-by-case determinations on whether the rule permits exclusion of particular proposals.

Resubmission Thresholds

If a proposal fails to receive a specified level of support, paragraph (12) under Question 9, formerly rule 14a–8(c)(12), permits a company to exclude a proposal focusing on substantially the same subject matter for a three-year period. In order to avoid possible exclusion, a proposal must receive at least 3% of the vote on its first submission, 6% on the second, and 10% on the third. We had proposed to raise the percentage thresholds respectively to 6%, 15%, and 30%.

Many commenters from the shareholder community expressed serious concerns about this proposal.[81]

We have decided not to adopt the proposal, and to leave the thresholds at their current levels.

Proposed Override Mechanism

We had proposed a new mechanism that would have permitted 3% of a company's shareownership to override the "ordinary business" exclusion and the "relevance" exclusion, paragraphs (7) and (5) under Question 9.

Several commenters opposed the proposal.[82] Other commenters supported the override concept as proposed, but expressed concerns about specific aspects, including whether the proposed 3% threshold may be too low and lead to erosion of the "ordinary business" and "relevance" exclusions that would be subject to an override.[83] Some shareholders thought the opposite, that 3% support of a company's shareownership would be too difficult for a shareholder proponent to obtain.

We have decided not to adopt the proposed "override" mechanism. Because we are not adopting the "override," we also are not adopting ancillary amendments designed to help implement the mechanism, including the proposed qualified exemption under the proxy rules, the proposed safe harbor from the beneficial ownership reporting requirements under section 13(d) of the Exchange Act, and the proposed shortening of companies' deadlines for making their rule 14a–8 no-action submissions to the Division.

The "Relevance" Exclusion

Paragraph (5) under Question 9 permits companies to exclude proposals

> Relating to operations which account for less than 5 percent of the registrant's total assets at the end of its most recent fiscal year, and for less than 5 percent of its net earnings and gross sales for its most recent fiscal year, and is not otherwise significantly related to the registrant's business.

We had proposed to revise the rule to apply a purely economic standard. Under the proposal, the exception for proposals that are "otherwise significantly related" would have be deleted. A company would have been permitted to exclude proposals relating to matters involving the purchase or sale of services or products that represent $10 million or less in gross revenue or total costs, whichever is appropriate, for the company's most recently completed fiscal year.

Few commenters indicated strong support for the proposed amendments, and we are not making any substantive changes to the rule. Many commenters within the corporate community agreed in concept with our proposal to base the rule on an objective economic standard, and to eliminate the subjective "not otherwise significantly related" part of the rule.[84] But most of those commenters thought that the proposed $10 million threshold was so low that companies would too infrequently be in a position to rely on the exclusion. Comments from the shareholder community were mixed.[85] Some shareholders opposed the elimination of the "not otherwise significantly related" part of the rule, while other shareholders expressed varying degrees of support for the approach, with some expressing concern that companies might apply the rule to exclude proposals on subjects that are difficult to quantify, despite the "safeguards" that we included as part of the proposed amendments.

Statements in Opposition: Commission Review

Finally, we had proposed eliminating rule 14a–8(e), which requires a company to provide a proponent with an advance copy of any statement in opposition to the proposal that it intends to include in its proxy materials. This provision also provides a mechanism for shareholders to bring materially false or misleading statements to the Division's attention. A number of commenters from the shareholder community opposed elimination of these procedures because they believed that the potential for proponent objections deters companies from making materially false or misleading statements, and encourages negotiation between the company and proponent.[86] We have decided not to adopt that proposal, and are retaining the mechanisms of former rule 14a–8(e) in the context of the answer to Question 13 of amended rule 14a–8.

VII. Final Regulatory Flexibility Analysis

We have prepared this Final Regulatory Flexibility Analysis under 5 U.S.C. 603 concerning the amendments to rules 14a–8, 14a–4, and 14a–5 as a follow-up to the Initial Regulatory Flexibility Analysis ("IRFA") that we prepared in connection with the Proposing Release.[87] We received few comments, and no significant empirical data, in response to the requests for further information included in the IRFA.

The purpose of the amendments is to streamline the operation of the rule, and address concerns raised by both shareholder and corporate participants. We are adopting the amendments pursuant to Sections 14 and 23 of the Exchange Act[88] and Section 20(a) of the Investment Company Act of 1940[89] (Investment Company Act").

Specifically, we are:

- Recasting rule 14a–8 into a more plain-English Question & Answer format;
- Reversing the *Craker Barrel* interpretive position on employment-related proposals raising significant social policy issues; and
- Amending rule 14a–4 to provide shareholders and companies with clearer guidance on companies' exercise of discretionary voting authority.

We have decided not to adopt other elements of our original proposals. We are *not adopting* our original proposals to:

- Increase the percentage of the vote a proposal must receive before it can be resubmitted in future years if it is not approved;
- Streamline the exclusion for matters considered irrelevant to corporate business,[90]
- Modify our administration of the rule permitting companies to exclude proposals furthering personal grievances of special interests; or
- Implement an "override" mechanism that would have permitted 3% of the share ownership to override a company's decision to exclude a proposal under certain of the bases for exclusion set forth under Question 9 of amended rule 14a–8.[91]

---

increases in the thresholds); but see TIAA–CREF Letter (supporting the increases at the levels proposed). These commenters were concerned that the increases would operate to exclude too great a percentage of proposals—particularly those focusing on social policy issues which tend to receive lower percentages of the shareholder vote.

[82] Former paragraphs (c)(7) and (c)(5) of rule 14a–8. *See, e.g.*, ABA Letter; ACCA Letter; LPA Letter; AT&T, Dec. 24, 1997; Household Int'l, Inc., Jan. 6, 1998; Federal Express Corp., Jan. 2, 1998; ICI Letter (concerned that proposal if adopted might be costly and disruptive for investment companies).

[88] 15 U.S.C. 78m, 78n, & 78u.

[89] 15 U.S.C. 80a–1 *et seq.*

[90] Paragraph (5) under Question 9, former rule 14a–8(c)(5).

[91] Because we are not adopting the proposed "override", we also are not adopting certain measures, designed to enable shareholders to use it, including the proposed qualified exemption from the proxy rules, and safe harbor from beneficial ownership reporting obligations under Section 13(d) of the Exchange Act.

The amendments will affect small entities that are required to file proxy materials under the Exchange Act or the Investment Company Act. Exchange Act rule 0–10 defines "small business" as a company whose total assets on the last day of its most recent fiscal year were $5 million or less.[92] Investment Company Act rule 0–10 defines "small entity" as an investment company with net assets of $50 million or less as of that date.[93] We are currently aware of approximately 1,000 reporting companies that are not investment companies with assets of $5 million or less. There are approximately 800 investment companies that satisfy the "small entity" definition. Only approximately one-third of all investment companies have shareholder meetings and file proxy materials annually.

Therefore, we believe approximately 250 small entity investment companies may be affected by the amendments.

Plain-English Question & Answer Format

Our revision of rule 14a–8 to create a more understandable Question & Answer format should help decrease the time and expense incurred by both shareholders and companies attempting to comply with its provisions companies frequently consult with legal counsel in preparing no-action submissions under rule 14a–8. The rule's added clarity may obviate the need for a shareholder or company to consult with counsel, depending on the issues raised by the submission. Under some circumstances, however, companies' submissions must include supporting opinions of counsel.

No comments submitted empirical data demonstrating how much it costs companies to consider and prepare an individual no-action submission under rule 14a–8. Question 13 of a Questionnaire that we made available in February 1997 [94] asked respondent companies how much money they spend on average each year determining whether to include or exclude shareholder proposals and following Commission procedures in connection with any proposal that they wish to exclude (including internal costs as well as any outside legal and other fees). While responses may have accounted for consideration of more than one proposal, the costs of making a determination whether to include a proposal reported by 80 companies averaged approximately $37,000.[95] We do not believe, however, that the cost is likely to vary depending on the size of the company. That is, the cost to a small entity is likely to be the same as the cost to a larger entity, depending on the number of proposals received and how many the company seeks to exclude under the staff no-action letter process.

Because the rule's added clarity may make it easier for shareholders to understand the procedures for submitting shareholder proposals, the amendments may encourage shareholders to submit more shareholder proposals to companies each year. In turn, companies may be required to make more rule 14a–8 no-action submissions to the Commission.

In the period from September 30, 1996 to September 30, 1997, we received submissions from a total of 245 companies, and only 6 (i.e., 2%) were "small businesses." While we received no empirical data on the number of small businesses that receive shareholder proposals each year, one commenter with substantial experience submitting shareholder proposals to companies reported that small companies seldom receive shareholder proposals.[96]

We also received no empirical information in response to our request for data on the marginal cost of including an additional shareholder proposal in companies' proxy materials. However, the Questionnaire asked each company respondent how much money on average it spends in the aggregate on printing costs (plus any directly related costs, such as additional postage and tabulation expenses) to include shareholder proposals in its proxy materials. While individual responses may have accounted for the printing of more than one proposal, the average cost reported by 67 companies was approximately $50,000.[97] By contrast, one commenter noted that the cost for companies, excluding the largest corporations, should average about $10,000 per proposal.[98] We expect that any additional printing costs are lower for small entities, since small entities typically should have to print fewer copies of their proxy materials because they have fewer shareholders.

A company that receives a proposal has no obligation to make a submission under rule 14a–8 unless it intends to exclude the proposal from its proxy materials. Accordingly, any costs of including an additional proposal should be offset, at least partially, by not having to make a rule 14a–8 submission. No commenters responded to our request for empirical data on the potential cost savings.

Reversal of Cracker Barrel

In the 1992 *Cracker Barrel* no-action letter, the Division stated that henceforth it would concur in the exclusion of all employment-related shareholder proposals raising social policy issues under rule 14a–8(c)(7), the "ordinary business" exclusion. Before the announcement of the position, the Division analyzed employment related proposals tied to social issues on a case-by-case basis, concurring in the exclusion of some, but not others. Reversal of the position will result in a return to the case-by-case analysis that prevailed before the position was announced.

Our decision to reverse the *Cracker Barrel* position on employment-related shareholder proposals may therefore result in an increase in the number of employment-related proposals tied to social issues that are submitted to companies each year, and that companies must include in their proxy materials. During the 1997 proxy season, the Division received approximately 30 submissions involving employment-related proposals tied to social issues, none from "small businesses." [99]

While it is unclear whether the number of proposals submitted to small businesses and included in their proxy statements will increase as a result of the reversal of *Cracker Barrel*, we have analyzed under "Plain English Question & Answer Format" above the potential costs to companies of considering and including additional proposals in their proxy materials.

Discretionary Voting Authority

The amendments to rule 14a–4 should favorably affect companies, including "small businesses," because they would provide clearer ground rules as to the ability to exercise discretionary voting power when a shareholder presents a proposal without invoking rule 14a–8. We do not routinely record information on the number of "small businesses" that receive non-rule 14a–8 proposals

[92] 17 CFR 240.0–10.

[93] 17 CFR 270.0–10.

[94] *See* Proposing Release, Footnote 14.

[95] This average is based on respondents reporting costs greater than zero. Reported costs ranged from a low of $10 to a high of approximately $1,200,000. The median cost was $10,000.

[96] ICCR Letter at 9.

[97] This average is based on respondents reporting costs greater than zero. Reported costs ranged from a low of $200 to a high of nearly $900,000. The median cost was $10,000.

[98] *See* ICCR Letter at 9–10.

[99] No commenters provided information on the likely impact reversal of the position will have on the number of shareholder proposals submitted to companies each year.

each year, since non-14a–8 proposals do not necessarily lead to a submission to the Commission. The Investor Responsibility Research Center ("IRRC") has reported to the Commission staff, however, that it is aware of a total of 19 independent proxy solicitations during calendar years 1996 and 1997 in support of non-14a–8 proposals, and none appear to have involved "small businesses." In addition, one commenter indicated that, since 1991, there have been 66 independent shareholder solicitations in support of shareholder resolutions.[110] None of the companies subject to the 66 solicitations appear to have been "small businesses."

To the extent that "small businesses" receive such proposals, we believe that the amendments to rule 14a–4 will favorably affect them by reducing uncertainty, and decreasing the likelihood that such companies would have to incur the delay and expense of rescheduling the shareholders meeting, or resoliciting shareholders. Some commenters thought that the proposal to require companies wishing to preserve voting authority to include an extra voting box on their proxy cards might encourage the submission of more non-14a–8 shareholder proposals. We have decided not to adopt that aspect of our original proposal. Some shareholders thought that the amendments as proposed might effectively inhibit independent proxy solicitations because they would have permitted companies to retain voting authority even if the shareholder solicited the percentage of shareownership required to carry the proposal. We also have decided not to adopt that aspect of our original proposal.

Under our amendments to rule 14a–4, a company wishing to preserve discretionary voting authority on certain proposals that might be presented to a vote may be required to advise shareholders of the nature of such proposals. We note, however, that this precondition is consistent with the Division's no-action positions predating the adoption of the amendments. No commenters provided empirical data on incremental costs likely to result from this amendment to rule 14a–4. Daniels Financial Printing informed the staff that in most cases adding up to three-fourths of a page in the proxy statement would not increase the cost to the company, and that adding more than three-fourths of a page could increase costs by about $1,500 for an average sized company.

Under our amendments to rule 14a–4, a shareholder undertaking an independent proxy solicitation would be required to provide a company with advance written notice of its intention to solicit the percentage of the company's shareownership to carry the proposal, followed by other measures to help ensure that the notice has been provided in good faith. These amendments would impose no additional costs on companies receiving such notice, since no action by them is required. The amendments should impose only de minimis additional costs on shareholders who undertake independent proxy solicitations.[101]

Our amendment to rule 14a–5 would require companies to disclose an additional date in their proxy statements. Disclosure of the date should require no more than an additional sentence, and therefore should result in no, or negligible, additional printing costs.

We considered significant alternatives to the proposed amendments for small entities with a class of securities registered under the Exchange Act. We considered, for instance, exempting small businesses from any obligation to include shareholder proposals in their proxy materials. Such an exemption, however, would be inconsistent with the current purpose of the proxy rules, which is to provide and regulate a channel of communication among shareholders and public companies. Exempting small entities would deprive their shareholders of this channel of communication.

We also considered other alternatives identified in Section 603 of the Regulatory Flexibility Act to minimize the economic impact of the amendments on small entities. We considered the establishment of different compliance requirements or timetables that take into account the resources available to small entities. Different timetables, however, may make it difficult for the Division to issue responses in a timely manner, and could otherwise impede the efficient operation of the rule.

We also considered the clarification, consolidation, or simplification of the rule's compliance requirements for small entities. As explained more fully in section II of this release, we are recasting and reformatting rule 14a–8 into a more understandable, Question & Answer format. As explained in Section IV above, we are adopting clearer guidelines for companies' exercise of discretionary voting authority under rule 14a–4. These modifications should simplify and facilitate compliance by all companies, including small entities. We do not believe that there is any appropriate way further to facilitate compliance by small entities without compromising the current purposes of the proxy rules.

We also considered the use of performance rather than design standards. The rules that we are amending are not specifically designed to achieve certain levels of performance. Rather, they are designed to serve other policies, such as to ensure adequate disclosure of material information, and to provide a mechanism for shareholders to present important and relevant matters for a vote by fellow shareholders. Performance standards accordingly would not directly serve the policies underlying the rules. We do not believe that any current federal rules duplicate, overlap, or conflict with the rules that we propose to amend.

VIII. Cost-Benefit Analysis

This cost-benefit analysis follows a preliminary analysis request for comments and empirical information included in the Proposing Release.[102] We received few comments and no significant empirical data, in response to our requests for further information.

The amendments to the rules on shareholder proposals should improve the efficiency of the process for determining which shareholder proposals must be included in proxy materials distributed by companies. They should help to make the rule understandable to the numerous shareholders and companies that refer to the rule each year, ensure that companies include certain employment-related proposals raising significant social policy issues in their proxy materials, and provide clearer guidelines for a company's exercise of discretionary voting authority when notified that a shareholder intends to present a proposal without invoking rule 14a–8's mechanisms.

Specifically, we are:

- Recasting rule 14a–8 into a more plain-English Question & Answer format;
- Reversing the *Cracker Barrel* interpretive position on employment-related proposals raising significant social policy issues; and
- Amending rule 14a–4 to provide shareholders and companies with clearer guidance on companies' exercise of discretionary voting authority.

[100] UNITE Letter.

[101] In order to comply, an insurgent is required to send to the company advance written notice of its intention to solicit the percentage of a company's shareownership required to carry the proposal, followed by evidence of the solicitation, and to include what should in most cases amount to little more than an additional sentence in the insurgent's proxy statement.

[102] *See* Proposing Release, Section VI.

We have decided not to adopt other elements of our original proposals. We are *not adopting* our original proposals to:

- Increase the percentage of the vote a proposal must receive before it can be resubmitted in future years if it is not approved;
- Streamline the exclusion for matters considered irrelevant to corporate business;[103]
- Modify our administration of the rule permitting companies to exclude proposals furthering personal grievances of special interests; or
- Implement an "override" mechanism that would have permitted 3% of the share ownership to override a company's decision to exclude a proposal under certain of the bases for exclusion set forth under Question 9 of amended rule 14a–8.[104]

We have considered whether the amendments we are adopting would promote efficiency, competition and capital formation. Rule 14a–8 requires companies to include shareholder proposals in their proxy materials, subject to specific bases for excluding them. We believe that the rule enhances investor confidence in the securities markets by providing a means for shareholders to communicate with management and among themselves on significant matters.

Plain-English Question & Answer Format

Our revision of the rule to create a more understandable Question & Answer format should help decrease the time and expense incurred by both shareholders and companies attempting to comply with its provisions. Companies frequently consult with legal counsel in preparing no-action submissions under rule 14a–8. The rule's added clarity may obviate the need for a shareholder or company to consult with counsel, depending on the issues raised by the submission. Under some circumstances, however, companies' submissions must include supporting opinions of counsel.

No commenters submitted empirical data demonstrating how much it costs companies to consider and prepare an individual no-action submission under rule 14a–8. Question 13 of the Questionnaire asked respondent companies how much money they spend on average each year determining whether to include or exclude shareholder proposals and following Commission procedures in connection with any proposal that they wish to exclude (including internal costs as well as any outside legal and other fees). While responses may have accounted for consideration of more than one proposal, the costs reported by 80 companies averaged approximately $37,000.[105]

Because the revised rule's added clarity may make it easier for shareholders to understand the procedures for submitting shareholder proposals, the amendments may encourage shareholders to submit more shareholder proposals to companies each year. In turn, companies may be required to make more rule 14a–8 no-action submissions to the Commission. A study conducted by one commenter reports that, each year, shareholder proposals come to a vote at 226 companies from among the 1,500 largest U.S. companies.[106]

We also received no information in response to our request for data on the marginal cost of including an additional shareholder proposal in companies' proxy materials. However, the Questionnaire asked each company respondent how much money on average it spends in the aggregate on printing costs (plus any directly related costs, such as additional postage and tabulation expenses) to include shareholder proposals in its proxy materials. While individual responses may have accounted for the printing of more than one proposal, the average cost reported by 67 companies was approximately $50,000.[107] By contrast, one commenter thought that this estimate is too high, although large companies in his view would incur relatively higher costs.[108]

A company that receives a proposal has no obligation to make a submission under rule 14a–8 unless it intends to exclude the proposal from its proxy materials.[109] Accordingly, any costs of including an additional proposal should be offset, at least partially, by not having to make a rule 14a–8 submission. No commenters responded to our request for empirical data on the potential cost savings.

Reversal of Cracker Barrel

In the 1992 *Cracker Barrel* no-action letter, the Division stated that henceforth it would concur in the exclusion of all employment-related shareholder proposals raising social policy issues under rule 14a–8(c)(7), the "ordinary business" exclusion. Before the announcement of the position, the Division analyzed employment related proposals tied to social issues on a case-by-case basis, concurring in the exclusion of some, but not others. Reversal of the position will result in a return to the case-by-case analysis that prevailed before the position was announced.

Our decision to reverse the *Cracker Barrel* position on employment-related shareholder proposals may therefore result in an increase in the number of employment-related proposals tied to social issues that are submitted to companies each year, and that companies must include in their proxy materials. During the 1997 proxy season, the Division received approximately 30 submissions involving employment-related proposals tied to social issues.[110]

We have analyzed under "Plain English Question & Answer Format" above the potential costs to companies of considering and including additional proposals in their proxy materials.

Shareholder proposals could have a positive or negative impact, or no impact, on the price of a company's securities.[111] Relatively few shareholder proposals are approved by shareholders each year, and the few that are approved typically focus on corporate governance matters rather than social issues.[112] Based on information provided to us by IRRC, we understand that for calendar year 1997, 22 proposals obtained

---

[103] Paragraph (5) under Question 9, former rule 14a–8(c)(5).

[104] Because we are not adopting the proposed "override", we also are not adopting certain measures designed to enable shareholders to use it, including the proposed qualified exemption from the proxy rules, and safe harbor from beneficial ownership reporting obligations under Section 13(d) of the Exchange Act.

[105] This average is based on respondents reporting costs greater than zero. Reported costs ranged from a low of $10 to a high of approximately $1,200,000. The median cost was $10,000.

[106] *See* Shareholder Rights Analysis: The Impact of Proposed SEC Rules on Resubmission of Shareholder Resolutions, Social Investment Forum Foundation, Dec. 10, 1997.

[107] This average is based on respondents reporting costs greater than zero. Reported costs ranged from a low of $200 to a high of nearly $900,000. The median cost was $10,000.

[108] *See* ICCR Letter at 9–10.

[109] In the period from September 30, 1996 to September 30, 1997, we received approximately 400 submissions under rule 14a–8.

[110] No commenters provided information on the likely impact reversal of the position will have on the number of shareholder proposals submitted to companies each year.

[111] *See, e.g.*, Michael P. Smith, Shareholder Activism by Institutional Investors: Evidence from CalPERS, *The Journal of Finance*, Vol. LI, No. 1, March 1996; Sunil Wahal, Pension Fund Activism and Firm Performance, *Journal of Financial and Quantitative Analysis*, Vol. 31, No. 1, March 1996.

[112] Even if a proposal does not obtain shareholder approval, however, it may nonetheless influence management, especially if it receives substantial shareholder support. A proposal may also influence management even if it is not put to a shareholder vote. We understand that in some instances management has made concessions to shareholders in return for the withdrawal of a proposal.

shareholder approval out of a total of 376 proposals submitted to shareholder votes. Ten were proposals to repeal classified boards (i.e., boards with staggered terms). Ten sought redemption of companies' shareholder rights plans. One focused on "golden parachute" payments to executives (i.e., large payments typically contingent upon corporate change of control). One sought to restrict director pension benefits.

Proposals addressing corporate governance matters tend to receive the most substantial shareholder support and may have an identifiable impact on shareholder wealth. Examples are proposals on voting and nomination procedures for board members, and proposals to restrict or eliminate companies' shareholder rights plans (i.e., "posion pills"). The amendments we are adopting do not focus on those type of proposals, and should not affect shareholders' ability to include them in companies proxy materials. Additionally, shareholder proposals on social issues may improve investor confidence in the securities markets by providing investors with a sense that as shareholders they have a means to express their views to the management of the companies in which they invest.

Discretionary Voting Authority

The amendments to rule 14a-4 should favorably affect companies because they should provide clearer ground rules as to the ability to exercise discretionary voting power when a shareholder presents a proposal without invoking rule 14a-8.

We do not collect information on the number of companies that receive non-rule 14a-8 proposals each year, since such proposals do not necessarily lead to a submission to the Commission. However, IRRC has reported to the Commission staff that, during the 1997 calendar year, it is aware of only two independent solicitations in support of non-14a-8 shareholder resolutions, down from 17 solicitations for calendar year 1996. In addition, one commenter indicated that, since 1991, there have been 66 independent shareholder solicitations in support of shareholder resolutions.[113]

To the extent "small businesses" receive such proposals, we believe that the amendments to rule 14a-4 will favorably affect them by reducing uncertainty, and decreasing the likelihood of incurring the delay and expense of rescheduling the shareholders meeting and/or resoliciting shareholders. Reducing the potential for uncertainty should also help to decrease the likelihood of related litigation.

One company estimated the cost of sending supplemental proxy material to its shareholders at about $170,000.[114] Thus, if the amendments permit companies to avoid resolicitations on five occasions, the savings would amount to about $850,000.[115]

Another commenter submitted information on the legal costs of representing insurgent shareholders in connection with court actions under the proxy rules.[116] According to that commenter, attorneys' fees and costs incurred by the insurgent ranged from $17,517 to $75,421. It is not clear whether these actions involved rule 14a-5 or discretionary voting authority, and they do not include the legal costs of other parties or any other associated expenses.

Some commenters thought that the proposal to require companies wishing to preserve voting authority to include an extra voting box on their proxy cards might encourage the submission of more non-14a.8 shareholder proposals, as well as confusion among shareholders. We have decided not to adopt that aspect of our original proposal. Other commenters thought that the proposals might effectively inhibit independent proxy solicitations because they would have provided companies with a means to retain voting authority even if the shareholder solicited the percentage of shareownership required to carry the proposal. We also have decided not to adopt that aspect of our original proposal.

Under our amendments to rule 14a-4, a company, wishing to preserve discretionary voting authority on certain proposals that might be presented to a vote, may be required to advise shareholders of the nature of such proposals. We note, however, that this precondition is consistent with the Division's no-action positions predating the adoption of these amendments. No commenters provided empirical data on incremental costs likely to result from these amendments to rule 14a-4. Daniels Financial Printing informed the staff that is most cases adding up to three-fourths of a page in the proxy statement would not increase the cost to the company, and that adding more than three-fourths of a page could increase costs by about $1,500 for an average sized company.

Under our amendments to rule 14a-4, a shareholder undertaking an independent proxy solicitation would be required to provide a company with advance written notice of its intention to solicit the percentage of the company's shareownership to carry the proposal, followed by other measures to help ensure that the notice has been provided in good faith. These amendments would impose no additional costs on companies receiving such notice, since no action by them is required. The amendments should impose only de minimis additional costs on a shareholder undertaking an independent proxy solicitation.[117]

Our amendment to rule 14a-5 would require companies to disclose an additional data in their proxy statements. Disclosure of the date should require no more than an additional sentence, and therefore should result in no, or negligible, additional printing costs.

Section 23(a) of the Exchange Act[118] requires the Commission to consider any anti-competitive effects of any rules it adopts thereunder and the reasons for its determination that any burden on competition imposed by such rules is necessary or appropriate to further the purposes of the Exchange Act. The Commission has considered the impact this rulemaking will have on competition and believes that the amendments will not impose a significant burden on competition.

IX. Paperwork Reduction Act

Regulation 14A[119] and the Commission's related proxy rules, including rules 14a-8, 14a-4, and 14a-5, were adopted pursuant to Section 14(a) of the Exchange Act. Section 14(a) directs the Commission to adopt rules "as necessary or appropriate in the public interest or for the protection of investors, to solicit or to permit the use of his name to solicit any proxy or consent or authorization in respect of any security (other than an exempted security) registered pursuant to section 12 of this title." Schedule 14A prescribes information that a company must include in its proxy statement to ensure that shareholders are provided material information relating to voting decisions.

---

[113] UNITE Letter.

[114] *See* Harrah's Entertainment, Inc., Dec. 31, 1997

[115] We have no basis for estimating reliably how many resolicitations, if any, are likely to be avoided in any given year as a result of the amendments.

[116] Davis, Cowell & Bowe Letter at 4.

[117] In order to comply, an insurgent is required to send to the company advance written notice of its intention to solicit the percentage of a company's shareownership required to carry the proposal, followed by evidence of the solicition, and to include what should in most cases amount to little more than an additional sentence in the insurgent's proxy statement.

[118] 15 U.S.C. 78w(a)

[119] 17 CFR 240.14a-101.

The amendments to rules 14a-8, 14a-4(c), and 14a-5 should make it easier for shareholder proponents to include in companies' proxy materials employment-related shareholder proposals raising significant social policy matters, and provide companies subject to the proxy rules with clearer ground rules for the exercise of discretionary voting authority. The amendments should also make rule 14a-8 easier to understand the follow. The amendments focus primarily on rule 14a-8, which requires companies to include shareholder proposals in their proxy materials, subject to certain bases for excluding them. We received no Paperwork Reduction Act comments relating to the amendments.

As set forth in the Proposing Release,[120] certain provisions of rules 14a–8, 14a–4, and 14a–5 contain "collection of information" requirements within the meaning of the Paperwork Reduction Act of 1995 (44 U.S.C. § 3501 et seq.). The Commission had submitted the amendments to those rules to the Office of Management and Budget ("OMB") for review in accordance with 44 U.S.C. § 3507(d) and 5 CFR. 1320.11. The title for the collection of information is "Regulation 14A." Except as explained below, the amendments should have no impact on the total estimated burden hours for Regulation 14A.[121]

As originally proposed, amended rule 14a–4 would have in some circumstances required companies to include an extra voting box in their proxy cards in order to preserve discretionary voting authority. We are not, however, adopting that requirement, which we believe would have increased the total annual burden by only a negligible amount, or not at all.[122] We are adopting a requirement under rule 14a–4 that a shareholder insurgent in some circumstances provide a company with advance written notice of its intention to solicit the percentage of a company's shareownership necessary to approve the proposal, followed by evidence of the solicitation, and by negligible additional disclosures in the insurgent's proxy statement.[123] We estimate that these additional requirements, in the context of other amendments adopted today, will increase the annual burden under Regulation 14A for a shareholder insurgent by approximately one hour per shareholder proponent, and that approximately 10 proponents will have to comply each year. Accordingly, we have increased our estimated total compliance burden for Regulation 14A by a total of 10 hours, to 810,935 hours.

Providing the information required by Regulation 14A is mandatory under Section 14(a) of the Exchange Act. The information will not be kept confidential. Unless a currently valid OMB control number is displayed on the Schedule 14A, the Commission may not sponsor or conduct or require response to an information collection. The OMB control number is 3235–0059. The collection is in accordance with 44 U.S.C. § 3507.

X. Statutory Basis And Text of Amendments

We are adopting amendments to Rules 14a–8, 14a–4, and 14a–5 under the authority set forth in Sections 13, 14 and 23 of the Securities Exchange Act of 1943, and Section 20(a) of the Investment Company Act.

List of Subjects in 17 CFR Part 240

Reporting and recordkeeping requirements, Securities.

Text of Amendments

In accordance with the foregoing, Title 17, Chapter II of the Code of Federal Regulations is amended as follows:

PART 240—GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

1. The authority citation for part 240 continues to read, in part, as follows:

Authority: 15 U.S.C. 77c, 77d, 77g, 77j, 77s, 77z–2, 77eee, 77ggg, 77nnn, 77sss, 77ttt, 78c, 78d, 78f, 78i, 78j, 78j–1, 78k, 78k–1, 78*l*, 78m, 78n, 78o, 78p, 78q, 78s, 78u–5, 78w, 78x, 78*ll*(d), 78mm, 79q, 79t, 80a–20, 80a–23, 80a–29, 80a–37, 80b–3, 80b–4 and 80b–11, unless otherwise noted.

* * * * *

a. By amending § 240.14a–4 by revising the introductory text of paragraph (c) and paragraph (c)(1), redesignating paragraphs (c)(2) through (c)(5) as paragraphs (c)(4) through (c)(7), and adding new paragraphs (c)(2) and (c)(3), to read as follows:

§ 240.14a–4 Requirements as to proxy.

* * * * *

(c) A proxy may confer discretionary authority to vote on any of the following matters:

(1) For an annual meeting of shareholders, if the registrant did not have notice of the matter at least 45 days before the date on which the registrant first mailed its proxy materials for the prior year's annual meeting of shareholders (or date specified by an advance notice provision), and a specific statement to that effect is made in the proxy statement or form of proxy. If during the prior year the registrant did not hold an annual meeting, or if the date of the meeting has changed more than 30 days from the prior year, then notice must not have been received a reasonable time before the registrant mails its proxy materials for the current year.

(2) In the case in which the registrant has received timely notice in connection with an annual meeting of shareholders (as determined under paragraph (c)(1) of this section), if the registrant includes, in the proxy statement, advice on the nature of the matter and how the registrant intends to exercise its discretion to vote on each matter. However, even if the registrant includes this information in its proxy statement, it may not exercise discretionary voting authority on a particular proposal if the proponent:

(i) Provides the registrant with a written statement, within the time-frame determined under paragraph (c)(1) of this section, that the proponent intends to deliver a proxy statement and form of proxy to holders of at least the percentage of the company's voting shares required under applicable law to carry the proposal;

(ii) Includes the same statement in its proxy materials filed under § 240.14a–6; and

(iii) Immediately after soliciting the percentage of shareholders required to carry the proposal, provides the registrant with a statement from any solicitor or other person with knowledge that the necessary steps have been taken to deliver a proxy statement and form of proxy to holders of at least the percentage of the company's voting shares required under applicable law to carry out the proposal.

(3) For solicitations other than for annual meetings or for solicitations by persons other than the registrant, matters which the persons making the solicitation do not know, a reasonable time before the solicitation, are to be presented at the meeting, if a specific statement to that effect is made in the proxy statement or form of proxy.

3. By amending § 240.14a-5 by revising paragraph (e), and adding paragraph (f), to read as follows:

§ 240.14a-5 Presentation of information in proxy statement.

* * * * *

(e) All proxy statements shall disclose, under an appropriate caption, the following dates:

(1) The deadline for submitting shareholder proposals for inclusion in the registrant's proxy statement and

---

[120] *See* Proposing Release, Section VII.

[121] 17 CFR 240.14a–101.

[122] See Section IV above.

[123] *Id.*

form of proxy for the registrant's next annual meeting, calculated in the manner provided in § 240.14a-8(d)(Question 4); and

(2) The date after which notice of a shareholder proposal submitted outside the processes of § 240.14a-8 is considered untimely, either calculated in the manner provided by § 240.14a-4(c)(1) or as established by the registrant's advance notice provision, if any, authorized by applicable state law.

(f) If the date of the next annual meeting is subsequently advanced or delayed by more than 30 calendar days from the date of the annual meeting to which the proxy statement relates, the registrant shall, in a timely manner, inform shareholders of such change, and the new dates referred to in paragraphs (e)(1) and (e)(2) of this section, by including a notice, under Item 5, in its earliest possible quarterly report on Form 10–Q (§ 249.308a of this chapter) or Form 10–QSB (§ 249.308b of this chapter), or, in the case of investment companies, in a shareholder report under § 270.30d-1 of this chapter under the Investment Company Act of 1940, or, if impracticable, any means reasonably calculated to inform shareholders.

4. By revising § 240.14a-8 to read as follows:

§ 240.14a-8 Shareholder proposals.

This section addresses when a company must include a shareholder's proposal in its proxy statement and identify the proposal in its form of proxy when the company holds an annual or special meeting of shareholders. In summary, in order to have your shareholder proposal included on a company's proxy card, and included along with any supporting statement in its proxy statement, you must be eligible and follow certain procedures. Under a few specific circumstances, the company is permitted to exclude your proposal, but only after submitting its reasons to the Commission. We structured this section in a question-and-answer format so that it is easier to understand. The references to "you" are to a shareholder seeking to submit the proposal.

(a) *Question 1:* What is a proposal? A shareholder proposal is your recommendation or requirement that the company and/or its board of directors take action, which you intend to present at a meeting of the company's shareholders. Your proposal should state as clearly as possible the course of action that you believe the company should follow. If your proposal is placed on the company's proxy card, the company must also provide in the form of proxy means for shareholders to specify by boxes a choice between approval or disapproval, or abstention. Unless otherwise indicated, the word "proposal" as used in this section refers both to your proposal, and to your corresponding statement in support of your proposal (if any).

(b) *Question 2:* Who is eligible to submit a proposal, and how do I demonstrate to the company that I am eligible? (1) In order to be eligible to submit a proposal, you must have continuously held at least $2,000 in market value, or 1%, of the company's securities entitled to be voted on the proposal at the meeting for at least one year by the date you submit the proposal. You must continue to hold those securities through the date of the meeting.

(2) If you are the registered holder of your securities, which means that your name appears in the company's records as a shareholder, the company can verify your eligibility on its own, although you will still have to provide the company with a written statement that you intend to continue to hold the securities through the date of the meeting of shareholders. However, if like many shareholders you are not a registered holder, the company likely does not know that you are a shareholder, or how many shares you own. In this case, at the time you submit your proposal, you must prove your eligibility to the company in one of two ways:

(i) The first way is to submit to the company a written statement from the "record" holder of your securities (usually a broker or bank) verifying that, at the time you submitted your proposal, you continuously held the securities for at least one year. You must also include your own written statement that you intend to continue to hold the securities through the date of the meeting of shareholders; or

(ii) The second way to prove ownership applies only if you have filed a Schedule 13D (§ 240.13d–101), Schedule 13G (§ 240.13d–102), Form 3 (§ 249.103 of this chapter), Form 4 (§ 249.104 of this chapter) and/or Form 5 (§ 249.105 of this chapter), or amendments to those documents or updated forms, reflecting your ownership of the shares as of or before the date on which the one-year eligibility period begins. If you have filed one of these documents with the SEC, you may demonstrate your eligibility by submitting to the company:

(A) A copy of the schedule and/or form, and any subsequent amendments reporting a change in your ownership level;

(B) Your written statement that you continuously held the required number of shares for the one-year period as of the date of the statement; and

(C) Your written statement that you intend to continue ownership of the shares through the date of the company's annual or special meeting.

(c) *Question 3:* How many proposals may I submit: Each shareholder may submit no more than one proposal to a company for a particular shareholders' meeting.

(d) *Question 4:* How long can my proposal be? The proposal, including any accompanying supporting statement, may not exceed 500 words.

(e) *Question 5:* What is the deadline for submitting a proposal? (1) If you are submitting your proposal for the company's annual meeting, you can in most cases find the deadline in last year's proxy statement. However, if the company did not hold an annual meeting last year, or has changed the date of its meeting for this year more than 30 days from last year's meeting, you can usually find the deadline in one of the company's quarterly reports on Form 10–Q (§ 249.308a of this chapter) or 10–QSB (§ 249.308b of this chapter), or in shareholder reports of investment companies under § 270.30d–1 of this chapter of the Investment Company Act of 1940. In order to avoid controversy, shareholders should submit their proposals by means, including electronic means, that permit them to prove the date of delivery.

(2) The deadline is calculated in the following manner if the proposal is submitted for a regularly scheduled annual meeting. The proposal must be received at the company's principal executive offices not less than 120 calendar days before the date of the company's proxy statement released to shareholders in connection with the previous year's annual meeting. However, if the company did not hold an annual meeting the previous year, or if the date of this year's annual meeting has been changed by more than 30 days from the date of the previous year's meeting, then the deadline is a reasonable time before the company begins to print and mail its proxy materials.

(3) If you are submitting your proposal for a meeting of shareholders other than a regularly scheduled annual meeting, the deadline is a reasonable time before the company begins to print and mail its proxy materials.

(f) *Question 6:* What if I fail to follow one of the eligibility or procedural requirements explained in answers to

Questions 1 through 4 of this section?

(1) The company may exclude your proposal, but only after it has notified you of the problem, and you have failed adequately to correct it. Within 14 calendar days of receiving your proposal, the company must notify you in writing of any procedural or eligibility deficiencies, as well as of the time frame for your response. Your response must be postmarked, or transmitted electronically, no later than 14 days from the date you received the company's notification. A company need not provide you such notice of a deficiency if the deficiency cannot be remedied, such as if you fail to submit a proposal by the company's properly determined deadline. If the company intends to exclude the proposal, it will later have to make a submission under § 240.14a–8 and provide you with a copy under Question 10 below, § 240.14a–8(j).

(2) If you fail in your promise to hold the required number of securities through the date of the meeting of shareholders, then the company will be permitted to exclude all of your proposals from its proxy materials for any meeting held in the following two calendar years.

(g) *Question 7:* Who has the burden of persuading the Commission or its staff that my proposal can be excluded? Except as otherwise noted, the burden is on the company to demonstrate that it is entitled to exclude a proposal.

(h) *Question 8:* Must I appear personally at the shareholders' meeting to present the proposal? (1) Either you, or your representative who is qualified under state law to present the proposal on your behalf, must attend the meeting to present the proposal. Whether you attend the meeting yourself or send a qualified representative to the meeting in your place, you should make sure that you, or your representative, follow the proper state law procedures for attending the meeting and/or presenting your proposal.

(2) If the company holds it shareholder meeting in whole or in part via electronic media, and the company permits you or your representative to present your proposal via such media, then you may appear through electronic media rather than traveling to the meeting to appear in person.

(3) If you or your qualified representative fail to appear and present the proposal, without good cause, the company will be permitted to exclude all of your proposals from its proxy materials for any meetings held in the following two calendar years.

(i) *Question 9:* If I have complied with the procedural requirements, on what other bases may a company rely to exclude my proposal? (1) Improper under state law: If the proposal is not a proper subject for action by shareholders under the laws of the jurisdiction of the company's organization;

Note to paragraph (i)(1): Depending on the subject matter, some proposals are not considered proper under state law if they would be binding on the company if approved by shareholders. In our experience, most proposals that are cast as recommendations or requests that the board of directors take specified action are proper under state law. Accordingly, we will assume that a proposal drafted as a recommendation or suggestion is proper unless the company demonstrates otherwise.

(2) *Violation of law:* If the proposal would, if implemented, cause the company to violate any state, federal, or foreign law to which it is subject;

Note to paragraph (i)(2): We will not apply this basis for exclusion to permit exclusion of a proposal on grounds that it would violate foreign law if compliance with the foreign law could result in a violation of any state or federal law.

(3) *Violation of proxy rules:* If the proposal or supporting statement is contrary to any of the Commission's proxy rules, including § 240.14a-9, which prohibits materially false or misleading statements in proxy soliciting materials;

(4) *Personal grievance; special interest:* If the proposal relates to the redress of a personal claim or grievance against the company or any other person, or if it is designed to result in a benefit to you, or to further a personal interest, which is not shared by the other shareholders at large;

(5) *Relevance:* If the proposal relates to operations which account for less than 5 percent of the company's total assets at the end of its most recent fiscal year, and for less than 5 percent of its net earning sand gross sales for its most recent fiscal year, and is not otherwise significantly related to the company's business;

(6) *Absence of power/authority:* If the company would lack the power or authority to implement the proposal;

(7) *Management functions:* If the proposal deals with a matter relating to the company's ordinary business operations;

(8) *Relates to election:* If the proposal relates to an election for membership on the company's board of directors or analogous governing body;

(9) *Conflicts with company's proposal:* If the proposal directly conflicts with one of the company's own proposals to be submitted to shareholders at the same meeting.

Note to paragraph (i)(9): A company's submission to the Commission under this section should specify the points of conflict with the company's proposal.

(10) *Substantially implemented:* If the company has already substantially implemented the proposal;

(11) *Duplication:* If the proposal substantially duplicates another proposal previously submitted to the company by another proponent that will be included in the company's proxy materials for the same meeting;

(12) *Resubmissions:* If the proposal deals with substantially the same subject matter as another proposal or proposals that has or have been previously included in the company's proxy materials within the preceding 5 calendar years, a company may exclude it from its proxy materials for any meeting held within 3 calendar years of the last time it was included if the proposal received:

(i) Less than 3% of the vote if proposed once within the preceding 5 calendar years;

(ii) Less than 6% of the vote on its last submission to shareholders if proposed twice previously within the preceding 5 calendar years; or

(iii) Less than 10% of the vote on its last submission to shareholders if proposed three times or more previously within the preceding 5 calendar years; and

(13) *Specific amount of dividends:* If the proposal relates to specific amounts of cash or stock dividends.

(j) *Question 10:* What procedures must the company follow if it intends to exclude my proposal? (1) If the company intends to exclude a proposal from its proxy materials, it must file its reasons with the Commission no later than 80 calendar days before it files its definitive proxy statement and form of proxy with the Commission. The company must simultaneously provide you with a copy of its submission. The Commission staff may permit the company to make its submission later than 80 days before the company files its definitive proxy statement and form of proxy, if the company demonstrates good cause for missing the deadline.

(2) The company must file six paper copies of the following:

(i) The proposal;

(ii) An explanation of why the company believes that it may exclude the proposal, which should, if possible, refer to the most recent applicable authority, such as prior Division letters issued under the rule; and

(iii) A supporting opinion of counsel when such reasons are based on matters of state or foreign law.

(k) *Question 11:* May I submit my own statement to the Commission responding to the company's arguments?

Yes, you may submit a response, but it is not required. You should try to submit any response to us, with a copy to the company, as soon as possible after the company makes its submission. This way, the Commission staff will have time to consider fully your submission before it issues its response. You should submit six paper copies of your response.

(l) *Question 12:* If the company includes my shareholder proposal in its proxy materials, what information about me must it include along with the proposal itself?

(1) The company's proxy statement must include your name and address, as well as the number of the company's voting securities that you hold. However, instead of providing that information, the company may instead include a statement that it will provide the information to shareholders promptly upon receiving an oral or written request.

(2) The company is not responsible for the contents of your proposal or supporting statement.

(m) *Question 13:* What can I do if the company includes in its proxy statement reasons why it believes shareholders should not vote in favor of my proposal, and I disagree with some of its statements?

(1) The company may elect to include in its proxy statement reasons why it believes shareholders should vote against your proposal. The company is allowed to make arguments reflecting its own point of view, just as you may express your own point of view in your proposal's supporting statement.

(2) However, if you believe that the company's opposition to your proposal contains materially false or misleading statements that may violate our anti-fraud rule, § 240.142–9, you should promptly send to the Commission staff and the company a letter explaining the reasons for your view, along with a copy of the company's statements opposing your proposal. To the extent possible, your letter should include specific factual information demonstrating the inaccuracy of the company's claims. Time permitting, you may wish to try to work out your differences with the company by yourself before contacting the Commission staff.

(3) We require the company to send you a copy of its statements opposing your proposal before it mails its proxy materials, so that you may bring to our attention any materially false or misleading statements, under the following timeframes:

(i) If our no-action response requires that you make revisions to your proposal or supporting statement as a condition to requiring the company to include it in its proxy materials, then the company must provide you with a copy of its opposition statements no later than 5 calendar days after the company receives a copy of your revised proposal; or

(ii) In all other cases, the company must provide you with a copy of its opposition statements no later than 30 calendar days before its files definitive copies of its proxy statement and form of proxy under § 240.14a–6.

Dated: May 21, 1998.

By the Commission.

Margaret McFarland,

Deputy Secretary.

RIN 1515–AC28

Emissions Standards for Imported Nonroad Engines

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Final rule.

SUMMARY: This document amends the Customs Regulations, in conformance with regulations of the U.S. Environmental Protection Agency (EPA), in order to include marine spark-ignition engines among those imported nonroad engines that are subject to compliance with applicable EPA emissions standards required by law. In addition, the Customs Regulations in this regard are further amended by eliminating the unnecessary, extensive replication of the particular admission requirements for subject nonroad engines that are already contained in the EPA regulations.

EFFECTIVE DATE: May 28, 1998.

FOR FURTHER INFORMATION CONTACT: Brad Lund, Office of Field Operations, (202–927–0192).

SUPPLEMENTARY INFORMATION:

Background

The Clean Air Act, as amended (42 U.S.C. 7401 *et seq.*), which has long authorized the Environmental Protection Agency (EPA) to regulate on-highway motor vehicle and engine emissions, was amended in 1990 to extend EPA's regulatory authority to include as well nonroad engines and related vehicles and equipment (see 42 U.S.C. 7521–7525, 7541–7543, 7547, 7549, 7550, 7601(a)).

In brief, EPA was given authority, inter alia, to regulate those classes or categories of new nonroad engines and associated vehicles and equipment that contribute to air pollution, if such nonroad emissions were determined to be significant.

To this end, the EPA issued regulations in 40 CFR parts 89 and 90 that established emissions standards for new nonroad compression-ignition engines at or above 50 horsepower (37 kilowatts) as well as new nonroad spark-ignition engines at or below 25 horsepower (19 kilowatts) (see 59 FR 31306 (June 17, 1994) and 60 FR 34582 (July 3, 1995), respectively, for the background and development of these EPA regulations).

By a final rule document published in the **Federal Register** on August 27, 1996 (61 FR 43960), Customs amended its regulations to add a new § 12.74 (19 CFR 12.74) that conformed to the regulations adopted by the EPA in order to ensure the compliance of the aforementioned imported nonroad engines with applicable EPA emissions standards required by law.

The EPA has now issued regulations in 40 CFR part 91, establishing emissions standards as well for new marine spark-ignition engines (see 61 FR 52088 (October 4, 1996) for the background and development of the EPA regulations).

Accordingly, § 12.74 is hereby amended to include marine spark-ignition engines among those imported nonroad engines that are subject to applicable EPA emissions standards. Furthermore, Customs has determined to abbreviate significantly § 12.74 by simply referencing the EPA regulations concerned, and eliminating the unnecessary, extensive replication of the particular admission requirements for subject nonroad engines that are already contained in the EPA regulations.

Inapplicability of Public Notice and Comment and Delayed Effective Date Requirements, the Regulatory Flexibility Act, and Executive Order 12866

Inasmuch as these amendments merely conform the Customs Regulations to existing law and regulation as noted above, pursuant to 5 U.S.C. 553(b)(B), notice and public

UMI
VOL
63
ISS
102
MAY
28
1998
UMI

procedure thereon are unnecessary and pursuant to 5 U.S.C. 553(d)(3), a delayed effective date is not required. Since this document is not subject to the notice and public procedure requirements of 5 U.S.C. 553, it is not subject to the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). Nor do these amendments meet the criteria for a "significant regulatory action" under E.O. 12866.

Customs duties and inspection, Entry of merchandise, Imports, Prohibited merchandise, Restricted merchandise, Reporting and recordkeeping requirements, Vehicles.

Amendments to the Regulations

Part 12, Customs Regulations (19 CFR part 12), is amended as set forth below.

PART 12—SPECIAL CLASSES OF MERCHANDISE

1. The general authority citation for part 12, and the specific authority citation for § 12.74, continue to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1202 (General Note 20, Harmonized Tariff Schedule of the United States (HTSUS)), 1624;

* * * * *

Sections 12.73 and 12.74 also issued under 19 U.S.C. 1484, 42 U.S.C. 7522, 7601;

* * * * *

2. Section 12.74 is revised to read as follows:

§ 12.74 Nonroad engine compliance with Federal antipollution emission requirements.

(a) *Applicability of EPA regulations.* The requirements governing the importation of nonroad engines subject to conformance with applicable emissions standards of the U.S. Environmental Protection Agency (EPA) are contained in EPA regulations, issued under the Clean Air Act, as amended (42 U.S.C. 7401 *et seq.*). These EPA regulations should be consulted for detailed information as to the admission requirements for subject nonroad engines, as follows:

(1) For nonroad compression-ignition engines at or above 37 kilowatts, see 40 CFR part 89, subpart G;

(2) For nonroad spark-ignition engines at or below 19 kilowatts, see 40 CFR part 90, subpart G; and

(3) For marine spark-ignition engines, see 40 CFR part 91, subpart H.

(b) *Admission of nonconforming nonroad engines.* (1) *EPA declaration required.* EPA Form 3520–21, "Importation of Nonroad Engines and Nonroad Engines Incorporated Into Nonroad Equipment or Vehicles, Subject to Federal Air Pollution Regulations", must be completed by the importer and retained on file by him before making a customs entry for such nonroad engines/equipment/vehicles.

(2) *Retention and submission of records to Customs.* Documents supporting the information required in the EPA declaration must be retained by the importer for a period of at least 5 years in accordance with § 162.1c of this chapter and shall be provided to Customs upon request.

(c) *Release under bond.* (1) *Conditional admission.* If the EPA declaration states that the entry for a nonconforming nonroad engine is being filed under one of the exemptions described in paragraphs (c)(3)(i) through (c)(3)(iv) of this section, under which the engine must be conditionally admitted under bond, the entry for such engine shall be accepted only if a bond is given on Customs Form 301 containing the conditions set forth in § 113.62 of this chapter for the presentation of an EPA statement that the engine has been brought into conformity with Federal emissions requirements.

(2) *Final admission.* Should final admission be sought and granted pursuant to EPA regulations for an engine conditionally admitted initially under one of the exemptions described in paragraphs (c)(3)(i) through (c)(3)(iv) of this section, the importer or consignee shall deliver to the port director the prescribed statement. The statement shall be delivered within the period authorized by EPA for the specific exemption, or such additional period as the port director of Customs may allow for good cause shown. Otherwise, the importer or consignee shall deliver or cause to be delivered to the port director the subject engine, either for export or other disposition under applicable Customs laws and regulations (see paragraph (e) of this section). If such engine is not redelivered within 5 days following the allotted period, liquidated damages shall be assessed in the full amount of the bond, if a single entry bond, or if a continuous bond, the amount that would have been taken under a single entry bond (see 40 CFR 89.612–96(d), 90.613(c) & (d), 91.705(c) & (d)).

(3) *Exemptions.* The specific exemptions under which a nonconforming nonroad engine may be conditionally admitted, and for which a Customs bond is required, are as follows:

(i) Repairs or alterations (see 40 CFR 89.611–96(b)(1), 90.612(b)(1), 91.704(b)(1));

(ii) Testing (see 40 CFR 89.611–96(b)(2), 90.612(b)(2), 91.704(b)(2));

(iii) Precertification (see 40 CFR 89.611–96(b)(3), 89.906); and

(iv) Display (see 40 CFR 89.611–96(b)(4), 90.612(b)(3), 91.704(b)(3)).

(d) *Notice of inadmissibility or detention.* If an engine is found to be inadmissible either before or after release from Customs custody, the importer or consignee shall be notified in writing of the inadmissibility determination and/or redelivery requirement. However, an engine which cannot be released merely due to a failure to furnish with the entry any documentary information as required by EPA shall be held in detention by the port director for a period not to exceed 30 days after filing of the entry at the risk and expense of the importer pending submission of the missing information. An additional 30-day extension may be granted by the port director upon application for good cause shown. If at the expiration of a period not over 60 days the required documentation has not been filed, a notice of inadmissibility will be issued.

(e) *Disposal of engines not entitled to admission; prohibited importations.* A nonroad engine denied admission under EPA regulations shall be disposed of consistent with such EPA regulations and in accordance with applicable Customs laws and regulations. The importation of nonroad engines otherwise than as prescribed under EPA regulations is prohibited.

Douglas M. Browning,

Acting Commissioner of Customs.

Approved: May 6, 1998.

John P. Simpson,

Deputy Assistant Secretary of the Treasury.

RIN 1515–AC26

Automated Clearinghouse Credit

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Interim rule; solicitation of comments.

SUMMARY: This document amends the Customs Regulations on an interim basis to provide for payments of funds to Customs by Automated Clearinghouse (ACH) credit. Under ACH credit, a payer

will be able to transmit daily statement, deferred tax, and bill payments electronically through a financial institution directly to a Customs account maintained by the Department of the Treasury. ACH credit allows the payer to exercise more control over the payment process, does not require the disclosure of bank account information to Customs, and expands the types of payments that may be made through ACH.

DATES: This interim rule is effective June 29, 1998. Comments must be received before July 27, 1998.

ADDRESSES: Written comments (preferably in triplicate) may be addressed to the Regulations Branch, Office of Regulations and Rulings, U.S. Customs Service, 1300 Pennsylvania Avenue, N.W., Washington, D.C. 20229. Comments submitted may be inspected at the Regulations Branch, Office of Regulations and Rulings, U.S. Customs Service, 1300 Pennsylvania Avenue, N.W., 3rd Floor, Washington, D.C.

FOR FURTHER INFORMATION CONTACT: Ben Robbin, Financial Systems Division, Financial Management Services Center, Office of Finance, U.S. Customs Service (317–298–1520, ext. 1428).

SUPPLEMENTARY INFORMATION:

Background

Part 206 of the Financial Management Service (FMS) Regulations (31 CFR Part 206) concerns, among other things, the management of Federal agency receipts and disbursements and applies to all Government departments and agencies within the Executive Branch. Section 206.4(a) of the FMS Regulations (31 CFR 206.4(a)) sets forth the general rule that all funds are to be collected and disbursed by electronic funds transfer (EFT) when cost-effective, practicable, and consistent with current statutory authority. Section 206.2 of the FMS Regulations (31 CFR 206.2) defines EFT as follows:

> *Electronic funds transfer (EFT)* means any transfer of funds, other than a transaction originated by cash, check or similar paper instrument, that is initiated through an electronic terminal, telephone, computer, or magnetic tape, for the purpose of ordering, instructing, or authorizing a financial institution to debit or credit an account. The term includes, but is not limited to, Fed Wire transfers, Automated Clearing House (ACH) transfers, transfers made at automatic teller machines (ATM) and Point-of-Sale (POS) terminals (to include use of the Government small purchase card), and other means of credit card transactions.

Section 24.25 of the Customs Regulations (19 CFR 24.25) concerns "statement processing" and "automated clearinghouse (ACH)" and thus, by virtue of the latter, in part implements the policy reflected in the FMS Regulations referred to above. Paragraph (a) of § 24.25 describes statement processing as a voluntary automated program which allows participants in the Automated Broker Interface (ABI) to group entry/entry summaries and entry summaries on a daily basis and to pay the related duties, taxes and fees with a single payment. Paragraph (a) of § 24.25 further provides that the preferred method for such single payment is by ACH, except where the importer of record has provided (normally, to a customs broker who files the entry on behalf of the importer) a separate check payable to Customs for the Customs charges.

The ACH payment process currently set forth in § 24.25 is a debit payment method (hereinafter referred to as "ACH debit") whereby ABI filers provide Customs with the bank routing and account number from which ACH payments are to be electronically debited by a Treasury-designated ACH processor bank upon receipt of an electronic message sent by Customs. However, following implementation of statement processing and ACH debit on January 1, 1990, Customs found that the ACH debit procedure did not achieve all of the intended results because some daily statement payers have remained reluctant to provide the U.S. Government with their bank account information and, therefore, such parties still make their daily statement payments by check. Moreover, the current ACH debit process is limited to daily statement payments and thus does not cover bill payments under § 24.3 of the Customs Regulations (19 CFR 24.3) and deferred tax payments under § 24.4 of the Customs Regulations (19 CFR 24.4), which are accepted primarily through check (through a Customs lockbox) and Fed Wire respectively, and for which Customs believes some payers would prefer to use the ACH environment.

The FMS and Riggs National Bank of Washington, D.C. have developed another ACH payment procedure for the Federal Government, referred to herein as "ACH credit". This process allows the Federal Government to receive ACH payments initiated directly by the private sector payer. This process benefits payers by allowing them to effect payment without having to disclose bank account information to the Government and by allowing them to maintain more control over the origination and timing of their payments. The ACH credit process benefits the Government in that transit routing and bank account authorization does not have to be obtained from the remitter and the Government does not have to do anything to effect an individual payment.

Customs has received authorization from the FMS to receive ACH credit payments, and appropriate modifications have been made to the Automated Commercial System (ACS) to accept the transfer of payment and remittance information from Riggs Bank and to apply those payments to the appropriate receivables. Since the ACH credit procedure represents a significant enhancement of the electronic entry and payment process and provides important benefits to both Customs and the trade community, Customs believes that it should be made available to the public, for use on a voluntary basis, at the earliest practicable date and that it should encompass not only daily statement payments but also bill payments and deferred tax payments.

The purpose of this document is to provide an appropriate regulatory context for the ACH credit procedure. The ACH credit procedure and the regulatory changes reflected in this document are discussed in more detail below.

How ACH Credit Works

Companies and other payers interested in enrolling in the ACH credit program must indicate such interest by providing the following information to Customs: Payer name and address; payer contact name(s); payer telephone number(s) and facsimile number; payer identification number (importer number, Social Security number, or Customs assigned number); and 3-digit filer code. This information should be sent to the Financial Management Services Center, U.S. Customs Service, 6026 Lakeside Boulevard, Indianapolis, Indiana 46278, by mail or facsimile transmission (317–298–1013). Pre-printed enrollment forms for this purpose, together with detailed information regarding the ACH credit program, are available from the Financial Management Services Center contact person identified earlier in this document.

The payer and its financial institution are responsible for determining the methodology used for originating the ACH credit payment (telephone or computer generated instructions, diskettes, etc.) and the methodology used for notifying the payer that its account has been charged. The financial institution that the payer uses must be capable of structuring ACH credit transactions according to the payment and addendum conventions prescribed by the National Automated

Clearinghouse Association, that is, the financial institution must use either the CCD+ or the CTX payment formats and must use the TXP data segment for the payment-related information within the addendum record for each daily statement or deferred tax or bill payment. Payments transmitted by ACH credit must be formatted as described in the format instructions provided by the Financial Management Services Center.

Following receipt of the enrollment information, the Financial Management Services Center provides the payer with specific ACH credit routing and format instructions and advises the payer that the following information must be provided to its financial institution when originating its payments: Company name; company contact person name and telephone number; company identification number (coded Internal Revenue Service employer identification number or DUNS number or Customs assigned number); company payment description; effective date; receiving company name (*i.e.* U.S. Customs); transaction code; Customs transit routing number and Customs account number (provided to the payer by Customs); payment amount; payer identifier (importer number or Social Security number or Customs assigned number or filer code if the payer is a broker who is the importer of record); document number (daily statement number, entry or warehouse withdrawal number for a deferred tax payment, or bill number); payment type code (which identifies the payment as a daily statement payment or deferred tax payment or bill payment); settlement date (no later than the payment due date); and document payment amount.

Before effecting any payments of funds through the ACH credit process, the payer is instructed by Customs to follow a trial run "prenotification" procedure, involving a non-funds message transmission through its financial institution to the Customs account, in order to validate the routing instructions. Once the routing instructions are validated, the Financial Management Services Center notifies the payer that the prenotification transaction has been accepted and that payments may be originated on or after the tenth calendar day following the prenotification acceptance date.

The payer obtains the source data (the document number and amount) for the ACH credit payment transaction from the daily statement or from the entry or warehouse withdrawal documentation in the case of a deferred tax or from the Customs bill. The payer, through its financial institution, originates payment information to the Customs account no later than one business day prior to the payment due date (daily statement payments are due no later than ten working days after release or withdrawal of the merchandise; deferred tax payments are due on the 14th day or 29th day of the month, with special rules if the due date falls on a weekend or Federal holiday; bills must be paid no later than the late payment date appearing on the bill). The next day (the settlement date), the payer's account is charged by its financial institution and the payment is credited by Customs and applied to the appropriate daily statement or entry or warehouse withdrawal or bill as of that settlement date.

If daily statement payments are involved, a statement filer who is not the importer of record (and thus will not be making or authorizing the payment) must still obtain the preliminary statement through ABI and must still present the preliminary statement and the corresponding entry summaries (when paper is required) to the Customs location, as provided in § 24.25(c). However, the process differs in the case of payments to be made by ACH credit in that such a filer will provide the payer with the statement number and the statement amount at least one business day prior to the due date.

The payer is responsible for following the routing and format instructions provided by the Financial Management Services Center, and for ensuring the accuracy of the information provided to its financial institution, when originating its payment. Erroneous information provided by the payer (for example, non-standard formatting, incorrect document number, payment amount different from the amount due) will delay the prompt posting of the payment to the receivable. If a payer repeatedly provides erroneous information when originating payments, the payer may be advised in writing to refrain from using ACH credit and to submit its payments by bank draft or check pursuant to § 24.1 or by the ACH debit payment method under § 24.25.

Regulatory Implementation

In view of the fact that ACH credit is a voluntary program intended to provide flexibility, efficiency and related benefits to the trade community and to Customs, it appears appropriate to implement the ACH program as an interim rule, subject to public comment procedures before adoption of a final rule. Moreover, since present § 24:25 concerns only statement processing and describes ACH debit procedures whereas ACH credit will also apply to deferred tax and bill payments, Customs believes that it is preferable (1) to deal with ACH credit in a separate new § 24.26 and (2) to make conforming changes to present § 24.25 to reflect the adoption of the new section, including, where appropriate, the addition of the word "debit" to clarify the meaning of the references to ACH in that section.

Comments

Before adopting this interim regulation as a final rule, consideration will be given to any written comments timely submitted to Customs. Comments submitted will be available for public inspection in accordance with the Freedom of Information Act (5 U.S.C. 552), § 1.4, Treasury Department Regulations (31 CFR 1.4), and § 103.11(b), Customs Regulations (19 CFR 103.11(b)), on normal business days between the hours of 9 a.m. and 4:30 p.m. at the Regulations Branch, Office of Regulations and Rulings, U.S. Customs Service, 1300 Pennsylvania Avenue, N.W., 3rd Floor, Washington, D.C.

Inapplicability of Prior Public Notice and Comment Procedures

Pursuant to the provisions of 5 U.S.C. 553(b)(B), Customs has determined that prior public notice and comment procedures on this regulation are unnecessary and contrary to the public interest. The ACH credit process implemented by this regulation is an entirely voluntary payment procedure that provides benefits to the public in that it facilitates the electronic entry and payment process, addresses some concerns of the public regarding existing electronic payments procedures, and has the overall effect of reducing the regulatory burden on the public.

Executive Order 12866

This document does not meet the criteria for a "significant regulatory action" as specified in Executive Order 12866.

Regulatory Flexibility Act

Because no notice of proposed rulemaking is required for interim regulations, the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) do not apply.

Paperwork Reduction Act

This regulation is being issued without prior notice and public procedure pursuant to the Administrative Procedure Act (5 U.S.C. 553). For this reason, the collection of information contained in this regulation has been reviewed and, pending receipt and evaluation of public comments,

approved by the Office of Management and Budget in accordance with the requirements of the Paperwork Reduction Act (44 U.S.C. 3507) under control number 1515–0218.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number.

The collection of information in these regulations is in § 24.26. This information is required in connection with an election to use the ACH credit procedure for making electronic payments of funds to Customs. The information will be used by the U.S. Customs Service to ensure that payments to Customs are properly transmitted, received, and credited. The likely respondents are business organizations including importers, exporters and manufacturers.

Estimated total annual reporting and/or recordkeeping burden: 17 hours.

Estimated average annual burden per respondent/ recordkeeper: .083 hours.

Estimated number of respondents and/or recordkeepers: 200.

Estimated annual number of responses: 200.

Comments are invited on: (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start up costs and costs of operations, maintenance, and purchase of services to provide information. Comments should be directed to the Office of Management and Budget, Attention: Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, D.C. 20503. A copy should also be sent to the Regulations Branch, Office of Regulations and Rulings, U.S. Customs Service, 1300 Pennsylvania Avenue, N.W., Washington, D.C. 20229.

List of Subjects in 19 CFR Part 24

Accounting, Claims, Customs duties and inspection, Imports, Taxes.

Amendments to the Regulations

For the reasons set forth above, Part 24, Customs Regulations (19 CFR Part 24), is amended as set forth below.

PART 24—CUSTOMS FINANCIAL AND ACCOUNTING PROCEDURES

1. The authority citation for part 24 continues to read in part as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 58a–58c, 66, 1202 (General Note 20, Harmonized Tariff Schedule of the United States), 1450, 1624; 31 U.S.C. 9701.

* * * * *

§ 24.25 [Amended]

2. In § 24.25:

a. The third sentence of paragraph (a) is amended by adding after "(ACH)" the words "debit or ACH credit";

b. The sixth sentence of paragraph (a) is amended by adding the words "debit (see paragraph (b)(2) of this section)" after "ACH" the first time it appears and adding at the end of the sentence before the period the words "; ACH credit is described in § 24.26";

c. The heading of paragraph (b)(2) is amended by adding after "Clearinghouse" the word "debit";

d. The first sentence of paragraph (b)(2) is amended by adding after "through ACH" the word "debit"; and

e. The first sentence of paragraph (c)(4) is amended by removing the words "ACH payment authorization" and adding, in their place, the words "ACH debit payment authorization or ACH credit payment".

3. Section 24.26 is added to read as follows:

§ 24.26 Automated Clearinghouse Credit.

(a) *Description.* Automated Clearinghouse (ACH) credit is an optional payment method that allows a payer to transmit statement processing payments (see § 24.25) or deferred tax payments (see § 24.4) or bill payments (see § 24.3) electronically, through its financial institution, directly to the Customs account maintained by the Department of the Treasury.

(b) *Enrollment procedure.* A payer interested in enrolling in the ACH credit program must indicate such interest by providing the following information to the Financial Management Services Center, U.S. Customs Service, 6026 Lakeside Boulevard, Indianapolis, Indiana 46278: Payer name and address; payer contact name(s); payer telephone number(s) and facsimile number; payer identification number (importer number or Social Security number or Customs assigned number); and 3-digit filer code.

(c) *Routing and format instructions.* Following receipt of the enrollment information, the Financial Management Services Center will provide the payer with specific ACH credit routing and format instructions and will advise the payer that the following information must be provided to its financial institution when originating its payments: Company name; company contact person name and telephone number; company identification number (coded Internal Revenue Service employer identification number or DUNS number or Customs assigned number); company payment description; effective date; receiving company name; transaction code; Customs transit routing number and Customs account number; payment amount; payer identifier (importer number or Social Security number or Customs assigned number or filer code if the payer is a broker who is the importer of record); document number (daily statement number, entry or warehouse withdrawal number for a deferred tax payment, or bill number); payment type code; settlement date; and document payment amount.

(d) *Prenotification procedure.* Before effecting any payments of funds through the ACH credit process, the payer must follow a prenotification procedure, involving a non-funds message transmission through its financial institution to the Customs account, in order to validate the routing instructions. When the routing instructions are validated, the Financial Management Services Center will notify the payer that the prenotification transaction has been accepted and that payments may be originated on or after the tenth calendar day following the prenotification acceptance date.

(e) *Payment origination procedures.* (1) *General.* Once the payer has received authorization to begin originating ACH credit payments under paragraph (d) of this section, the payer, through its financial institution, must originate each payment transaction to the Customs account no later than one business day prior to the payment due date. The payer's account will be charged by the financial institution on the settlement date identified in the transaction. The payer is responsible for following the routing and format instructions provided by Customs and for ensuring the accuracy of the information when originating each payment. Improperly formatted or erroneous information provided by the payer will delay the prompt posting of the payment to the receivable.

(2) *Procedures for daily statement filers.* The procedures set forth in § 24.25(c) for ABI filers using statement processing remain applicable when payment is effected through ACH credit. However, when the ABI filer is a customs broker who is not the importer of record and thus is not responsible for the payment, the ABI filer must provide

the statement number and statement amount to the importer of record at least one business day prior to the due date so that the importer of record can originate the payment.

(f) *Date of collection.* The date that the ACH credit payment transaction is received by Customs shall be the collection date which equates to the settlement date. The appropriate daily statement or entry or warehouse withdrawal or bill shall be identified as paid as of that collection date.

(g) *Removal from the ACH credit program.* If a payer repeatedly provides improperly formatted or erroneous information when originating ACH credit payments, the Financial Management Services Center may advise the payer in writing to refrain from using ACH credit and to submit its payments by bank draft or check pursuant to § 24.1 or, in the case of daily statement payments, to use the ACH debit payment method under § 24.25.

Samuel H. Banks,

Acting Commissioner of Customs.

Approved: May 5, 1998.

John P. Simpson,

Deputy Assistant Secretary of the Treasury.

RIN 1515-AB98

Prior Disclosure

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Final rule.

SUMMARY: This document amends the Customs Regulations governing "prior disclosure", including implementation of the Customs modernization provisions of the North American Free Trade Implementation Act (Mod Act) concerning prior disclosure by a person of a violation of law committed by that person involving the filing or attempted filing of a drawback claim, or an entry or introduction, or attempted entry or introduction of merchandise into the United States by fraud, gross negligence, or negligence. Pursuant to the "prior disclosure" provision of 19 U.S.C. 1592(c)(4) as amended by the Mod Act, and 19 U.S.C. 1593a(c)(3), if a person commits a violation of 19 U.S.C. 1592 or 19 U.S.C. 1593a and discloses the circumstances of the violation before, or without knowledge of, the commencement of a formal investigation of such violation, merchandise shall not be seized and any monetary penalty to be assessed shall be limited. "Commencement of a formal investigation" for purposes of 19 U.S.C. 1592 and 1593a is defined in these regulations. The document also amends the regulations to give Fines, Penalties and Forfeitures Officers discretion to defer Customs disclosure verification proceedings until the disclosing party has an opportunity to explain all the circumstances underlying the disclosed violation.

EFFECTIVE DATE: June 29, 1998.

FOR FURTHER INFORMATION CONTACT: Robert Pisani, Penalties Branch (202) 927-2344.

SUPPLEMENTARY INFORMATION:

Background

On December 8, 1993, the President signed the North American Free Trade Agreement Implementation Act (Pub. L. 103-182). The Customs modernization portion of this Act (Title VI), popularly known as the Customs Modernization Act, or "the Mod Act" became effective when it was signed. Section 621 of Title VI amended section 592 of the Tariff Act of 1930 (19 U.S.C. 1592) (hereinafter referred to as section 592), and section 622 of Title VI added new section 593a. On September 26, 1996, Customs published in the **Federal Register** (61 FR 50459) a notice of proposed rulemaking to amend the Customs Regulations governing prior disclosure as it relates to sections 592 and 593a. Pursuant to the "prior disclosure" provision of 19 U.S.C. 1592(c)(4) as amended by the Mod Act, and 19 U.S.C. 1593a(c)(3), if a person commits a violation of 19 U.S.C. 1592 or 19 U.S.C. 1593a and discloses the circumstances of the violation before, or without knowledge of, the commencement of a formal investigation of such violation, merchandise shall not be seized and any monetary penalty to be assessed shall be limited.

It is noted that it is the policy of the Customs Service to encourage the submission of prior disclosures.

The notice of proposed rulemaking invited public comments on the proposals, which would be considered before adoption of a final rule. The public comment period closed on November 25, 1996.

Analysis of Comments

A total of thirty-seven commenters responded to the solicitation of comments during the public comment period. Many commenters applauded Customs efforts to re-organize and simplify the regulations involving prior disclosure. Ten of the commenters set forth specific recommendations to change the proposed amendments on a "section by section" basis. Five of these ten commenters made general comments which were not directly related to a specific section of the proposal. The remaining twenty-seven commenters set forth the single recommendation to amend the proposal to include a regulatory prohibition that would specify that a valid prior disclosure precludes the assessment of a liquidated damage claim for the disclosed violation.

The specific "section by section" recommendations and/or suggestions, general recommendations and/or suggestions, and the Customs responses thereto, are set forth below.

Proposed § 162.74(a)

Comment: One commenter suggests that § 162.74(a)(2) be amended to preclude "oral" prior disclosures. If adopted, the commenter recommends deleting all other references to oral prior disclosures in the proposal. No reason is articulated for suggesting this change.

Customs Response: We can find no valid reason for precluding a party from making an oral prior disclosure. Of course, as with a party making a written prior disclosure, a party who elects to make an oral disclosure must meet the regulatory criteria governing "disclosure of the circumstances of the violation" before, or without knowledge of the commencement of a formal investigation of such violation, in order to obtain prior disclosure benefits.

Comment: One commenter suggests that Customs change proposed § 162.74(a)(2) to reflect that the "appropriate Customs officer," rather than the Fines, Penalties and Forfeitures Officer, be the deciding official regarding whether the party had included substantially the information set forth in paragraph (b) of proposed § 162.74. The commenter is of the opinion that the decision-making authority should be vested in a Customs officer not connected to a potential penalty action. For similar reasons, another commenter suggests that the port director should be the deciding official instead of the Fines, Penalties and Forfeitures Officer.

Customs Response: We disagree. Inasmuch as the evaluation of information regarding the potential assessment of penalties under 19 U.S.C. 1592 or 19 U.S.C. 1593a is within the province of the Fines, Penalties and Forfeitures Officer, we are of the opinion that the Fines, Penalties and

Forfeitures Officer is the appropriate Customs official to determine whether the criteria set forth in proposed § 162.74(b) is met.

Comment: One commenter suggests that proposed § 162.74(a)(2) be amended to include language that indicates that a disclosing party is presumed to have no knowledge of the commencement of a formal investigation of the disclosed violation, unless Customs can rebut such presumption by virtue of one or more of the events set forth in proposed § 162.74(i).

Customs Response: Proposed § 162.74(i) sets forth events which give rise to presumptions of knowledge of the commencement of a formal investigation of the disclosed violation(s). Inasmuch as circumstances may exist that demonstrate "knowledge," but that are not included in the list of events set forth in proposed § 162.74(i), we do not believe that adoption of this suggestion is warranted. Moreover, we believe creating such a presumption would conflict with 19 U.S.C. 1592 and 1593a, which places the burden to demonstrate lack of knowledge on the disclosing party.

Comment: One commenter recommends that the Fines, Penalties and Forfeitures Officer should not be listed in proposed § 162.74(a)(2) as the sole officer to decide whether the disclosing party made a "disclosure of the circumstances of a violation" (*i.e.*, the criteria set forth in proposed § 162.74(b)), and that any such decisions should be subject to review or appeal. Further, for the sake of grammatical continuity, the commenter recommends deletion of the word "that" after the word "satisfied" in proposed § 162.74(a)(2).

Customs Response: For reasons discussed above, we are of the opinion that the Fines, Penalties and Forfeitures Officer is the appropriate Customs official to determine whether or not the party has met the criteria set forth in proposed § 162.74(b). With respect to a right of review or appeal of such determinations, Customs notes that such rights already are ensured by virtue of the disclosing party's right to petition if Customs issues a prepenalty or penalty notice initiating or assessing regular penalties. Lastly, we note that we have adopted the commenter's grammatical recommendation.

Proposed § 162.74(b)

Comment: One commenter recommends that the word "violator" in proposed § 162.74(b)(4) be changed to "disclosing party."

Customs Response: The recommendation is adopted.

Comment: One commenter suggests that proposed § 162.74(b)(4) should be clarified to indicate that requests for extensions apply to all information specified in proposed § 162.74(b).

Customs Response: We disagree. The adoption of the suggestion is contrary to the principle of "shared responsibility" and would eliminate the obligation to initially provide any information regarding a claimed prior disclosure.

Comment: One commenter suggests that Customs change proposed § 162.74(b)(4) to reflect that extension requests should normally be granted by Customs except in certain specified circumstances.

Customs Response: Customs believes that this change is not necessary. We note that the commenter did not specify circumstances that would warrant a denial of a request for an extension, and we believe that the creation of such circumstances would not be in the interests of either the disclosing party or the Customs Service.

Comment: One commenter recommends that proposed § 162.74(b)(4) be changed to specify that information provided to Customs pursuant to this provision may not be used to initiate or develop a criminal investigation or proceeding. The commenter suggests that use of such information to develop criminal cases impinges on the disclosing party's Constitutional 5th Amendment rights.

Customs Response: Customs disagrees. In addition to the fact that a party *elects* to make a claimed prior disclosure, it should be noted that current law requires referral of suspected criminal violations to the concerned U.S. Attorney's office. Consequently, the decision to prosecute a suspected violation of criminal statutes rests with the concerned U.S. Attorney's office rather than the Customs Service.

Proposed § 162.74(c)

Comment: One commenter suggests a change in the language in this section to make it clearer that the disclosing party may decide to wait to tender the actual loss of duties until Customs advises the party of its calculation of the actual loss of duties. The commenter is of the opinion that the current language is ambiguous, and that some ports have insisted that lost duties be tendered at the time of disclosure. Further, the commenter recommends that the period for tendering an actual loss of duties after having been notified by Customs of such loss be extended from 30 days to 60 days, and that the party may request an extension of time to tender.

Customs Response: We agree that the language suggested by the commenter regarding the timing of a tender is less ambiguous than the proposed language and have revised this section in accordance with the commenter's recommendation. On the other hand, we see no reason to change the 30 day period to tender an actual loss calculated by Customs to 60 days. We note that the proposed regulations do provide the Fines, Penalties and Forfeitures Officer with the authority to extend the 30 day period if it is determined that there is good cause to do so.

Comment: One commenter recommends adding a subsection to proposed § 162.74(c) to provide for refund in the event that Customs determines that the amount tendered is not, in fact, an actual loss of duties. Three other commenters recommend that proposed § 162.74(c) be revised to provide the disclosing party with a mechanism to challenge or protest Customs calculation of the actual loss of duties. Two of these three commenters suggest that the inability to challenge Customs actual loss calculation discourages prior disclosures.

Customs Response: We agree that where legitimate disputes exist between a Customs field office and a disclosing party regarding the amount of the actual loss of duties due the government, there should be some mechanism for review at Customs Headquarters—provided that the Customs claimed loss of duty is substantial (*i.e.*, exceeds $100,000); the disclosing party deposits the Customs claimed actual duty loss amount; greater than one year remains under the statute of limitations; and that the Headquarters review is limited solely to the basis for Customs determination of the actual duty loss. In addition, we note that granting such review is within the discretion of Customs Headquarters, and that such review is conditioned upon the disclosing party's compliance with all other provisions of the prior disclosure regulations. We also note that where Headquarters review is afforded, such review is not limited to the revenue loss claims raised by the Customs field office or disclosing party, but could involve an independent Headquarters determination. Lastly, although the Headquarters decision on such review may result in a partial or total refund of the deposited duty loss amount, the regulations indicate that, in any case where such review is afforded, the Headquarters decision is final and not subject to administrative or judicial appeal. In effect, the disclosing party who elects to request such Headquarters review should be aware that, if granted,

the party is waiving any right to contest Headquarters actual loss of duties determination—either administratively or judicially.

Proposed § 162.74(d)

Comment: One commenter recommends that proposed § 162.74(d)(2) be revised to require that Customs furnish a receipt that indicates the time and date of Customs receipt of claimed prior disclosure documents delivered in person. The commenter suggests that it is somewhat anomalous to require a person delivering documents to Customs to request a receipt, and that as part of "shared responsibility" it seems more appropriate to provide that the person delivering the documents would be furnished a receipt.

Customs Response: Customs agrees that the proposed regulation should be amended to reflect that a receipt will be furnished to the person delivering documents, but in keeping with the spirit of "shared responsibility," we remain of the opinion that the receipt will be furnished upon request.

Comment: One commenter claims that proposed § 162.74(d)(3) is silent as to the specific time and date when a claimed oral prior disclosure becomes effective. The commenter provides revised language which indicates that orally provided information is "deemed to have occurred at the time the oral communication is made."

Customs Response: We disagree with the premise of this recommendation. The proposed regulation does, in fact, provide that claimed oral prior disclosures are "deemed to have occurred at the time Customs was provided with the information which substantially complies with the requirements set forth in paragraph (b) of this section."

Proposed § 162.74(e)

Comment: Two commenters point out an apparent inconsistency between proposed § 162.74(e)(2) and proposed § 162.74(a)(1), in that the latter proposed section provides for making a claimed prior disclosure to a "Customs officer," whereas the former proposed section provides for making a "multi-port" claimed prior disclosure to "all concerned Fines, Penalties and Forfeitures Officers." One of the commenters suggests that Port Director be substituted for Fines, Penalties and Forfeitures Officer.

Customs Response: We agree that there is an apparent inconsistency between the two proposed sections. Customs is revising proposed § 162.74(e)(2) to reflect that although a "multi-port" claimed prior disclosure may be made to a Customs officer, unless the claimed prior disclosure is made directly to the concerned Fines, Penalties and Forfeitures Officer, it is incumbent upon the Customs officer to refer the claimed prior disclosure to the concerned Fines, Penalties and Forfeitures Officer so that consolidation of the matter can be arranged in accordance with internal procedures. We believe that a disclosing party should not be limited to providing the claimed prior disclosure to the concerned port director.

Proposed § 162.74(f)

Comment: One commenter recommends that the word "violator" in proposed § 162.74(f) be changed to "disclosing party."

Customs Response: The recommendation is adopted.

Comment: One commenter recommends that the Fines, Penalties and Forfeitures Officer be eliminated in proposed § 162.74(f) as the Customs official responsible for requests for the withholding of initiation of disclosure verification proceedings. No specific reason is suggested for this change.

Customs Response: Inasmuch as the concerned Fines, Penalties and Forfeitures Officer is the Customs officer who is responsible for ascertaining the validity of the claimed prior disclosure, we see no reason to adopt the recommended change.

Comment: One commenter suggests that proposed § 162.74(f) be revised to include language indicating that requests to withhold initiation of disclosure verification proceedings of the claimed prior disclosure should be granted "except for good cause."

Customs Response: The suggestion is not adopted. In the event that Customs learns of a serious abuse of discretion regarding such requests, Customs can take measures to eliminate the problem through either internal guidelines, regulatory revisions or whatever other action is deemed appropriate.

Comment: One commenter suggests that proposed § 162.74(f) be revised to provide the Fines, Penalties and Forfeitures Officer with the discretion to defer notification to the Office of Investigations of a claimed prior disclosure. The commenter is of the opinion that the deferral of notification should be predicated on a number of factors, such as the gravity of the disclosed violation, any pattern of non-compliance, etc.

Customs Response: The notification to the Office of Investigations of the claimed disclosure serves to prevent delay in the administrative disposition of the disclosure, in that the Office of Investigations can take immediate action to initiate or coordinate disclosure verification proceedings as well as ascertain whether or not Customs already had commenced a formal investigation of the claimed prior disclosure. Consequently, Customs is of the opinion that the proposed regulation remain unchanged.

Comment: One commenter recommends that proposed § 162.74(f) be changed to reflect that a disclosing party may also request that Customs audits be included in a request to withhold initiation of disclosure verification proceedings.

Customs Response: Inasmuch as audits initiated solely to verify disclosures would often be considered part of the disclosure verification proceedings, Customs is of the opinion that the suggested change is unnecessary.

Comment: One commenter suggests that Customs add to the end of the first sentence in proposed § 162.74(f) "and the Office of Investigations is requested to determine whether or not investigation is pending or contemplated." The commenter does not provide a reason for the suggested change.

Customs Response: In view of the fact that internal procedures already exist regarding the handling of claimed prior disclosures by the Office of Investigations, Customs is of the opinion that the suggested change is unnecessary.

Proposed § 162.74(g)

Comment: Two commenters indicate that, based upon Congressional discussions involving the Customs Modernization Act, proposed § 162.74(g) should include language to require that records of a "commencement of a formal investigation" be maintained in the Office of Investigations, Customs Headquarters or some other central unit. One of these two commenters also suggests that the regulation specify the official who is charged with recording the "commencement" information. Also, this commenter suggests that the words "with regard to the disclosing party" be added after the word "commenced" in the first sentence of the proposed section. A third commenter recommends that this section be revised to indicate that only Customs agents from the Office of Investigations can commence formal investigations for prior disclosure purposes. Three other commenters recommend that the proposed section be revised to require that a formal

investigations control number be assigned to the written commencement document or otherwise require the Office of Investigations to open an investigation. Lastly, one other commenter suggests revisions to the proposed section which specify the form and nature of the "commencement" document.

Customs Response: Customs is of the opinion that proposed § 162.74(g) fully comports with the Customs Modernization Act's statutory language and intent regarding the definition of the term "commencement of a formal investigation." The proposed language requires that the Customs Service evidence the commencement by a writing, as well as specifies that the disclosing party will receive written evidence of such a "commencement" in any required notice issued to the party pursuant to 19 U.S.C. 1592 or 1593a, in the event the claimed prior disclosure is denied. We do not agree that the law mandates that agents of the Office of Investigations are the only Customs officials capable of commencing a formal investigation for the purposes of prior disclosure. Further, in Customs view, additional requirements involving custody of such records, or record forms/formats, record maintenance or case control numbers are not properly the province of regulation, but rather, concern internal procedures developed by the agency. We do agree with the suggestion to include the phrase "with regard to the disclosing party" after the word "commenced" in the first sentence, and have revised the proposed section to reflect adoption of this recommendation.

Comment: One commenter states that proposed § 162.74(g) should indicate that a Customs Form 28 (Request for Information) and Customs Form 29 (Notice of Action) cannot be considered written evidence of a "commencement of a formal investigation." The commenter is of the opinion that these documents will have a "chilling" effect on the prior disclosure provisions if they are permitted to be construed as "formal commencement" documents, in that they, for the most part, merely request information or propose rate or value advances.

Customs Response: As indicated above, Customs is of the opinion that dictating the form of the "commencement" writing is not properly the province of regulation. We do agree that Customs Forms 28 and 29 which merely request information or propose rate or value advances could not be considered "commencement" documents for prior disclosure purposes unless they articulate that a possibility of a violation existed.

Comment: One commenter recommends deleting the phrase "denied prior disclosure treatment on the basis of the commencement of a formal investigation of the disclosed violation" in the second sentence of proposed § 162.74(g). The commenter points out that "commencement of a formal investigation is merely one fact bearing on the ultimate resolution of the matter."

Customs Response: Customs agrees with the commenter that "commencement of a formal investigation of the disclosed violation" is one of several issues concerning the disposition of the claimed prior disclosure (*e.g.*, a disclosing party may be unable to obtain prior disclosure benefits if the party fails to "disclose the circumstances of the violation" in accordance with § 162.74(b)—and this may occur in cases where Customs had not commenced a formal investigation). Nevertheless, this provision of proposed § 162.74(g) addresses those instances where the denial of the prior disclosure *is* predicated on the commencement of the formal investigation of the disclosed violation. In such cases, the regulation requires a copy of a writing evidencing the commencement of a formal investigation of the disclosed violation. Accordingly, the recommendation is not adopted.

Comment: One commenter recommends that proposed § 162.74(g) be revised to indicate that any required notice issued pursuant to 19 U.S.C. 1592 or 1593a should specify the event listed in proposed § 162.74(i) that provided the disclosing party with knowledge of the commencement of a formal investigation of the disclosed violation. The commenter believes that inclusion of such a provision would eliminate disputes regarding the issue of knowledge of the commencement.

Customs Response: We disagree. Customs notes that the purpose underlying proposed § 162.74(g) is to provide a definition of the "commencement of a formal investigation" for prior disclosure purposes. We note that notices issued to the disclosing party pursuant to 19 U.S.C. 1592 or 1593a may commence a formal investigation of the disclosed violation and may be issued prior to the claimed disclosure. It should also be noted that the law establishes the burden to demonstrate lack of knowledge of the commencement of the formal investigation upon the disclosing party.

Comment: One commenter suggests that proposed § 162.74(g) be revised to require that the disclosing party be notified of the acceptance or denial of the claimed prior disclosure as soon as Customs makes that decision, and that documentary evidence of the "commencement of a formal investigation" should be furnished to the disclosing party well in advance of the initiation of penalty proceedings.

Customs Response: Customs believes that the statutory and regulatory procedures already in place are sufficient to advise parties of the validity of a claimed prior disclosure. Also, it is well established that an invalid prior disclosure may subject the disclosing party to penalties.

Proposed § 162.74(h)

Comment: One commenter recommends that proposed § 162.74(h) be revised to clarify that once an investigation begins with respect to a disclosed violation, the disclosing party still may obtain prior disclosure treatment for other violations not covered by the commenced formal investigation.

Customs Response: Customs does not believe that clarification is necessary. The proposed section makes clear that additional disclosed violations not covered in the disclosing party's original prior disclosure may receive prior disclosure benefits, provided that such additional disclosures were made before "the date recorded in writing by the Customs Service as the date on which facts and circumstances were discovered or information was received which caused the Customs Service to believe that a possibility of such additional violations existed."

Proposed § 162.74(i)

Comment: Five commenters recommend that proposed § 162.74(i) be revised to require that for the "presumption of knowledge" to be effective any Customs notification of the disclosed violation to the disclosing party that precedes the claimed prior disclosure must be evidenced by a "writing." Four of the five commenters maintain that such a requirement will avoid unnecessary conflict or misunderstandings concerning the content or circumstances of an oral notification by Customs. Two of the five commenters are of the opinion that a written notification requirement also should require a return receipt. In addition, two of the five commenters recommend that proposed § 162.74(i) be revised to ensure that "general inquiries" (*e.g.*, Customs Forms 28 and 29) are not used as evidence of prior knowledge of the commencement of a formal investigation of the disclosed

violation. One of these two commenters suggests inclusion of the phrase "so informed the person of that reasonable belief," immediately following the statutory citations in proposed § 162.74(i)(1)(i) in order to clarify that "general inquiries" would not constitute a presumption of knowledge.

Customs Response: Customs notes that although the Customs Modernization Act prior disclosure changes added the requirement that a "commencement of a formal investigation" must be evidenced by a writing, the Modernization Act changes did not impose such a writing requirement regarding "knowledge of the commencement of a formal investigation" involving Customs notification to the disclosing party. Customs believes that the language of the proposed regulatory section makes clear that "general inquiries" or mere "contact" with a Customs officer prior to the submission of the claimed prior disclosure is insufficient to create a "presumption of knowledge" of the commencement of a formal investigation of the disclosed violation. In those instances where oral notification pursuant to proposed § 162.74(i) renders the presumption operative, the concerned Customs official must meet other criteria—such as informing the person of the type of or circumstances of the disclosed violation.

Customs is of the opinion that its position regarding "presumption of knowledge" is consistent with the underlying Modernization Act theme of "shared responsibility"—if a party receives oral notification from a Customs officer of the type of or circumstances of the violation(s) at issue *before* making the claimed prior disclosure, Customs believes that prior disclosure benefits should not accrue—unless, of course, the party is able to rebut the presumption of knowledge as provided for under the proposed regulatory provision. Also, it should be noted that even if one or more of the events have taken place as set forth in the proposed § 162.74(i), a party still may wish to submit a claimed disclosure—either because the party believes it can rebut the presumption of knowledge, or because the party seeks to obtain substantial mitigation in an ensuing penalty proceeding (despite the fact that the information provided to Customs does not qualify for disclosure benefits).

Comment: One commenter suggests changing proposed § 162.74(i) so that it cannot be read to permit denial of prior disclosure benefits in those instances where one of the events or notifications under the proposed regulatory section takes place, but no formal investigation has been commenced. Another commenter recommends that Customs should eliminate the language in the proposed section which places the burden of proving "lack of knowledge" on the disclosing party.

Customs Response: Customs believes the proposed section is clear. The second sentence of proposed § 162.74(i) sets forth the requirement that the commencement of a formal investigation must occur before there can be a presumption of knowledge. Consequently, Customs sees no need to adopt the first commenter's suggestion. With respect to the burden of proving lack of knowledge, we reject the commenter's suggestion to eliminate this burden inasmuch as both concerned statutory provisions (*i.e.*, 19 U.S.C. 1592(c)(4) and 19 U.S.C. 1593a(c)(3)(c)) establish the burden of proving lack of knowledge.

General Comments

Comment: One commenter recommends that prior disclosure benefits should extend to violations of the customs laws other than violations of 19 U.S.C. 1592 or 1593a.

Customs Response: Customs notes that the proposed regulations are being promulgated based upon the statutory authority establishing "prior disclosure" for violations of 19 U.S.C. 1592 and 1593a. Currently, such statutory authority for permitting "prior disclosure" of other violations of the customs laws does not exist. Nevertheless, it should be noted that in some instances, a party who discloses a violation of the customs laws (other than 19 U.S.C. 1592 or 1593a) may be entitled to substantial mitigation in the administrative disposition of the offense under existing Customs guidelines for such violations.

Comment: Twenty-six commenters recommend that the proposed amendments be revised to prohibit an assessment of liquidated damages for a violation revealed in a 19 U.S.C. 1592 or 1593a prior disclosure. The vast majority of these commenters are of the opinion that it is unfair for the Customs Service to assess liquidated damages against a Foreign-Trade Zone (FTZ) operator for breach of the FTZ operator's bond based on information obtained from a prior disclosure submitted by an operator. These commenters believe that inasmuch as most valid prior disclosures by FTZ operators involve a tender of all lost revenue, Customs is made whole and that the subsequent assessment of liquidated damages should not be allowed. The FTZ commenters are of the opinion that the proposed regulations unfairly discriminate against FTZ operators, and serve to deter such parties from submitting prior disclosures.

Customs Response: Customs notes that unlike the assessment of civil penalties, the assessment of liquidated damages for a breach of bond terms is based upon the contractual agreement with the bondholder. Accordingly, although Customs may, under existing guidelines, reduce liquidated damage amounts in administrative proceedings—particularly in those cases where a valid prior disclosure is submitted, the agency does not believe the suggestion should be adopted.

Comment: One commenter suggests that the proposed regulations include a statement that indicates that the submission of valid prior disclosures is encouraged.

Customs Response: Customs notes that the commenter's suggested statement is not provided for by statute, but rather is a recommended statement of agency policy. Inasmuch as it is the policy of the Customs Service to encourage the submission of prior disclosures in accordance with the proposed regulatory requirements, we have added such a sentence to the preamble of this document.

Comment: One commenter is of the opinion that the annual reporting burden set forth in the section under Paperwork Reduction Act heading is understated. The commenter believes that it also would be helpful for the estimated number of respondents shown to be based on the actual number of prior disclosures filed annually in the last several years.

Customs Response: Customs notes that the figures set forth in the notice of proposed rulemaking are Customs best estimates of both the annual reporting burden, estimated annual number of respondents and estimated average annual burden per respondent. Inasmuch as a prior disclosure may involve one Customs entry with one line item, or several thousand Customs entries involving hundreds of line items, it is virtually impossible to predict either the frequency at which disclosures will be made, or the amount of time necessary to complete a disclosure. It should also be noted that the simplicity or complexity of the "disclosed violation," as well as the number of line items at issue may involve a completion time that is either substantially more or less than the "one hour for each Customs entry" set forth in the notice of proposed rulemaking. In view of these considerations and the voluntary nature of the prior disclosure

provisions, Customs is of the opinion that its estimates comport with the regulatory requirements of the Paperwork Reduction Act.

Comment: One commenter believes that it would be helpful to acknowledge in this document that there may be instances where the disclosing party requires several months—or even longer—to submit all of the required information to complete its disclosure of the circumstances of the violation.

Customs Response: Customs acknowledges that in certain cases a claimed prior disclosure may involve numerous transactions, multiple ports, and/or complex issues and information—all of which require adequate research and compilation time. The agency is of the opinion that the proposed regulations accommodate such prior disclosures by virtue of the ability of the party to request extensions of time to research and compile such information.

Comment: One commenter recommends that the proposed regulations include a provision that either establishes a procedure for appealing a denial of a claimed prior disclosure, or references such a procedure found elsewhere in the Customs Regulations. The commenter is of the opinion that such a provision or statement would serve to avoid unnecessary litigation.

Customs Response: Customs notes that, ordinarily, the denial of a prior disclosure is manifested by Customs initiation of administrative penalty proceedings at ordinary penalty amounts under either 19 U.S.C. 1592 or 1593a. Inasmuch as the disclosing party may avail itself of administrative petitioning rights in such cases (including the right to petition Customs denial of prior disclosure treatment), Customs believes it is unnecessary to enact a separate or additional appeal procedure.

Comment: Four commenters are of the opinion that Customs should reinstate the "minor violations" section of the regulations governing prior disclosure (former § 162.74(j)). The commenters believe that the proposed regulations should state that minor, non-fraudulent violations should not be subject to penalty, and one commenter believes that such infractions should not be referred to the Office of Investigations. Another commenter believes that the deletion of former § 162.74(j) will discourage prior disclosure of minor violations.

Customs Response: Customs notes that despite the deletion of former § 162.74(j), the agency does not anticipate any change of practice with respect to minor violations. It should be noted that inasmuch as "minor violations" already are addressed in Customs revised penalty guidelines (19 CFR Part 171, Appendix B), former § 162.74(j) is unnecessary.

Conclusion

Accordingly, based on the comments received and the analysis of those comments as set forth above, and after further review of this matter, Customs believes that the proposed regulatory amendments should be adopted as a final rule with certain changes thereto as discussed above and as set forth below. This document also includes an appropriate update of the list of information collection approvals contained in § 178.2 of the Customs Regulations (19 CFR § 178.2).

Regulatory Flexibility Act

Insofar as this amendment closely follows legislative direction, pursuant to the provisions of the Regulatory Flexibility Act (5 U.S.C. 601, *et seq.*), it is certified that the amendment will not have a significant economic impact on a substantial number of small entities. Accordingly, it is not subject to the regulatory analysis or other requirements of 5 U.S.C. 603 and 604.

Executive Order 12866

This amendment does not meet the criteria for a "significant regulatory action" as specified in E.O. 12866.

Paperwork Reduction Act

The collection of information contained in this final regulation was submitted to the Office of Management and Budget (OMB) in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) and approved under OMB control number 1515–0212. An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless the collection of information displays a valid control number assigned by OMB.

The collection of information in this final rule is in § 162.74. This information is required in connection with prior disclosure by a person of a violation of law committed by that person involving the filing or attempted filing of a drawback claim, or an entry or introduction, or attempted entry or introduction of merchandise into the United States by fraud, gross negligence or negligence. This information will be used by Customs to determine if the party discloses the circumstances of a violation before, or without knowledge of, the commencement of a formal investigation of such violation, so that merchandise would not be seized and any monetary penalty to be assessed would be limited. The collection of information is required to obtain a benefit. The likely respondents are business organizations including importers, exporters, and manufacturers.

The estimated average burden associated with the collection of information in this final rule is 1 hour per respondent or recordkeeper for each Customs entry involved in prior disclosure. Comments concerning the accuracy of this burden estimate and suggestions for reducing this burden should be directed to the U.S. Customs Service, Paperwork Management Branch, 1300 Pennsylvania Avenue, N.W., Washington, D.C. 20229, and to the OMB, Attention: Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, D.C. 20503.

Drafting Information: The principal author of this document was Keith B. Rudich, Regulations Branch, Office of Regulations and Rulings, U.S. Customs Service. However, personnel from other offices participated in its development.

List of Subjects

19 CFR Part 162

19 CFR Part 178

Administrative practice and procedure, Exports, Imports, Reporting and recordkeeping requirements.

Amendment to the Regulations

In accordance with the preamble, Parts 162 and 178 of the Customs Regulations (19 CFR Parts 162 and 178) are amended as set forth below:

PART 162—RECORDKEEPING, INSPECTION, SEARCH AND SEIZURE

1. The general authority citation for Part 162 continues to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 66, 1624.

* * * * *

2. Section 162.71 is amended by removing paragraph (e).

3. Section 162.74 is revised to read as follows:

§ 162.74 Prior disclosure.

(a) *In general.*—(1) A prior disclosure is made if the person concerned discloses the circumstances of a violation (as defined in paragraph (b) of this section) of 19 U.S.C. 1592 or 19 U.S.C. 1593a, either orally or in writing to a Customs officer before, or without knowledge of, the commencement of a

UMI
VOL
63
ISS

MAY
28
1998
UMI

formal investigation of that violation, and makes a tender of any actual loss of duties in accordance with paragraph (c) of this section. A Customs officer who receives such a tender in connection with a prior disclosure shall ensure that the tender is deposited with the concerned local Customs entry officer.

(2) A person shall be accorded the full benefits of prior disclosure treatment if that person provides information orally or in writing to Customs with respect to a violation of 19 U.S.C. 1592 or 19 U.S.C. 1593a if the concerned Fines, Penalties and Forfeitures Officer is satisfied the information was provided before, or without knowledge of, the commencement of a formal investigation, and the information provided includes substantially the information specified in paragraph (b) of this section. In the case of an oral disclosure, the disclosing party shall confirm the oral disclosure by providing a written record of the information conveyed to Customs in the oral disclosure to the concerned Fines, Penalties and Forfeitures Officer within 10 days of the date of the oral disclosure. The concerned Fines, Penalties and Forfeiture Officer may, upon request of the disclosing party which establishes a showing of good cause, waive the oral disclosure written confirmation requirement. Failure to provide the written confirmation of the oral disclosure or obtain a waiver of the requirement may result in denial of the oral prior disclosure.

(b) *Disclosure of the circumstances of a violation.* The term "discloses the circumstances of a violation" means the act of providing to Customs a statement orally or in writing that:

(1) Identifies the class or kind of merchandise involved in the violation;

(2) Identifies the importation or drawback claim included in the disclosure by entry number, drawback claim number, or by indicating each concerned Customs port of entry and the approximate dates of entry or dates of drawback claims;

(3) Specifies the material false statements, omissions or acts including an explanation as to how and when they occurred; and

(4) Sets forth, to the best of the disclosing party's knowledge, the true and accurate information or data that should have been provided in the entry or drawback claim documents, and states that the disclosing party will provide any information or data unknown at the time of disclosure within 30 days of the initial disclosure date. Extensions of the 30-day period may be requested by the disclosing party from the concerned Fines, Penalties and Forfeitures Officer to enable the party to obtain the information or data.

(c) *Tender of actual loss of duties.* A person who discloses the circumstances of the violation shall tender any actual loss of duties. The disclosing party may choose to make the tender either at the time of the claimed prior disclosure, or within 30 days after Customs notifies the person in writing of his or her calculation of the actual loss of duties. The Fines, Penalties and Forfeitures Officer may extend the 30-day period if there is good cause to do so. The disclosing party may request that the basis for determining Customs asserted actual duty loss be reviewed by Headquarters, provided that the actual duty loss demanded by Customs exceeds $100,000 and is deposited with Customs, more than one year remains under the statute of limitations involving the shipments covered by the claimed disclosure, and the disclosing party has complied with all other prior disclosure regulatory provisions. A grant of review is within the discretion of Customs Headquarters in consultation with the appropriate field office, and such Headquarters review shall be limited to determining issues of correct tariff classification, correct rate of duty, elements of dutiable value, and correct application of any special rules (GSP, CBI, HTS 9802, etc.). The concerned Fines, Penalties and Forfeitures Officer shall forward appropriate review requests to the Chief, Penalties Branch, Customs Headquarters, Office of Regulations and Rulings. After Headquarters renders its decision, the concerned Fines, Penalties and Forfeitures Officer will be notified and the concerned Customs port will recalculate the loss, if necessary, and notify the disclosing party of any actual duty loss increases. Any increases must be deposited within 30 days, unless the local Customs office authorizes a longer period. Any reductions of the Customs calculated actual loss of duty shall be refunded to the disclosing party. Such Headquarters review decisions are final and not subject to appeal. Further, disclosing parties requesting and obtaining such a review waive their right to contest either administratively or judicially the actual loss of duties finally calculated by Customs under this procedure. Failure to tender the actual loss of duties finally calculated by Customs shall result in denial of the prior disclosure.

(d) *Effective time and date of prior disclosure.*—(1) If the documents that provide the disclosing information are sent by registered or certified mail, return-receipt requested, and are received by Customs, the disclosure shall be deemed to have been made at the time of mailing.

(2) If the documents are sent by other methods, including in-person delivery, the disclosure shall be deemed to have been made at the time of receipt by Customs. If the documents are delivered in person, the person delivering the documents will, upon request, be furnished a receipt from Customs stating the time and date of receipt.

(3) The provision of information that is not in writing but that qualifies for prior disclosure treatment pursuant to paragraph (a)(2) of this section shall be deemed to have occurred at the time that Customs was provided with information that substantially complies with the requirements set forth in paragraph (b) of this section.

(e) *Addressing and filing prior disclosure.*—(1) A written prior disclosure should be addressed to the Commissioner of Customs, have conspicuously printed on the face of the envelope the words "prior disclosure," and be presented to a Customs officer at the Customs port of entry of the disclosed violation.

(2) In the case of a prior disclosure involving violations at multiple ports of entry, the disclosing party may orally disclose or provide copies of the disclosure to all concerned Fines, Penalties and Forfeitures Officers. In accordance with internal Customs procedures, the officers will then seek consolidation of the disposition and handling of the disclosure. In the event that the claimed "multi-port" disclosure is made to a Customs officer other than the concerned Fines, Penalties and Forfeitures Officer, the disclosing party must identify all ports involved to enable the concerned Customs officer to refer the disclosure to the concerned Fines, Penalties and Forfeitures Officer for consolidation of the proceedings.

(f) *Verification of disclosure.* Upon receipt of a prior disclosure, the Customs officer shall notify Customs Office of Investigations of the disclosure. In the event the claimed prior disclosure is made to a Customs officer other than the concerned Fines, Penalties and Forfeitures Officer, it is incumbent upon the Customs officer to provide a copy of the disclosure to the concerned Fines Penalties and Forfeitures Officer. The disclosing party may request, in the oral or written prior disclosure, that the concerned Fines, Penalties and Forfeitures Officer request that the Office of Investigations withhold the initiation of disclosure verification proceedings until after the party has provided the information or data within the time limits specified in

paragraph (b)(4) of this section. It is within the discretion of the concerned Fines, Penalties and Forfeitures Officer to grant or deny such requests.

(g) *Commencement of a formal investigation.* A formal investigation of a violation is considered to be commenced with regard to the disclosing party on the date recorded in writing by the Customs Service as the date on which facts and circumstances were discovered or information was received that caused the Customs Service to believe that a possibility of a violation existed. In the event that a party affirmatively asserts a prior disclosure (i.e., identified or labeled as a prior disclosure) and is denied prior disclosure treatment on the basis that Customs had commenced a formal investigation of the disclosed violation, and Customs initiates a penalty action against the disclosing party involving the disclosed violation, a copy of a "writing" evidencing the commencement of a formal investigation of the disclosed violation shall be attached to any required prepenalty notice issued to the disclosing party pursuant to 19 U.S.C. 1592 or 19 U.S.C. 1593a.

(h) *Scope of the disclosure and expansion of a formal investigation.* A formal investigation is deemed to have commenced as to additional violations not included or specified by the disclosing party in the party's original prior disclosure on the date recorded in writing by the Customs Service as the date on which facts and circumstances were discovered or information was received that caused the Customs Service to believe that a possibility of such additional violations existed. Additional violations not disclosed or covered within the scope of the party's prior disclosure that are discovered by Customs as a result of an investigation and/or verification of the prior disclosure shall not be entitled to treatment under the prior disclosure provisions.

(i) *Knowledge of the commencement of a formal investigation.*—(1) A disclosing party who claims lack of knowledge of the commencement of a formal investigation has the burden to prove that lack of knowledge. A person shall be presumed to have had knowledge of the commencement of a formal investigation of a violation if before the claimed prior disclosure of the violation a formal investigation has been commenced and:

(i) Customs, having reasonable cause to believe that there has been a violation of 19 U.S.C. 1592 or 19 U.S.C. 1593a, so informed the person of the type of or circumstances of the disclosed violation; or

(ii) A Customs Special Agent, having properly identified himself or herself and the nature of his or her inquiry, had, either orally or in writing, made an inquiry of the person concerning the type of or circumstances of the disclosed violation; or

(iii) A Customs Special Agent, having properly identified himself or herself and the nature of his or her inquiry, requested specific books and/or records of the person relating to the disclosed violation; or

(iv) Customs issues a prepenalty or penalty notice to the disclosing party pursuant to 19 U.S.C. 1592 or 19 U.S.C. 1593a relating to the type of or circumstances of the disclosed violation; or

(v) The merchandise that is the subject of the disclosure was seized; or

(vi) In the case of violations involving merchandise accompanying persons entering the United States or commercial merchandise inspected in connection with entry, the person has received oral or written notification of Customs finding of a violation.

(2) The presumption of knowledge may be rebutted by evidence that, notwithstanding the foregoing notice, inquiry or request, the person did not have knowledge that an investigation had commenced with respect to the disclosed information.

PART 178—APPROVAL OF INFORMATION COLLECTION REQUIREMENTS

1. The authority citation for part 178 continues to read as follows:

Authority: 5 U.S.C. 301; 19 U.S.C. 1624; 44 U.S.C. 3501 *et seq.*

2. Section 178.2 is amended by adding a new listing to the table in numerical order to read as follows:

§ 178.2 Listing of OMB control numbers.

19 CFR section	Description	OMB control No.
. . . . .		
§ 162.74	Prior disclosure	1515–0212
. . . . .		

Samuel H. Banks,

Acting Commissioner of Customs.

Approved: May 12, 1998.

John P. Simpson,

Deputy Assistant Secretary of the Treasury.

Food and Drug Administration

21 CFR Part 173

[Docket No. 97F–0283]

Secondary Direct Food Additives Permitted in Food for Human Consumption; Monester of alpha-Hydro-omega-Hydroxy-Poly(Oxyethylene) Poly(Oxypropylene) Poly(Oxyethylene) (15 Mole Minimum) Blocked Copolymer

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations for safe use of monoester of alpha-hydro-omega-hydroxy-poly(oxyethylene) poly(oxypropylene) poly(oxyethylene) (15 mole minimum) blocked copolymer derived from low erucic acid rapeseed oil as a component of defoaming agents used in the washing of sugar beets for processing into sugar. This action responds to a petition filed by Akzo Nobel Chemical, Inc.

DATES: The regulation is effective May 28, 1998; written objections and requests for a hearing by June 29, 1998.

ADDRESSES: Submit written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., rm. 1–23, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Vivian M. Gilliam, Center for Food Safety and Applied Nutrition (HFS–215), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–418–3167.

SUPPLEMENTARY INFORMATION: In a notice published in the **Federal Register** of July 11, 1997 (62 FR 37266), FDA announced that a food additive petition (FAP 6A4494) had been filed by Akzo Nobel Chemical, Inc., 5 Livingstone Ave., Dobbs Ferry, NY 10522–3407. The petition proposed to amend the food additive regulations in § 173.340 *Defoaming agents* (21 CFR 173.340) to provide for the safe use of monoester of α-hydro-ω-hydroxy-poly(oxyethylene) poly(oxypropylene) poly(oxyethylene)(15 mole minimum) blocked copolymer derived from low erucic acid rapeseed (LEAR) oil as a component of defoaming agents used in the washing of sugar beets for processing into sugar. (Although the additive was named in the filing notice using the Greek symbols for alpha and omega, the agency has chosen to spell out the words in the listing of the additive to facilitate electronic searches.)

FDA has evaluated data in the petition and other relevant material. Based on this information the agency concludes that the proposed use of monoester of alpha-hydro-omega-hydroxy-poly(oxyethylene) poly(oxypropylene) poly(oxyethylene) (15 mole minimum) blocked copolymer is safe, that the additive will achieve its intended technical effect, and therefore, that the regulations should be amended as set forth below.

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person listed above. As provided in § 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

The agency has previously considered the potential environmental effects of this action, as announced in the notice of filing for FAP 6A4494 (62 FR 37266). FDA has concluded that the action will not have a significant impact on the human environment, and that an environmental impact statement is not required. The agency's finding of no significant impact and the evidence supporting that finding, contained in a environmental assessment, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday. No comments were received during the 30-day comment period specified in the filing notice for comments on the environmental assessment submitted with the petition.

Any person who will be adversely affected by this regulation may at any time on or before June 29, 1998 , file with the Dockets Management Branch (address above) written objections thereto. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents shall be submitted and shall be identified with the docket number found in brackets in the heading of this document. Any objections received in response to the regulation may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

This final rule contains no collections of information. Therefore, clearance by the Office of Management and Budget under the Paperwork Reduction Act of 1995 is not required.

List of Subjects in 21 CFR Part 173

Food additives.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Director, Center for Food Safety and Applied Nutrition, 21 CFR part 173 is amended as follows:

PART 173—SECONDARY DIRECT FOOD ADDITIVES PERMITTED IN FOOD FOR HUMAN CONSUMPTION

1. The authority citation for 21 CFR part 173 continues to read as follows:

Authority: 21 U.S.C. 321, 342, 348.

2. Section 173.340 is amended by revising paragraph (a)(4) and in the table in paragraph (a)(4) by revising the first heading and by alphabetically adding the entry for "monoester of alpha-hydro-omega-hydroxy-poly(oxyethylene) poly(oxypropylene) poly(oxyethylene) (15 mole minimum) blocked copolymer derived from low erucic acid rapeseed oil" under the newly revised heading "Substances" to read as follows:

§ 173.340 Defoaming agents.

* * * * *

(a) * * *

(4) The substances listed in this paragraph (a) (4), provided they are components of defoaming agents limited to use in processing beet sugar only, and subject to the limitations imposed:

BILLING CODE 4160–01–F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 178

[Docket No. 96F–0489]

Indirect Food Additives: Polymers

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to provide for the safe use of 5,7-bis(1,1-dimethylethyl)-3-hydroxy-2(3H)-benzofuranone, reaction products with *o*-xylene, as an antioxidant and/or stabilizer for olefin polymers intended for use in contact with food. This action responds to a petition filed by Ciba Specialty Chemicals Corp.

DATES: The regulation is effective May 28, 1998. Submit written objections and request for a hearing by June 29, 1998.

ADDRESSES: Submit written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., rm. 1–23, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Hortense S. Macon, Center for Food Safety and Applied Nutrition (HFS–206), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–418–3086.

SUPPLEMENTARY INFORMATION: In a notice published in the **Federal Register** of January 2, 1997 (62 FR 100), FDA announced that a food additive petition (FAP 7B4529) had been filed by Ciba Specialty Chemicals Corp., 540 White Plains Rd., Tarrytown, NY 10591–9005. The petition proposed to amend the food additive regulations in § 178.2010 *Antioxidants and/or stabilizers for polymers* (21 CFR 178.2010) to provide for the safe use of 5,7-bis(1,1-dimethylethyl-3-hydroxy-2(3H)-benzofuranone, reaction products with *o*-xylene as an antioxidant and/or stabilizer for olefin polymers intended for use in contact with food.

FDA has evaluated data in the petition and other relevant material. Based on this information, the agency concludes that: (1) The proposed use of the additive is safe, (2) the food additive will achieve its intended technical effect, and therefore, (3) the regulations in § 178.2010 should be amended as set forth below.

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person listed above. As provided in § 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

The agency has carefully considered the potential environmental effects of this action. FDA has concluded that the action will not have a significant impact on the human environment, and that an environmental impact statement is not required. The agency's finding of no significant impact and the evidence supporting that finding, contained in an environmental assessment, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this regulation may at any time on or before June 29, 1998, file with the Dockets Management Branch (address above) written objections thereto. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents shall be submitted and shall be identified with the docket number found in brackets in the heading of this document. Any objections received in response to the regulation may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 178

Food additives, Food packaging.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Director, Center for Food Safety and Applied Nutrition, 21 CFR part 178 is amended as follows:

PART 178—INDIRECT FOOD ADDITIVES: ADJUVANTS, PRODUCTION AIDS, AND SANITIZERS

1. The authority citation for 21 CFR part 178 continues to read as follows:

Authority: 21 U.S.C. 321, 342, 348, 379e.

2. Section 178.2010 is amended in the table in paragraph (b) by alphabetically adding an entry to read as follows:

§ 178.2010 Antioxidants and/or stabilizers for polymers.

* * * * *

(b) * * *

Substances	Limitations
. . .	. . . .
5,7-bis(1,1-dimethylethyl)-3-hydroxy-2(3H)-benzofuranone, reaction products with *o*-xylene (CAS Reg. No. 181314–48–7).	For use only: 1. At levels not to exceed 0.1 percent by weight of olefin polymers complying with § 177.1520(c) of this chapter. The finished polymers may only be used in contact with food of the types identified in § 176.170(c) of this chapter, Table 1, under Categories I, II, IV–B, VI–A, VI–B, VII–B, and VIII, and under conditions of use B through H described in Table 2 of § 176.170(c) of this chapter. 2. At levels not to exceed 0.02 percent by weight of propylene polymers and copolymers complying with § 177.1520(c) of this chapter, items 1.1, 1.2, 3.1a, 3.2a, 3.2b, 3.4, or 3.5, and ethylene polymers and copolymers complying with § 177.1520(c) of this chapter, items 2.1, 2.2, 2.3, 3.1a, 3.1b, 3.2a, or 3.6 (where the density of each of these polymers is at least 0.94 gram per cubic centimeter), or 5. The finished polymers may only be used in contact with food of the types identified in § 176.170(c) of this chapter, Table 1, under Categories III, IV–A, V, VI–C, VII–A, and IX, and under conditions of use B through H described in Table 2 of § 176.170(c) of this chapter; provided that the finished food-contact articles have a volume of at least 18.9 liters (5 gallons). 3. At levels not to exceed 0.02 percent by weight of ethylene polymers and copolymers complying with § 177.1520(c) of this chapter, items 2.1, 2.2, 2.3, 3.1a, 3.1b, 3.2a, 3.4, 3.5, or 3.6 (where the density of each of these polymers is less than 0.94 gram per cubic centimeter). The finished polymers may only be used in contact with food of the types identified in § 176.170(c) of this chapter, Table 1, under Categories III, IV–A, V, VI–C, VII–A, and IX, and under conditions of use B through H described in Table 2 of § 176.170(c) of this chapter; provided that the average thickness of such polymers in the form in which they contact food shall not exceed 50 micrometers (0.002 inch).

BILLING CODE 4160–01–F

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 165

[COTP San Diego; 98–011]

RIN 2115–AA97

Safety Zone; Oceanside, CA

AGENCY: Coast Guard, DOT.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone in the navigable waters of the Pacific Ocean adjacent to Oceanside, California, for the 2nd Annual Oceanside Grand Prix Powerboat Race on 31 May 1998. The race zone will encompass the water from the Oceanside harbor entrance and the southerly city limits of Oceanside, approximately .5 miles from the shoreline and running approximately parallel thereto, in an area more particularly described as follows: beginning at a point located at latitude 33°09′87″ N. longitude 117°22′81″ W; thence northeast to a point located at latitude 33°10′14″ N, longitude 117°22′33″ W; thence northwest to a point located at latitude 33°11′49″ N, longitude 117°23′36″ W; thence north to a point located at latitude 33°11′64″ N. longitude 117°23′36″ W; thence southeast to the point of the beginning.

This safety zone is established to protect the lives and property of the race participants and spectators by establishing an exclusionary zone around the race course. Entry into, transit through, or anchoring within this zone is prohibited unless authorized by the Captain of the Port.

EFFECTIVE DATES: This regulation becomes effective at 1:30 p.m. (DST) on May 31, 1998, and continues until 2:45 p.m. (DST) on May 31, 1998, unless cancelled earlier by the Captain of the Port.

ADDRESSES: Marine Safety Office San Diego, 2716 N. Harbor Drive, San Diego, CA 92101–1064.

FOR FURTHER INFORMATION CONTACT: LT Mike Arguelles, U.S. Coast Guard Marine Safety Office San Diego at (619) 683–6484.

SUPPLEMENTARY INFORMATION: In accordance with 5 U.S.C. 553, a notice of proposed rulemaking was not published for this regulation and good cause exists for making it effective in less than 30 days after Federal Register publication. Publication of a notice of proposed rulemaking and delay of its effective date would be contrary to the public interest since immediate action is necessary to ensure the safety of vessels operating in the area of the race. The safety zone boundaries and 2nd Annual Oceanside Grand Prix arrangements were not finalized until a date fewer than 30 days prior to the event date. Following normal rulemaking procedures in this case would be impracticable.

Drafting Information

The drafters of this regulation are Lieutenant Mike Arguelles, Project Officer, U.S. Coast Guard Marine safety Office San Diego, and LTJG Derek A. D'Orazio, Project Attorney, Maintenance

and Logistics Command Pacific Legal Office.

Discussion of Regulation

This regulation is necessary to protect the lives and property of the race participants and spectators by establishing an exclusionary zone around the 2nd Annual Oceanside Grand Prix. During race times, vessels will be traveling at high rates of speed which will hinder their reaction time to obstacles. This safety zone will be marked by the sponsor, and enforced by U.S. Coast Guard personnel with the assistance of the Oceanside Harbor Police. Persons and vessels are prohibited form entering into, transiting through, or anchoring within the safety zone unless authorized by the Captain of the Port.

Regulatory Evaluation

This proposal is not a significant regulatory action under section 3(f) of Executive Order 12866 and does not require an assessment of potential costs and benefits under section 6(a)(3) of that order. It has been exempted for review by the Office of Management and Budget under that order. It is not significant under the regulatory policies and procedures of the Department of Transportation (44 FR 11040; February 26, 1979). Due to the short duration and limited scope of the safety zone the Coast Guard expects the economic impact of this proposal to be so minimal that a full Regulatory Evaluation under paragraph 10(e) of the regulatory policies and procedures of Department of Transportation is unnecessary.

Collection of Information

This regulation contains no collection of information requirements under the Paperwork Reduction Act (44 U.S.C. 3501 et seq.).

Federalism

The Coast Guard has analyzed this regulation under the principles and criteria contained in Executive Order 12612, and has determined that this regulation does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Environmental Assessment

The Coast Guard has considered the environmental impact of this regulation and concluded that under figure 2–1, paragraph 34(g), of Commandant Instruction M16475.1C as revised in 59 FR 38654, July 29, 1994, it will have no significant environmental impact and it is categorically excluded from further environmental documentation. A Categorical Exclusion Determination and Environmental Analysis Checklist will be available for inspection and copying in the docket to be maintained at the address listed in **ADDRESSES**.

Regulation

In consideration of the foregoing, Subpart F of Part 165 of Title 33, Code of Federal Regulations, is amended as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

1. The authority citation for 33 CFR part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1(g), 6.04–1, 6.04–6, and 160.5; 49 CFR 1.46.

2. A new section 165.T11–033 is added to read as follows:

§ 165.T11–033 Safety Zone: Oceanside, CA

(a) *Location.* The following area constitutes a safety zone in the navigable waters in the vicinity of Oceanside, CA: beginning at a point located at latitude 33°09′87″ N, longitude 117°22′81″ W; thence northeast to a point located at latitude 33°10′14″ N, longitude 117°22′33″ W; thence northwest to a point located at latitude 33°11′49″ N, longitude 117°23′36″ W; thence north to a point located at latitude 33°11′64″ N, longitude 117°23′36″ W; thence southeast to the point of the beginning.

(b) *Effective Dates.* This section becomes effective at 1:30 a.m. (DST) on May 31, 1998, and continues until 2:45 p.m. (DST) on May 31, 1998, unless cancelled earlier by the Captain of the Port.

(c) *Regulations.* In accordance with the general regulations in § 165.23 of this part, entry into, transit through, or anchoring within this zone is prohibited unless authorized by the Captain of the Port.

Dated: 30 April 1998.

J. A. Watson,

Commander, U.S. Coast Guard, Captain of the Port, San Diego, California.

BILLING CODE 4910–15–M

LIBRARY OF CONGRESS

Copyright Office

37 CFR Parts 201, 202, 203, 204 and 211

[Docket No. 98–2A]

Fees

AGENCY: Copyright Office, Library of Congress.

ACTION: Final regulations.

SUMMARY: The Copyright Office is issuing final regulations for fees it charges for special services. The Office is initiating new fees and amending other existing fees based on the actual costs to the Office of providing such services. The Office is establishing these fees so it can more nearly recover the costs of providing these services to the public.

EFFECTIVE DATE: July 1, 1998.

FOR FURTHER INFORMATION CONTACT: Marilyn J. Kretsinger, Assistant General Counsel, or Patricia L. Sinn, Senior Attorney, Copyright GC/I&R, P.O. Box 70400, Southwest Station, Washington, D.C. 20024. Telephone: (202)707–8380. Fax: (202) 707–8366.

SUPPLEMENTARY INFORMATION:

I. Background

Section 708 of title 17, United States Code, authorizes the Register of Copyrights to charge fees for services the Copyright Office provides as described in section 708(a)(1)–(9), such as registration, recordation, and certification. Nonspecified fees, called "special," or "discretionary" fees, are addressed in section 708(a)(10). This section authorizes an assessment for "any other special services requiring a substantial amount of time or expense, such fees as the Register of Copyrights may fix on the basis of the cost of providing the service." *Id.*

Examples of such services include special handling, full term storage of deposits, and provision of services on an expedited basis. The Office last increased fees in 1994 to reflect costs of performing certain services. See 58 FR 38369 (July 28, 1994).

On April 1, 1998, the Office published a Notice of Proposed Rulemaking (NOPR) seeking public comments on amendments to existing fees and establishing new fees for certain services. See 63 FR 15802 (April 1, 1998). As described in the NOPR the Office completed a comprehensive economic analysis of the operating costs involved in providing special services to users to determine whether or not these fees should be adjusted. Using its own

analysis, reflection on analysis done by the Government Accounting Office, and the results of studies conducted by private sector consultants, the Office determined that it must adjust fees for special services in order to more nearly recapture the actual costs for providing them. It also determined that it must charge fees for other services such as appeals and servicing underfunded deposit accounts.

In addition to publishing the proposed new fee schedule in the **Federal Register**, the Office made it available online and mailed an announcement about the proposed fee increase to deposit account holders.

II. Comments

The Motion Picture Information Service (MPIS) submitted the only comment the Copyright Office received in response to the NOPR. The commenter asserts that the deposit account system is inconvenient and should be abolished and "replaced with a simple cash, check, debit card, or credit card system." The commenter states that this would bring the Office into line with current business practices, and would eliminate inconvenience and administrative burdens for both the public and the Office. MPIS comment at 1.

III. Final Regulations

The Copyright Office realizes that there are benefits for both claimants and the Office by accepting credit cards for payment of copyright fees. It has just completed a two-year pilot program in which credit cards were accepted for the filing of claims and recording of documents under the provisions of the Uruguay Round Agreements Act (URRA). Public Law 103–465; 108 Stat. 4809 (1994). It is now in the process of evaluating the resources needed in order to plan for implementation of a credit card system.

The Office also believes some customers prefer the convenience of deposit accounts and will continue to use them even if credit cards are accepted. The fees on deposit accounts will only be assessed when there are insufficient funds in the account to cover current requests for services. The Office mails monthly statements to deposit account holders notifying them of the status of their accounts.

The Office received no comments on any of the other proposed fees. It is adopting the proposed fee schedule in its entirety, effective July 1, 1998, other than the short fee charge which will not take effect until a date which will be announced later.

In consideration of the foregoing, parts 201, 202, 203, 204, and 211 of 37 CFR chapter II are amended as follows:

PART 201—GENERAL PROVISIONS

1. The authority citation for part 201 continues to read as follows:

Authority: 17 U.S.C. 702.

2. Section 201.32 is amended by revising the special services fee chart to read as follows:

§ 201.32 Fees for Copyright Office special services.

* * * * *

Special services	Fees
1. Service charge for deposit account overdraft	$70
2. Service charge for dishonored deposit account replenishment check	35
3. Service charge for short fee payment	20
4. Appeals	
a. First appeal	200
Additional claim in related group	20
b. Second appeal	500
Additional claim in related group	20
5. Secure test processing charge, per hour	60
6. Copying charge, first 15 pages, per page	1
Each additional page	.50
7. Inspection charge	65
8. Special handling fee for a claim	500
Each additional claim using the same deposit	50
9. Special handling for recordations of a document	330
10. Full-term storage of deposits	365
11. Surcharge for expedited Certifications and Documents Section services	
a. Additional certificates, per hour	75
b. In-process searches, per hour	75
c. Copy of assignment, per hour	75
d. Certification, per hour	75
e. Copy of registered deposit	
First hour	95
Each additional hour	75
f. Copy of correspondence file	
First hour	95
Each additional hour	75
12. Surcharge for expedited Reference & Bibliography searches	
First hour	125
Each additional hour	95

PART 202—REGISTRATION OF CLAIMS TO COPYRIGHT

3. The authority citation for part 202 continues to read as follows:

Authority: 17 U.S.C. 702.

§ 202.23 [Amended]

4. Section 202.23(e)(1) and (2) are amended by removing "$270.00" each place it appears and adding in its place "$365.00."

PART 203—FREEDOM OF INFORMATION ACT: POLICIES AND PROCEDURES

5. The authority citation for part 203 continues to read as follows:

Authority: 17 U.S.C. 702; and 5 U.S.C. 552(a)(1).

§ 203.6 [Amended]

6. Section 203.6(b)(2) is amended by removing "$7 for up to 15 pages and $.45 per page over 15." and adding in its place "$15.00 for up to 15 pages and $.50 per page over 15.".

PART 204—PRIVACY ACT: POLICIES AND PROCEDURES

7. The authority citation for part 204 continues to read as follows:

Authority: 17 U.S.C. 702; and 5 U.S.C. 552(a).

§ 204.6 [Amended]

8. Section 204.6(a) is amended by removing "$7 for up to 15 pages and $.45 per page over 15." and adding in its place "$15.00 for up to 15 pages and $.50 per page over 15."

PART 211—MASK WORK PROTECTION

9. The authority citation for part 211 continues to read as follows:

Authority: 17 U.S.C. 702 and 908.

§ 211.3 [Amended]

10. In § 211.3(a)(1) and (2) remove "$20.00" each place it appears and add in is place "$75.00."

11. In § 211.3(a)(7), remove "$330" and add in its place "$500.00."

Dated: May 20, 1998.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

49 CFR Part 571

[Docket No. NHTSA–98–3870; Notice 7]

RIN 2127–AG81

Federal Motor Vehicle Safety Standards; School Bus Pedestrian Safety Devices

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Final Rule.

SUMMARY: The agency is amending Standard No. 131, *School Bus Pedestrian Safety Devices*, to permit the use of additional light sources on the surface of retroreflective stop signal arms and to permit a certain amount of the retroreflective surface to be obscured by mounting hardware. It also makes minor clarifications to the standard. This responds to a petition from Transpec, Inc., a maker of stop arms.

DATES: This rule will become effective on May 28, 1998. Petitions for reconsideration of this rule must be received no later than July 13, 1998.

ADDRESSES: Petitions for reconsideration should refer to the docket number and notice number and be submitted in writing to: Administrator, National Highway Traffic Safety Administration, Room 5109, 400 Seventh Street, SW, Washington DC, 20590. Telephone: (202) 366–5267

FOR FURTHER INFORMATION CONTACT:

For technical issues: Mr. Charles Hott, Office of Crashworthiness Standards, National Highway Traffic Safety Administration, 400 Seventh Street, SW., Washington, D.C. 20590 (202) 366–0247.

For legal issues: Mr. Paul Atelsek, Office of the Chief Counsel, NCC–20, telephone (202) 366–2992, FAX (202) 366–3820.

SUPPLEMENTARY INFORMATION:

1. Background

Federal Motor Vehicle Safety Standard No. 131, *School bus pedestrian safety devices* requires each new school bus to be equipped with a stop signal arm. A stop signal arm is a device, patterned after a conventional "STOP" sign, that automatically extends outward from the bus to alert motorists that a school bus is stopping or has stopped.

To ensure the conspicuity of a stop signal arm, Standard No. 131 specifies that the device must either be reflectorized or be equipped with flashing lamps. If reflectorization is used to comply with the standard, "the *entire* surface of both sides of the stop signal arm" must be reflectorized (S5.3.1, emphasis added). NHTSA has interpreted this language to mean that Light Emitting Diodes (LEDs) outlining the word "Stop" on the stop arm blade would not be permitted under the reflectorization option because LEDs do not meet the requirements for reflectorized material.

Transpec, Inc. (Transpec) submitted a petition for rulemaking requesting that S5.3.1 of the standard be amended to allow the use of LEDs on stop signal arms. The petition sought to amend the section to permit red LEDs on the surface of the stop arm that are "contained within a light channel not greater than 10mm (.394 inches) wide centered within the stroke width of each letter." Under the requested amendment, the minimum stroke width of letters containing LEDs would be increased from 20 mm (0.79 inches) to 25 mm (0.8984 inches). The LEDs would be required to flash at the rate specified for stop arm lamps conforming to S5.3.2. The petition also sought to permit a percentage of the surface area of the stop arm to be obscured by mounting brackets and other necessary components, with the aggregate area obscured by the LEDs and other components not to exceed 7.5 percent of the surface area of the stop arm.

2. The Notice of Proposed Rulemaking (NPRM)

On August 6, 1997, the agency published a NPRM proposing to amend the standard in most ways as requested by Transpec. It proposed to permit light to be emitted "from the surface of each letter or from the area immediately surrounding each letter" in the legend "STOP." Lamps on the surface of the letter would have to be located on the centerline of each letter, or outline each letter of the legend. The lamps on the surface of the stop arm would have to flash in the same manner as specified for the lamps in non-reflectorized stop arms. The net stroke width (i.e., the stroke width minus the width of the legend lamps) of each letter containing lamps was proposed to be at least 15 mm, to assure that an acceptable amount of white letter reflectorized surface would be provided.

Rather than limit the permitted light sources to LEDs, the agency was more flexible than requested, proposing to permit almost any type of light source in the legend lamps. It proposed to permit white lamps as well as red lamps, but not both colors simultaneously, on the assumption that

white lamps might better illuminate the white letters. It also proposed amending S6.2.2.1 to eliminate the word "filament," in order to permit other non-filament light sources to be used in the legend lamps. It also clarified that a requirement on the "off" cycle time of gaseous discharge lamps applied only to xenon short-arc discharge lamps.

The agency proposed to permit "mounting brackets, bolts, or other components necessary to the mechanical or electrical operation of the stop signal arm" to obscure up to 7.5 percent of the total surface area of either side of the stop arm, and up to 10 percent of the white border.

Finally, the NPRM clarified that when two stop arms are installed on the same side of a bus, the forward side of the rearmost stop signal shall not be reflectorized. This was done to avoid confusing drivers in the lanes of opposing traffic as to where they should stop relative to the school bus.

The agency also requested comment on a wide range of issues, including: (1) comments and test data about the effectiveness of LED-equipped stop signal arms as a means of enhancing stop arm conspicuity, (2) the use of other light sources, such as miniature incandescent and neon light sources, and their effectiveness, and the possibility of confusion from mixed light sources, (3) whether to allow use of either red or white LEDs or other light sources, or to allow only one color of emitted light, (4) whether 7.5 percent, the percentage of permitted obscuration requested by Transpec, is an appropriate amount, (5) what, if any, intensities and test procedures should be required for lamps used on stop arms. In addition, the agency noted that the Society of Automotive Engineers' standards referenced in FMVSS 131 are not current and asked if it would be useful to update some or all of these to the latest versions and if there would be any burden associated with making such changes, (6) whether light sources should be allowed to outline each letter rather than be centered on each letter, and (7) whether an immediate effective date is appropriate.

3. Summary of Comments

Comments were submitted by sixteen State departments of education or school districts, Mr. Harry Gough, P.E., and two stop arm manufacturers, Transpec and Specialty Manufacturing. Six of the school district comments were forwarded by Transpec. Two national student transportation organizations commented, the National School Transportation Association (NSTA) and the National Association of State Directors of Pupil Transportation Services (NASDPTS).

The Florida Department of Education conducted a comparative test program involving school buses and three stop arm designs: standard reflective stop arms with incandescent lights; stop-arms using strobe lights; and Transpec LED-equipped stop arms. Fifteen different Florida school districts tested the three stop arm designs for 20 school days each. Although the results were not statistically significant, the Florida study concluded that the LED and the strobe lighted stops were "no less effective" at stopping traffic than the incandescent lighted stop arms Florida currently uses. The study also concluded that the raw data tend to indicate "some improvement" at stopping traffic by both the strobe and the LED type stop arms over the incandescent lighted stop arm. The strobe lighted stop arm had a "small advantage" over the LED stop arm at stopping traffic.

All other commenting States and school districts that had conducted pilot tests liked the Transpec LED stop arm. Most stated that it reduced the number of illegally passing motorists and was more visible than the "standard" stop arm, although it was not always clear what they were comparing it to.

Most commenters that addressed the issue supported the idea of allowing other light sources. Transpec stated that NHTSA should establish performance requirements for other light sources, but that NHTSA's consideration of other light sources should not delay the implementation of LEDs.

No commenters objected to the use of other light sources. Transpec submitted the only comment to address the potential for confusion caused by the LEDs and other light sources. It stated that the potential confusion would not be so great as the confusion caused between the flashing lights and reflectorized versions already allowed by the standard.

A number of commenters expressed the opinion that only red lights should be permitted in or around the legend. NSTA, Transpec and Specialty all commented that these lights should be red because red is the color that is currently used in all traffic lights that denote that the motorist must stop. Transpec stated that white lights do not create in a driver the same sense of urgency as red lights. In addition, Transpec stated that white lights introduce a third lighting color (i.e., red, amber, and white) to the school bus that could detract from the "STOP" message.

Two commenters were concerned about the intensity of LEDs. Specialty believed that LEDs were less visible when viewed from an angle (as when viewed across multiple lanes) and that side angle viewing should be studied. It also believed that LEDs are less visible when viewed in direct sunlight. In contrast, a school district that had pilot tested the LED stop arm believed that LEDs were more effective than the incandescent lights in bright sunshine. Specialty provided test results showing that LEDs do not pass the light specifications for incandescent lamps in Society of Automotive Engineers Recommended Practice J1133, School Bus Stop Arms. Mr. Gough also stated that, based on testing, LEDs produce only one third the intensity of light as incandescent lamps. He stated that NHTSA should establish minimum intensity levels for LEDs.

Transpec indicated that it had developed a prototype LED-equipped stop arm with the LEDs outlining the word stop, but that the design was flawed because it had a "Christmas tree" effect (i.e., appearing as a random field of lights distracting the observer and resulting in diminished readability). Transpec urged NHTSA not to allow such a configuration of lights unless further testing was conducted.

The only commenter to address the appropriateness of allowing obscuration of up to 7.5 percent of the retroreflective surface of the stop arm was Specialty. Specialty stated that the proposed 7.5 percent figure was too great, and that obscuring more than 2 or 3 percent of the retroreflective material would significantly reduce the effectiveness of the stop arm because the retroreflective material does the work of alerting the motorist.

Comment was mixed on the appropriateness of obscuring up to 10 percent of the white border of the stop arm. Specialty believed that limiting the border obscurement to 10 percent may cause some difficulty in mounting because some stop arms would have to be positioned farther outward, which it believes would cause them to protrude so far out from the side of the school bus that the bus would exceed the maximum width under some State laws. Some states have laws that limit the distance a stop arm can extend from the side of a school bus. Requiring that no more than 10 percent of the border be obscured would lead to additional tooling cost for manufacturers. However, the NSTA stated that 10 percent was an appropriate maximum.

4. Discussion

A. Stop Arm Effectiveness

NHTSA agrees with the commenters who stated that effectiveness should be the prime consideration in whether or not to amend the standard. NSTA expressed doubt that adding lights would solve the problem of illegally passing motorists, but both it and the NASDPTS stated that NHTSA should base its decision on ultimate effectiveness. All field testing indicates that the Transpec stop arm is at least as effective as other stop arms that the agency permits in preventing motorists from illegally passing. The agency found the Florida study to be the most helpful because it was the largest study to provide comparative data.

Although statistically significant data would be preferable, the agency is not constrained from acting without it. The reactions to the field tests of the LED-equipped stop arm were positive, and NHTSA considers this a sufficient basis on which to act. The Clark County (Nev.) School District, for example, has employed over 230 school buses equipped with the LED stop arm over the past five months and feels they are superior. Considering the positive test results, the agency has decided to permit LED-equipped stop arms.

B. Alternative Light Sources

The agency agrees with Transpec that the standard should not prevent other light sources from being used in the legend of the stop arm. No commenter opposed other light sources. The agency notes that Standard No. 131 is a design standard only to the extent that it promotes uniformity. The agency did not propose to allow only LEDs as additional light sources, as Transpec's comment implies. Any light source that meets the performance requirements of this rule is permitted.

C. Intensity of Lights in the Legend

Specialty and Mr. Gough expressed concern over the lower intensity of LEDs and the inability to see them at angles or in bright sunlight, and encouraged the agency to set intensity requirements. Transpec also suggested that NHTSA set performance standards for light sources other than LEDs. However, at this time there are no industry standards for the intensity of lights used in the legend of school bus stop arms.

As stated above, the primary consideration is effectiveness. In the field testing, the LEDs that are currently used in the legend of stop arms did not appear to have a negative effect on a driver's ability to see the extended stop arm. Therefore, the agency does not believe there is currently a need to set intensity requirements. NHTSA will monitor the situation closely. Should manufacturers offer excessively dim lights that do not adequately substitute for the light "lost" by obscuring the retroreflective material, or excessively bright lights that interfere with the drivers' of other vehicles ability to see, the agency will consider developing intensity requirements.

D. Color of Light Sources

The agency finds persuasive the arguments of NSTA, Transpec and Specialty that lights in the legend should be red and not white. Red is the color that is currently used in all traffic lights that denote that the motorist must stop (e.g., brake lights, traffic lights, railroad crossing lights). Therefore, the rule has been modified from the proposal to state that red is the only light color that is acceptable in the legend of school bus stop arms.

E. Amount of Retroreflective Surface That May Be Obscured

Only Specialty commented on the amount of surface area and white border that could be obstructed on a school bus stop arm. The NPRM proposed that no more that 7.5 percent of the total surface area be obstructed. Specialty questioned whether 7.5 percent was needed, stating that no more than 2–3 percent of the total surface area of current stop arm designs will be obstructed by the wires and support clips running to surface mount lamps. Specialty also suggested that permitting the obscuration of 7.5 percent of the reflective surface could have a safety impact. It stated that the more retroreflective material that is obscured, the less noticeable the stop arm becomes. It concluded that obscuring more than 2–3 percent of the retroreflective material would significantly reduce the effectiveness of the stop arm.

During a May 7, 1998 telephone conversation with Specialty's Engineering Manager, Specialty revised its position on this issue. It referred to an industry-wide market survey of current stop arms showing that mounting brackets currently obscure up to 6.3 percent of the retroreflective material. Since a small amount of additional retroreflective material might be obscured by bolts and other necessary components, Specialty now takes the position that permitting up to 7.5 percent obscuration is appropriate, since it is needed by the industry for current designs, and would not significantly reduce the effectiveness of the stop arm.

Ultimately, there was no opposition to permitting 7.5 percent obscuration. The market survey referred to by Specialty adds support for the proposed amount by indicating that current stop arm designs require this provision. Therefore, the proposed 7.5 percent obscuration permitted for brackets, bolts, or other components is retained in the final rule.

F. Amount of White Border That May Be Obscured

The amount of white border that may be obstructed proved to be more controversial. The NPRM proposed allowing up to 10 percent of this border be obstructed. Specialty argued that more of the border should be allowed to be obstructed for two reasons.

First, Specialty attempted to define the role of the white border. It argued that the purpose of the white border is to provide a clear border definition and an enhanced contrast between the retroreflective material and the background (i.e., the area behind the stop arm). Specialty concluded that "the border does not alert [the] motorist to the stop arm, the retroreflective material does that."

This argument is not persuasive because, as stated in NHTSA's November 1, 1995 interpretation to Specialty, the "entire surface" of the stop arm is required to be reflectorized, including the white border. Since the white border is retroreflective, it contributes to the light returning to the drivers of other vehicles, while the area that NHTSA is allowing to be obstructed does not. As Specialty noted, the white border also provides contrast. Therefore, NHTSA also considers the border to be important in attracting the motorist's attention.

Second, Specialty argued that stop arms require mounting brackets to mount the stop arm to the school bus and the mounting brackets may obscure part of the border, and that requiring no more than 10 percent of the border to be obscured would lead to additional tooling costs for manufacturers to devise methods for putting the stop arm blades further outboard without violating State laws.

This argument is persuasive. It was not the intent of the NPRM to change the way existing stop arms are mounted on school buses. The intent was to provide a basis for the amount of white border that could be obstructed by mounting and operational hardware. Some obscuration is a practical necessity for mounting the stop arm blade in a cost-effective manner. Specialty did not offer the percentage of white border that is obstructed on

current stop arms. Agency staff looked at various models of stop arms and concluded that, at most, 15 percent of the white border is obstructed by mounting hardware. Therefore, S5.1.2 has been changed to permit 15 percent obscuration of the white border.

G. Outlining Versus Centering the Lamps in the Legend

Transpec was the only commenter to address the issue of placement of the lights in or around the legend. Its recommendation against placement on the border of the legend was based on its desire to avoid a "Christmas tree effect" it found in one of its prototypes. As stated in NHTSA's November 1, 1995 interpretation letter to Specialty, widely spaced lights "could appear as a random field of lights (like a Christmas tree), distracting the observer and resulting in diminished readability." Transpec therefore recommends restricting light placement to a location "centered" within the letters.

The agency notes that this "Christmas tree effect" is caused more by excessive spacing between adjacent lights than by their placement relative to the legend. The effect can also be caused by lights centered in the legend's letters, if the spacing between the lights is too great. Conversely, the effect can be avoided with lights placed around the perimeter of the legend's letters if the lights are located close enough together.

The option for placing the lamps around the border is being retained in the final rule. The agency does not believe it is currently necessary to regulate the spacing of the lights in or around the legend. The optimum spacing might vary according to the lamp intensity, lamp size, and legend letter size. NHTSA will monitor the products being offered and will consider specifying light spacing if it finds stop arms being produced with LEDs that impair the effectiveness the stop arm, regardless of whether they are centered in, or arranged around the border of, the letters.

H. Effective Date

Some commenters urged delaying the effective date. Specialty recommended that the effective date of these amendments be delayed until extensive testing is conducted, out of a concern that pushing untested, potentially nonbeneficial technologies quickly to market would not be in the interest of the general public. The NSTA, the NASDPTS, Mr. Gough, and a few other commenters also encouraged NHTSA to conduct extensive testing before promulgating the rule.

Other commenters, notably Transpec and some States and school districts that liked Transpec's stop arm, urged an immediate effective date. The primary reason given was that to delay implementation would perpetuate confusion and ambiguity over Transpec's LED-equipped stop arm and delay arrival of a beneficial technology in the market.

The agency concludes that an immediate effective date is warranted. Field testing indicates that the Transpec stop arm is at least as effective as existing stop arms in stopping motorists from illegally passing stopped school buses. The commenters who encouraged more extensive testing did not have the benefit of the results of the Florida study and may not have realized the large number of smaller pilot test programs being conducted by the other States and school districts when they composed their comments. The agency considers this field testing to be sufficient.

This amendment is permissive only, so there is no burden associated with an immediate effective date. Since the LED-equipped stop arms seem effective, there is no reason to delay their entry into the marketplace.

I. Miscellaneous issues

There was no comment on several aspects of the proposal, and these elements are maintained in the final rule. These include: (1) the proposal to use a diminished "net stroke width" of the letters in the legend to account for the width of the lights centered within them; (2) the removal of the word "filament" in S6.2.2.1 to remove the restriction against non-filament light sources; (3) the addition of the words "xenon short arc" clarification that the requirements of S6.2.2.2 apply only to that type of gaseous discharge lamp; and (4) the addition of a requirement in S5.3.1.3 that the forward side of the rearmost stop signal not be reflectorized if there are forward and rearward stop arms.

Regulatory Analyses and Notices

A. Executive Order 12866 (Federal Regulation) and DOT Regulatory Policies and Procedures

This notice was not reviewed under Executive Order 12866, because the Office of Management and Budget determined that it is not significant within the definitions of the Executive Order. NHTSA has analyzed this rulemaking and determined that it is not significant within the meaning of the Department of Transportation regulatory policies and procedures. The agency has determined that the economic effects of the amendment would be so minimal that a full regulatory evaluation is not required. Since the amendment would impose no new requirement but simply would allow for an alternative design, there are no cost impacts. Because stop arms with legend lamps are optional, the agency assumes those companies availing themselves of the option would be maximizing benefits with respect to any added costs associated with legend lamps.

B. Regulatory Flexibility Act

In accordance with the Regulatory Flexibility Act, NHTSA has evaluated the effects of this rulemaking on small entities. Based on this evaluation, I certify that the amendment will not have significant economic impact on a substantial number of small entities. Accordingly, a regulatory flexibility analysis has not been performed.

The following is NHTSA's statement providing the factual basis for certification (5 U.S.C. 605(b)). Because Standard No. 131 applies to vehicles rather than stop arms as items of motor vehicle equipment, the rule applies primarily to school bus manufacturers. The school bus industry is dominated by two companies that are not small entities, but there are a few school bus manufacturers that are small entities. All school buses are required to be equipped with stop arms. However, this rule imposes no requirements, but merely allows school bus manufacturers to have more choice in the stop arm designs they order. The rule is thus beneficial to vehicle manufacturers, and has no negative economic impact.

All stop arm manufacturers known to the agency are small entities. They might be affected in the sense that market share might shift among them if school bus manufacturers choose to purchase stop arms with legend lights. Transpec is the only company known by the agency to produce stop arms with legend lamps. However, NHTSA does not know if Transpec's design will be widely accepted in the marketplace, either by school bus manufacturers for installation on new buses, or in the aftermarket. In addition, this rule provides flexibility for other manufacturers to produce their own legend lamp-equipped stop arm designs. Therefore, the agency does not view this rule as either conferring a competitive advantage or imposing a negative impact on any stop arm manufacturer.

C. Federalism Assessment

This action has been analyzed in accordance with the principles and criteria contained in Executive Order

12612. NHTSA has determined that the rulemaking does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment. This rule does not impose any unfunded mandates on State, local, or tribal governments as defined by the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532–38).

D. Civil Justice Reform

This rule has no retroactive effect. Under 49 U.S.C. 30103, whenever a Federal motor vehicle safety standard is in effect, a State may not adopt or maintain a safety standard applicable to the same aspect of performance which is not identical to the Federal standard, except to the extent that the state requirement imposes a higher level of performance and applies only to vehicles procured for the State's use. 49 U.S.C. 30161 sets forth a procedure for judicial review of final rules establishing, amending or revoking Federal motor vehicle safety standards. That section does not require submission of a petition for reconsideration or other administrative proceedings before parties may file suit in court.

List of Subjects in 49 CFR Part 571

Imports, Motor vehicle safety, Motor vehicles, Rubber and rubber products, Tires.

In consideration of the foregoing, 49 CFR part 571 is amended as follows:

PART 571—FEDERAL MOTOR VEHICLE SAFETY STANDARDS

1. The authority citation for part 571 continues to read as follows:

Authority: 49 U.S.C. 322, 30111, 30115, 30117, and 30166; delegation of authority at 49 CFR 1.50

2. Section 571.131 is amended by revising S5.2.1, S5.2.2, S5.3.1, S6.2.2.1, and S6.2.2.2, and by adding S5.3.1.1, S5.3.1.2, and S5.3.1.3 to read as follows:

§ 571.131 Standard No. 131, School Bus Pedestrian Safety Devices.

* * * * *

S5.2.1 The stop signal arm shall have a white border at least 12 mm (0.47 inches) wide on both sides, except as provided in S5.2.3. Mounting brackets, clips, bolts, or other components necessary to the mechanical or electrical operation of the stop signal arm may not obscure more than 15 percent of the border on each side of the stop arm. The portion of the border that may be obscured is in addition to that portion which may be obscured by the two red lamps specified in S5.3.2.

S.5.2.2 The stop signal arm shall have the word "STOP" displayed in white upper-case letters on both sides, except as provided in S5.2.3. The letters shall be at least 150 mm (5.9 inches) in height. The letters shall have a stroke width of at least 20 mm (0.79 inches), except as provided in S.5.3.1.1.

* * * * *

S5.3.1 Except as provided in S5.3.1.1, S5.3.1.2, or S5.3.1.3, the entire surface of both sides of each stop signal arm shall be reflectorized with Type III retroreflectorized material that meets the minimum specific intensity requirements of S6.1 and Table I.

* * * * *

S.5.3.1.1 The legend of the retroreflective stop arm may be illuminated in a manner such that light is emitted from the surface of each letter or from the area immediately surrounding each letter. Only red lamps may be used. They shall form the complete shape of each letter of the legend, and shall be affixed to all letters (or to the areas immediately surrounding all letters) in the legend. The shape of each letter shall remain constant and, if the lamps are contained within each letter, the net stroke width (stroke width minus the width of the lamp(s)) of each letter of the legend, specified in S5.2.2, shall not be less than 15 mm (0.59 inch). When the stop arm is extended, the lamps shall flash at the rate specified in S6.2.2, with a current "on" time specified in S6.2.2.1. All lamps shall be positioned in one of the two following ways:

(1) centered within the stroke of each letter of the legend, or

(2) outlining each letter of the legend.

S5.3.1.2 Nonreflectorized mounting brackets, clips, bolts, or other components necessary to the mechanical or electrical operation of the stop signal arm shall not obscure more than 7.5 percent of the total surface area of either side of the stop signal arm.

S5.3.1.3 When two stop signal arms are installed on a school bus, the forward side of the rearmost stop signal arm shall not be reflectorized.

* * * * *

S6.2.2.1 Lamps, except those subject to S6.2.2.2, shall have a current "on" time of 30 to 75 percent of the total flash cycle. The total current "on" time for the two terminals shall be between 90 and 110 percent of the total flash cycle.

S6.2.2.2 Xenon short-arc gaseous discharge lamps shall have an "off" time before each flash of at least 50 percent of the total flash cycle.

* * * * *

Issued: May 22, 1998.

Ricardo Martinez,

Administrator.

Federal Aviation Administration

14 CFR Part 39

[Docket No. 98–NM–90–AD]

RIN 2120–AA64

Airworthiness Directives; Dornier Model 328–100 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to certain Dornier Model 328–100 series airplanes. This proposal would require revising the Airplane Flight Manual (AFM) to require use of the electrical fuel pump for take-off and landing and performance of an operational check of the electrical fuel pump following landing. This proposal also would require replacement of the jet booster pumps with new or modified jet booster pumps, which would terminate the requirement for the AFM revision. This proposal is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by the proposed AD are intended to prevent failure of the jet booster pumps, which could result in reduced engine thrust during take-off or landing, and consequent increased risk of impact with terrain.

DATES: Comments must be received by June 29, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–90–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from FAIRCHILD DORNIER, DORNIER Luftfahrt GmbH, P.O. Box 1103, D–82230 Wessling, Germany. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–NM–90–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–90–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

The Luftfahrt-Bundesamt (LBA), which is the airworthiness authority for Germany, notified the FAA that an unsafe condition may exist on certain Dornier Model 328–100 series airplanes. The LBA advises that, on an in-service airplane, the non-return flap valve of the jet booster pump failed, which resulted in inadequate fuel pressure being provided to fuel the engine and consequent loss of engine thrust. Further investigation revealed that the design of the jet booster pumps on certain Model 328–100 series airplanes is susceptible to this type of failure. This condition, if not corrected, could result in reduced engine thrust during take-off or landing, and consequent increased risk of impact with terrain.

Explanation of Relevant Service Information

Dornier has issued All Operators Telefax (AOT) AOT–328–28–014, Revision 1, dated October 16, 1996, which describes procedures for revising the Airplane Flight Manual (AFM) to require use of the electrical fuel pump for take-off and landing and performance of an operational check of the electrical fuel pump following landing.

In addition, Dornier has issued Service Bulletin SB–328–28–211, dated March 26, 1997, which describes procedures for replacement of certain jet booster pumps with new or modified jet booster pumps. Accomplishment of this replacement eliminates the need for the AFM revision.

Accomplishment of the actions specified in the AOT and service bulletin is intended to adequately address the identified unsafe condition. The LBA classified this AOT and service bulletin as mandatory and issued German airworthiness directives 97–004, dated January 30, 1997, and 97–149, dated May 22, 1997, in order to assure the continued airworthiness of these airplanes in Germany.

FAA's Conclusions

This airplane model is manufactured in Germany and is type certificated for operation in the United States under the provisions of § 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement,

the LBA has kept the FAA informed of the situation described above. The FAA has examined the findings of the LBA, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, the proposed AD would require revising the Limitations Section of the FAA-approved AFM to require use of the electrical fuel pump for take-off and landing and performance of an operational check of the electrical fuel pump following landing. This proposed AD also would require replacement of the jet booster pumps with new or modified jet booster pumps, which would terminate the requirement of the AFM revision.

Cost Impact

The FAA estimates that 50 airplanes of U.S. registry would be affected by this proposed AD. It would take approximately 1 work hour per airplane to accomplish the proposed AFM revision, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the AFM revision proposed by this AD on U.S. operators is estimated to be $3,000, or $60 per airplane.

It would take approximately 6 work hours per airplane to accomplish the proposed replacement, at an average labor rate of $60 per work hour. Required parts would be provided by the manufacturer at no cost to the operators. Based on these figures, the cost impact of the replacement proposed by this AD on U.S. operators is estimated to be $18,000, or $360 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Dornier Luftfahrt GmbH: Docket 98–NM–90–AD.

Applicability: Model 328–100 series airplanes, serial numbers 3005 through 3093 inclusive; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (d) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent failure of the jet booster pumps, which could result in reduced engine thrust during take-off or landing, and consequent increased risk of impact with terrain, accomplish the following:

(a) Within 5 days after the effective date of this AD, revise the Limitations Section of the FAA-approved Airplane Flight Manual (AFM) by inserting a copy of Dornier All Operators Telefax AOT–328–28–014, Revision 1, dated October 16, 1996, into the AFM to require use of the electrical fuel pump for take-off and landing and performance of an operational check of the electrical fuel pump following landing.

(b) Within 180 days after the effective date of this AD, replace the jet booster pumps having part number (P/N) 219335–2 with new or modified jet booster pumps, having P/N 219335–3, in accordance with Dornier Service Bulletin SB–328–28–211, dated March 26, 1997. Accomplishment of this replacement constitutes terminating action for the requirements of paragraph (a) of this AD; after the replacement has been accomplished, the previously required limitation may be removed from the AFM.

(c) As of the effective date of this AD, no person shall install a jet booster pump, part number 219335–2, on any airplane.

(d) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

(e) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 3: The subject of this AD is addressed in German airworthiness directives 97–004, dated January 30, 1997, and 97–149, dated May 22, 1997.

Issued in Renton, Washington, on May 20, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. 98–NM–19–AD]

RIN 2120–AA64

Airworthiness Directives; Airbus Model A300–600 and A310 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the supersedure of an existing airworthiness directive (AD), applicable to certain Airbus Model A300–600 and A310 series airplanes, that currently requires revising the Airplane Flight Manual (AFM) to instruct the flightcrew to cross-check certain primary power setting parameters of the Thrust Control Computer (TCC) against tables of these values; and apply corrective action, if necessary. That AD also provides for optional terminating action for the AFM revisions. This proposed rule would require accomplishment of the previously optional terminating action. This proposal is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by the proposed AD are intended to prevent incorrect primary power setting parameters of the TCC, which could result in insufficient thrust being applied during takeoff.

DATES: Comments must be received by June 29, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–19–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–NM–19–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–19–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

On December 29, 1997, the FAA issued AD 98–01–09, amendment 39–10272 (63 FR 658, January 7, 1998), applicable to certain Airbus Model A300–600 and A310 series airplanes, to require revising the Limitations Section of the FAA-approved Airplane Flight Manual (AFM) to instruct the flightcrew to cross-check certain primary power setting parameters of the Thrust Control Computer (TCC) against tables of these values; and apply corrective action, if necessary. That AD also provides for an optional terminating action for the AFM revisions. That action was prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The requirements of that AD are intended to ensure that the flightcrew is provided with procedures for cross-checking and correcting certain primary power setting parameters of the TCC; incorrect parameters could result in insufficient thrust being applied during takeoff.

Actions Since Issuance of AD 98–01–09

In the preamble to AD 98–01–09, the FAA specified that the actions required by that AD were considered interim action because French airworthiness directive 97–110–218(B) dated May 7, 1997, required modification of the TCC on A300–600 and A310 series airplanes, while AD 98–01–09 provided for optional modification of the TCC. The FAA also indicated that it would consider further rulemaking action since the planned compliance time for that action was sufficiently long so that notice and opportunity for prior public comment were practicable. This proposed AD will require accomplishment of the previously optional modification.

Explanation of Relevant Service Information

Airbus has issued the following service bulletins:

- A310–22–2025, dated April 18, 1989;
- A310–22–2027, dated June 8, 1990;
- A310–22–2031, dated September 2, 1991;
- A310–22–2035, Revision 1, dated July 13, 1994;
- A300–22–6010, dated April 18, 1989;
- A300–22–6011, dated June 8, 1990; and
- A300–22–6017, dated September 2, 1991.

These service bulletins describe procedures for modification of the TCC to prevent sensitivity to electrical power transients. Accomplishment of the modification would eliminate the need for the AFM limitation. The modification of the TCC varies depending on the airplane model and engine configuration.

Accomplishment of the action specified in the service bulletins is intended to adequately address the identified unsafe condition. The Direction Genrale de l'Aviation Civile (DGAC), which is the airworthiness authority for France, classified these service bulletins as mandatory and issued French airworthiness directive 97–110–218(B), dated May 7, 1997, in order to assure the continued airworthiness of these airplanes in France.

FAA's Conclusions

These airplane models are manufactured in France and are type

certificated for operation in the United States under the provisions of § 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the DGAC has kept the FAA informed of the situation described above. The FAA has examined the findings of the DGAC, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other products of this same type design, the proposed AD would supersede AD 98–01–09 to continue to require a revision to the Limitations Section of the FAA-approved AFM, that instructs the flightcrew to cross-check certain primary power setting parameters of the TCC. This proposed AD also would add a requirement to modify the TCC, which would terminate the requirement for the AFM revision.

Cost Impact

The FAA estimates that 94 airplanes of U.S. registry would be affected by this proposed AD.

The AFM revision that is currently required by AD 98–01–09 takes approximately 1 work hour per airplane to accomplish, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the currently required AFM revision on U.S. operators is estimated to be $5,640, or $60 per airplane.

The modification that is proposed in this AD action would take approximately 3 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Required parts would cost approximately $4,300 per airplane. Based on these figures, the cost impact of the modification proposed by this AD on U.S. operators is estimated to be $421,120, or $4,480 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the current or proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing amendment 39–10272 (63 FR 658, January 7, 1998), and by adding a new airworthiness directive (AD), to read as follows:

Airbus Industrie: Docket 98–NM–19–AD. Supersedes AD 98–01–09, Amendment 39–10272.

Applicability: Model A300–600 and A310 series airplanes equipped with General Electric CF6–80C2 engines on which Airbus Modification 7174, 7588, or 8246 has not been accomplished; and Model A300–600 and A310 series airplanes equipped with Pratt & Whitney PW 4000 engines on which Airbus Modification 7694 has not been accomplished; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent incorrect primary power setting parameters of the Thrust Control Computer (TCC), which could result in insufficient thrust being applied during takeoff, accomplish the following:

Restatement of Requirements of AD 98–01–09

(a) Within 15 days after January 22, 1998 (the effective date of AD 98–01–09, amendment 39–10272), revise the Limitations Section of the FAA-approved Airplane Flight Manual (AFM) by inserting a copy of A300–600 or A310 Flight Manual Temporary Revision 4.03.00/18, 4.03.00/19, 4.03.00/20, or 4.03.00/21, all dated November 4, 1996; as applicable; into the AFM.

Note 2: When the temporary revision specified in paragraph (a) of this AD has been incorporated into the general revisions of the AFM, the general revisions may be inserted in the AFM, provided the information contained in the general revision is identical to that specified in the applicable temporary revision cited in paragraph (a).

New Requirements of this AD

(b) Within 15 months after the effective date of this AD, modify the TCC in accordance with the applicable Airbus service bulletins specified below. (The applicability of the service bulletins is specified in the effectivity section of each service bulletin.)

- A310–22–2025, dated April 18, 1989;
- A310–22–2027, dated June 8, 1990;
- A310–22–2031, dated September 2, 1991;
- A310–22–2035, Revision 1, dated July 13, 1994;
- A300–22–6010, dated April 18, 1989;
- A300–22–6011, dated June 8, 1990; or
- A300–22–6017, dated September 2, 1991.

Accomplishment of the modification of the TCC constitutes terminating action for the requirements of paragraph (a) of this AD. After the modification has been accomplished, the temporary revision may be removed from the AFM.

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be

obtained from the International Branch, ANM–116.

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 4: The subject of this AD is addressed in French airworthiness directive 97–110–218(B), dated May 7, 1997.

Issued in Renton, Washington, on May 20, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. 97–NM–187–AD]

RIN 2120–AA64

Airworthiness Directives; Dornier Model 328 Series Airplanes Equipped with Honeywell GP–300 Guidance and Display Controller

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the supersedure of an existing airworthiness directive (AD), applicable to certain Dornier Model 328 series airplanes, that currently requires modification of certain Honeywell GP–300 guidance and display controllers. That AD was prompted by reports of smoke and fumes emitting from the Honeywell GP–300 guidance and display controller due to a defective light bulb; and a report of failure of the autopilot to disconnect manually. The actions specified by that AD are intended to prevent a defective light bulb from causing a short circuit that emits smoke and fumes into the cockpit; or causing damage to the circuit cards and various components, which may lock the autopilot into the engaged mode. Locking of the autopilot into the engaged mode could lead to the inability of the pilot to disconnect the autopilot, which could result in reduced controllability of the airplane. This action would require verification of proper installation of the modification, and repair, if necessary.

DATES: Comments must be received by June 29, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 97–NM–187–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from Honeywell, Inc., Attn: Customer Support Materiel, P.O. Box 21111, Phoenix, Arizona 85036. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California 90712–4137; telephone (562) 627–5220; fax (562) 627–5210.

FOR FURTHER INFORMATION CONTACT: J. Kirk Baker, Aerospace Engineer, Systems and Equipment Branch, ANM–130L, FAA, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California 90712; telephone (562) 627–5345; fax (562) 627–5210.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 97–NM–187–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 97–NM–187–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

On May 31, 1996, the FAA issued AD 96–12–13, amendment 39–9656 (61 FR 29465, June 11, 1996), applicable to certain Dornier Model 328 series airplanes, to require modification of certain Honeywell GP–300 guidance and display controller. That action was prompted by reports of smoke and fumes emitting from the Honeywell GP–300 guidance and display controller due to a defective light bulb; and a report of failure of the autopilot to disconnect manually. The requirements of that AD are intended to prevent a defective light bulb from causing a short circuit that emits smoke and fumes into the cockpit; or causing damage to the circuit cards and various components, which may lock the autopilot into the engaged mode. Locking of the autopilot into the engaged mode could lead to the inability of the pilot to disconnect the autopilot, which could result in reduced controllability of the airplane.

Actions Since Issuance of Previous Rule

Since the issuance of AD 96–12–13, the Luftfahrt-Bundesamt (LBA), which is the airworthiness authority for Germany, has advised the FAA that the service bulletin issued by Honeywell and referenced in AD 96–12–13 has been misinterpreted by personnel at Honeywell service centers. The LBA advises that, on an in-service airplane, a miswired unit of the GP–300 control panel was found, which caused the panel to overheat and generate smoke. In addition, two miswired units were found during the manufacturing process. Such miswired units would prevent the overheat protection device from functioning and could lead to smoke and fumes in the cockpit.

Explanation of Relevant Service Information

The FAA has reviewed and approved Honeywell Service Bulletin 7015327–22–4, dated March 31, 1997, which describes procedures for verification of proper installation of the modification by re-testing the circuit card assemblies, and repair, if necessary. The LBA classified this service bulletin as mandatory and issued German airworthiness directive 96–239/2, dated June 19, 1997, in order to assure the continued airworthiness of these airplanes in Germany.

FAA's Conclusions

This airplane model is manufactured in Germany and is type certificated for operation in the United States under the provisions of § 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the LBA has kept the FAA informed of the situation described above. The FAA has examined the findings of the LBA, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, the proposed AD would supersede AD 96–12–13 to continue to require modification of certain Honeywell GP–300 guidance and display controllers. The proposed AD also would add a requirement for verification of proper installation of the modification of Honeywell GP–300 guidance and display controller, and repair, if necessary. The actions would be required to be accomplished in accordance with the service bulletin described previously.

Cost Impact

There are approximately 50 Dornier Model 328–100 series airplanes of U.S. registry that would be affected by this proposed AD.

The actions that are currently required by AD 96–12–13, and retained in this proposed AD, take approximately 7 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Required parts will be provided by the manufacturer at no cost to the operators. Based on these figures, the cost impact of the currently required actions on U.S. operators is estimated to be $21,000, or $420 per airplane.

The new actions that are proposed in this AD action would take approximately 4 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the proposed requirements of this AD on U.S. operators is estimated to be $12,000, or $240 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the current or proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing amendment 39–9656 (61 FR 29465, June 11, 1996), and by adding a new airworthiness directive (AD), to read as follows:

Dornier Luftfahrt GmbH: Docket 97–NM–187–AD. Supersedes AD 96–12–13, Amendment 39–9656.

Applicability: Model 328–100 airplanes, equipped with Honeywell GP–300 guidance and display controller having part number (P/N) 7015327–901 or –902; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent a defective light bulb from causing a short circuit that emits smoke and fumes into the cockpit, or causing damage to the circuit cards and various components, which may lock the autopilot into the engaged mode, accomplish the following:

Restatement of Requirements of AD 96–12–13, Amendment 39–9656

(a) Within 60 days after June 26, 1996 (the effective date of AD 96–12–13, amendment 39–9656), modify the Honeywell GP–300 guidance and display controller, having P/N 7015327–901 or –902, in accordance with Honeywell Service Bulletin 7015327–22–2, dated March 4, 1996.

New Requirements of this AD

(b) Within 60 days after the effective date of this AD, verify that the wiring of the Honeywell GP–300 guidance and display controller is correct by conducting a re-test of the circuit card assemblies, in accordance with Honeywell Service Bulletin 7015327–22–4, dated March 31, 1997. If any discrepancy is found, prior to further flight, repair in accordance with the service bulletin.

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Los Angeles Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Los Angeles ACO.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Los Angeles ACO.

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 3: The subject of this AD is addressed in German airworthiness directive 96–239/2, dated June 19, 1997.

Issued in Renton, Washington, on May 20, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 39

[Docket No. 98–NM–112–AD]

RIN 2120–AA64

Airworthiness Directives; Dornier Model 328–100 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to all Dornier Model 328–100 series airplanes. This proposal would require a one-time inspection of the propeller de-ice system to verify the proper functioning of the engine indication and crew alert system (EICAS) for the de-ice system; and corrective action, if necessary. This proposal is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by the proposed AD are intended to prevent failure of the EICAS to provide a warning to the flightcrew in the event of failure of the propeller de-ice system, which could result in damage to the airplane and consequent loss of controllability of the airplane.

DATES: Comments must be received by June 29, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–112–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from FAIRCHILD DORNIER, DORNIER Luftfahrt GmbH, P.O. Box 1103, D–82230 Wessling, Germany. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–NM–112–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–112–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

The Luftfahrt-Bundesamt (LBA), which is the airworthiness authority for Germany, notified the FAA that an unsafe condition may exist on all Dornier Model 328–100 series airplanes. The LBA advises that it has received a report indicating that the propeller de-ice system on the airplane failed without appropriate indication of the failure to the flightcrew via the engine indication and crew alert system (EICAS). The failure of this system resulted in the accumulation of ice on both airplane propellers; the ice subsequently shed, which damaged the fuselage and other parts of the exterior of the airplane. Further investigation of the incident did not reveal an exact cause; although the LBA advises that this is considered to be an isolated incident, they consider a one-time fleet-wide inspection to be warranted. Such failure of the EICAS to provide a warning to the flightcrew in the event of failure of the propeller de-ice system, if not corrected, could result in damage to the airplane and consequent loss of controllability of the airplane.

Explanation of Relevant Service Information

The manufacturer has issued Dornier Alert Service Bulletin ASB–328–30–013, Revision 1, dated February 21, 1997, which describes procedures for a one-time inspection of the propeller de-ice system, to verify that the EICAS provides appropriate warning to the flightcrew during operation of the propeller de-ice system in the event of failure. The LBA classified this alert service bulletin as mandatory and issued German airworthiness directive 97–066, dated March 13, 1997, in order to assure the continued airworthiness of these airplanes in Germany.

FAA's Conclusions

This airplane model is manufactured in Germany and is type certificated for operation in the United States under the provisions of 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the LBA has kept the FAA informed of the situation described above. The FAA has examined the findings of the LBA, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, the proposed AD would require accomplishment of the actions specified in the alert service bulletin described previously, except as discussed below.

Differences Between Proposed Rule and Alert Service Bulletin

Operators should note that, although the alert service bulletin does not specify corrective action if the inspection results do not verify proper functioning of the EICAS for the

propeller de-ice system, this proposal would require the repair of the EICAS to be accomplished in accordance with a method approved by the FAA.

Cost Impact

The FAA estimates that 50 airplanes of U.S. registry would be affected by this proposed AD, that it would take approximately 1 work hour per airplane to accomplish the proposed inspection, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the inspection proposed by this AD on U.S. operators is estimated to be $3,000, or $60 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Dornier Luftfahrt GmbH: Docket 98–NM–112–AD.

Applicability: All Model 328–100 series airplanes, certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent failure of the engine indication and crew alert system (EICAS) to provide a warning to the flightcrew in the event of failure of the propeller de-ice system, which could result in damage to the airplane and consequent loss of controllability of the airplane, accomplish the following:

(a) Within 30 days after the effective date of this AD, perform a one-time inspection of the propeller de-ice system to verify the proper functioning of the EICAS for the de-ice system, in accordance with Dornier Alert Service Bulletin ASB–328–30–013, Revision 1, dated February 21, 1997.

(b) If the inspection required by paragraph (a) of this AD indicates that the EICAS is malfunctioning, prior to further flight, repair the EICAS in accordance with a method approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate.

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 3: The subject of this AD is addressed in German airworthiness directive 97–066, dated March 13, 1997.

Issued in Renton, Washington, on May 20, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. 97–NM–100–AD]

RIN 2120–AA64

Airworthiness Directives; Boeing Model 747–100, 747–200, and 747–SP Series Airplanes and Military Type E–4B Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to certain Boeing Model 747–100, –200, and 747–SP series airplanes and military type E–4B airplanes. This proposal would require repetitive inspections to detect cracking of the wing front spar web, and repair of cracked structure. This proposal also provides for optional terminating action for the repetitive inspection requirements. This proposal is prompted by reports indicating that fatigue cracks were found on the aft surface of the wing front spar web. The actions specified by the proposed AD are intended to detect and correct such fatigue cracking, which could result in a fuel leak, and consequent increased risk of a fire.

DATES: Comments must be received by July 13, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 97–NM–100–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from

Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124–2207. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Tamara L. Anderson, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Transport Airplane Directorate, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2771; fax (425) 227–1181.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 97–NM–100–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 97–NM–100–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

The FAA has received reports indicating that operators have found numerous fatigue cracks on the aft surface of the front spar web on Boeing Model 747 series airplanes. The cracks were found inside the wing fuel tank at Front Spar Station Inboard (FSSI) 688 where the inboard nacelle rib post and the 670 rib post attach to the web of the front spar. All of the cracks were found between these two rib posts inside the wing fuel tank. Metallurgical analyses indicate that the cracks were initiated by fatigue on the aft surface of the front spar web. The analyses also indicate that the various fatigue cracks initiated on the web itself, and not at the edges of the adjacent fastener holes. Such fatigue cracking, if not detected and corrected, could result in a fuel leak and consequent increased risk of a fire.

Explanation of Relevant Service Information

The FAA has reviewed and approved Boeing Service Bulletin 747–57A2303, Revision 1, dated September 25, 1997, which describes procedures for repetitive ultrasonic inspections to detect cracking of the wing front spar web at the fastener rows behind and between the upper link fittings for the number 2 and 3 engine struts; and repair, if necessary. The service bulletin also describes procedures for an optional terminating modification, which, if accomplished, would eliminate the need for the repetitive inspections. The optional terminating modification involves replacing the cracked spar web with a shot-peened spar web. Accomplishment of the actions specified in the service bulletin is intended to adequately address the identified unsafe condition.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other products of this same type design, the proposed AD would require accomplishment of the actions specified in the service bulletin described previously, except as discussed below.

Differences Between Proposed Rule and Service Bulletin

Operators should note that, although the service bulletin specifies that the manufacturer may be contacted for disposition of certain repair conditions, this proposal would require the repair of those conditions to be accomplished in accordance with a method approved by the FAA.

Optional Terminating Modification

This proposed AD also would provide for an optional terminating modification of the wing front spar web . The FAA has determined that the repetitive inspections proposed by this AD can be allowed to continue in lieu of accomplishment of a terminating action. In making this determination, the FAA considers that, in this case, long-term continued operational safety will be adequately assured by accomplishing the repetitive inspections to detect fatigue cracking before it represents a hazard to the airplane.

Cost Impact

There are approximately 190 airplanes of the affected design in the worldwide fleet. The FAA estimates that 95 airplanes of U.S. registry would be affected by this proposed AD, that it would take approximately 64 work hours per airplane to accomplish the proposed inspection, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the inspection proposed by this AD on U.S. operators is estimated to be $364,800, or $3,840 per airplane, per inspection cycle.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Should an operator elect to accomplish the optional terminating modification, it would take approximately 518 work hours per airplane to accomplish the modification, at an average labor rate of $60 per work hour. Required parts would cost approximately $17,000 per airplane. Based on these figures, the cost impact of the optional terminating modification proposed by this AD is estimated to be $48,080 per airplane.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft

regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES.**

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Boeing: Docket 97–NM–100–AD.

Applicability: Model 747–100, 747–200, and 747–SP series airplanes and military type E–4B airplanes; as listed in Boeing Service Bulletin 747–57A2303, Revision 1, dated September 25, 1997; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (d) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To detect and correct fatigue cracking of the wing front spar web, which could result in a fuel leak, and consequent increased risk of a fire, accomplish the following:

(a) Perform an ultrasonic inspection to detect cracking of the wing front spar web at the fastener rows behind and between the upper link fittings for the number 2 and 3 engine struts, in accordance with the Accomplishment Instructions of Boeing Service Bulletin 747–57A2303, Revision 1, dated September 25, 1997, at the time specified in paragraph (a)(1) or (a)(2) of this AD, as applicable.

(1) For airplanes identified as Group 1, 2, 3, or 5 in the alert service bulletin: Inspect prior to the accumulation of 12,500 total flight cycles, or within 15 months after the effective date of this AD, whichever occurs later. Repeat the inspection thereafter at intervals not to exceed 2,200 flight cycles.

(2) For airplanes identified as Group 4, 6, 7, 8, 9, or 10 in the alert service bulletin: Inspect prior to the accumulation of 18,000 total flight cycles, or within 15 months after the effective date of this AD, whichever occurs later. Repeat the inspection thereafter at intervals not to exceed 3,000 flight cycles.

(b) If any crack is found during any inspection required by paragraph (a) of this AD, prior to further flight, accomplish either paragraph (b)(1) or (b)(2) of this AD.

(1) Accomplish the terminating action in accordance with the Accomplishment Instructions of Boeing Service Bulletin 747–57A2303, Revision 1, dated September 25, 1997. Accomplishment of this action constitutes terminating action for the repetitive inspection requirements of this AD; or

(2) Repair in accordance with a method approved by the Manager, Seattle Aircraft Certification Office (ACO), FAA, Transport Airplane Directorate.

(c) Replacement of the affected wing front spar web with a new shot-peened wing front spar web in accordance with the Accomplishment Instructions of Boeing Service Bulletin 747–57A2303, Revision 1, dated September 25, 1997, constitutes terminating action for the repetitive inspection requirements of this AD.

(d) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Seattle ACO. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Seattle ACO.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Seattle ACO.

(e) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Issued in Renton, Washington, on May 20, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Airbus Model A300, A310, and A300–600 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to certain Airbus Model A300, A310, and A300–600 series airplanes. This proposal would require repetitive detailed visual inspections to detect cracks in the pylon thrust and sideload fitting of the wing, and replacement of any cracked pylon thrust and sideload fitting with a new fitting. This proposal is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by the proposed AD are intended to detect and correct cracks in the pylon thrust and sideload fitting of the wing, which could result in reduced structural integrity of the airplane.

DATES: Comments must be received by June 29, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–116–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager,

International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–NM–116–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–116–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

The Direction Générale de l'Aviation Civile (DGAC), which is the airworthiness authority for France, notified the FAA that an unsafe condition may exist on certain Airbus Model A300, A310, and A300–600 series airplanes. The DGAC advises that during a zonal inspection on a Model A310 series airplane, a cracked pylon thrust and sideload fitting was detected on an in-service airplane which had accumulated 2,170 total flight cycles. Further investigation revealed that the cracks were caused by improper mounting of the fitting to the wing reinforcing plate and built-in stresses due to a surface flaw in the titanium thrust and sideload fitting. Such cracks in the pylon thrust and sideload fitting of the wing, if not corrected, could result in reduced structural integrity of the airplane.

Explanation of Relevant Service Information

Airbus has issued Service Bulletins A300–57–0232, Revision 01 (for Model A300 series airplanes); A310–57–2075, Revision 01 (for Model A310 series airplanes); and A300–57–6079, Revision 02 (for Model A300–600 series airplanes); all dated January 12, 1998; which describe procedures for repetitive detailed visual inspections to detect cracks in the pylon thrust and sideload fitting of the wing, and replacement of any cracked pylon thrust and sideload fitting with a new fitting. Accomplishment of the actions specified in the service bulletins is intended to adequately address the identified unsafe condition. The DGAC classified these service bulletins as mandatory and issued French airworthiness directive 97–358–232(B), dated November 19, 1997, in order to assure the continued airworthiness of these airplanes in France.

FAA's Conclusions

These airplane models are manufactured in France and are type certificated for operation in the United States under the provisions of § 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the DGAC has kept the FAA informed of the situation described above. The FAA has examined the findings of the DGAC, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, the proposed AD would require accomplishment of the actions specified in the service bulletins described previously, except as discussed below.

Differences Between Proposed Rule and Foreign AD

The proposed AD would differ from the parallel French airworthiness directive in that it would not allow for adjustment in compliance time based on airplane utilization. In developing an appropriate compliance time for this AD, the FAA considered not only the manufacturer's recommendation, but the degree of urgency associated with addressing the subject unsafe condition, and the average utilization of the affected fleet. In light of these factors, the FAA finds an 18-month compliance time for initiating the required actions to be warranted, in that it represents an appropriate interval of time allowable for affected airplanes to continue to operate without compromising safety.

Cost Impact

The FAA estimates that 126 airplanes of U.S. registry would be affected by this proposed AD, that it would take approximately 3 work hours per airplane to accomplish the proposed inspection, and that the average labor rate is $60 per work hour. Based on these figures, the cost impact of the proposed AD on U.S. operators is estimated to be $22,680, or $180 per airplane, per inspection cycle.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption ADDRESSES.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Airbus Industrie: Docket 98–NM–116–AD.

Applicability: Model A300 series airplanes, as listed in Airbus Service Bulletin A300–57–0232, Revision 01, dated January 12, 1998; Model A310 series airplanes, as listed in Airbus Service Bulletin A310–57–2075, Revision 01, dated January 12, 1998; and Model A300–600 series airplanes, as listed in Airbus Service Bulletin A300–57–6079, Revision 02, dated January 12, 1998; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To detect and correct cracks in the pylon thrust and sideload fitting of the wing, which could result in reduced structural integrity of the airplane, accomplish the following:

(a) Prior to the accumulation of 2,800 total flight cycles, or within 18 months after the effective date of this AD, whichever occurs later, perform a detailed visual inspection to detect cracks in the pylon thrust and sideload fitting of the wing, in accordance with Airbus Service Bulletin A300–57–0232, Revision 01 (for Model A300 series airplanes); A310–57–2075, Revision 01 (for Model A310 series airplanes); or A300–57–6079, Revision 02 (for Model A300–600 series airplanes); all dated January 12, 1998; as applicable. Repeat the detailed visual inspection thereafter at intervals not to exceed 2,800 flight cycles.

(b) If any crack is detected during any inspection required by paragraph (a), prior to further flight, replace the pylon thrust and sideload fitting with a new fitting in accordance with Airbus Service Bulletin A300–57–0232, Revision 01 (for Model A300 series airplanes); A310–57–2075, Revision 01 (for Model A310 series airplanes); or A300–57–6079, Revision 02 (for Model A300–600 series airplanes); all dated January 12, 1998; as applicable. Thereafter, continue the inspections in accordance with the requirements of paragraph (a) of this AD.

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

(d) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 3: The subject of this AD is addressed in French airworthiness directive 97–358–232(B), dated November 19, 1997.

Issued in Renton, Washington, on May 20, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Airworthiness Directives; McDonnell Douglas Model MD–90–30 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to certain McDonnell Douglas Model MD–90–30 series airplanes. This proposal would require modification of the wiring of the strake ice protection system (SIPS). This proposal is prompted by a report of a fire in the electrical and electronic compartment of a Model MD–90–30 series airplane. The actions specified by the proposed AD are intended to prevent an electrical short circuit of the wiring of the SIPS, which could result in a fire in the electrical and electronic compartment of the airplane.

DATES: Comments must be received by July 13, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–136–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from The Boeing Company, Douglas Products Division, 3855 Lakewood Boulevard, Long Beach, California 90846, Attention: Technical Publications Business Administration, Dept. C1–L51 (2–60). This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the FAA, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3960 Paramount Boulevard, Lakewood, California.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–136–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

The FAA received a report of a fire in the electrical and electronic compartment of a Model MD–90–30 series airplane which resulted in injury to a mechanic. Investigation revealed that the fire was caused by an electrical short circuit at the termination of a wire shield near the connector of the strake controller. The short circuit has been attributed to damaged insulation of certain wiring of the strake ice protection system (SIPS). This wiring insulation was damaged during manufacture because a shield termination was not being performed correctly. For this reason, this same condition may exist on other airplanes of the same type. Damaged insulation of the wiring of the SIPS could fail, which could cause an electrical short circuit between the exposed wire conductors and the shielded ground. Such an electrical short circuit of the wiring of the SIPS, if not corrected, could result in a fire in the electrical and electronic compartment of the airplane.

Explanation of Relevant Service Information

The FAA has reviewed and approved McDonnell Douglas Alert Service Bulletin MD90–30A021, dated March 31, 1998, which describes procedures for modification of the wiring of the SIPS at the connectors of the strakes and the strake controller. The modification involves removing the pigtail ground wires at the connectors of the strakes and the strake controller, installing shrink tubing over each power wire, and performing a resistance test of the electrical insulation. (The alert service bulletin refers to this resistance test as a "resistance check.") If any strake heating wiring fails the resistance test, the discrepant wiring is to be replaced with new wiring and retested.

Accomplishment of the actions specified in the alert service bulletin is intended to adequately address the identified unsafe condition.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other products of this same type design, the proposed AD would require modification of the wiring of the strake ice protection system. The actions would be required to be accomplished in accordance with the alert service bulletin described previously.

Cost Impact

There are approximately 66 Model MD–90–30 series airplanes of the affected design in the worldwide fleet. The FAA estimates that 23 airplanes of U.S. registry would be affected by this proposed AD, that it would take approximately 15 work hours per airplane to accomplish the proposed actions, and that the average labor rate is $60 per work hour. The cost of the required parts would be minimal. Based on these figures, the cost impact of the proposed AD on U.S. operators is estimated to be $20,700, or $900 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

McDonnell Douglas: Docket 98–NM–136–AD.

Applicability: Model MD–90–30 series airplanes, as listed in McDonnell Douglas Alert Service Bulletin MD90–30A021, dated March 31, 1998; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent an electrical short circuit of the wiring of the strake ice protection system (SIPS), which could result in a fire in the electrical and electronic compartment of the airplane, accomplish the following:

(a) Within 180 days after the effective date of this AD, modify the wiring of the SIPS and perform a resistence test of the electrical insulation in accordance with McDonnell Douglas Alert Service Bulletin MD90–30A021, dated March 31, 1998. If any strake heating wiring fails the resistance test, prior to further flight, replace the discrepant wiring with new wiring, and repeat the resistance test, in accordance with the alert service bulletin.

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Los Angeles Aircraft Certification Office (ACO),

FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Los Angeles ACO.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Los Angeles ACO.

(c) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Issued in Renton, Washington, on May 20, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

[Docket No. 98–NM–101–AD]

RIN 2120–AA64

Airworthiness Directives; Fokker Model F.28 Mark 0100 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to certain Fokker Model F.28 Mark 0100 series airplanes. This proposal would require a one-time visual inspection and a one-time eddy current and/or dye penetrant inspection of the nose landing gear (NLG) main fitting to detect cracking; and rework of the NLG main fitting, if necessary. This proposal is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by the proposed AD are intended to prevent cracking of the NLG main fitting, which could lead to collapse of the NLG during takeoff and landing and possible injury to the flightcrew and passengers.

DATES: Comments must be received by June 29, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–101–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays.

The service information referenced in the proposed rule may be obtained from Fokker Services B.V., Technical Support Department, P. O. Box 75047, 1117 ZN Schiphol Airport, the Netherlands. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055–4056; telephone (425) 227–2110; fax (425) 227–1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 98–NM–101–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Transport Airplane Directorate, ANM–114, Attention: Rules Docket No. 98–NM–101–AD, 1601 Lind Avenue, SW., Renton, Washington 98055–4056.

Discussion

The Rijksluchtvaartdienst (RLD), which is the airworthiness authority for the Netherlands, notified the FAA that an unsafe condition may exist on certain Fokker Model F.28 Mark 0100 series airplanes, equipped with certain Messier-Dowty (formerly Dowty Rotol) nose landing gears (NLG). The RLD advises that it received a report indicating that the NLG of an airplane broke off just below the NLG pintle pins immediately after touchdown of the nose wheel. The nose section of the aircraft came to rest on the fuselage and remaining portion of the NLG. Subsequently, the airline involved performed a detailed visual inspection of the NLG main fittings on all airplanes in its fleet and identified three more suspect NLG main fittings. Investigation of these fittings revealed that the cracking had originated on the inner side of the right-hand downlock plunger support web. The total number of flight cycles on the airplanes with the cracked NLG main fittings ranged from 9,300 to 17,600. The exact cause of the cracking has not been determined at this time. Such cracking of the NLG main fitting, if not corrected, could lead to collapse of the NLG during takeoff and landing, and possible injury to the flightcrew and passengers.

Explanation of Relevant Service Information

The manufacturer has issued Fokker Service Bulletin SBF100–32–112, dated November 14, 1997, and Messier-Dowty has issued Service Bulletin F100–32–92, dated November 14, 1997. These service bulletins describe procedures for a one-time visual inspection of the NLG main fitting to detect cracking. The service bulletins also describe procedures for a one-time eddy current and/or dye penetrant inspection if cracking is suspected following accomplishment of the visual inspection, and rework of the NLG main fitting, if cracking is found.

The RLD classified these service bulletins as mandatory and issued Dutch airworthiness directive BLA 1997–116 (A), dated November 28, 1997, in order to assure the continued airworthiness of these airplanes in the Netherlands.

FAA's Conclusions

This airplane model is manufactured in the Netherlands and is type certificated for operation in the United States under the provisions of § 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement,

VOL 63 ISS 102 MAY 28 1998 UMI

the RLD has kept the FAA informed of the situation described above. The FAA has examined the findings of the RLD, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of Proposed Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, the proposed AD would require accomplishment of the actions specified in the service bulletins described previously.

This proposed AD also requires that operators report the results of the one-time inspection to Fokker Services B.V. Because the cause of the addressed cracking is not currently known, the intent of these required inspection reports is to enable Fokker to determine how widespread such cracking problems may be in the affected fleet. Based on the results of these reports, further corrective action may be warranted.

Differences Between the Proposed AD and the Dutch Airworthiness Directive

Operators should note that the parallel Dutch airworthiness directive specifies that the actions be accomplished for airplanes on which the nose landing gear (NLG) has accumulated more than 8,000 total flight cycles. However, because the exact cause of the cracking remains unknown, the FAA would require compliance with the actions in this proposed AD for all airplanes of this type design, including those that have accumulated less than 8,000 total flight cycles as of the effective date of this proposed AD, in order to ensure the integrity of the entire fleet.

Cost Impact

The FAA estimates that 127 airplanes of U.S. registry would be affected by this proposed AD.

It would take approximately 2 work hours per airplane to accomplish the proposed visual inspection, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the proposed visual inspection on U.S. operators is estimated to be $15,240, or $120 per airplane.

It would take approximately 2 work hours per airplane to accomplish the proposed eddy current and/or dye penetrant inspection, at an average labor rate of $60 per work hour. Based on these figures, the cost impact of the proposed eddy current and/or dye penetrant inspection on U.S. operators is estimated to be $15,240, or $120 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the proposed requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Fokker Services B.V.: Docket 98–NM–101–AD

Applicability: Model F.28 Mark 0100 series airplanes; equipped with Messier-Dowty Nose Landing Gear (NLG) having part number (P/N) 201071001 or P/N 201071002, on which the NLG main fitting has not been overhauled in accordance with Component Maintenance Manual 32–20–51; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent cracking of the NLG main fitting, which could lead to collapse of the NLG during takeoff and landing and possible injury to the flightcrew and passengers, accomplish the following:

(a) Perform a one-time visual inspection to detect cracking of the NLG main fitting, in accordance with Fokker Service Bulletin SBF100–32–112, dated November 14, 1997, at the applicable time specified in either paragraph (a)(1) or (a)(2) of this AD. If any cracking is found, prior to further flight, accomplish the requirements of paragraph (b) of this AD.

(1) For airplanes that have accumulated less than 15,000 total flight cycles as of the effective date of this AD: Inspect prior to the accumulation of 8,000 total flight cycles, or within 90 days after the effective date of this AD, whichever occurs later.

(2) For airplanes that have accumulated 15,000 or more total flight cycles as of the effective date of this AD: Inspect within 30 days after the effective date of this AD.

(b) Perform a one-time eddy current and/or dye penetrant inspection to detect cracking of the NLG main fitting, in accordance with Messier-Dowty Service Bulletin F100–32–92, dated November 14, 1997, at the applicable time specified in either paragraph (b)(1) or (b)(2) of this AD. Accomplishment of the inspection required by paragraph (b) of this AD, if accomplished prior to the inspection required by paragraph (a) of this AD, terminates the inspection required by paragraph (a) of this AD.

(1) For airplanes that have accumulated less than 15,000 total flight cycles as of the effective date of this AD: Inspect prior to the accumulation of 8,000 total flight cycles, or within 180 days after the effective date of this AD, whichever occurs later.

(2) For airplanes that have accumulated 15,000 or more total flight cycles as of the effective date of this AD: Inspect within 60 days after the effective date of this AD.

(c) If any crack is detected during the inspection required by paragraph (b) of this AD, prior to further flight, rework the NLG main fitting in accordance with Messier-Dowty Service Bulletin F100–32–92, dated November 14, 1997.

(d) Within 7 days after accomplishing the inspection required by either paragraph (a) or (b) of this AD, submit a report of the inspection results (both positive and negative findings) to Fokker Services B.V., Technical Support Department, P.O. Box 75047, 1117 ZN Schiphol Airport, the Netherlands. Information collection requirements contained in this regulation have been approved by the Office of Management and Budget (OMB) under the provisions of the Paperwork Reduction Act of 1980 (44 U.S.C. 3501 *et seq.*) and have been assigned OMB Control Number 2120–0056.

(e) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM–116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM–116.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM–116.

(f) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Note 3: The subject of this AD is addressed in Dutch airworthiness directive BLA 1997–116 (A), dated November 28, 1997.

Issued in Renton, Washington, on May 20, 1998.

Darrell M. Pederson,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 97–CE–112–AD]

RIN 2120–AA64

Airworthiness Directives; Pilatus Britten-Norman Ltd. BN–2, BN–2A, BN–2B, and BN–2T Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Supplemental notice of proposed rulemaking (NPRM); Reopening of the comment period.

SUMMARY: This document proposes to revise an earlier proposed airworthiness directive (AD) that would have required replacing the washers on the attachment bolts of the lower fitting of the main landing gear (MLG) on certain Pilatus Britten-Norman Ltd. (Pilatus Britten-Norman) BN–2, BN–2A, BN–2B, and BN–2T series airplanes. The proposed AD was the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for the United Kingdom. The actions specified by the proposed AD are intended to prevent the bolts that attach the lower fitting of the MLG to the nacelle from becoming threadbound, which could result in structural failure of the MLG with consequent loss of control of the airplane during takeoff, taxi, or landing operations. Since issuing the NPRM, the Federal Aviation Administration (FAA) has realized that the Model BN–2T–4R airplanes were inadvertently omitted from the proposed AD. In addition, Pilatus Britten-Norman has revised the service information to include replacing the attachment bolts and nuts of the lower fitting of the MLG instead of re-using the existing bolts and nuts. This service information also adjusts the torque values of the nuts. The FAA has determined that the procedures included in the revised service information should be incorporated into the proposed AD, and that the comment period for the proposal should be reopened and the public should have additional time to comment.

DATES: Comments must be received on or before July 3, 1998.

ADDRESSES: Submit comments in triplicate to the FAA, Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 97–CE–112–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106. Comments may be inspected at this location between 8 a.m. and 4 p.m., Monday through Friday, holidays excepted.

Service information that applies to the proposed AD may be obtained from Pilatus Britten-Norman Limited, Bembridge, Isle of Wight, United Kingdom PO35 5PR; telephone: 44–1983 872511; facsimile: 44–1983 873246. This information also may be examined at the Rules Docket at the address above.

FOR FURTHER INFORMATION CONTACT: Mr. Roger Chudy, Aerospace Engineer, Small Airplane Directorate, Aircraft Certification Service, 1201 Walnut, suite 900, Kansas City, Missouri 64106; telephone: (816) 426–6932; facsimile: (816) 426–2169

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this supplemental notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this supplemental notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 97–CE–112–AD." The postcard will be date stamped and returned to the commenter.

Availability of Supplemental NPRM's

Any person may obtain a copy of this supplemental NPRM by submitting a request to the FAA, Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 97–CE–112–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

Discussion

A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an AD that would apply to certain Pilatus Britten-Norman BN–2, BN–2A, BN–2B, and BN–2T series airplanes was published in the **Federal Register** as a notice of proposed rulemaking (NPRM) on March 19, 1998 (63 FR 13379). The NPRM proposed to require replacing the washers on the attachment bolts of the lower fitting of the MLG. Accomplishment of the proposed action as specified in the NPRM would be in accordance with Pilatus Britten-Norman Service Bulletin BN–2/SB.231, Initial Issue, dated October 17, 1996.

The NPRM was the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for the United Kingdom.

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were received on the proposed rule or the FAA's determination of the cost to the public.

Events Since Issuance of the NPRM

Since issuance of the NPRM, Pilatus Britten-Norman has informed the FAA that Service Bulletin BN–2/SB.231 has been revised to the Issue 2 status (dated October 1, 1997). This revision changes the procedures to specify replacing the attachment bolts and nuts of the lower fitting of the MLG instead of re-using the existing bolts and nuts. This service information also adjusts the torque loading values of the bolts.

In addition, the FAA has realized that the Model BN–2T–4R airplanes were inadvertently omitted from the proposed AD. The Model BN–2T–4R airplanes are of similar type design to those currently listed in the NPRM.

The FAA's Determination

After examining all information related to the subject described in this document, the FAA has determined that:

—The revised service information should be incorporated into the proposed AD;

—The unsafe condition could exist or develop on the Model BN–2T–4R airplanes and should be part of the applicability of the NPRM; and

—AD action should be taken to incorporate these changes to prevent the bolts that attach the lower fitting of the MLG to the nacelle from becoming threadbound, which could result in structural failure of the MLG with consequent loss of control of the airplane during takeoff, taxi, or landing operations.

The Supplemental NPRM

Since replacing the attachment bolts and nuts of the lower fitting of the MLG, adjusting the torque values of these bolts, and adding the Model BN–2T–4R airplanes to the Applicability of the NPRM proposes actions that go beyond the scope of what was already proposed, the FAA is reopening the comment period to allow the public additional time to comment on this proposed action.

Cost Impact

The FAA estimates that 80 airplanes in the U.S. registry would be affected by the proposed AD, that it would take approximately 3 workhours per airplane to accomplish the proposed action, and that the average labor rate is approximately $60 an hour. Parts cost approximately $10 per airplane. Based on these figures, the total cost impact of the proposed AD on U.S. operators is estimated to be $15,200.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action has been placed in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

Pilatus Britten-Norman Ltd: Docket No. 97–CE–112–AD. Applicability: Models BN–2, BN–2A, BN–2A–3, BN–2A–6, BN–2A–8, BN–2A–2, BN–2A–9, BN–2A–20, BN–2A–21, BN–2A–26, BN–2A–27, BN–2B–20, BN–2B–21, BN–2B–26, BN–2B–27, BN–2T, and BN–2T–4R airplanes (all serial numbers), certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required within the next 50 landings after the effective date of this AD, unless already accomplished.

Note 2: The compliance time of this AD is presented in landings instead of hours time-in-service (TIS). If the number of landings is unknown, hours TIS may be used by multiplying the number of hours TIS by 1.5.

To prevent the bolts that attach the lower fitting of the main landing gear (MLG) to the nacelle from becoming threadbound, which could result in structural failure of the MLG with consequent loss of control of the airplane during takeoff, taxi, or landing operations, accomplish the following:

(a) Replace the attachment bolts, nuts, and washers of the lower fitting of the MLG, in accordance with Pilatus Britten-Norman Service Bulletin No. BN–2/SB.231, Issue 2, dated October 1, 1997.

(b) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

(c) An alternative method of compliance or adjustment of the compliance time that provides an equivalent level of safety may be approved by the Manager, Small Airplane Directorate, 1201 Walnut, suite 900, Kansas City, Missouri, 64106. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Small Airplane Directorate.

(d) Questions or technical information related to Pilatus Britten-Norman Service Bulletin BN–2/SB.231, Issue 2, dated October

1, 1997, should be directed to Pilatus Britten-Norman Limited, Bembridge, Isle of Wight, United Kingdom PO35 5PR; telephone: 44–1983 872511; facsimile: 44–1983 873246. This service information may be examined at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

Note 4: The subject of this AD is addressed in British AD No. 008–10–96, dated January 31, 1997.

Issued in Kansas City, Missouri, on May 21, 1998.

Michael Gallagher,

Manager, Small Airplane Directorate, Aircraft Certification Service.

14 CFR Part 71

[Airspace Docket No. 98–AGL–27]

Proposed Establishment of Class E Airspace; Waupun, WI

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to establish Class E airspace at Waupun, WI. A Global Positioning System (GPS) Standard Instrument Approach Procedure (SIAP), 102° helicopter point in space approach, has been developed for Waupun Memorial Hospital Heliport. Controlled airspace extending upward from 700 to 1200 feet above ground level (AGL) is needed to contain aircraft executing the approach. This action proposes to create controlled airspace with a radius of 6.0 miles for the point in space serving Waupun Memorial Hospital Heliport.

DATES: Comments must be received on or before July 6, 1998.

ADDRESSES: Send comments on the proposal in triplicate to: Federal Aviation Administration, Office of the Assistant Chief Counsel, AGL–7, Rules Docket No. 98–AGL–27, 2300 East Devon Avenue, Des Plaines, Illinois 60018.

The official docket may be examined in the Office of the Assistant Chief Counsel, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois. An informal docket may also be examined during normal business hours at the Air Traffic Division, Airspace Branch, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois.

FOR FURTHER INFORMATION CONTACT: Michelle M. Behm, Air Traffic Division, Airspace Branch, AGL–520, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois 60018, telephone (847) 294–7568.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify the airspace docket number and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 98–AGL–27." The postcard will be date/time stamped and returned to the commenter. All communications received on or before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of comments received. All comments submitted will be available for examination in the Rules Docket, FAA, Great Lakes Region, Office of the Assistant Chief Counsel, 2300 East Devon Avenue, Des Plaines, Illinois, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Inquiry Center, APA–230, 800 Independence Avenue, SW, Washington, DC 20591, or by calling (202) 267–3484. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11–2A, which describes the application procedure.

The Proposal

The FAA is considering an amendment to 14 CFR part 71 to establish Class E airspace at Waupun, WI, to accommodate aircraft executing the proposed GPS SIAP, 102° helicopter point in space approach, for Waupun Memorial Hospital Heliport by creating controlled airspace. Controlled airspace extending upward from 700 to 1200 feet AGL is needed to contain aircraft executing the approach. The area would be depicted on appropriate aeronautical charts. Class E airspace designations for airspace areas extending upward from 700 feet or more above the surface of the earth are published in paragraph 6005 of FAA Order 7400.9E dated September 10, 1997, and effective September 16, 1997, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore this, proposed regulation—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9E, Airspace Designations and Reporting Points, dated September 10, 1997, and effective September 16, 1997, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

AGL WI E5 Waupun, WI [New]

Waupun Memorial Hospital Heliport, WI
Point in Space Coordinates
(Lat. 43°38'00" N., long. 89°45'46" W.)

That airspace extending upward from 700 feet above the surface within a 6.0-mile radius of the Point in Space serving Wautpun Memorial Hospital Heliport excluding that airspace within the Oshkosh, WI, Juneau, WI, and Beaver Dam, WI, Class E airspace areas.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify the airspace docket number and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 98–AGL–30." The postcard will be date/time stamped and returned to the commenter. All communications received on or before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of comments received. All comments submitted will be available for examination in the Rules Docket, FAA, Great Lakes Region, Office of the Assistant Chief Counsel, 2300 East Devon Avenue, Des Plaines, Illinois, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Inquiry Center, APA–230, 800 Independence Avenue, S.W., Washington, DC 20591, or by calling (202) 267–3484. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11–2A, which describes the application procedure.

The Proposal

The FAA is considering an amendment to 14 CFR part 71 to establish Class E airspace at Richland Center, WI, to accommodate aircraft executing the proposed GPS SIAP, 168° helicopter point in space approach, for Richland Center Hospital Heliport by creating controlled airspace. Controlled airspace extending upward from 700 to 1200 feet AGL is needed to contain aircraft executing the approach. The area would be depicted on appropriate aeronautical charts. Class E airspace designations for airspace areas extending upward from 700 feet or more above the surface of the earth are published in paragraph 6005 of FAA Order 7400.9E dated September 10, 1997, and effective September 16, 1997, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposal regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore this, proposed regulation—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal

Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9E, Airspace Designations and Reporting Points, dated September 10, 1997, and effective September 16, 1997, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

AGL WI E5 Richland Center, WI [New]

Richland Center Hospital Heliport, WI
Point in Space Coordinates
(Lat. 43°21'18"N., long 90°23'14"W.)

Proposed Revision of Class E Airspace; Pueblo, CO

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Proposed Rulemaking (NPRM).

SUMMARY: This proposal would provide additional controlled airspace to accommodate the development of a new Standard Instrument Approach Procedure (SIAP) utilizing the Global Positioning System (GPS) at the Pueblo Memorial Airport. This new SIAP requires airspace extending upward from 700 feet above the surface in order to contain an associated holding procedure.

DATES: Comments must be received on or before July 13, 1998.

ADDRESSES: Send comments on the proposal in triplicate: Manager, Airspace Branch, ANM–520, Federal Aviation Administration, Docket No. 98–ANM–01, 1601 Lind Avenue SW, Renton, Washington 98055–4056.

The official docket may be examined in the office of the Assistant Chief Counsel for the Northwest Mountain Region at the same address.

An informal docket may also be examined during normal business hours in the office of the Manager, Air Traffic Division, Airspace Branch, at the address listed above.

FOR FURTHER INFORMATION CONTACT: Dennis Ripley, ANM–520.6, Federal Aviation Administration, Docket No. 98–ANM–01, 1601 Lind Avenue SW, Renton, Washington 98055–4056; telephone number: (425) 227–2527.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy related aspects of the proposal. Communications should identify the airspace docket number and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 98–ANM–01." The postcard will be date/time stamped and returned to the commenter. All communications received on or before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in the light of comments received. All comments submitted will be available for examination at the address listed above both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this NPRM by submitting a request to the Federal Aviation Administration, Airspace Branch, ANM–520, 1601 Lind Avenue SW, Renton, Washington 98055–4056. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11–2A, which describes the application procedure.

The Proposal

The FAA is considering an amendment to Title 14 Code of Federal Regulations, part 71 (14 CFR part 71) to revise Class E airspace at Pueblo, CO. This amendment would provide additional airspace necessary to fully encompass the GPS Runway 8L and the GPS Runway 26L SIAPs to the Pueblo Memorial Airport, Pueblo, CO. This amendment proposes to add a small 1200-foot Class E area extension to the east in order to accommodate a holding pattern for the SIAPs. The holding pattern is required to meet necessary airspace criteria for aircraft transitioning between the terminal and en route environments. The FAA establishes Class E airspace extending upward from 700 feet AGL where necessary to contain aircraft transitioning between the terminal and en route environments. The intended effect of this proposal is designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under IFR at the Pueblo Memorial Airport and between the terminal and en route transition stages.

The area would be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. Class E airspace areas extending upward from 700 feet or more above the surface of the earth, are published in Paragraph 6005 of FAA Order 7400.9E dated September 10, 1997, and effective September 16, 1997, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant

rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120, E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9E, Airspace Designations and Reporting Points, dated September 10, 1997, and effective September 16, 1997, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

ANM CO E5 Pueblo, CO [Revised]

Pueblo Memorial Airport, CO
(Lat. 38°17′21″, long. 104°29′48″)

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify the airspace docket number and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 98–AGL–29." The postcard will be date/time stamped and returned to the commenter. All communications received on or before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of comments received. All comments submitted will be available for examination in the Rules Docket, FAA, Great Lakes Region, Office of the Assistant Chief Counsel, 2300 East Devon Avenue, Des Plaines, Illinois, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRM's

Any person may obtain a copy of this Notice of Proposed Rulemaking (NPRM) by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Inquiry Center, APA–230, 800 Independence Avenue, SW, Washington, DC 20591, or by calling (202) 267–3484. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11–2A, which describes the application procedure.

The Proposal

The FAA is considering an amendment to 14 CFR part 71 to establish Class E airspace at Beaver Dam, WI, to accommodate aircraft executing the proposed GPS SIAP, 266° helicopter point in space approach, for Hillside Hospital Heliport by creating controlled airspace. Controlled airspace extending upward from 700 to 1200 feet AGL is needed to contain aircraft executing the approach. The area would be depicted on appropriate aeronautical charts. Class E airspace designations for airspace areas extending upward from 700 feet or more above the surface of the earth are published in paragraph 6005 of FAA Order 7400.9E dated September 10, 1997, and effective September 16, 1997, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore this, proposed regulation—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

14 CFR Part 71

[Airspace Docket No. 98–AGL–28]

Proposed Modification of Class E Airspace; New Lisbon, WI

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to modify Class E airspace New Lisbon, WI. A Global Positioning System (GPS) Standard Instrument Approach Procedure (SIAP), 179° helicopter point in space approach, has been developed for Mile Bluff Medical Center Heliport. Controlled airspace extending upward from 700 to 1200 feet above ground level (AGL) is needed to contain aircraft executing the approach. This action proposes to modify existing controlled airspace for New Libson, WI, to the southeast, by adding controlled airspace for the point in space approach serving Mile Bluff Medical Center Heliport.

DATES: Comments must be received on or before July 6, 1998.

ADDRESSES: Send comments on the proposal in triplicate to: Federal Aviation Administration, Office of the Assistant Chief Counsel, AGL–7, Rules Docket No. 98–AGL–28, 2300 East Devon Avenue, Des Plaines, Illinois 60018.

The official docket may be examined in the Office of the Assistant Chief Counsel, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois. An informal docket may also be examined during normal business hours at the Air Traffic Division, Airspace Branch, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois.

FOR FURTHER INFORMATION CONTACT: Michelle M. Behm, Air Traffic Division, Airspace Branch, AGL–250, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois 66018, telephone (847) 294–7568.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify the airspace docket number and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to Airspace Docket No. 98–AGL–28." The postcard will be date/time stamped and returned to the commenter. All communications received on or before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of comments received. All comments submitted will be available for examination in the Rules Docket, FAA, Great Lakes Region, Office of the Assistant Chief Counsel, 2300 East Devon Avenue, Des Plaines, Illinois, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

by submitting a request to the Federal Aviation Administration, Office of Public Affairs, Attention: Public Inquiry Center, APA–230, 800 Independence Avenue, SW, Washington, DC 20591, or by calling (202) 267–3484. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM's should also request a copy of Advisory Circular No. 11–2A, which describes the application procedure.

The Proposal

The FAA is considering an amendment to 14 CFR part 71 to modify Class E airspace at New Lisbon, WI, to accommodate aircraft executing the proposed GPS SIAP, 179° helicopter point in space approach, for Mile Bluff Medical Center Heliport by modifying existing controlled airspace. Controlled airspace extending upward from 700 to 1200 feet AGL is needed to contain aircraft executing the approach. The area would be depicted on appropriate aeronautical charts. Class E airspace designations for airspace areas extending upward from 700 feet or more above the surface of the earth are published in paragraph 6005 of FAA Order 7400.9E dated September 10, 1997, and effective September 16, 1997, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore this, proposed regulation—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINT

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9E, Airspace Designations and Reporting Points, dated September 10, 1997, and effective September 16, 1997, is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

AGL WI E5 New Lisbon, WI [Revised]

Mauston-New Lisbon Union Airport, WI
(lat. 43°50'17"N., long. 90°08'13"W.)
Mile Bluff Medical Center Heliport, WI
Point in Space Coordinates
(lat. 43°48'09"N., long. 90°04'34"W.)

That airspace extending upward from 700 feet above the surface within a 8.8-mile radius of Mauston-New Lisbon Union Airport, and within a 6.0-mile radius of the Point of Space serving Mile Bluff Medical Center Heliport excluding that airspace within the Necedah, WI, Class E airspace area; and excluding that airspace within the Camp Douglas, WI, Class D and Class E airspace areas, during the specific dates and times Class D airspace is effective.

Proposed Modification of Class E Airspace; Marshall, MN

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice proposes to modify Class E airspace at Marshall, NM. Amendment 7 to the VHF Omnidirectional Range (VOR) Standard Instrument Approach Procedure (SIAP) to Run way (. Rwy) 12 has been developed for Marshall Municipal-Ryan Field Airport, MN. Controlled airspace extending upward from 700 to 1200 feet above ground level (AGL) is needed to contain aircraft executing the approach. This action proposes to increase the radius of the existing controlled for this airport.

DATES: Comments must be received on or before July 7, 1998.

ADDRESSES: Send comments on the proposal in triplicate to: Federal Aviation Administration, Office of the Assistant Chief Counsel, AGL–7, Rules Docket No. 98–AGL–33, 2300 East Devon Avenue, Des Plaines, Illinois 60018.

The official docket may be examined in the Office of the Assistant Chief Counsel, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois. An informal docket may also be examined during normal business hours at the Air Traffic Division, Airspace Branch, Federal Aviation Administration, 2300 East Devon Avenue, Des Plaines, Illinois.
